INTRODUCTION.

At a meeting held on the 6th March, 1905, the Trustees of William Ramsay Henderson, Esq. of Warriston and Eildon Hall, resolved to devote a portion of the funds at their disposal to the collection of facts likely to be useful in the study of Anthropology, having reference especially to the cranial conformation of man, to the size and configuration of the brain and larger nervous centres, and to other kindred subjects, and to publish from time to time the records of such collections of facts under the designation of *The Henderson Trust Reports*.

The following record of Anthropometric Observations on Inmates of Lunatic Asylums in Scotland is the first of these reports. It consists of a series of tables of craniological and other measurements made under the superintendence of Mr J. F. Tocher, with an explanatory statement by him.

HENDERSON TRUST REPORTS.

A RECORD OF MEASUREMENTS, WEIGHTS, AND OTHER FACTS
RELATING TO MAN.

No. I.

JULY, 1905.

**ANTHROPOMETRIC SURVEY OF THE INMATES OF
ASYLUMS IN SCOTLAND**

BY

J. F. TOCHER.

11

PREFACE.

THE observations recorded in this Report were undertaken by me at the suggestion of Dr John Macpherson, Commissioner in Lunacy. The measurements were made in December, 1903, and during the year 1904, under my direction by Mr A. M. Macgillivray and Mr W. S. Cran, and also by myself. Mr Cran made observations at the following asylums:—Aberdeen, Banff, Elgin, Inverness, and Montrose. Mr Macgillivray made observations at the following asylums:—Montrose, Perth, Stirling, Edinburgh, Midlothian, Haddington, Roxburgh, Lanark (Hartwood), Glasgow (Woodilee and Gartloch), Govan (Hawkhead), Greenock, Paisley, Ayr, Argyll, Dumfries, Fife and Kinross, and Dundee. Measurements were made by me at the following asylums:—Aberdeen, Montrose, Dundee, Stirling, Edinburgh, Perth, Lanark (Hartwood), and Glasgow (Woodilee). The superintendents of all the asylums very kindly afforded the observers every facility and assistance in making the measurements, and besides supplying information on every case, gave interesting and valuable details where necessary, and measured a few exceptional cases.

I wish here to acknowledge the assistance and co-operation of the superintendents and staffs of all the asylums. Without such assistance and co-operation it would have been impossible to carry out this rather formidable undertaking.

It is not proposed to enter here into any statement as to the results arising from this survey. The following is merely a correct record of the observations, as made (Table X.), and tabulated with respect to the frequency of each individual character, and the frequencies of each combination of two characters, for the whole number of persons observed (Tables I.-VII., IX., and XXI.-XXVI.), and with respect to the colour in the individual asylums (Tables XXVII.-LXX.).

In addition to the foregoing tables, a table showing the mean value and variability (standard deviation) of each of the cranial characters, the whole number observed being considered, is given on page 10 (Table VIII.). The mean, variability (standard deviation) and coefficient of variation with probable errors for the various characters in each individual asylum are given in Tables XI.-XX.

A Map is given (facing page 12), which shows the position of the various asylums in Scotland, and the areas or districts from which the inmates of each asylum are drawn.

I have to thank very cordially the members of the Henderson Trust, and particularly Sir Arthur Mitchell and Sir John Sibbald, for the great interest they have taken in this work, for their kindness in affording the means of carrying out a survey which supplies such valuable information respecting the cranial characters of man, and for the honour they have conferred on me by entrusting me with the task of editing their first publication.

J. F. TOCHER.

PETERHEAD, 31st July, 1905.

**ANTHROPOMETRIC SURVEY OF THE INMATES OF
ASYLUMS IN SCOTLAND.**

Explanatory Note to Tables I to IX.

These Tables practically explain themselves. Table I shows the total frequency for each cranial character observed, the inmates of asylums being treated as a whole. As an illustration, 301 males had a head height of 136 mm., the total number of male inmates being the sum of the frequencies found for each mm., namely 4436. Tables II to VII are tabulations of the observations with respect to the frequencies of each combination of two characters, *i.e.* they are correlation tables. For instance, take the two characters head length and head breadth (males) in Table II. The "Totals" columns give the frequencies for the various sizes of head length and head breadth, just as Table I does, while the figures in the body of the table give the frequencies of the various sizes of length of head for any particular breadth, and *vice versa*. For example, there were five males with a head length of 174 mm., the sizes and frequencies of head breadth for this group of 5 being 130 mm., one person; 138 mm., two; 141 mm., one; and 150 mm., one. Where italics occur at the end of the range in these tables, a break in the continuity of the scale is indicated. No persons with intermediate dimensions were observed to occur. Table VIII shows the average value and degree of variability for each of the cranial characters, the whole of the inmates being considered. The degree of variability is expressed by means of the standard deviation which measures the "degree of scatter" of the sizes, the values given being the various values of σ found. The dimensions of the various characters are expressed in millimetres. Table IX shows the pigmentation distribution, both of hair and eyes, of 4235 males and 3708 females (the total numbers observed for hair and eye colour), and also the corresponding percentages for the various colours observed. The table is similar in type to Tables II-VII, showing not only the total frequencies for the various hair and eye colours, but also the frequency for each combination. To illustrate again, there were 1372 males out of the total of 4235 who had dark hair. Of the 1372 dark haired persons, 346 had light eyes, 497 had medium coloured eyes, and 529 had dark eyes, and so on with the others. The results for individual asylums are given in subsequent tables.

Observations on Inmates of Asylums in Scotland.

IV.—Edinburgh Royal Asylum	Edinburgh (City) and Leith.
V.—Montrose Royal Asylum	{ Forfar, Kincardine, Caithness, Shetland.
VI.—Argyll District Asylum	Argyll, Bute, and Arran.
VII.—Ayr District Asylum	Ayr.
VIII.—Banff District Asylum	Banff.
IX.—Elgin District Asylum	Elgin.
X.—Fife District Asylum	Fife, Kinross.
XI.—Glasgow District Asylum (Gartloch)	Glasgow.
XII.— " " " (Lenzie) ... "	"
XIII.—Govan District Asylum	"
XIV.—Haddington District Asylum	Haddington.
XV.—Inverness District Asylum	Inverness, Nairn, Ross & Cromarty.
XVI.—Lanark District Asylum	Lanark.
XVII.—Midlothian District Asylum	Midlothian, Peebles.
XVIII.—Perth District Asylum	Perth.
XIX.—Roxburgh District Asylum	Berwick, Roxburgh, Selkirk.
XX.—Stirling District Asylum	{ Stirling, Dumbarton, Clackmannan, and Linlithgow.
XXI.—Greenock Parochial Asylum	Renfrew.
XXII.—Paisley Parochial Asylum	Renfrew.

MAP

showing the areas or districts from which the inmates of the various Asylums are drawn.

County boundaries are shown by a faint dotted black line while the districts are indicated by a red one.

TABLE X.

Table of Measurements at the various Asylums.

Explanatory Note to Table X.

Observations were made on a selection of both measurable and non-measurable character of inmates. The measurable characters observed and recorded were those of stature, head length (L), head breadth (B), and head height (H); the non-measurable characters were those of hair colour, eye colour, and nose contour. The head length was measured from the most prominent point of glabella to the occipital point, and was therefore the maximum head length. The head breadth measured was the maximum breadth above the level of the ear. The head height was taken from mid-points of auricular passages to the vertex. The types of nose recognised were straight (S), Roman (R), Jewish (J), concave (C), and wavy (W). The categories adopted for hair and eye colours were those used by the author in similar previous observations, and are the categories recognised by authorities in this country. The hair categories were red (R), fair (F), medium (M), dark (D). The letter B has, however, been inadvertently used in pages 16 to 24, to describe medium hair (*i.e.* in the Record of Observations on Males at (1) Aberdeen, (2) Dumfries, (3) Dundee, (4) Edinburgh, (5) Montrose, and (6) Argyll. Otherwise M is used in the hair column to describe medium hair. Red included light, bright, and dark red; fair consisted of white, flaxen, and golden yellow; medium included chestnut and all shades of brown except dark brown; dark embraced dark brown and black. The eye categories were light, medium, and dark (hazel brown). Where blanks occur in the table, no observations were made or recorded. The blanks in hair colour were chiefly due to absence of hair (baldness) or absence of pigment (grey hair).

TABLE X.—MEASUREMENTS.

TABLES XI. to XX.

INDIVIDUAL ASYLUMS.

TABLES OF VALUES OF THE MEAN, STANDARD DEVIATION, AND COEFFICIENT
OF VARIATION FOR EACH CHARACTER MEASURED.

Explanatory Note to Tables XI. to XX.

THESE Tables deal with the characters exhibited by the inmates at each individual asylum. The *mean*, *standard deviation* and *coefficient of variation*, with their probable errors, of each character have been determined. These terms are perfectly familiar ones to scientific men handling similar data, but perhaps it may be useful to add a word of explanation as to their meaning for those to whom the method of dealing with the results of such measurements is a novelty. The *mean* is, of course, the average size for each character. The *standard deviation* is a measure of the degree of spread or scatter of the various sizes round the mean. If the various sizes differed very little from the average size, the standard deviation would be small and would indicate a low degree of variability, while if the sizes were of all sorts—very large and very small—and therefore differed a good deal from the average, the standard deviation would be much greater, and, as already stated, would give an estimate of the degree of scatter round the mean. The *coefficient of variation* is the ratio of the standard deviation to the mean, considered as a percentage.

Tables XI. and XII. deal with the Head Length; Tables XIII. and XIV. Head Breadth; Tables XV. and XVI. Head Height; Tables XVII. and XVIII. Cephalic Index; and Tables XIX. and XX. Stature. The values given in the Tables are those found by calculation on the basis of a 5 mm. grouping. In the case of stature, a 3 inch unit was adopted. The addition of the probable error furnishes the means of ascertaining (1) how far the values may differ in future samples, and (2) what significance is to be attached to the differences existing in each character among the various asylums. As explained in the introduction to the Report no discussion as to the significance of the differences found or of the results generally is to be entered into here. The Tables merely give the facts relating to the measurements in a condensed form.

In performing the analyses of the data from individual asylums, account was taken of exceptional cases—those whose characters were undoubtedly affected by pathological and other conditions. There may be others whose characters are similarly affected in a lesser degree, but a special research would be required to solve this. Those omitted in the determination of the constants for individual asylums are undoubtedly exceptional. Of the 4436 males observed, 55 were excluded, and of the 3951 females, 26 were thus excluded, leaving 4381 males and 3925 females to be subjected to enquiry.

TABLES XXI to XXVI.

TABLES OF STATURE AND HEAD CHARACTERS FOR TOTAL
INMATES.

Explanatory Note to Tables XXI to XXVI.

Tables XXI-XXVI are similar in character to Tables II-VII (pages 4-9). The characters Head Length, Head Breadth, and Head Height, are given in five mm. units, while a two-inch scale has been adopted for Stature.

TABLES XXVII. to LXX.

HAIR AND EYE COLOURS—INDIVIDUAL ASYLUMS.

Explanatory Note to Tables XXVII-LXX.

These Tables are identical in form with Table IX, which is a table of frequency and correlation of hair and eye colours for the whole of the inmates taken together. The following Tables (XXVII-LXX) show in a similar manner the distribution of colour for each asylum separately. The percentages for each hair colour are given alongside the absolute figures in each case. Illustration :— Of the 234 males in Aberdeen Asylum, 132 had dark hair. Of the 132 dark haired persons, 23 had light eyes, 69 had medium eyes, and 40 had dark eyes. There were 8 red haired persons or 3·42 per cent. of the inmates were red haired, and so on.
