TOPOGRAPHICAL DICTIONARY

OF

SCOTLAND.

KEIG

KEIG

KEANLOCHBERVIE, or **KINLOCHBERVIE**, a district, in the parish of **EDDRACHILLIS**, county of **SUTHERLAND**; containing 1028 inhabitants, of whom 105 are in the village, 14 miles (N. by E.) from **Eddrachillis**. This place is situated on the western shore of the county, on the north side of **Loch Inchard**, and near its mouth: the coast is much indented. In the interior are numerous lakes; and the district, generally, partakes of the mountainous character of the land in this quarter. The Duke of Sutherland is the sole proprietor; and under him the aspect of the country, though still rugged, has been vastly improved within the last few years. **Keanlochbervie** was separated, for ecclesiastical purposes, from the rest of the parish, some years ago; and as that arrangement was afterwards set aside, it is proposed by the Court of Session to again erect it into a quoad sacra district. It is in the presbytery of **Tongue** and synod of **Sutherland** and **Caithness**, and the patronage is vested in the Crown: the stipend of the minister is £120, paid from the exchequer; and there is a good manse, with a glebe of some acres. The church was erected in 1828-9, at the expense of government; it contains 350 sittings, and is of sufficient height to be enlarged by galleries. The members of the Free Church have also a place of worship. A school was built and endowed in 1845.

KEANLOCH-LUICHART, in the county of **ROSS** and **CROMARTY**.—See **KINLOCH-LUICHART**.

KEARN, in the county of **ABERDEEN**.—See **AUCHINDOIR** and **KEARN**.

KEIG, a parish, in the district of **ALFORD**, county of **ABERDEEN**, $4\frac{1}{2}$ miles (N. E. by E.) from the post-town of **Alford**; containing 662 inhabitants. This parish, which includes the north-eastern portion of the vale of **Alford**, is bounded on the north by the mountain range of **Benachic**, and on the east by the **Menaway hills**. It is about five miles and a half in length, of irregular form, and nearly two miles and a half in average breadth, comprising an area of 7900 acres, of which 3100 are arable, 2300 woodland and plantations, and the remain-

der moorland pasture and waste. The surface in the central part of the parish is generally flat; and even the acclivities of the hills are under tillage, to a height of 700 feet above the level of the sea. The river **Don** flows in a winding course through the parish (dividing it into two nearly equal portions), and, after receiving numerous tributary streams, falls into the German Ocean at **Aberdeen**, in the south-eastern extremity of the county: it abounds with trout and salmon. For the most part the scenery is of interesting character, being enriched with wood, and in some places beautifully picturesque; and it derives much additional interest from the extensive and finely-planted demesne of **Castle-Forbes**, which is within the parish.

In this parish the soil is mostly a gravelly sand combined with clay, with the exception of the grounds along the banks of the river, which have a rich alluvial mould; there are also some tracts of peat-moss in the hills, furnishing but very indifferent fuel. The chief crops are oats and bear, with a small quantity of wheat occasionally, and crops of potatoes and turnips, of which, however, not more is raised than is sufficient for home consumption. The system of husbandry is greatly improved, and a due rotation of crops regularly observed; much of the waste has been drained and brought into cultivation, and the lands are well inclosed, chiefly with dykes of stone. In general the cattle are of the native **Aberdeenshire** breed, with a few crosses of the **Galloway** and the **short-horned**; but not more than 1100 or 1200 are reared, and of these a considerable number are fed for a few years for the market, and many of them sent by steamers to **London**. The sheep, of which about 600 are fed on the pastures, are principally of the **black-faced Highland** breed, with some of the **Leicestershire**; the latter are kept principally for their wool, which is used for domestic purposes. The plantations, chiefly on the lands of **Castle-Forbes**, consist of oak, ash, white and black poplar, birch, weeping-birch, aspen, beech, laburnum, elm, lime, plane, cork, horse-chesnut, maple, Wey-

mouth pine, and larch, silver, spruce, and Scotch firs. The prevailing rocks in the parish are granite, with gneiss, greenstone, and clay-slate; some masses of porphyry, also, are to be found, and fine specimens of rock-crystal. The rateable annual value of Keig is £2563. Castle-Forbes, the seat of Lord Forbes, premier baron of Scotland, is a spacious and elegant mansion in the castellated style, beautifully situated on the north bank of the Don, and on the acclivity of the mountain of Benachie, commanding a fine view of the river. The demesne, which is very extensive, is tastefully laid out in walks and rides, and richly embellished with timber and thriving plantations. There is no village; neither is there any trade, except the pork-trade to London, or any manufacture, except the knitting of worsted stockings for the Aberdeen houses, in which many of the poorer females are employed. At Whitehouse, on the borders of the parish, is a post-office, by which a mail-coach runs daily to Aberdeen. Facility of communication is maintained by the Aberdeen and Alford turnpike-road; by statute roads kept in good repair; and by a handsome bridge of one arch, 101 feet in span, erected over the Don in 1817, at a cost of £2300, one-half defrayed by government.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Alford, synod of Aberdeen. The minister's stipend is £158. 13. 6., of which one-fourth is paid from the exchequer; with a manse, and a glebe valued at £12 per annum: patron, the Crown. Keig church, erected in 1835, is a handsome structure in the later English style, crowned with pinnacles, and containing 500 sittings. The parochial school is conveniently situated: the master has a salary of £34, with a house and garden, and a portion of the Dick bequest; and his fees average upwards of £20 per annum. There are two Druidical circles in the parish, one of which, more entire than the other, is within the grounds of Castle-Forbes, about half a mile from the house, in a wood on the Cothiemuir hill; it appears to have consisted of eleven upright stones, and is twenty-five yards in diameter. The other, situated near the farm of Old Keig, is about twenty-two yards in diameter; and within the area are two upright stones, nine feet high, between which is an immense slab, apparently used as an altar: this slab bears a striking resemblance to the rocking-stone, which was poised in such a way as to vibrate with a touch of the hand, and yet to be scarcely moveable by the greatest force. On the summit of a hill on the north-west of the parish, is a circular wall of loose stones, inclosing an area nearly eighty yards in diameter, called the Barmekin; but nothing of its history is known. The place anciently gave the title of Baron to the Bishop of St. Andrew's, who sat in the Scottish parliament as Lord Keig and Monymusk.

KEIR, or KIEN, a parish, in the county of DUMFRIES, 2 miles (S. W.) from Thornhill; containing, with the village of Barjarg, 984 inhabitants. This parish is supposed to derive its name from the British word *Caer*, signifying "a fort", used in reference to some fortress of importance, all traces of which have now disappeared. It is thought to have anciently belonged to the abbey of Holywood, or, as some say, was a vicarage belonging to the parish of Caerlaverock, which latter was a parsonage connected with the abbey. After the Reformation, the fees that used to be paid to the Church

were given to the Earl of Morton; but that nobleman having disoblged the sovereign, they were afterwards granted to the Earl of Nithsdale, whose successors were the chief heritors of the parish till 1702, when James, Duke of Queensberry, purchased the barony of Keir. The property has since been increased by several purchases, and consists at present of three large portions, held by the Duke of Buccleuch and Queensberry, and extending to nearly one-half of the whole parish. The other estates are Capenoch, Waterside, Barjarg, and Blackwood, one of which is still in the possession of a very ancient family.

The PARISH is about seven miles and a half long, and two miles and a half in extreme breadth, containing between 7000 and 8000 acres. It is bounded by the parish of Penpont on the north, by Dunscore on the south, by Closeburn on the east, and by Tynron and Glencairn on the west. The surface is diversified with numerous hills, affording excellent sheep pasture: the rivers are, the Nith, and its tributary the Scar, the former of which constitutes the eastern boundary of the parish. The Edinburgh road passes within the south-east end of the parish for half a mile. The holm land on the banks of the rivers consists of a fine rich loam. In other parts where the ground is level there is a light, dry, and fertile earth, producing good crops in moist weather, but soon parched up with drought. The soil on the high grounds is deep and strong, but very stony, and generally covered with coarse though nutritious grasses. About 3375 acres are cultivated for the usual white and green crops; 750 are meadow land, and nearly 2600 natural pasture: between 600 and 700 acres are occupied by wood, natural and planted. The sheep are chiefly the black-faced, and the cattle of the Galloway and Ayrshire breeds. Many improvements have been introduced into the district, the chief of which is the reclaiming of waste land by drainage and other means, so as to increase the extent of arable ground in a very great degree. The rocks in the parish consist of greywacke in many varieties, with sandstone and abundance of limestone, of the latter of which a quarry is worked, producing annually lime worth about £2500. The annual value of real property in Keir is £4562. The mansions are Barjarg, Capenoch, Waterside, and Blackwood Houses, all of them modern with the exception of the first, which is partly an old edifice. There are two villages, namely, Keir-Mill and Barjarg. About eight miles and a half of turnpike-road run through the parish, and five bridges connect Keir with the adjoining districts: one of these bridges, a suspension-bridge of a new construction, was lately erected by the Duke of Buccleuch over the Scar; the span is 110 feet. Ecclesiastically the parish is within the bounds of the presbytery of Penpont, synod of Dumfries and Galloway; patron, the Duke of Buccleuch. The stipend is about £220; and there is a good manse, with a glebe of ten acres, worth about £18 per annum. Keir church, which is inconveniently situated at Keir-Mill, near the upper end of the parish, was built in 1814; it contains 430 sittings, and is in good repair. There are two parochial schools, in which Greek, Latin, mathematics, and all the usual branches of education are taught: each of the masters' salaries is £25. 13. 4., with from £14 to £18 fees.

KEISS, formerly a quoad sacra parish, partly in the parish of Wick, and partly in that of CANISHAY, county

of CAITHNESS, $7\frac{3}{4}$ miles (N.) from Wick; containing, with the village of Keiss, 1009 inhabitants. The portion of this district which is within the parish of Wick is about five miles in length and three in breadth, containing 809 inhabitants; and after the erection and endowment of a church by government, in 1827, was, with a contiguous portion of Canisbay, formed into a quoad sacra parish under act of the General Assembly, in 1834. Whinstone and red sandstone prevail in the district; and the soil is principally composed of a light loam in some parts, and of a strong clay in others. The herring-fishery, which is prosecuted in the months of July and August, is very considerable; and cod, ling, and haddock are also obtained: in 1840 a salmon-fishery on a small scale was commenced, but it was not attended with much success. A cattle-market is held in the month of June. Keiss House, a plain massive building, erected about 1760, is at present in a very dilapidated state, not having been for a number of years the residence of its owners. The village, situated at the head of Keiss harbour in Sinclair bay, and on the great coast-road from Wick to Huna, is chiefly inhabited by persons engaged in the fisheries. Ecclesiastically the place is in the presbytery of Caithness, synod of Caithness and Sutherland: the stipend of the minister is £120, paid by endowment of the government, with a manse, built near the church. The church, erected by government, in 1827, on a rising ground to the west of the harbour, at an expense of £1500, is a plain structure containing 350 sittings, and by the addition of galleries would contain 200 more. The Baptists have a place of worship. A school, also, has been erected, the master of which receives a salary of £15, one-half derived from the Rev. William Hallawall's endowment, and the other paid by the Society for Propagating Christian Knowledge: he has likewise the fees. On a rock overhanging the sea are remains of an old castle, called Keiss Castle; and there are some vestiges in the district of two ancient chapels, and a Picts' house.

KEITH, a parish, partly in the county of ELGIN, but chiefly in that of BANFF; containing, with the town of Keith, and the villages of Fife-Keith and Newmills, 4456 inhabitants, of whom 276 are in the county of Elgin, and 1804 are in the town, situated $10\frac{1}{2}$ miles (N.W.) from Huntly, and 49 (N.W.) from Aberdeen. This place, the name of which is of uncertain derivation, is of very remote antiquity; the old town was for many years the principal seat of jurisdiction for the surrounding district, and had precedence of Fordyce, Cullen, and Banff, at that time the only other towns within the county. The ancient courts of regality held their sittings in the church, for the determination of all pleas, including even those of the crown, and for the trial of capital offences; the tower of the church was used for a prison, and the hill on which the new town is built was the place of execution for malefactors. In 1645, a skirmish occurred here, between the forces under the Marquess of Montrose and a party of the Covenanters led by General Baillie; and in 1667 the peasantry, headed by the Gordons of Auchinachy and Glengarrick, defeated the banditti of Patrick Roy MacGregor, and took their leader prisoner. The New Town of Keith is pleasantly situated on the acclivity of a gentle eminence, to the south-east of the Old Town, and consists of several spacious and well-formed streets, parallel with each other,

and intersected at right angles by smaller streets and lanes. The houses are well built, and attached to each of them is a good garden. In the centre of the town is an ample market-place, 700 feet in length and 150 feet wide. Fife-Keith, on the north bank of the river Isla, was commenced by the Earl of Fife in 1816, and consists of regular streets of good houses, and a handsome square, crescent, and terrace. It is connected by two bridges with Old Keith; and as Old Keith communicates with New Keith by a street extending for 250 yards along the great north road, the three places may be considered as forming one town, about a mile in length. A public library, containing a good collection of volumes on history and general literature, is supported; and there are also a library connected with a literary association, and several congregational libraries.

The linen manufacture was formerly carried on here to a very considerable extent, but since the introduction of the cotton manufacture it has been discontinued. There are mills for carding and spinning wool, and home-grown flax; and also several corn and flour mills which supply the country with flour for many miles round. A distillery producing about 20,000 gallons of whisky annually, and a tobacco and snuff manufactory, are in active operation. There are also a tannery and a bleachfield, and many of the inhabitants are employed in the extensive lime-works in the parish, from which 40,000 bolls of lime are sent every year. The numerous handsome shops are amply stored with merchandise of every description; and branches of the Aberdeen, the Town and County, and the North of Scotland Banks, have been established in the town. A spacious and commodious inn and posting-house, at which the mail and another coach stop daily, was erected by the Earl of Seafield in 1823. A weekly market, for grain and provisions of all kinds, is held on Friday; and fairs, chiefly for cattle, horses, and sheep, are holden on the first Friday in January and March; the first Tuesday, O. S., in April and June, and the Friday before Huntly fair in July. Fairs, also, for the hiring of servants and for general business, are held on the Wednesday after the first Tuesday in September, and on the third Friday, O. S., in November. The September fair, called "Summer Eve fair", formerly continued for a fortnight, and was the great mart for the exchange of commodities between the north and south parts of Scotland; it was resorted to by crowds who, for want of accommodation, took up their lodgings in barns and outhouses, and it is still numerously attended. The post-office has three deliveries daily; and facility of communication is maintained by the great north road and several other turnpike-roads which pass through the parish. Though not a burgh of barony, yet, being within the barony of Keith or Ogilvie, courts may be held here by the baron-bailie of the Earl of Seafield. The sheriff's court for the recovery of small debts, and a justice-of-peace court, are also held in the town, the former six times in the year, and the latter on the first Wednesday in every month. A gaol has been erected within the last few years; but there being no town-hall in the burgh, the courts are held in the inn erected by the Earl of Seafield.

The PARISH, which is situated in the beautiful and fertile valley of the Isla, is of the form of an irregular square, about six miles in length and nearly of equal breadth, comprising an area of thirty-six square miles,

one-half arable and one-half pasture and waste. Its surface rises gradually from the banks of the river Isla, towards the north-western and south-eastern confines of the parish, where there are hills of moderate elevation. The river Isla has its source in the adjoining parish of Botriphnie, and flows through this parish in a north-eastern direction, receiving several smaller streams in both parishes; it then runs into the parish of Grange, and eventually falls into the Doveron: the river abounds with trout of good quality, and, half a mile below Keith, forms a picturesque cascade. In general the soil is clay, alternated with loam, in some parts of great fertility, and in others poorer and of lighter quality. The chief crops are oats and barley, with potatoes and turnips; flax is also raised on some lands, but little or no wheat is sown. The system of husbandry is improved, and a regular rotation duly observed; but the lands are not inclosed, and much yet remains to be done in the way of cultivation. The cattle are of the native breed, with a cross of the Teeswater, and great numbers are sent to London; the dairy-farms are well managed, and the butter and cheese, which are much esteemed, find a ready sale in the southern markets. The plantations formed by the Earl of Fife on such parts of the land as were incapable of cultivation are in a thriving state, and others have been added by the Earl of Seafield and the other proprietors. The principal substrata are limestone and slate; both these are quarried, and there are several lime-works in the parish, affording employment to a considerable number of persons. In the lime-works at Maisly a vein of antimony has been found, and fluor spar has also been discovered in some places. The only seat of a landed proprietor is Edintore, a handsome mansion lately erected. The annual value of real property in the parish is returned at £8001.

As to ECCLESIASTICAL affairs, the parish is in the presbytery of Strathbogie and synod of Moray. The minister's stipend is £222, with a manse, and a glebe valued at £50 per annum; patron, the Earl of Fife. Keith church, which is situated in the centre of the parish, is a very handsome structure in the later English style of architecture, with a square tower 120 feet high; it was built in 1816, and contains 1800 sittings. There are a well-built Free church, places of worship for members of the United Presbyterian Church and Independents, and an Episcopal, and a Roman Catholic chapel: the last mentioned is an elegant and much-admired edifice, containing a splendid picture, the gift of Charles X. of France, representing the incredulity of Thomas. Keith parochial school, for which a spacieous building was erected in 1833, capable of receiving 260 children, is well attended and admirably taught. The master, who keeps an assistant, has a salary of £34, with an allowance of £10 for a house and garden: the fees average £80, and he receives a portion of Dick's bequest, with a fixed payment of £16. 13. 4. from the lands of Edendrach, which were bequeathed for the support of the school; and also the interest of £500 three per cent. consols, bequeathed by Dr. Simson, of Worcester. There are likewise schools at Newmills and in other parts in the parish, to the number of seventeen. Chalybeate springs occur in several places; but they are not much used medicinally. About half a mile below the town are the ruins of an ancient castle, formerly the seat of the Oliphant family. Ferguson, the eminent astronomer,

though not a native, was brought up from his infancy in the parish.

KEITH and HUMBIE, a parish, in the county of HADDINGTON, 8 miles (S. W. by S.) from Haddington; containing 881 inhabitants. This parish was formed, subsequently to the Reformation, by the union of the two parishes of Keith-Symmars and Keith-Hundeley. It is about six miles in length from east to west, and five in breadth from north to south, comprising an irregular area which, towards the south-western extremity, is intersected by part of the parish of Fala. Keith and Humbie parish is bounded on the north by the parish of Peneaitland; on the east by the parishes of Bolton, Salton, and Yester; on the south by the Lammermoor hills; on the west and south-west by the parishes of Crichton and Fala; and on the north-west by those of Ormiston and Cranston. Its surface is greatly diversified, rising gradually from the northern part of the parish, which is 350 feet above the level of the sea, till it attains a height of 600 feet at the base of the Lammermoor hills, of which Lammerlaw, the loftiest eminence of the range, has an elevation of 1200 feet, and other eminences vary from 800 to 1000 feet. The lands are watered by three rivulets, which have their source in the higher grounds, and in their way through the parish acquire a sufficient strength to give impulse to several mills. Of these streams the Keith and the Humbie unite their waters a little below the church, and after flowing in one channel for nearly two miles, receive the waters of the Birnswater, which, from its rise to its junction, forms the eastern boundary of the parish: they all three abound with trout of good quality. The scenery is enriched with timber of mature growth, and with young and thriving plantations. Humbie wood comprises an area of 400 acres of oak, birch, beech, and firs, many of which display luxuriance of growth, and in combination with the adjoining woods in the parish of Salton form a conspicuous and beautiful feature in the landscape, finely contrasting with the various aspects of the Lammermoor hills, some of which are covered with barren heath and others with lively verdure.

In some places the SOIL is a rich loam, in others a light sand, and in others again, clayey and mossy. The number of acres in the parish is estimated at 17,000, of which about 7000 are arable or capable of tillage. A considerable portion of the mossy bogs in the Lammermoor range has been reclaimed by open surface-draining, and converted into excellent pasturage; and from 200 to 300 acres more might be brought into profitable cultivation. In addition to the 400 acres forming Humbie wood, about 100 are covered with plantations in the different demesne lands; and 2500 acres are hilly pasture and moor. The system of agriculture, which has always been good, is at present in a highly improved state; the crops are wheat, barley, oats, potatoes, peas, and turnips. Rape-dust manure has been successfully employed in the cultivation of wheat, and bone-dust on the turnip grounds. The farm houses and offices are substantial and well arranged: the lands are inclosed partly with stone dykes, but chiefly with hedges of thorn, which have been planted at considerable expense, even where the soil was not originally favourable to their growth. Great attention is paid to live stock: the sheep are generally of the Cheviot breed, or a cross between the Cheviot and the Leicestershire, with a few

of the black-faced, which, however, are diminishing in number; about 3000 sheep are kept, and more than 300 head of cattle. The annual value of real property in Keith and Humbie is £7603. Whitburgh, a handsome modern mansion, pleasantly situated; Keith House, an ancient mansion, formerly the residence of the Earls-Marischal of Scotland, the timber for the erection of which was a present from the King of Denmark; and the mansion of Johnstoneburn, lately much improved and enlarged; are the houses of note in the parish. There is facility of communication with the towns of Haddington and Dalkeith, which are the chief markets in this part of the country for the sale of agricultural produce. The roads throughout the parish are kept in repair by statute labour: over each of the rivulets is a good stone bridge of one arch. Ecclesiastically the parish is within the bounds of the presbytery of Haddington, synod of Lothian and Tweeddale. The stipend of the incumbent is £272: the manse was erected in 1790, and enlarged in 1822, and is a comfortable residence; the glebe is valued at £10 per annum. The church, situated nearly in the centre of the parish, was built in 1800, and is a plain substantial edifice adapted to a congregation of 400 persons. A place of worship has been erected for members of the Free Church. There are two parochial schools, the masters of which have each a salary of £30, with a house and garden, and the fees.

KEITH-HALL and KINKELL, a parish, in the district of GARIOCH, county of ABERDEEN, 1 mile (E. by S.) from Inverury; containing 913 inhabitants. The former of these two districts was anciently called Montkeggie, a word of uncertain derivation; it assumed the present appellation after the larger part of it had come into the possession of Keith, Earl-Marischal of Scotland. The Gaelic term Kinkell, signifying "the head or principal church", was applied to the ancient parish of that name, because the incumbent, who was of great importance in the chapter of Aberdeen, had also in his possession the six inferior parishes of Kintore, Kinnellar, Skene, Kemnay, Dyce, and Drumblade. This patronage, however, about the year 1662, was annexed, by the influence of Archbishop Sharpe, to the office of principal of St. Leonard's College, St. Andrew's. In 1754, one-third of the parish of Kinkell was joined to Kintore, and the remaining portion to Keith-Hall. The PARISH is separated from the parish of Inverury on the west by the river Urie, and from that of Kintore in the same quarter by the river Don, which streams unite about the centre of the western boundary. Its figure is very irregular: the parish stretches in length about five miles, and its breadth varies exceedingly, measuring however in some parts nearly as much as its length. It comprises between 7000 and 8000 acres, of which 2000 are arable, 400 in plantations, and the remainder waste. Though occasionally undulated and hilly, the ground is marked by no particular elevations, and the principal features in the scenery are the two rivers, of which the Don, after the junction of the Urie, runs in a south-eastern course, with numerous picturesque windings, till it falls into the sea at Aberdeen, in the south-eastern extremity of the county. The canal from Inverury passes parallel to the Don, all the way, to the same city. Pike, eels, and trout are found in both the above-mentioned streams, and salmon are also taken in the Urie.

In rainy seasons they overflow their banks, especially the Don, and occasion much damage to the neighbouring crops.

The best land is in the western district, near the rivers, where the soil is either loamy or alluvial, and very fertile; the eastern portion has a great variety of soil, mostly of inferior quality, and the usual subsoil is gravel or clay. The grain and green crops comprehend the usual kinds. The South-Down, Leicester, and Scotch breeds of sheep are kept; the cattle are in general excellent, and of the Old Aberdeenshire kind. The late Lord Kintore, whose family possess about two-thirds of the parish, cultivated with great spirit and success the Ayrshire and Teeswater breeds of cattle; and his beautiful stock is well known as having produced the celebrated Keith-Hall ox, which obtained the first premium at the Highland Society's show in 1834, and was sold, at seven years of age, for £100. Portions of waste land have been recovered within these few years, though not to the same extent as in many other parishes, the proprietors not offering much encouragement for those improvements. The old farm-houses with turf roofs have gradually disappeared, and more convenient buildings have been raised, neatly thatched, and in some instances slated. Some of the farms are inclosed with hawthorn hedges; but the inclosures are in general of stone, many of them of a secure and substantial nature. The annual value of real property in the parish is £4067.

The plantations consist of beech, oak, elm, ash, plane, Scotch fir, and larch, all growing well except the larch and oak. In the grounds of Keith-Hall, the seat of the Earl of Kintore, the luxuriant plantations constitute a beautiful feature in the scenery, and increase the effect produced by the view of the noble mansion, a quadrangular structure of ancient and modern architecture, with an elegant front. The immediate vicinity of the house commands extensive and striking prospects over a rich valley, well wooded and watered, with a fine range of mountains in the distance. Inverury is only about a quarter of a mile from the western boundary; and to it, therefore, the farmers convey their grain and other disposable produce, to be sent to Aberdeen by canal. The turnpike-road from Aberdeen to Inverury runs past the western boundary of the parish, at a short distance; and that from the same place to Old Meldrum passes on the east; but neither intersects the parish. An annual fair is held at Kinkell on the Wednesday after the last Tuesday of September, O. S., and is much frequented. Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of the Earl of Kintore: the minister's salary is £217, with a manse, and a glebe of 25 acres, valued at £30 per annum. The church was built in 1771, and accommodates 600 persons with sittings. The Society of Friends have a place of worship at Kinnuck, attached to which is a cemetery. The parochial school affords instruction in Latin and geography, with all the elementary branches; the master has a salary of £30, with a house, and £15 fees. Many illustrious persons who fell in the battle of Harlaw were interred in the churchyard, among whom was the high constable of Dundee.

KEITHTOWN, a village, in the parish of FODDERTY, county of ROSS and CROMARTY; containing 64 inhabitants. It is one of three small villages in the parish, and is of recent formation.

KELLAS, a hamlet, in the parish of MURROES, county of FORFAR; containing 25 inhabitants.

KELLS, a parish, in the stewartry of KIRKCUDBRIGHT, 14 miles (N. W. by N.) from Castle-Douglas, and 19 (N. by W.) from Kirkcudbright; containing, with the burgh of New Galloway, 1121 inhabitants. This place is supposed by some to derive its name from its elevated situation, of which, in the Gaelic language, the word is descriptive. Others deduce the name from the British *Cell*, on account of the extensive woods formerly existing here, and of which considerable remains are still found embedded in the various mosses. The parish is one of the largest in the county. It is bounded on the west and south by the river Dee, which separates it from the parishes of Minnigaff, Girthon, and Balma-ghie; and on the east by the river Ken, which divides it from Dalry, Balmaclellan, and Parton parishes. Kells is about sixteen miles in length and eight miles in extreme breadth, comprising an area of 47,500 acres, of which by far the greater part is mountain pasture, and, with the exception of about 400 acres of woodland and plantations, the remainder is arable and in good cultivation. Its surface is irregularly broken, rising towards the north into a range of lofty mountains, including the most conspicuous heights of Galloway, some of which have an elevation of 2700 feet above the sea. The arable lands, which are chiefly along the banks of the Ken, are tolerably level, and interspersed with copses of oak and birch. The lower grounds are watered by numerous rivulets, intersecting the parish in various directions, and forming tributaries to the Dee and to the Ken. The Ken has its source on the confines of Dumfriesshire, and after entering the parish on the north-east, receives the waters of the Deuch, and at the southern extremity unites with the Dee. There are also many lakes, of which those of Loch Dungeon and Loch Harrow, in the north, are of considerable extent, but both inferior to Loch Ken, on the eastern border of the parish, which is about five miles in length and three-quarters of a mile in breadth, and by far the most eminent for the beauty of its scenery. A remarkably large pike, probably the largest known to have been killed in Scotland, was caught in this loch with the rod and fly many years ago; it weighed seventy-two pounds, and the head is still preserved in Kenmure Castle, bearing witness to its enormous size. The parish affords an interesting field for the investigations of the botanist.

The SOIL of the lands along the Ken is a rich clay, producing good crops of oats, but not in larger quantity than is sufficient for home consumption. The district is chiefly *pastoral*, and, under the auspices of the Glenkens Society, established in 1830 with the patronage of Mr. Yorstoun of Garroch, has been greatly improved: among other changes for the better, the cottages have in many instances been rendered much more comfortable and commodious. The progress of *agricultural* improvement, however, is retarded by the difficulty of obtaining lime at any moderate expense; and consequently, several farms which would otherwise be capable of tillage are thrown together as sheep-walks. The number of sheep pastured is about 17,500; about 560 head of cattle of the Highland breed are kept, about 320 Galloways, and 420 cows and their followers. There are also a great number of pigs kept in the parish. The sheep and cattle are sent to the markets in the south. In this parish

the hills are chiefly of granite: there are neither mines nor quarries of any description. The remains of ancient wood are principally copses of oak and birch, both of which are indigenous, and appear well adapted to the soil; the plantations, which are of recent formation, consist of oak, intermixed with Scotch fir and larch, and are well managed, and in a flourishing condition. The annual value of real property in the parish is £5246. Kenmure Castle, the seat of Lord Viscount Kenmure, the principal landed proprietor, is a very ancient structure, seated on a circular mount, at the head of Loch Ken, within a mile of the town of New Galloway; and is supposed to have been the residence of John Baliol. It suffered frequent assaults during the wars with England in the time of Edward I.; and was burnt in the reign of Mary, Queen of Scots, and again during the usurpation of Cromwell. The estate subsequently belonged to the Gordons of Lochinvar, of whom Sir John Gordon was created Lord of Lochinvar and Viscount Kenmure, in 1633; but it became forfeited to the crown in the time of William, the sixth viscount, who was attainted for his participation in the rebellion of 1715, and beheaded on Tower Hill, London, in the following year. The property was, however, purchased from the crown by a member of his family; and the title was restored by act of parliament, in 1824, to his grandson, the late viscount and proprietor. The grounds are tastefully embellished with stately timber and thriving plantations, and the approach to the castle is by a noble avenue of lime-trees. Glenlee is a handsome mansion, which has been greatly enlarged, and is finely situated on the banks of the Ken, in a park embellished with many oaks of majestic growth. Knocknalling and Balingear are also good houses lately erected.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kirkcudbright, synod of Galloway. The minister's stipend is £300, with a manse, and a glebe valued at £15 per annum; patron, the Crown. Kells church, erected in 1822, is a handsome structure in the early English style of architecture, with a square embattled tower; it contains 560 sittings, and is capable of being made to hold a greater number. In the churchyard lie interred the remains of several generations of the Coultharts of Coulthart, chiefs of their name, who had a seat in the parish during the sixteenth and seventeenth centuries. The parochial school is attended by about 100 children; the master has a salary of £34, with a house and garden, and the fees average £30 per annum. The Glenkens Society annually award prizes to the most deserving of the scholars. A school-house has been erected in the northern part of the parish, by Mr. Kennedy of Knocknalling, who pays the salary of the master; and there is also a Sabbath school in the parish, to which is attached a good library. The poor are partly supported by the interest of £522 bequeathed by various individuals, in the hands of the Kirk Session. There are several chalybeate springs, one of which, on Cairn-Edward, about two miles from New Galloway, was formerly in great repute, and is still used by the inhabitants in its neighbourhood. Among the natives of the parish have been, Lowe, the author of *Mary's Dream*; Heron, author of a history of Scotland; Gordon, the translator of *Tacitus*; and the Rev. William Gillespie, author of the *Progress of Refinement*, of *Consolation*, and other works.

Burgh Seal.

KELSO, a burgh of barony, a market-town, and parish, in the district of Kelso, county of Roxburgh, 23 miles (S. W.) from Berwick-upon-Tweed, and 41 (S. E.) from Edinburgh; containing, with the village of Maxwellhough, 5328 inhabitants, of whom 4594 are in the burgh. This place is said to have derived its name, anciently written Calchow, or Calkow, from

the chalky cliff on which the original village was situated. The district now occupied by the town and parish appears to have formerly included the parishes of Kelso on the north, and of Maxwell and St. James on the south, side of the river Tweed: of these the two first had separate churches, and the last was part of the ancient burgh of Roxburgh. The churches of Kelso and Maxwell were both destroyed during the earlier period of the border warfare; that of St. James seems to have been burnt down at a later date. These several parishes were all granted to the ABBEY of Kelso by David I., the founder of that institution, which he endowed for brethren of the order of Benedictines, of the class called Tyronenses, whom he placed in the abbey on its completion, about the year 1130. Under the munificent endowment of that monarch's successors, the establishment became one of the most wealthy in the kingdom. From its situation, however, so near the border, the monastery was frequently exposed to violence and plunder; and after suffering repeated injuries, from which in process of time it always recovered, it was, finally, almost destroyed in 1523 by a party of the English under Lord Dacre. Having plundered the town, and laid waste the adjacent country, they burnt the conventual buildings, and removed the roof from the church, which they otherwise defaced; compelling the monks to retire to a village in the neighbourhood, to celebrate the offices of religion. In 1545, the town again sustained devastation from the English forces, who also destroyed the greater portion of what was left of the abbey, which never afterwards recovered; the north and south aisles and the choir were battered down by artillery, and the venerable and stately structure was reduced to a mere ruin. The monks, however, still maintained a religious establishment here, and inhabited the remains of the conventual buildings till the Reformation, after which the site and revenues were granted, in 1587, to Sir John Maitland, lord high chancellor, and subsequently to the Earl of Bothwell, on whose attainder, reverting to the crown, they were bestowed on Sir Robert Ker of Cessford, warden of the East marches, and ancestor of the Duke of Roxburghe, the present proprietor.

The foundation of the abbey naturally led to the increase and importance of the town, which previously was only an inconsiderable village, and a comparatively insignificant appendage to the burgh of Roxburgh, at that time a place of great note. In the reign of Robert I., the town had so augmented in extent as to be divided into the two portions of Easter and Wester Kelso; and on the demolition of Roxburgh, it became the residence of many of the inhabitants of that burgh. Its increase was now still more rapid, and it had attained a high de-

gree of prosperity in 1545, when, participating in the disastrous fate of its abbey, it was so reduced by the English under the Earl of Hertford, that the markets could no longer be held in it, and were consequently transferred to the neighbouring village of Hume. On the accession of the Ker family to the revenues and jurisdiction of the abbots, the town recovered; the abbey was erected into a temporal lordship in 1607, by charter of James VI. to the Earl of Roxburghe, and the earl subsequently granted to the inhabitants all the privileges of a free burgh of barony. But the place was arrested in its career of prosperity by a destructive fire, which in 1686 burnt down more than one-half of the houses; it was again partly destroyed by fire in 1738, and subsequently sustained considerable damage by similar calamities till within a comparatively recent period. These losses, however, did not impede the progress of the town so much as might have been expected; and it is now in a prosperous state.

Kelso is finely situated on the north bank of the river Tweed, near its confluence with the Teviot, and consists chiefly of a principal street, irregularly built, several smaller streets, and a handsome square of considerable extent, comprising ranges of buildings in a very pleasing style. In general the houses are of light-coloured stone, and roofed with slate; and the whole has a cheerful and prepossessing appearance. The streets are paved, and lighted with gas; the inhabitants are amply supplied with water, and a good approach from the opposite shore is formed by a well-built bridge over the river. The surrounding scenery, remarkable for many peculiarities of feature, is agreeably varied, and when viewed in combination with the ruins of the ancient abbey is deeply interesting. Kelso bridge is an elegant structure of stone, erected in 1803, to replace a bridge which had been swept away by an inundation of the river in 1797. It consists of five elliptical arches, seventy-two feet in span, and about fifty feet in height above the surface of the stream; the structure is nearly 500 feet in length, and was completed by the late Mr. Rennie, at an expense of £18,000. This bridge forms a conspicuous feature in the landscape of the town, and derives additional interest from the beauty of the scenery on both banks of the Tweed. The Kelso library, supported by a proprietary of shareholders, contains a well-assorted collection of more than 5000 volumes in all departments of literature, and is held in a commodious building. The "New Library" and the "Modern Library" are also well supported, in a similar manner; the former has 2000 and the latter 1500 volumes, chiefly modern works. There is likewise a book club, maintained by subscribers, for the purchase and circulation amongst its members of standard and periodical publications; and a reading-room, chiefly frequented as a billiard-room, is established. A Physical and Antiquarian Society has collected a valuable museum of natural history and antiquities.

The chief TRADE here is in corn, and in the various articles of merchandise that are requisite for the supply of the neighbouring district. There are no manufactures carried on to any considerable extent; the principal are those of leather and tobacco, and the weaving of linen and stockings, all of which together scarcely afford employment to 150 persons. On the river Tweed are several valuable salmon-fisheries, one of which, of very small extent, was let to some gentlemen at the high rent of

£210 per annum; the season commences in February, and terminates in November. Kelso contains branches of the four principal banking establishments in Scotland, namely, the Bank of Scotland, the British Linen Company, the Commercial Bank, and the National Bank; and has three newspapers, one of them published twice, and the others once, a week. The chief market is on Friday, and is amply supplied with corn, and well attended: there is a daily market for butchers' meat, fish, and vegetables. Markets, also, for cattle are held on the second Friday in every month. Fairs occur on the four Fridays in March, for horses, and on the second Friday for cattle also; and a very ancient fair is held on the 5th of August, on St. James' Green, the site of the ancient church of that name. This fair is numerously attended; and the magistrates of the town have a cumulative right of jurisdiction with the magistrates of the burgh of Jedburgh, and divide the tolls with the lord of the barony.

The lands belonging to the abbey of Kelso were, as already stated, granted, under the title of the lordship and barony of Hallydean, to the Kers of Cessford, ancestors of the Dukes of Roxburghe, in 1607; and in 1634 that portion of the lands which constitutes the town and parish of Kelso was separated and erected into a BURGH of BARONY by James VI., who conferred upon the superior, Robert, Earl of Roxburghe, the right of holding a weekly market and fairs, and of creating burgesses, a baron-bailie, and other officers. The government is now vested in a bailie, appointed by the superior; a body of sixteen commissioners of police, appointed under the act of the 3rd and 4th of William IV., for establishing a general system of police in Scotland; a town-clerk; procurator-fiscal; and others. The bailie holds his office during pleasure. There are seven incorporated trades, the merchants, shoemakers, tailors, hammermen, skinnners, weavers, and fleshers; and no person is authorized to carry on trade in the burgh who is not a member of one of these companies. The bailie holds a weekly court for the trial and determination of civil and criminal cases, of which, on an average, about forty of the latter are decided annually. The town-house, situated on the east side of the public square, is a well-built edifice of stone, two stories in height, with a portico of four Ionic columns supporting a triangular pediment, surmounted by a neat turret, in which is a handsome clock. There is likewise a small prison, employed chiefly as a place of temporary confinement for vagrants.

The PARISH, which is of triangular form, is about five miles in length and three in extreme breadth, and is divided into two nearly equal parts by the river Tweed. It comprises 4400 acres, of which 3800 are arable, 300 meadow and pasture, and 215 inclosed plantation. The surface is boldly diversified with broad vales and undulating heights, and abounds with much variety and beauty of scenery: the rivers Tweed and Teviot, especially, present some pleasingly picturesque views in their devious courses through the parish, flowing between richly-wooded banks, and receiving numerous tributary streams from the higher lands. In this parish the soil is various, but generally fertile, and of light dry quality; the crops are oats, wheat, barley, potatoes, and turnips. The system of agriculture is improved, and the four and five shift courses of husbandry are prevalent: lime and bone-dust form the principal manures. The lands have been well drained, and inclosed partly with stone dykes, but chiefly

with hedges of thorn: the farm-houses are substantially built, and some, of more recent erection, are elegant; threshing-mills have been erected on most of the farms, some of them driven by steam; and all the improvements in the construction of agricultural implements have been adopted. For the most part the sheep reared and fed in the parish are of the Leicestershire breed; and much attention is paid to them: the cattle are all the short-horned, or Teeswater. The Union Agricultural Society hold meetings in the town, for awarding prizes to successful competitors at the monthly show of cattle, and for improvements in agriculture. The older wood consists of oak, beech, ash, and other forest-trees, of which many fine specimens are to be seen in the parks of Floors and Springwood; the plantations are chiefly firs, intermixed with hard-woods. There are several mansions in the parish and vicinity, of which Floors, the property of the Duke of Roxburghe, is a stately edifice, erected in 1718, after a design by Sir John Vanbrugh. It is situated on the north side of the river Tweed, in an extensive park embellished with fine-grown timber and rich plantations: a holly-bush in the park, of venerable growth, marks out the spot where James II. was killed by the bursting of a cannon, while employed in the siege of Roxburgh Castle, in 1460. Ednam House is also an elegant residence, in tastefully-disposed grounds. The mansion of Springwood Park, to which is an approach by a beautiful Grecian archway; Hendersyde Park; Wooden; Pinnacle Hill; and Woodside, are all handsome; and in the vicinity of the town are also numerous pleasing villas. Facility of intercourse with the neighbouring places is afforded by railways, by excellent roads in every direction, and by bridges. The annual value of real property in the parish is £19,755.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kelso, synod of Merse and Teviotdale; and the patronage is vested in the Duke of Roxburghe. The stipend is £320. 13. 6., with a manse, and a glebe valued at £54. 15. per annum. Kelso church, erected in 1773, and repaired and reseated in 1833, is an octagonal edifice, conveniently situated, and adapted for a congregation of 1314 persons. An additional church was erected in 1837, on a site northward of the town, at an expense of more than £3500, towards which £1500 were contributed by Mr. James Nisbet, of London; it is a handsome edifice in the later English style of architecture, with a lofty square tower, and contains 877 sittings, of which 144 are free. A certain portion of the parish was allotted to it for a short time, as a district, and called the North quoad sacra parish, with a population of 2383. Adjoining it is a building for an infants' and another school. There are places of worship for members of the United Presbyterian Church, the Free Church, Reformed Presbyterians, Original Seceders, the Society of Friends, and Wesleyans, with an Episcopal chapel. Two parochial schools are held, one of which is a grammar school, and the other a school for reading, writing, and arithmetic. The master of the former has a salary of £34, with £80 fees, and a house and garden; and the master of the latter a salary of £5. 11., with £50 fees, and the interest of a bequest of £240 for teaching gratuitously a number of poor children. Another school is maintained partly at the expense of two of the heritors, who give the masters a schoolroom and dwelling-house rent free, in addition to the fees, for teaching children of

the south division of the parish. A school for boys and girls, also, is supported by the Duke of Roxburgh and others, who pay the mistress £15 per annum, including fees, and give the master as much as will raise the amount of his fees to £60. The poor have the interest of funded bequests, producing £35. 10. a year. A savings' bank, under good management, has contributed to prevent applications for parochial relief; and there are several charitable institutions, which have also been highly beneficial to the poorer inhabitants. The dispensary, established in 1777, and supported by subscription, contains wards for the reception of patients whose cases require residence in the institution, and has hot, cold, and vapour baths, which are accessible to the public. The majority of the patients, however, are visited at their own dwellings. The establishment is under the direction of a physician and surgeons, and on an average affords relief annually to about 500 patients.

The principal relics of antiquity are the interesting ruins of the ancient ABBEY, which, within the last fifty or sixty years, have been cleared from the barbarous incrustations of masonry by which they were long concealed, and have been prevented by judicious repairs from sinking into entire dilapidation. Of this once magnificent cruciform structure, of the Saxon or early Norman style of architecture, the principal parts remaining are a portion of the choir, and the central tower, with part of the nave and transepts. A portion of the building was fitted up in 1649 as a parish church, which was in use till 1771; and the masonry employed for that purpose, which concealed some of the finest parts of the abbey, and disfigured the whole, was removed partly in 1805, and completely in 1816. By this means, the ruins were restored to their original beauty; and in 1823 their further dilapidation was prevented, by replacing much that was decayed, and thoroughly repairing what remained. They are considered to be the finest specimen of Saxon architecture in the kingdom. No vestige now remains of the ancient residence of the Earl of Morton, who resided in the village of Maxwellheugh in the reign of Queen Elizabeth. Kelso gives the title of Earl to the Duke of Roxburgh.

KELTON, a parish, in the stewartry of KIRKCUDBRIGHT; including the villages of Rhonehouse and Gelston, and containing 2875 inhabitants, of whom 1848 are in the town of Castle-Douglas, 10 miles (N. E. by E.) from Kirkcudbright. This parish derives its name, of Celtic origin, from the extensive woods formerly in its vicinity; and is bounded on the west by the river Dee, which separates it from the parishes of Balmaghie and Tongland. It extends nearly six miles in length, and is about three miles in average breadth, comprising an area of almost 11,400 acres, of which 3000 are arable, 560 woodland and plantations, and the remainder moorland pasture and waste. The surface rises gradually from the river into a ridge of hills of conical form, most of which are arable to the summit, and which, towards the south, increase in loftiness, till they attain, in some parts, an elevation of 1200 feet above the level of the sea. Of these hills the highest are Bengairn, the Skreel, and Dungle: from the two former is obtained an extensive view embracing the whole vale of the Dee, the hill of Cairns-muir, the mountain range that separates the county of Kirkcudbright from Ayrshire, St. Bees Head, and the Cumberland hills. The river Dee, which here attains its

greatest breadth, divides into two streams above and below the bridge, inclosing two large and beautifully wooded islands. Several rivulets, descending from the hills, intersect the parish in different directions. The Slack burn and the Auchlane burn, which have their rise in Bengairn, after flowing for some distance towards the north, take a western direction, and fall into the Dee. Three other burns descend from the Skreel, one of which, taking a northern course, flows past the village of Gelston into Loch Carlinwark, while the other two run south-eastward into the Solway Firth. The loch of Carlinwark, situated in the north angle of the parish, was originally 180 acres in extent; but in 1765 it was partly drained by the construction of a canal, one mile and a half in length, which, conveying its water to the Dee, reduced its height to the same level, and diminished its surface to 100 acres. By the draining of the lake, great quantities of rich marl were obtained, which, being carried by the canal to the Dee in boats, were shipped to many of the surrounding parishes for the improvement of the lands.

For the most part the SOIL is a thin hazel loam, or brown mould, mixed in some places with sand, and in others incumbent on gravel and a stiff retentive clay, but generally fertile, producing abundant crops of grain, with potatoes and turnips, and the various grasses. The system of agriculture has been greatly improved under the encouragement of an agricultural society comprising Kelton and the adjacent parishes, in each of which ploughing matches take place by turns; and a general show of stock is held annually at Castle-Douglas on the first Tuesday in October, when prizes are awarded. The farm-houses are substantially built, and roofed with slate. The lands have been much enriched by the marl from Carlinwark loch, and are inclosed partly with stone dykes, and partly with hedges of thorn; bone-dust is used as manure for turnips; and all the more recent improvements in the implements of husbandry have been adopted. On the moorlands is good pasturage for black-cattle, of which considerable numbers are reared; and though none of the farms are exclusively appropriated to the purpose, numbers of sheep, chiefly of the black-faced, with a few of the Leicestershire and Cheviot breeds, are fed on the several lands. There is no established fishery; but salmon are taken in the Dee, and trout, pike, and perch in the loch, which is also frequented by almost every variety of waterfowl. In this parish the substrata comprise greywacke and slate, with veins of porphyry; and granite is found in the hills. The plantations, most of which are of modern growth, consist of oak, ash, elm, and larch, Scotch, and spruce firs, and are in a very thriving state. The annual value of real property in the parish is £9170. Gelston Castle was built by the late Sir William Douglas, and is conspicuous for the elegance of its architecture, and the romantic beauty of its situation. Carlinwark, erected by the late Mr. McCulloch, and Daldawn, built by the late proprietor, Captain McDougall, are also handsome mansions. The village of Rhonehouse, on Kelton hill, was long celebrated for its annual fairs for cattle and horses, all of which have been removed to Castle-Douglas, except the summer fair, which is still held at Rhonehouse, on the first Tuesday after the 17th of June, O. S., chiefly for horses and for the hiring of servants. There are no manufactures of importance; but a few of the inhabitants are employed

in hand-loom weaving for the houses at Carlisle. Facility of communication is afforded by good roads, of which the military road from Carlisle to Portpatrick passes through the northern part of the parish for about four miles, and others intersect it in various directions.

This parish is within the bounds of the presbytery of Kirkeudbright, synod of Galloway; and both civilly and ecclesiastically includes the ancient parishes of Gelston and Kilcormack, which, after the decay of their churches, were annexed to Kelton about the year 1689. The minister's stipend is £246. 18., with a manse, and a glebe valued at £20 per annum; patron, the Crown. The present church, a plain substantial structure with a campanile turret, was erected on a more eligible site than that of the old edifice, in 1806, and has since been enlarged by the addition of galleries; it now contains 1000 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, and Reformed Presbyterians. Three parochial schools are supported, of which the original school is at Rhonehouse, and the two others respectively at Gelston and Castle-Douglas: about 440 children are instructed. The master in Rhonehouse has a dwelling-house, and one-third of £51. 6. paid by the heritors, with £2 from a bequest by Sir William Douglas, and £7. 10. from the seat-rents of the galleries in the church. The master of Gelston receives one-third of £51. 6., with £3. 3. from Sir William Douglas's fund, but has no dwelling-house; and the fees in each of the two schools average £32. The master at Castle-Douglas has one-third of £51. 6., £7. 10. from the Douglas fund, and £15 from seat-rents, in addition to the fees, which average £120 per annum. There are three other schools, for females, unendowed, but the teachers of which, besides their fees, receive a small sum from the Douglas fund. Miss Harriet Douglas bequeathed £100, the interest of which is distributed in coal among the poor.

The parish contains numerous remains of antiquity, among which is part of a Druidical circle on the farm of Torrs. There are several British forts, two of which are in good preservation, on the hill of Dungyle, and both defended by three ramparts of stones and earth; one has a circular area of 117, and the other of sixty-eight, paces in diameter. In a tumulus near Gelston, have been found a stone coffin containing human bones of gigantic size, a copper helmet, and some military weapons greatly corroded. At Mid Kelton, a Roman tripod has been discovered by the plough; and on an island in Carlinwark loch has been found a large iron hammer, supposed to have been used by the Druids. Several canoes; a Roman dagger, plated with gold, and twenty-two inches long; the remains of an iron forge said to have been employed by the troops of Edward I., for shoeing their horses; and various other relics, have also been discovered in the loch. The great cannon called Mons Meg, which stands on the Argyll battery of Edinburgh Castle, was made in this parish, at a place called The Buchan.

KELTON, a village, chiefly in the parish of CAERLAVEROCK, and partly in that of DUMFRIES, $3\frac{1}{2}$ miles (S. by E.) from Dumfries; containing 154 inhabitants. This village lies on the eastern bank of the river Nith, and on the high road from Glencaple-Quay to Dumfries. It has a small harbour, in which the water rises fifteen feet at spring tides, and which affords anchorage for vessels of

ninety tons' burthen at all times. A considerable trade was formerly carried on in the exportation of grain and potatoes; but the prosperity of the place has latterly been checked by the more central position and increasing traffic of neighbouring towns, and it is likely to decay.

KELTY, a village, in the parish of BEATH, district of DUNFERMLINE, county of FIFE, 6 miles (N. E. by E.) from Dunfermline; containing 257 inhabitants. The population consists chiefly of colliers employed in the mines of the parish. There is a place of worship here for members of the Free Church.

KELTY, a village, in the parish of CLEISH, county of KINROSS, 5 miles (S. by W.) from Kinross; containing 164 inhabitants. It is situated in the south-eastern part of the parish, and a short distance west of the road from Burntisland to Kinross. In the vicinity is Blair-Adam inn, where is a post-office.

KEMBACK, a parish, in the district of ST. ANDREW'S, county of FIFE, 3 miles (E. by N.) from Cupar; containing, with the village of Blebo-Craigs, 778 inhabitants. It is supposed to derive its name from the rivulet called the Kem or Kam, which rises in the hills of the parish of Scoonie, and flowing through this parish, falls into the river Eden. The parish is bounded on the north by the river Eden, and measures about three miles in length and a mile and a half in breadth, comprising 2200 acres, of which 1700 are arable, with a due proportion of meadow and pasture, and 320 are woodland and plantations. Its surface is varied with hills, of which a ridge traverses the parish from east to west, sloping gently towards the south, and more abruptly towards the north; the highest eminence is Clatto hill, rising 548 feet above the level of the sea. The whole of this range, formerly a wild barren heath, is now covered with thriving plantations, adding greatly to the beauty of the scenery, for which this district is distinguished. The river Eden flows in a winding course, along the boundary of the parish, between banks which in some places are level with its stream, and in others rise into precipitous elevation; while the Kem brook, frequently called the Ceres burn, runs through a thickly-wooded ravine called Dura Den, nearly a mile in length, abounding with romantic scenery, and enlivened by a picturesque cascade. The Eden contains plenty of trout in the spring and autumn, and is a favourite resort for anglers.

In this parish the soil displays every possible variety; along the banks of the river, a rich alluvial clay of great fertility; in other parts, black and brown loam, alternated with peat-moss, sand, and gravel. The system of agriculture is in an improved state; the farm-buildings are substantial, and on many of the farms are threshing-mills, driven by horses, water, or steam. The substratum is chiefly sandstone of a bright yellow colour, occurring in beds of great thickness, and abounding with organic remains; there are some quarries of whinstone, and coal and ironstone have been discovered, but are not wrought. The annual value of real property in the parish is £3515. Blebo House, the seat of General Alexander Bethune, the principal landed proprietor, is a handsome modern mansion; there are also good houses at Dura and Kemback, belonging to other proprietors, and the latter of which is an ancient building. The village is small, and consists chiefly of scattered cottages, on the road to St. Andrew's. The inhabitants are partly employed in the spinning of yarn, for which there are two mills belong-

ing to Mr. David Yool, both situated on the Ceres burn. Of these, Yoolfield mill was built in 1839, and the machinery is impelled by a water-wheel of thirty-nine feet diameter, and, when water is scarce, by steam; Blebo mill, farther up the stream, is driven by a water-wheel, and a steam-engine of ten-horse power. In the two about 195 persons are employed, of whom 125 are females. Connected with the Blebo mill are a meal-mill, a barley-mill, and a mill for scutching flax; and lower down the stream, at Kemback, is a mill, also belonging to Mr. Yool, driven by a water-wheel of sixteen-horse power, for grinding meal, sawing timber, and crushing bones. Ecclesiastically the parish is within the bounds of the presbytery of St. Andrew's and synod of Fife. The minister's stipend is £159. 7., with a manse, and a glebe valued at £24 per annum; patrons, the University of St. Andrew's. Kemback church, erected in 1814, is a neat plain building. The parochial school is attended by about forty children; the master has a salary of £34, with a good house and garden, and the fees average £16 per annum. There are three other schools, partly supported by subscription and the fees. The poor have bequests producing £10 per annum. There are several tumuli in the parish; and some relics of Roman antiquity have been occasionally discovered.

KEMNAY, a parish, in the district of GARIOCH, county of ABERDEEN, 4 miles (W. by S.) from Kintore; containing 637 inhabitants. This place is situated on the banks of the river Don, which, by its circuitous course in this part, forms the boundary on two sides, separating Kemnay on the north from the parish of Inverury, and on the west from Chapel of Garioch and Monymusk. The parish is irregular in figure, and measures between four and five miles in length, and about three in breadth; comprising 6000 acres, of which about half is pasture and in tillage, and half in plantations and uncultivated. Its surface in general is uneven, and diversified with a picturesque range of small hills called *kems*, running nearly parallel with the river. The scenery is beautiful, combining well-cultivated arable grounds, rich and verdant pastures, and numerous thriving plantations, ornamented by the serpentine course of the river Don; and the burn of Ton, one of the tributaries of that river, contributes in no small degree to heighten the interesting appearance of this pleasing locality. On most of the lands the soil is a light mould resting on sand, but in the vicinity of the rivers are some tracts of fine deep loamy earth; and the higher grounds, which are cultivated to the summit, are for the most part clayey. The crops consist chiefly of oats, bear, potatoes, and turnips, peas and wheat being very scantily sown: the rotation system is followed. Much of the mossy land has been brought into cultivation, and now produces good corn; but considerable tracts still remain, supplying the inhabitants with their ordinary fuel. The whole of the lands, till lately, were held by Lord Kintore and another proprietor; but the former has alienated part of his property. The annual value of real property in the parish is £2340. The rocks are of the granite formation, quartz and mica prevailing in their composition: the stone admits of a fine polish, and is raised from two or three quarries, as well as found in detached masses on the hills. Kemnay House, a modern structure, is surrounded with thick and thriving plantations, and is approached by an ornamental avenue of very fine beech-

trees. The road from Aberdeen to Monymusk passes through the parish, and the basin of the Aberdeenshire canal, at Inverury, is only five miles distant: the marketable produce is sent for sale to Aberdeen, Inverury, and Kintore. Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of the Earl of Kintore: the minister's stipend is £150, of which about two-fifths are received from the exchequer; with a manse, and a glebe valued at £15 per annum. The present church is a handsome edifice, erected in 1844, and will accommodate about 400 persons. The former church was very ancient, and had become ruinous: it was extensively repaired in 1632, and again in 1794. Kemnay parochial school, which, since the appointment of the present master, Mr. Andrew Stevenson, has been admirably conducted, and, in conjunction with a flourishing academy under the same auspices, has excited much interest, affords instruction in all the branches of a sound education: the master has a salary of £25. 13. 4., with a house, £2 the interest of various bequests, and £50 fees; he also largely participates in the Dick bequest. There is a parish library, containing works on divinity, history, and general literature. The only relics of antiquity are several tumuli and cairns.

KENDROCHAD, or BRIGDEND, in the county of PERTH.—See BRIGDEND.

KENMORE, a parish, in the county of PERTH; containing, with the villages of Acharn, Blairmore, Bridgend, and Stronfernan, 2539 inhabitants, of whom 106 are in the village of Kenmore, 6 miles (S. W. by W.) from Aberfeldy. This place derives its name, in the Gaelic language signifying "a great headland", from the situation of its church on a headland forming the south bank of the river Tay, near its source, and stretching far into the lake of that name. The parish comprises an area of nearly sixty-two square miles, of extremely irregular form, and in several parts separated into detached portions by the intervening lands of other parishes. It is bounded on the north and south by the hills that rise from the shores of Loch Tay, and comprises about 40,000 acres of land, of which 5400 are arable, 8600 meadow and pasture, 5000 in woods and plantations, and the remainder moorland and waste. The surface, with the exception of that part of it covered by the waters of Loch Tay, part of Loch Fraochy, and one or two small lakes, is mountainous and hilly, with some small portions of level ground, the chief of these being the commencement of the valley of the Tay, a fine open plain about a mile in width, through which that river flows with a full and rapid stream. *Loch Tay*, a magnificent expanse of water, nearly sixteen miles in length, and averaging about a mile in breadth, is of a serpentine form, extending from the north-east to the south-west, and in many parts not less than 600 feet in depth. From the margin of the lake, on both sides, the surface rises gradually to a great height, forming two parallel ranges of mountains, of which *Ben-Lawers*, the highest point, has an elevation of more than 4000 feet above the level of the sea. The lower acclivities of these mountains are in some parts in a high state of cultivation, and in others afford luxuriant pasture, interspersed with woods of ancient growth, and plantations of recent formation, giving to the scenery of the lake a rich variety, which renders it pre-eminent in beauty.

Loch Tay, at its south-western extremity, receives the waters of the rivers Dochart and Lochay, and on both sides is fed by numerous torrents, which descend from the mountains, and in their progress form picturesque cascades. *Loch Fraochy*, part of which is within the limits of the parish, is a fine sheet of water, about two miles and a half in length and nearly one mile in average breadth. It is situated in Glenquaich, a sequestered dell to which the Quaich, a mountain torrent in the parish, gives its name. In this part, however, the scenery is destitute of beauty, the dell possessing no features of interest, and the shores of the lake being little more than a dead swamp. The river *Tay* issues from the north-eastern extremity of the loch of that name, and flowing through the parks of Taymouth, the vale of Tay, part of Strathmore, and by the Carse of Gowrie, falls into the German Ocean below Dundee. Of the numerous cascades formed by the various mountain streams, the principal is the fall of *Acharn*, or the Hermitage, about two miles from the village of Kenmore, and which is strikingly grand. Salmon are found in Loch Tay, and also some way up its two principal feeders, the Dochart and the Lochay; and pike, perch, eels, char, and trout are abundant in both the lakes: the trout in Loch Fraochy, though small, are of excellent quality, and in great request.

The SOIL in general is a light brown loam, with a mixture of clay, and in the hills a light moss; the crops are oats, bear, potatoes, and turnips. The system of agriculture is improving, and considerable progress has been made in draining and inclosing the lands. Some of the farm houses and offices are inferior to others in the country, but those of more recent erection are of very superior character. Much attention is paid to the breeding of cattle, chiefly of the West Highland kind, with a mixture of the Ayrshire; the average number in the parish is more than 3000. The sheep, for which the hills afford excellent pasturage, are mostly the black-faced, and about 12,000 are kept: on the lands of Taymouth are some sheep of the Leicestershire and South-Down breeds. Horses, chiefly for agricultural purposes, are bred by the farmers, but not in any great numbers; the average number of horses kept is 500, and there is about the same number of pigs. The woods of natural growth are oak, birch, common and mountain ash, alder, hazel, cherry, hawthorn, and holly. The plantations are larch and Scotch fir, interspersed with numerous fine specimens of beech, elm, sycamore, lime, and chesnut, and with various other ornamental trees of luxuriant growth, among which are some remarkable cedars, abundance of common and Portugal laurels, cypress, yew, pines, and laburnums. In this parish the substrata consist of mica-slate, of which the rocks are mostly composed, gneiss, clay-slate, &c. Limestone and other stone of peculiarly fine quality, and well adapted for building, are extensively quarried; and a stone of harder grain is obtained from the quarry near Kenmore, and is susceptible of a very high polish. Quartz is also found in large masses in several places, and is wrought for building and other purposes; it is of remarkably white colour, and has been used in the construction of the dairy in Taymouth Park. The annual value of real property in Kenmore is £8266.

The whole of the parish, with the exception of part of Glenquaich, the property of the Misses Campbell of

Shian, belongs to the Marquess of Breadalbane, who has greatly contributed to the improvement of the soil and the embellishment of the district, by the liberal encouragement he has given to his tenantry in draining the lands, and extending the plantations. Under his lordship's patronage, also, the Breadalbane Agricultural Society has effected considerable benefit, by the distribution of premiums annually. *Taymouth Castle*, the seat of the marquess, and formerly the castle of Balloch, of which some remains are incorporated with the present mansion, is a spacious and elegant edifice, beautifully situated on the southern bank of the Tay, and embosomed in woods of almost interminable extent. It is a quadrangular building, with a lofty square tower in the centre of the principal range, rising to a considerable height above the roof of the mansion, and containing a magnificent staircase, which leads to the principal apartments, and is lighted from the roof of the tower, and by windows in the walls, of elegant design, and adorned with stained glass. The great hall, the dining-room, and drawing-room are noble apartments, splendidly fitted up; and the library, which is in part of the old castle, but renewed of late in a most magnificent style, contains an extensive and valuable collection. In the mansion is also a gallery of paintings by the first masters of the Flemish and Italian schools. The grounds are laid out with exquisite taste; and the scenery of the spacious demesne is richly diversified with wood and water, and with every variety of hill and dale in striking combination, the castle forming an object of imposing grandeur in every point of view from which it can be seen. Taymouth Castle was visited by Her Majesty during her tour in Scotland in September 1842. She arrived here on the afternoon of the 7th of that month; and in the evening a singularly magnificent scene presented itself, from the simultaneous kindling of numerous bonfires in the neighbourhood, and the variety of the illuminations on the demesne. On the evening of the 9th, a grand ball was given; and on the following morning Her Majesty took her departure for the town of Crieff, entering her beautiful barge at the village of Kenmore, amid the cheers of the assembled people, and proceeding to Killin by water. *Shian*, the residence of the Misses Campbell, stands on the north bank of the Quaich, about a mile from its influx into Loch Fraochy, and in the glen to which that stream gives name. The village of *Kenmore* is beautifully situated, and the houses neatly built: a post-office has been established, which has a daily delivery of letters from Dunkeld; there is a good inn, and a small library has been opened, promising in due time to be well supported. Kenmore is one of the chief stages, or points, in the tour of Perthshire. The nearest market-town is Crieff, distant as many as twenty-two miles; but facility of intercourse with the neighbouring district is maintained by good roads, branching off from the village in various directions. In the immediate vicinity of the village is a small establishment for the dyeing, spinning, and weaving of wool, which affords employment to twelve or fourteen persons. Fairs are held on the first Tuesday in March, O. S., for horses and general merchandise; on the 28th of June, for wares of all kinds; the 26th of July, for horses and wool; the 17th September, for cattle and agricultural produce; the Friday in November before the festival of St. Donat; and the 22nd of December.

Ecclesiastically the parish is in the presbytery of Wcom, synod of Perth and Stirling, and in the patronage of the Marquess of Breadalbane: the minister's stipend is £253. 14. 9., with a manse, and a glebe valued at £20 per annum. Kenmore church, erected in 1761-2, is a spacious cruciform structure, with a tower at the west end, and is beautifully situated, but at an inconvenient distance from many parts of this very extensive parish; it is adapted for a congregation of 636 persons. There are two chapels of ease, one at Ardeonaig, and the other at Lawers, both erected by the Marquess of Breadalbane, at his own expense, for the accommodation of the more distant parishioners. They are under the patronage of the Society for Propagating Christian Knowledge, by whom, conjointly with the marquess, the salaries of the ministers are paid. The salary of the minister of Ardeonaig is £60 per annum, with seventeen acres and a half of glebe land, and a comfortable residence built by the marquess; the minister of Lawers has £50, with a dwelling-house, and six acres and a quarter of glebe. There is also a place of worship for members of the Free Church; and at Lawers is one for a small congregation of Baptists. Kenmore parochial school affords a useful education; the master has a salary of £34, with £20 fees, and a house and garden. There are three schools endowed by the Society for Propagating Christian Knowledge, situated respectively at Moreinsh, Ardtallanaig, and Shian; the masters have each a salary of £15, paid by the society, with a house and garden given by the Marquess of Breadalbane, in addition to the fees. A school is also carried on at Kiltrie, the teacher of which is paid £10 per annum by the marchioness. The poor have the interest of charitable bequests, producing £56 annually; and the Breadalbane family, by private hospitality, provide for the wants of their poorer tenantry by various distributions of provisions and clothing, and by other donations.

On an island in Loch Tay, near the source of the river, and separated from the main land only by a narrow creek, are the ruins of a priory founded by Alexander I., as a cell to the monastery of Scone: the remains are, however, scarcely perceptible among the wood by which they are overgrown. Sibilla, daughter of Henry I. of England, and consort of the founder, was interred in the chapel of this priory. Coins of the reigns of Edward I. of England, and Alexander III. of Scotland, have been found in a field near Loch Fraochy; they are of silver, in good preservation, and some of them are in the possession of the Marquess of Breadalbane. In making a road from Taymouth to Glenquaich, in 1775, were found some Roman coins of the Antonines, embedded in a substance resembling charcoal; they were also of silver, with the legends in a perfect state.

KENNET, a village, in the parish and county of CLACKMANNAN, $\frac{3}{4}$ of a mile (S. E.) from Clackmannan; containing 238 inhabitants. This is a neat village, lying westward of the high road from Clackmannan to Kincardine, and is one of several villages in the parish, the late increase of whose population is ascribable to the extension of mining operations in their respective neighbourhoods, particularly the working of coal. The mansion of Kennet is beautifully situated on ascending ground which overlooks the Forth, and is about a mile distant from the river; it is more remarkable, however, for its internal elegance than its exterior appearance.

In the village is a very handsome school-house, with a master's dwelling, and a garden attached: the buildings were erected by the Bruce family, by whom the school is endowed. On the shore of the Forth is the hamlet of Kennet-Pans, where is a distillery, and where formerly were salt-works: its harbour affords facility for the shipping of coal.

KENNETHMONT, in the county of ABERDEEN.— See KINNETHMONT.

KENNOWAY, a parish, in the district of KIRKCALDY, county of FIFE; containing, with the village of Baynton, and part of Star, 2044 inhabitants, of whom 1101 are in the village of Kennoway, $3\frac{1}{2}$ miles (E.) from Markinch. This parish, which derives its name from the situation of the village at the head of a small but beautifully romantic glen, is about three miles in length from east to west, and two in breadth from north to south. It comprises about 3750 acres, whereof 3470 are arable, 250 woodland and plantations, and the remainder pasture and waste. The surface, which is gently but irregularly undulated, is diversified with hills and valleys; and the higher grounds command extensive and richly-varied prospects over the adjacent country, comprehending a fine view of the Firth of Forth, with the shipping, the island of May, the Bass Rock, and Inchkeith, the southern coast from Dunbar to Edinburgh, the Lammermoor, and part of the Pentland hills. From the highest eminence in the northern part of the parish, is a more extended prospect, including nearly the whole of the county, with large portions of the counties of Perth, Angus, and Stirling, and the range of the Grampians. The scenery is enlivened by numerous small rivulets that intersect the parish in various directions, and by others flowing along its boundaries. Of these rivulets one, entering the parish near Balnkirk, on the north, after following a circuitous course, passes close to the village of Kennoway, where it meanders through a deep dell, darkened by the foliage that crowns its banks. Issuing from this dell, it receives a tributary stream at Kennoway-Burns, on the south boundary of the parish, whence proceeding about a mile southward, it falls into the river Leven.

The SOIL is fertile, though varying in quality; in some parts light, in others a dry loam, in others a rich loam intermixed with clay, and towards the western extremity of the parish a peat-moss. The crops are wheat, barley, oats, potatoes, turnips, and a few acres of beans. In this parish, as in others, the rotation system of husbandry is generally practised; and through the improvement of the lands by draining, and the abundant use of lime and manures, the crops are greatly superior, both in quantity and quality, to what they formerly were. The cattle reared are in general of the Fifeshire breed, with occasionally a cross of the Teeswater, which produces a stock nearly as forward at three years old as the Fifeshire at four, and which is more easily fattened: the cows for the dairy are all of the native Fifeshire breed. The plantations consist chiefly of larch and Scotch fir, which thrive well, and attain to a considerable growth; and many hard-wood trees have been interspersed, and appear to be adapted to the soil. Great improvements have been made on their respective lands by the various proprietors. The farm-buildings are substantial and commodious, and some have been lately built in a superior style: on most of the farms thresh-

ing-mills have been constructed, some of which are set in motion by steam. The lands are well inclosed with hedges, kept in good order. Among the substrata are freestone and whinstone: the former, of very soft quality, and coarse in its texture, is quarried only on a very limited scale; the whinstone, which is good, is quarried in various parts for building, and for mending the roads. Coal is found in several places, and is worked at Balgrie by J. B. Fernie, Esq., of Kilmux, who, in consequence of the exhaustion of the former mines, which had been in operation for more than sixty years, lately opened a new mine in that part of the parish. The coal lies at a depth of more than fifty fathoms; the vein is nearly six feet in thickness, and of very good quality, affording an ample supply of fuel for the neighbourhood. About fifty persons are employed in the pits, from which the water is drawn off by a steam-engine of forty-eight horse power. The annual value of real property in the parish is £4654. In this parish the seats are, Auchtermairnie, a fine old house, pleasantly situated in a tastefully-embellished demesne; and Kingsdale and Newton Hall, both handsome modern mansions, in grounds ornamented with flourishing plantations.

The village of Kennoway, where the church stands, is neatly built on the banks of the principal stream, which are richly clothed with plantations. The chief employment of the inhabitants is the weaving of linen, in which not fewer than 300 persons are engaged; and several are occupied in spinning and winding yarn. Exclusive of two mills for grinding oats and barley, there are a mill for sawing wood and a mill for spinning tow, driven by water. The principal articles manufactured are dowlas, sheetings, twills, diapers, and Darlington's. For the greater facility of procuring reeds for the use of the weavers, a society has been established in the village, called the Kennoway Reed Society, consisting of 120 persons, who form a proprietary of 200 shares. Fairs are held in April and October; but they are not very numerously attended, and little business is transacted. Intercourse with the neighbouring market-towns of Cupar and Kirkealdy is maintained by good turnpike-roads, and easy communication between the several parts of the parish is afforded by convenient roads in every direction. Kennoway is ecclesiastically in the presbytery of Kirkealdy, synod of Fife, and in the patronage of the Crown: the minister's stipend is £242. 17., with a manse, and a glebe valued at £20 per annum. The church is an ancient structure, displaying some interesting architectural details; it was substantially repaired in 1832, at an expense of £200, and is adapted for a congregation of nearly 500 persons. There are places of worship for members of the United Presbyterian Church and the Free Church. The parochial school affords instruction to about 120 scholars; the master has a salary of £34, with £30 fees, and a house and garden. There are also Sabbath schools, in connexion with which is a juvenile library of 400 volumes. An annual distribution of coal and meal is made among the poor, about the commencement of the year, for which an extraordinary collection is raised at the church. A savings' bank has been established upwards of fifteen years, and still continues in operation.

KEPP, a village, in the parish of KIPPEN, county of PERTH, 2 miles (W.) from Kippen; containing 43 inhabitants. It is about a mile southward of the river

Forth, and on the high road from Kippen to Bucklyvie.

KEPPOCK-HILL, a suburban village, in the former ecclesiastical parish of CAMLACHIE, parish of BARONY, and within the jurisdiction of the city of GLASGOW, county of LANARK, 1½ mile (N.) from Glasgow; containing 235 inhabitants. This place is a precinct of the city of Glasgow, chiefly occupied by hand-loom weavers and labourers.

KERERA, an island, in the parish of KILBRIDE, district of LORN, and county of ARGYLL; containing 187 inhabitants. This isle is situated in the sound of Mull, about eight miles eastward of that island, and one mile from the main land of the district of Lorn, in which direction Kerera contributes to form the excellent and romantic harbour of Lorn. It is four miles in length and two in breadth, and is very mountainous; many of the rocks have a volcanic appearance. Kerera possesses two good harbours, called the Ardintrive and the Horse-Shoe bay. In the latter, Alexander II. anchored a large fleet of 160 galleys, when upon an expedition against the Danes; and here he caught a fever, which obliged him to be removed on shore, where he died on the 8th of July, 1249. The place where his pavilion was erected still bears the name of Dalrigh from this circumstance, signifying "the King's field". On the south point of the island are the ruins of the old Danish fort of Gylen.

KERRYCROY, a village, in the parish of KINGARTH, Isle and county of BUTE, 2¼ miles (S. E. by S.) from Rothesay; containing 97 inhabitants. It lies on the east side of the island, and on the western shore of the Firth of Clyde; and consists of several neatly-built houses at the bay of Seoulag: the coast road from Kilebattan bay to Rothesay passes through it. South of the village, in the demesne of Mountstuart, is a neat church, still in tolerable repair, and at one time used as the parish church.

KETTINS, a parish, in the county of FORFAR; containing, with the villages of Campmuir, Ford of Pitcur, Ley of Hallyburton, and Peatie, 1109 inhabitants, of whom 171 are in the village of Kettins, 1 mile (S. E. by E.) from Cupar-Angus. This parish is situated principally on the south side of the valley of Strathmore, and on the northern declivity of the Sidlaw hills, and measures in length four miles from east to west, and three from north to south, exclusive of the detached portion called Bandirran, in Perthshire, six miles distant to the south-west. It comprises 8238 acres, of which 6130 are arable, 1579 in plantations, 180 uncultivated pasture, and chiefly hilly, and the remainder roads, gardens, &c. The scenery is delightfully picturesque. The whole parish, with slight exceptions, is richly adorned with larch and pine, interspersed with many other trees; and the village of Kettins is pleasantly situated on the banks of a rivulet which, after passing through Cupar-Angus, falls into the Isla, and which, being embosomed in wood, forms a striking and beautiful feature of this interesting locality. In general the soil is light and thin, consisting of a dryish black mould, or siliceous loam, tolerably fertile, and resting on a loose red tilly or gravelly subsoil; but in many parts the land is wet and spongy; and in others there is a considerable portion of strong red clay. Much has been done in the way of draining; and waste land to some extent, on the hills of

Baldowrie, has been reclaimed and brought under cultivation. Great improvements have also taken place in the breed of live stock, promoted by the encouragement of several agricultural associations. The cattle are of the Angus or polled breed, and the Teeswater, with a few of the Ayrshire, and several crosses. The rocks in the parish are of the old red or grey sandstone, except in the southern quarter, towards the Sidlaw hills, where the substrata are much intermixed with trap: several quarries are in operation, supplying an excellent and durable material for building. The annual value of real property in Kettins is £8524.

In this parish the chief mansions are Hallyburton House, Lintrose, Bandirran, Newhall, and Baldowrie, some of which have grounds handsomely laid out, and are ornamented with fine clusters of wood. The village of Kettins is generally admired as a picture of neatness, seclusion, and rural simplicity. The cottages, furnished with pleasing gardens, are clustered round a green, the site of rustic sports and pastimes; and in the immediate vicinity are the mansions of Newhall, Beechwood, and Hallyburton, the whole being shrouded among shady and verdant trees, and enlivened by the course of the silvery rivulet. About fifty persons are employed in the weaving of brown linen, and at Borlands is a small bleachfield. Facilities of intercourse are afforded by the Scottish Midland Junction railway, and the turnpike-road from Dundee to Cupar-Angus: Dundee and Perth are the markets for the sale of the grain raised here; and potatoes are sent in considerable quantities to London. Ecclesiastically the parish is in the presbytery of Meikle, synod of Angus and Mearns, and in the patronage of the Crown: the minister's stipend is £226, with a manse, and a glebe of four acres, valued at £12 per annum. Kettins church was built in 1768. The parochial school affords instruction in the usual branches; the master has a salary of £30, with £32 from other sources, of which £13 are the produce of different bequests for teaching children. Besides several considerable bequests for the benefit of the poor, there is one by the Rev. James Paton, amounting now to £500, for educating one or two girls at the public schools of Dundee. The parish contains the castle of Pitcur, now in ruins, but which once gave the title of baron to the ancient family of Hallyburton, great promoters of the Reformation. At Campmuir are the remains of a camp supposed to be Roman; and at Baldowrie is a Danish monument, six feet high, marked with figures now almost defaced. Prior to the Reformation, the church of Kettins belonged to the Red Friars at Peebles, and had six chapels dependent on it, most of them with small inclosures for burial-places, none of which, however, now remain.

KETTLE, a parish, in the district of CUPAR, county of FIFE; including the villages of Balmalcolm, Bankton-Park, Coalton, and Holekettle-Bridge, and the hamlets of Muirhead and Myreside; and containing 2312 inhabitants, of whom 480 are in the village of Kettle, 6 miles (S. W.) from Cupar. This place derives its name, which in ancient documents is written *Catril* and *Katel*, from its having belonged to the kings of Scotland, by whom it was appropriated to the pasture of the cattle of the royal household; and towards the close of the last century there were, on the lands of Blackdikes, the remains of an ancient building, said to have been the residence of the king's herdsman. The greater portion

of the lands is still the property of the crown, and the rents are duly paid into the exchequer. The PARISH is situated on the river Eden, and is bounded on the north by the parishes of Auchtermuchty and Collessie; on the south by Markinch, Kemnoway, and Leven; on the east by the parish of Ceres and Cults; and on the west by the parish of Falkland. It is about eight miles in length, and three miles at its greatest breadth, forming an irregular area of nine square miles. In some parts the surface is level, and in others rises to a considerable elevation: the lower parts are watered by the Eden, which abounds with red and white trout, pike, and cels; and though in summer its stream is very shallow, yet, from its winding course, and the sluggishness of its current, it sometimes inundates the adjacent lands. To remedy this evil, frequent attempts were long ago made to open a canal of considerable depth, to receive and carry off the superfluous waters; and Mr. Johnstone, in 1783, cut a spacious canal through the extent of his own lands, which materially improved his property; but the neighbouring proprietors not continuing the line through their estates, the evil is but partially removed, and many of the low grounds are still subject to occasional floods.

The SOIL is very various, even in the level lands, part of which are extremely rich and fertile, and others sandy, with moss resting on beds of stiff clay. On the rising grounds are light friable moulds, with a strong clayey soil, which under proper management produces good crops: the more hilly parts of the parish afford excellent pasture, and even to their summits are covered with verdure. The whole number of acres is 6375, the principal portion of which is arable; very little land is in pasture, and the chief plantations comprise not more than 200 acres. A moderate extent of common has been divided, and partly brought into cultivation and partly planted, by which the appearance of the parish is greatly improved. The crops are barley, wheat, oats, potatoes, and turnips, with the usual green crops; the system of husbandry is of a highly advanced kind, and much greater quantities of grain, and of finer quality, than formerly, have been raised of late years, a very considerable portion being now sent to the neighbouring markets. The farm-buildings are substantial and commodious, generally roofed with slate; and all the improvements in agricultural implements have been adopted. Considerable progress has also been made in draining and inclosing the lands; the fences, partly of stone and partly of thorn, are kept in good order. The substratum is mostly limestone, freestone, and fine trap whinstone. The limestone is of excellent quality; it contains, according to an analysis, ninety-eight parts of fine lime in every hundred, and is worked at Forthar quarry, belonging to General Balfour, from whose pits at Balbirnie the kilns are supplied with coal. This quarry affords employment to a considerable number of men; and the produce, after supplying the neighbourhood, is sent to Newburgh, whence it is shipped to Dundee and other places. Coal was formerly wrought at Burnturk, in the parish; but with the exception of a little which is employed in burning lime, it is not now worked. Ironstone is also found, but in small quantities. One of the beds of trap whinstone rises perpendicularly in pentagonal columns from five to seven feet in height; and these, when detached from the quarry, are without further preparation used for gate pillars. There is also a quarry

of trap tuffa, which, from the durability of the stone, and its capability of resisting the action of fire, is admirably adapted for ovens and other purposes subjecting it to intense heat. The annual value of real property in the parish is £8675.

The lands are divided among numerous proprietors; the late Mr. Johnstone, of Lathrisk, built an elegant mansion upon that estate, and there are several other handsome houses, belonging to resident proprietors, which, with the plantations on their demesnes, greatly enliven the scenery. The village of Kettle is pleasantly situated on the south side of the river Eden, and is well inhabited; it is plentifully supplied with provisions of every kind at a moderate price. Many of the inhabitants of the parish are employed in weaving linen, in which, upon an average, 400 hand-looms are engaged; the principal article is dowlas, and about forty looms are occupied in weaving window-blinds. There is also a mill for the manufacture of linen yarn. Facility of intercourse with the neighbouring district is greatly promoted by the line of road forming the thoroughfare from the Firth of Forth to the Firth of Tay, which is continued for four miles through the parish. A post-office has been established in the village, and the Edinburgh, Perth, and Dundee railway has a station here. Ecclesiastically the parish is within the bounds of the presbytery of Cupar, synod of Fife; and the patronage is vested in the Crown. The stipend of the incumbent is £223: the manse, built in 1792, is a substantial and comfortable residence in good repair; and the glebe is valued, with £2. 3. 4. in lieu of pasturage, at £5. 3. 4. per annum. Kettle church, a handsome cruciform edifice in the later English style, with a square tower, was erected in 1834-5, at an expense of £3000, and is adapted for 1200 persons. There are places of worship for members of the Free Church and United Presbyterian Church. The parochial school is under good regulation; the master has a salary of £34, with an excellent house and garden, and the fees, which are very moderate. On the hills of Bowden and Downfield are some remains of ancient encampments; and there are several barrows in the parish, of which two, called respectively Pundlers Know and Lowries Know, are in the grounds of Forthar, and a third, called Lackerstone, in the grounds of Kettle. In the eastern extremity of the parish are some lands called Clatto, formerly the residence of the Seatons, whose predatory excursions are still the subject of traditionary story.

KILARROW or KILAROW, and KILMENY or KILMENZIE, a parish, in the district of ISLAY, county of ARGYLL; containing, with the villages of Bowmore and Bridgend, 5782 inhabitants, of whom 4026 are in the district of Kilarrow. These two ancient parishes, now united, are frequently designated as the parish of Bowmore, from the erection of the new church of Kilarrow in that village. The feuds which had so long subsisted in this quarter between the Macdonalds, lords of the Isles, and the Macleans, of the Mull, terminated about the commencement of the seventeenth century, in the succession of the Campbells of Argyll, whose descendant, W. F. Campbell, Esq., of Islay, is the sole proprietor of the lands. The parish, which is situated on the eastern shore of Loch Indal, is about seventeen miles in length and six in extreme breadth, comprising 49,920 acres, whereof 15,000 acres are arable, a small portion in plantations, and the large remainder rough pasture,

moorland, and waste. Though generally level, the surface is diversified with hills of moderate elevation, covered with heath and fern. The rivers are, the Laggan, which, taking a south-western course, falls into the bay of that name; and the Kilarrow, which empties itself into Loch Indal. There is a salmon-fishery on the Laggan. The soil is various, and on some of the farms rich and fertile. The system of agriculture has been much advanced by the spirited and liberal efforts of the Campbell family; the pasture lands have been improved by surface draining, and large tracts of moor have been reclaimed and brought into cultivation. Furrow draining is also growing into extensive use, a tile-work having been established for that purpose. Great attention is paid to the rearing of sheep and black-cattle, and prizes for the improvement of the breed are awarded by an agricultural society, which has been established here some years. The annual value of real property in the parish is £8888. The plantations are well attended to; the soil appears best adapted to the growth of hard-wood trees. Islay House, the seat of Mr. Campbell, is a handsome mansion, beautifully situated on the north shore of Loch Indal, in grounds tastefully laid out, and embellished with plantations. The villages of Bowmore and Bridgend are described under their own heads.

Kilarrow originally formed part of the parish of Kildalton, from which it was separated in 1767, when Kilmeny was annexed to it. The parish is in the presbytery of Islay and Jura, synod of Argyll; and the minister's stipend is £160, of which two-thirds are paid from the exchequer; with a manse, and a glebe valued at £10 per annum: patron, the Crown. The church is an elegant structure of circular form, with a handsome spire; it was erected in 1767, enlarged by the addition of galleries in 1828, and contains 830 sittings. A church, also, has long existed at Kilmeny (*which see*), about seven miles distant; it is now a separate incumbency, and the minister has a stipend of £120. The parochial school, situated in Bowmore, is a commodious building, erected by Mr. Campbell; the master has a salary of £34, with a house and garden, and the fees average £25 per annum. A parliamentary school has been established at Ballygrant, in the district of Kilmeny, the master of which has a salary of £35; two schools are supported in the parish by the Gaelic Society; and near Bridgend is a female school, supported by Mrs. Campbell, who allows the teacher a house and garden, and a salary of £12. There are various remains of forts, the ancient strongholds of the Macdonalds.

KILBARCHAN, a parish, in the Upper ward of the county of RENFREW; containing, with the village of Linwood and part of Bridge-of-Weir, 5595 inhabitants, of whom 2382 are in the village of Kilbarchan, 5 miles (W. by S.) from Paisley. This place is of considerable antiquity, and derives its name, either from the founder of its ancient church, or from the situation of the church in a vale bounded by hills, of which the Celtic terms *Kil*, *Bar*, *Chan*, are said to be minutely descriptive. The parish is unconnected with any event of historical importance. It is situated nearly in the centre of the county, and is rather more than seven miles in length from east to west, and about two miles in average breadth. Kilbarchan is bounded on the north by the river Gryfe, separating it from the parish of Houston and Kilallan; on the east, by the parish of Renfrew; on

the north-east, by Inchinnan; on the south-east, by the Abbey parish of Paisley; on the north-west, by the parish of Kilmalcolm; and on the south-west by the parish of Lochwinnoch. Its surface is agreeably varied; in the eastern portion, between the rivers Gryfe and Black Cart, generally level; and towards the west and north-west, rising into considerable eminences. The scenery is enriched with thriving plantations, and enlivened with numerous gentlemen's seats and pleasing villas. The Barr hill, extending for nearly a mile to the east of the church, commands some beautiful prospects, that suddenly burst upon the view after an extensive ride through a fine avenue obscured by the thick foliage in which it is embosomed. The Locher, a tributary of the Gryfe, forms various cascades in its progress through the lands, flowing, in several parts of its course, between rocky banks of precipitous elevation, crowned with overhanging plantations of hazel, birch, and mountain-ash.

Of this parish the entire number of acres has been estimated at 9216; the soil in the lower portions is a peat-moss, alternated with a rich loam, and in the upper lands of a gravelly nature. The system of agriculture has been considerably improved, and large portions of unproductive land have been brought into cultivation, by clearing the surface from moss. The cattle are mostly of the Ayrshire breed; the dairy-farms are well managed, and the produce finds a ready market in the neighbouring towns. The horses are principally of the Clydesdale breed. The farm-buildings of later erection are substantial, and in general roofed with slate; the lands are inclosed with fences of stone in the upper, and with hedges of thorn in the lower, parts. Coal is abundant; it has long been wrought, and the produce of the mines is considerable. Limestone of tolerable quality is quarried both for building, and for burning into lime, for which latter purpose part of the coal found here is used. Freestone and greenstone are also quarried; the former is of excellent quality, and the latter is employed for the roads. The annual value of real property in the parish is £17,394. There are numerous handsome houses belonging to resident proprietors, one of the principal of which is Milliken House, a modern mansion, finely seated in an ample demesne tastefully disposed in pleasure-grounds, and embellished with thriving plantations. Glentyan House is a spacious mansion of modern style, situated above the village of Kilbarchan, in grounds commanding some pleasing views: this house, which was built at the commencement of the present century, contains a valuable collection of paintings. Blackstone House is a substantial and well-built mansion, erected about the middle of the last century, on the site of a country-seat of the abbots of Paisley. Craighends is of ancient foundation, with modern additions and improvements, and is beautifully situated on the right bank of the river Gryfe. Clippens House is a handsome villa, erected about twenty or thirty years since, by the late Peter Cochrane, Esq., M.D.

The village is built of freestone from the quarries of Barr hill, and consists of several well-formed streets. There are two public libraries supported by subscription, and a masonic lodge; and the Kilbarchan Agricultural Society hold their annual meetings here, for the distribution of premiums for the most approved specimens of live stock, and for the general improvement of agriculture. The inhabitants are chiefly employed in

the weaving of silk and cotton for the manufacturers of Paisley and Glasgow, in which from 600 to 700 looms are sometimes engaged; and a considerable number of females are occupied in tambour-work, and embroidering the finer muslins. The cotton-mill lately belonging to Messrs. Findlay and Co., at Bridge-of-Weir (*which see*), is an extensive structure, 120 feet in length, thirty-two feet in breadth, and six stories in height, and contains 7000 spindles: in the mill at Barbush, belonging to Messrs. Napier, there are 13,000 spindles at work. In the village of Linwood, of which an account is given under its own head, the cotton manufacture is also carried on to a very considerable extent. On the river Locher, a print and bleach field was established more than half a century ago, but the water of that stream not being sufficient for the purpose, the establishment became considerably reduced: an active company are now engaged at these works as printers. Part of the village of Bridge-of-Weir is within the parish of Houston and Kilallan, on the opposite bank of the river Gryfe, over which is a substantial bridge of stone, connecting the two portions of that village. Communication is maintained by good turnpike-roads; by the Glasgow, Paisley, and Greenock railway, which intersects the eastern extremity of the parish; and the Glasgow, Paisley, and Ayr railway, which passes on the south of the parish. The canal from Johnstone to Glasgow, on which boats ply daily, also affords great facility for the conveyance of goods. A fair is held on the second Tuesday in December, which is a great market for horses; and a cattle-show takes place in the last week in July.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Paisley, synod of Glasgow and Ayr: the minister's stipend is about £294, with a manse, and a glebe worth £32 per annum; patron, Sir William Milliken Napier, Bart. The church was built in 1724, and has been lately repaired; it is a neat structure containing 620 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, and Scottish Baptists. The parochial school is well attended; the master has a salary of £34, with an allowance of £10 in lieu of house and garden, and the fees average £15. 10. per annum. A school is also supported in the village of Linwood, by the proprietors of the cotton factories, for the accommodation of the children of their workmen. About half a mile from Bridge-of-Weir are some remains of the castle of Ranfurly, the ancient seat of the Knox family, from whom descended the celebrated reformer, John Knox. There are also remains of several chapels; and on the farm of Clochoderick (Clach-na-Druid) is a large stone twenty-two feet in length, seventeen feet in breadth, and twelve feet high, supposed to be a Druidical relic, and from which the farm appears to have derived its name. On the Barr hill are the remains of a camp thought to be of Danish origin; and near it are some rocks of greenstone, among which is a recess called Wallace's Seat. Ranfurly Castle gives the titles of Earl and Baron to the family of Knox.

KILBERRY, in the county of ARGYLL.—See KILCALMONELL.

KILBIRNIE, a parish, in the district of CUNNINGHAME, county of AYR, 3 miles (W. by N.) from Beith; containing 2631 inhabitants. It derives its name from

the term *Kil*, signifying a church, chapel, or monastic cell, and *Birnie*, or *Birinus*, the tutelal saint of the parish, the church of which, with the rectorial tithes and revenues, belonged in ancient times to the monastery of Kilwinning, the monks providing a vicar to serve the cure. The parish is situated in the northern extremity of the county, bordering on Renfrewshire, and is of an oblong form, measuring in length from south-east to north-west between seven and eight miles, and about two miles and a half in average breadth. It consists nominally of the three baronies of Kilbirnie, Glengarnock, and Ladyland; and comprises an area of 10,800 acres, of which 1600 are arable, 2800 in cultivated grasslands and meadows, 1270 green-hill pasture, 70 in plantations, and the remainder heath, moss-land, and water. The surface is much diversified in appearance, and is naturally formed into two distinct tracts. Of these, one is wholly arable, and ornamented by the beautiful water of Kilbirnie loch on its eastern limit, and the winding stream of the Garnock running from north to south. The other is marked by hill pastures, bog, and moorland, and has a very irregular surface: it rises first into lofty uplands, and these are succeeded by dreary tracts of moss and heath, and ranges of barren and uninhabited hills, the highest of which, called the hill of Staik, is 1691 feet above the level of the sea, and commands prospects the most extensive, varied, and beautiful. Kilbirnie loch contains trout, perch, roach, pike, and abundance of eels. The Garnock and the Maich, also, are good trout-streams. The former has its source in the hill of Staik, and runs in a south-eastern direction: about a mile and a half from its source it forms a wild and romantic waterfall called the Spout of Garnock, and some miles further down descends along a well-wooded ravine, passes the village, and then pursues its course through the parishes of Dalry and Kilwinning to the sea at Irvine. The Maich runs along the north-eastern boundary of the parish, nearly parallel with the Garnock; and after a course of about five miles in a deep channel, through lonely moorlands, with very little interesting scenery about its banks, except when, like the Garnock, passing one or two favoured spots, it falls into the loch of Kilbirnie.

The *SOIL* comprises several varieties, with numerous modifications and admixtures. In the lower, or southern, part of the parish is a very fertile alluvial loam, which, higher up the Garnock, assumes the character of a rich clayey loam. Towards the east, near Kilbirnie loch, and along part of the Maich, the soil is a light red clay, incumbent on a stiff clayey subsoil. West of the Garnock, clayey loam is again found, and also a tenacious clay mixed with sand, crossed with stripes of meadow land. The soil of the higher ground is a light, dry, and fertile earth, resting on trap and limestone, and well suited to pasture; the moorish uplands consist of mossy tracts lying on clay, much interspersed with pools of stagnant water. The produce comprehends all the usual white and green crops; but wheat is now cultivated only to a very limited extent, the returns for several years having been unsatisfactory, in consequence, principally, of the humidity and coldness of the climate, and the moist retentive nature of the subsoil. The farms vary much in size; those under the plough are from fifty to 180 acres, and the rotation system of husbandry is followed. There is a corn-mill in the parish,

to which all the lands are *thirled*; and fifteen of the farms have threshing-mills. On the lower grounds the inclosures are chiefly ditches and thorn-hedges, while those on the higher grounds and pastures are stone walls; and in addition to the great improvements effected during the present century by liming and draining, some superior farm-houses have been built, with good offices: the old, ill-constructed, thatched tenements, however, are still numerous. The sheep, of which upwards of 2000 are kept, are principally the black-faced, and fed on the moorlands; but a few crosses of various English breeds are to be seen on the arable farms. There are about 550 milch-cows and 600 or 700 head of cattle, mostly of the Cunninghame breed, to the selection of which, and the management of the dairy, much attention is paid: the horses used in husbandry are of the Clydesdale kind. The strata of the parish comprise coal of several descriptions, freestone, limestone, and ironstone. The coal is generally found in moderate-sized basins, and has long been worked. Both freestone and limestone are wrought in abundance; and the ironstone, formerly neglected, is now wrought to a great extent by the Glengarnock Iron Company, who have a number of smelting-furnaces in operation. The annual value of real property in Kilbirnie is £7678.

The plantations were chiefly formed in the early part of the present century; but they are of little interest: there are a few fine old trees in the vicinity of Kilbirnie House and the mansion of Ladyland. Kilbirnie House, sometimes called the Place of Kilbirnie, is situated a mile westward of the village, and embraces fine views of the vale of Kilbirnie loch and the river Garnock, with the country beyond. It consists of an ancient quadrilateral tower, and a modern addition built about 1627, extending at right angles from its eastern side, the whole forming a large commanding edifice. The structure was accidentally destroyed by fire in the year 1757, leaving a ruin which time has since been gradually desolating; and all the beautiful wood that once surrounded it, with the ornamental grounds and approaches, have nearly disappeared. The old house of Ladyland, with the exception of a small portion, was demolished in 1815; and in the following year, an elegant and spacious mansion was built by the proprietor, which is situated on a gentle eminence, and adorned with some thriving plantations, intermixed with fine old trees. The village consists principally of a long street lying along the right bank of the river Garnock, and a shorter one extending westward from its upper end. Its general appearance is neat, clean, and interesting: many of the houses, which are of a light-coloured freestone, have been but lately built; and the population, now amounting to 1500 or 1600, has been doubled within the last thirty years, through the progress of manufactures in the locality. The houses are mostly lighted with gas, procured partly from a power-loom manufactory, and partly from the gas-work of Mr. John Allan, erected at his own expense, and capable of supplying half the village.

In the beginning of the present century, a small cotton factory was established, which, being burnt down in 1831, was rebuilt on an enlarged scale. This establishment, in 1834, was sold to a Glasgow merchant, who converted it into a spinning power-loom manufactory, on an extensive footing; the machinery is driven by two steam-engines, and the works employ altogether

350 persons. In 1834, also, a mill was erected for the spinning of flax; the machinery is impelled by steam-power, and the works employ 150 hands. On the opposite side of the river is a bleachfield, in full operation, where about 140,000lb. of linen thread-yarn are annually bleached for the manufacturers of Beith, besides which, 90,000lb. of coloured thread are finished; the whole engaging from ninety to 100 hands. The proprietors have lately erected, near these works, a mill for spinning flax. About 160 hand-loom weavers, also, reside at Kilbirnie, who are engaged in the usual kinds of work given by the Glasgow and Paisley manufacturers; and 150 females are occupied in ornamental work on muslin. A rope-work is likewise in operation, employing twenty men and boys; the produce is chiefly sold at Paisley. A sub-post office in the village communicates with Beith twice a day; the turnpike-road from Dalry to Lochwinnoch runs in a north-eastern direction across the lower part of the parish, and another, to Largs, intersects it on the west. There are also two good parish roads, and several bridges, opening up easy communication in every direction. The Glasgow and Ayr railway proceeds to the south, on the eastern verge of Kilbirnie loch, where the line attains its summit level, which is seventy feet above the Glasgow terminus, and nineteen miles from that station; it then continues its course on the east of the Garnock river. Near the northern extremity of the loch is the Beith station on the line, and near the southern extremity the Kilbirnie station. The coke furnaces of the railway company, employed in manufacturing the coke consumed by the locomotives, are situated at Kilbirnie. The agricultural produce of the parish is disposed of at Paisley, Glasgow, and several neighbouring places. A fair called Brinnan's, a term corrupted from St. Brandane, the apostle of the Orkneys, is held on the third Wednesday in May, O. S., and being the largest horse-market in the west of Scotland, is attended by a great concourse of people. Coopers' work and culinary utensils are also sold at it in great quantities, and general business is transacted extensively. A fair held on the first Tuesday in July, and one on the last Tuesday in October, have dwindled away.

Ecclesiastically the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of the Earl of Eglinton: the minister's stipend is £193, with a manse, and a glebe of nearly nine acres, valued at £18 per annum. Kilbirnie church, situated about half a mile south of the village, is one of the most ancient in the west of Scotland, the body of it having been built a considerable time before the Reformation. An aisle, called the Glengarnock aisle, bears the date of 1597; but it is considered to be a much more recent addition. The most modern part of the structure is the Craufurd gallery, erected opposite to the aisle in 1654 by Sir John Craufurd, according to an inscription in relief over one of the windows. The church has long been an object of interest to the antiquary on account of the rich carvings in oak, profusely displayed on the gallery and on the pulpit: the gallery also exhibits the armorial bearings of twelve of the ancestors of John, first Viscount Garnock, by whose order the edifice was repaired, and the ornamental work executed, about the year 1700. In the churchyard is the tomb of Captain Thomas Craufurd, of Jordanhill, who performed the remarkable exploit of storming the castle of Dumbarton in 1571: the

monument, built of sandstone, is nine feet long and six wide, and through an aperture in the east end are faintly seen the recumbent effigies of the captain in a military garb, and of his lady in the costume of the times. There is a place of worship in the village for the Reformed Presbytery; and the members of the Free Church, also, have a place of worship. The parochial school affords instruction in Latin, Greek, practical mathematics, and book-keeping, in addition to the usual branches; the master has a salary of £25. 13. 4., with a school-house and dwelling, erected in 1823, two acres of land, and about £42 fees. A subscription library was established in 1820, and now contains upwards of 500 volumes. A society was instituted a few years since for granting relief in sickness, called "the Kilbirnie Gardeners' Society"; it has above 100 members, and £100 stock. The chief relic of antiquity is the ruin of Glengarnock Castle, situated on a precipitous ridge overhanging the river Garnock, about two miles north of Kilbirnie. The date of the erection of this extensive fortification is uncertain; but it is conjectured to have existed in the time of the de Morevilles.

KILBRANDON with KILCHATTAN, a parish, in the district of LORN, county of ARGYLL, 14 miles (S. by W.) from Oban; containing 2602 inhabitants. In ancient times there were four churches or chapels within the boundaries of this parish, dedicated respectively to St. Brenan or Brandon, St. Cattan, St. Bride or Bridget, and St. Coan. The two first names have been retained, and are now, with the common prefix *Kil*, the proper designation of the parish, though the natives usually adopt the term Cuan, on account of the proximity of the church to the sound of Cuan. The parish is situated in that part of the country styled Nether Lorn, and consists of a portion of the main land, and of a group of islands, of which those of Seil, Luìng, Easdale, Torsay, and Shuna are inhabited. The whole measures between ten and eleven miles in length, from north to south; and the extreme breadth, from east to west, is six miles, including the sound of Kilbrandon. The mainland portion is four miles long and two broad, and is washed on its south-eastern boundary by Loch Melfort, and on the west by the sound of Kilbrandon, at the northern extremity of which is the spacious bay of Ardmaddy, formed by the receding of the shore. The island of *Seil*, also four miles long and two broad, is separated from the parish of Kilninver and Kilmelfort, on the north-east, by the sound of Clachan, a shallow and very narrow channel, in some places nearly dry at low water, and over which a bridge was built towards the end of the last century. Southward of the island of *Seil*, and divided from it only by the sound of Cuan, is the island of *Luìng*, extending six miles from north to south, and two from east to west; and on the east of *Luìng* is the island of *Shuna*, measuring two miles and a half by one mile and a half, and separated by a narrow strait of its own name. Each of the other islands is less than a square mile in extent: *Torsay*, almost wholly arable, lies on the east of the northern division of *Luìng*, and *Easdale*, celebrated for its fine slate-quarries, a little to the west of *Seil*. The sound of Jura runs on the south and south-west of the parish, and the sound of Mull on the north-west, exposing it to the impetuosity of the Atlantic. The coast on the east side of the islands of *Seil* and *Luìng*, which constitute the chief portion of the

parish is low, and marked by numerous bays, affording a secure retreat and good anchorage in stormy weather: the bays of Blackmill and Toberonehy in Luìng, and Balvicar in Seil, are the most considerable. On the west, however, are bold and lofty rocks, especially about Easdale; they form a striking feature, and supply an important barrier against the fury of the ocean.

The surface of the main land is chiefly hilly, and covered with pasture; some of the ridges rise from 600 to 800 feet above the level of the sea. In Luìng the surface is mostly level; but Seil consists to a great extent of a series of undulations, interspersed with fertile slopes, rich dells, and pleasant valleys. In both the isles the soil is tolerably good, and suited to all kinds of crops; but the crops are frequently spoiled through the moisture and variableness of the climate. The agricultural character of the parish has been much improved within the last few years, by draining, the reclaiming of waste land, and the introduction of a superior method of cultivation. The rotation system is in operation; the six-shift course is preferred for the larger farms, a five-shift for farms of moderate extent, and a four-shift for crofts. The Marquess of Breadalbane, to whom about three-fourths of the parish belong, has adopted regulations for the protection, comfort, and independence of the cottars, and affords his patronage to an agricultural society established on his property about the year 1838. Premiums are awarded for the best black-cattle and sheep, to the rearing of which considerable attention is paid; the former are of the West Highland breed, and in general of an excellent description, and the latter the native black-faced, but not so fine as the cattle. Prizes are also given to the most expert ploughmen, and for the best-kept horses and harness, as well as to those cottars who manage their gardens in a superior manner; and the cultivation of turnips, especially, has been much improved under the same auspices. The strata of the parish are chiefly of the schistose formation; and the fine durable slate quarried here for nearly two centuries, has conferred great and well deserved celebrity on the district. Though this material is procured at Balvicar in Seil, and at two places in Luìng, yet the principal seat of operations is Easdale, where one of the quarries is 120 feet below the level of the sea; the number of men employed at the different works averages 200, and they raise between four and five millions of slates yearly. Indications of lead-ore and zinc have been observed in Luìng and Seil; and there is a marble-quarry near Ard-maddy, which was formerly worked. The annual value of real property in the parish is £4928.

Ardmaddy Castle, the property and occasional residence of the Marquess of Breadalbane, is situated on the main land, at the head of the bay of the same name, and commands extensive prospects both of sea and land. It is an ancient structure, and was once the residence of a branch of the Mc Dougalls. In the reign of Charles II., and of his successor James, it was occupied by Lord Niel Campbell, brother of the Earl of Argyll, who made additions to the edifice, and whose initials, with those of his lady, may be seen, cut in stone, with the date 1676. The only other mansion, situated at Ardincaple, was built at the close of the last century. In the parish are five villages, namely, Easdale, on the sound of Easdale, which is the largest village; Balvicar, in Seil; and Toberonehy, Millbay, and Colipool, in Luìng; all built

in the neighbourhood of slate-quarries. The village of Easdale, including that portion of it which is situated on the Seil side of the sound, and called Eilean-na-beithe, "isle of birch", contains several hundred persons; most of the houses are neatly constructed, one story high, and covered with slate. A few persons in the parish are engaged in the herring-fishery: in May and June considerable number of herrings are caught with the fly, and they usually fetch a high price. Attempts have been made, under the patronage of the principal proprietor, to introduce cod and ling fishing. Easdale contains a post-office, which communicates daily with Oban. The steam-vessels plying between Glasgow and the ports in the north pass along the sound of Easdale, and touch at its harbour; and the coal used by the quarry-men is obtained from Glasgow: the farmers mostly burn peat. The means of communication with the interior are also easy, on account of the number of ferries and roads; the road from Oban enters the parish from the north-east, at Clachan bridge, and passes through the centre of Seil and Luìng.

Ecclesiastically the parish is in the presbytery of Lorn, synod of Argyll, and in the alternate patronage of the Duke of Argyll and the Marquess of Breadalbane. The stipend is the minimum, £14 of which are annually paid out of the exchequer; there is a manse, with a glebe valued at £15 per annum. The church, which is more than a hundred years old, was repaired and enlarged in 1816, and accommodates about 600 persons; it is situated at the south end of the island of Seil, and it is necessary for all the parishioners who attend, except those dwelling in the island, to cross one or more ferries on their journey. The members of the Free Church and the Reformed Presbyterians have places of worship. A parochial school is established in Kilbrandon, and another at Luìng; the ordinary branches of education are taught, with Latin, mathematics, and navigation, if required. The master of the Kilbrandon school, who resides at Seil, has the maximum salary, with a house and garden, and £26 fees; and the other master, £25 per annum, with the same amount in fees, and a garden. A school is supported at Easdale by the Society for Propagating Christian Knowledge, the master receiving a salary of £15. There are several schools partially supported by the proprietors of estates in the respective localities, and others entirely dependent on fees. The scholars of all are eligible to join in a public competition, at which prizes are awarded by the liberality of the Marquess of Breadalbane: the competition has not been held invariably every year, but it is hoped that in future it will be annually observed.

KILBRIDE, county of ARGYLL.—Sec KILMORE.

KILBRIDE, a parish, in the island of ARRAN, county of BUTE, 20 miles (S. W. by W.) from Saltcoats; containing, with the villages of Brodieck and Corrie, 2786 inhabitants, of whom 271 are in the village, or kirktown, of Kilbride, called also Lamlash from its situation on the bay of that name. This parish, which derives its name from the dedication of its ancient church to St. Bridget or Bride, was the scene of some interesting events during the wars with England that originated in the disputed succession to the Scottish throne, after the death of Alexander III. In 1306, Robert Bruce, who during his reverses of fortune had remained for some time in concealment in Ireland, landed

on the Isle of Arran with a small fleet, and being joined by Sir James Douglas and others of his adherents, assaulted and reduced the castle of Brodick, which was then held by Sir John Hastings for Edward I. of England. Upon this occasion, Bruce, in recompense of their important services, conferred upon his friends many of the lands of Arran, which, however, long since passed from their descendants, and are now the property of the Duke of Hamilton. The island of Arran, which at that time was thickly wooded, became a favourite resort of the Scottish kings, for pursuing the diversion of the chase; and the castle of Loch Ranza, the remains of which denote its former magnificence, was erected as a hunting-seat by one of the Stuarts, prior to the year 1380.

In 1544, the castle of Brodick was demolished by the Earl of Lennox, whom Henry VIII. of England had sent with an expedition against the west coast of Scotland, this being one of the king's warlike measures to punish the Scots for their refusal to concur in the proposed alliance of Mary of Scotland with Prince Edward, afterwards King of England. Some years subsequently, the Earl of Sussex, lord lieutenant of Ireland, who had landed with a considerable force in Cantyre, then in the possession of the Macdonalds, to retaliate the frequent incursions of the islanders into the north of Ireland, sailed to the bay of Brodick, and laid waste the adjacent country. In 1651, the castle of Brodick was garrisoned by Cromwell, who also repaired the fortifications, and erected an additional bastion; but the garrison, who had rendered themselves obnoxious to the inhabitants, were surprised while on a foraging party, and put to the sword. The remains of this fortress are considerable, though, from its frequent demolition, but little of its ancient character is preserved. The Duchess of Hamilton, more than a century since, made a large addition to the buildings; and within the last few years, extensive repairs and additions have been effected. In February 1845, a few weeks after the principal tower had been completed, that portion of the structure fell down; but it was soon afterwards rebuilt, with every precaution taken to prevent a similar accident. The castle is now called Arran House, and is the principal residence, especially during the summer, of the Marquess and Marchioness of Douglas.

The PARISH, which occupies nearly one-half of the Isle of Arran, is bounded on the east by the Firth of Clyde, and on the west by a range of mountains separating it from the parish of Kilmorie, which forms the remainder of the island. It is about twenty-two miles in extreme length from north to south, varying from two miles to four and a half in breadth; and comprises an area of 42,000 acres, of which nearly 6000 are arable, 900 woodland and plantations, and the remainder hill pasture, moorland, and waste. The surface is strikingly varied with hills and mountains, interspersed with deep and narrow glens of picturesque character; and the scenery abounds with features either of wild magnificence and majestic grandeur, or of romantic beauty. The hills, from the southern boundary of the parish to the bay of Brodick, rise gradually in gentle undulations to a height of 800 feet, and are covered to their summits with grass and heath. Towards Loch Ranza, near the northern boundary, however, they rise precipitously in rugged masses of barren rock, the highest of which, *Goatfell*, has an elevation of nearly 3000 feet above the level of the

sea. The glens, the principal of which are Glen-Rosa, Glensherag, Glenshant, Glen-Sannox, Glencloy, and Ashdale, are watered by their respective rivers, flowing between narrow banks of mountainous acclivity that darken their stream: the river of Ashdale, obstructed in its course by masses of rock, forms two romantic cascades, falling respectively 100 and 50 feet from ledges of columnar basalt. These rivers, which, in their progress through the glens, receive numerous tributary streams, abound with trout and eels of small size; and when swollen with rains in summer, salmon and sea-trout ascend in considerable numbers. The only lake belonging to the parish is *Loch Urie*, on the hill of Urie; it is of small extent. Springs of the purest water, issuing from the rocks, occur in many parts; and there are some springs impregnated with iron and other minerals.

The whole extent of the SEA-COAST, except where it is indented with bays, is guarded by a ledge of rude cliffs and rugged precipices, between which and the sea is a narrow tract of level land. These rocks are in many places clothed with ivy, and interspersed with hirsch, ash, oak, and brushwood. On the eastern shore are the bays of Lamlash and Brodick. That of *Lamlash* is a fine circular haven, about three miles in length, of sufficient depth to afford safe anchorage to a large fleet of vessels of any burthen, and surrounded with a fine sandy beach. The entrance to this bay is by two inlets at the extremities of the island of Lamlash, or the Holy Isle, which lies in front of it, a picturesque island of conical form, rising to a height of 900 feet above the level of the sea. A quay was formed here by the Duchess of Hamilton, at a cost of nearly £3000; but the materials were, from time to time, removed for building the village at the head of the bay, and the loss is now severely felt. The bay of *Brodick*, to the north of Lamlash, is about two miles in length, and of considerable depth; and at the northern extremity are the remains of the ancient castle, now Arran House, the residence of the Duke of Hamilton's eldest son. To the south of Lamlash is *Whiting* bay, of smaller dimensions, but the shores of which present much interesting scenery; and to the north of Brodick is the bay of Corrie, where is a small harbour. There is also a good harbour at Loch Ranza, on the north-west. The sea abounds with various kinds of fish; the most numerous kinds are whiting and haddock, but cod, ling, mackerel, conger-eels, skate, flounders, soles, and turbot are likewise taken in considerable quantities. Lobsters, crabs, and other varieties of shell-fish are also to be obtained on every part of the coast; oysters are found only at Loch Ranza. Herrings occasionally visit the coast, but in greater numbers on the north and west sides of the island.

The SOIL of the cultivated lands is generally light. In the valleys the soil is extremely various; in some places, little more than sand; and in others, a fine alluvial loam, and moss and marsh converted by draining and manure into rich black loam, more or less interspersed with gravel. The crops raised in the parish are oats, barley, beans, peas, potatoes, and turnips, with a few acres of flax. The system of husbandry has been greatly improved under the encouragement of the principal proprietor, and by the stimulus of a farming association which awards prizes for the best specimens of stock and rural management. The lands have been well drained and inclosed; the farm houses and offices are generally

substantial and commodious; and the various recent improvements in the construction of agricultural implements have been introduced. On the hills there is good pasturage for the numerous flocks of sheep, which are of the black-faced breed, with a few of the Cheviot and Merino on the lower grounds. The cattle are mostly of the Argyllshire Highland breed, to the improvement of which much attention has been paid. Ayrshire cows are kept on the dairy-farms, which are well managed; and the butter and cheese produced here are equal to what is made in the best districts of Ayrshire. There are some remains of the ancient woods, which were very extensive. The plantations round the castle of Brodiek, near the bay of Lamlash, and at Kilmichael, which last are of very recent date, consist of larch, Scotch spruce, and silver firs, oak, ash, elm, sycamore, and birch, and are in a thriving condition. The annual value of real property in the parish is £4548.

The geology of the district is in the highest degree interesting, exhibiting within a small compass a kind of epitome of the mineral structure of Scotland. There are granite, trap, porphyry, and porphyritic clay-stone; and rock crystals of almost every variety are found: the substrata also comprise sandstone, clay-slate, limestone, ironstone, and coal, which last is found near the Coek of Arran. There are quarries of limestone and freestone near Corrie. An attempt was once made to work the coal, but for some reason it was abandoned; and a slate-quarry in the neighbourhood was for a time in operation. At Sannox is a quarry of barytes, the proprietor of which has erected a large mill for pulverizing the mineral, and extracting the sulphate, which obtains a high price in the market. The ironstone, though abundant, is not wrought. The whole of the parish, with the exception only of the farm of Kilmichael, belonging to John Fullarton, Esq., who resides on his estate, is the property of the Duke of Hamilton. The village of Lamlash consists chiefly of a few rural cottages and some shops, and, during the summer, is the resort of visitors for sea-bathing: there are three good inns. A small fair is held at Lamlash, about the commencement of winter, principally for horses, but it is not much frequented; and there is also a fair at Brodiek, for cattle, horses, and wool, held in the last week of June, and numerously attended. Two branch offices in the parish, under the post-office of Saltcoats, have daily deliveries. Facility of communication is afforded by good roads in various directions, and by steamers which frequent the bay, plying in summer daily, and in winter twice a week, between Arran and Ardrossan, and also twice in the week between Arran and Glasgow from the beginning of June till the end of September.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Cantyre, synod of Argyll. The minister's stipend is £259, with a manse, and a glebe valued at £20 per annum; patron, the Duke of Hamilton. Kilbride church, situated on the shore of the bay of Lamlash, was erected in 1773; it is a plain structure, without either tower or spire, and contains 560 sittings. A chapel in connexion with the Established Church was erected at Loch Ranza, about the year 1782, by the Duke of Hamilton, for the accommodation of both the parishes of Arran; it contains sittings for 400 persons. The minister has a stipend of £41, arising from an endowment by the Duchess of Hamilton. A church

was erected at Brodiek in 1839, at an expense of £850, of which £100 were given by the duke, £167. 15. by the extension committee of the General Assembly, and the remainder raised by subscription; it is now occupied by the Free Church of Scotland, the missionary or assistant minister who officiated in it having seceded at the time of the Disruption in 1843. The salary of the parochial school is divided among four teachers, one of whom, at Lamlash, has £19; one at Brodiek £16; one at Corrie £4; and the fourth, at Loch Ranza, £6, with nearly an equal sum from the parish of Kilmorie, to which that school is open. The masters have each a house and garden, rent-free, from the Duke of Hamilton, in addition to their fees, which vary from £14 to £5 per annum. There is also a school at Whiting bay, to the master of which a salary of £25 is paid by the General Assembly. A parochial library, established in 1824, and having now a collection of more than 300 volumes, is supported by subscription.

There are some remains of Druidical circles; and several have been destroyed at different times, to furnish materials for building. Near the manse are two sepulchral cairns; and at the head of Moniemore glen, is one more than 200 feet in circumference at the base, on the removal of part of which stone coffins were found. Similar coffins have been found in various places, containing human bones; and in one of them was a piece of gold, supposed to have been part of the guard of an ancient sword. The Holy Isle, at the entrance of Lamlash bay, was the solitary retreat of St. Molios, a disciple of St. Columba, who, for greater seclusion, is said to have removed from Iona to this place, whence he diffused the light of Christianity among the pagan inhabitants of Arran. The cave that was his abode was hewn in a sandstone rock; and in the roof is a Runic inscription, setting forth his name and office. A monastery was afterwards founded on the island, the ruins of which were visible in 1594: the cause of its abandonment was the loss of a vessel, conveying a number of people attending a corpse for interment in its cemetery, which was distinguished by various rude tombstones till within the last ten years, when they were removed. In Gleneloy were till lately the remains of the ancient chapel of Kilmichael; and at Sannox was a church, the only vestige of which now remaining is a rude figure of its patron saint, built up in the wall of the cemetery, which is still used.

KILBRIDE, EAST, a parish, in the Middle ward of the county of LANARK; containing 3810 inhabitants, of whom 926 are in the village, 8 miles (S. S. E.) from Glasgow. This place, distinguished by its allix *East* from West Kilbride in the county of Ayr, and including the ancient parish of Torrance, is of great antiquity, and once formed part of the see of Glasgow, to which the original grant was confirmed by a bull of Pope Alexander III., in 1178, and by some of his successors. A castle was erected here by Robert de Valnois, about the year 1182; and previously to the reign of Robert Bruce, nearly two-thirds of the lands belonged to the family of Cummin, in whose hands they remained till 1382, when, on their forfeiture by John Cummin, they were granted by that monarch to John Lindsay, of Dunrode, as a reward for his fidelity. The lands of Calderwood were the property of the Maxwell family in the reign of Alexander III., and are still in the possession of their descendant, Sir William A. Maxwell, Bart. Those of Torrance be-

longed to Sir William Stuart, who, in 1398, was one of the sureties on the part of Scotland for the peace of the western marches, and whose representative, Miss Stuart of Torrance, is the present proprietor. During the prevalence of the plague in Glasgow, the inhabitants of this neighbourhood used to deposit the produce with which they supplied the city, at a spot on the old Glasgow road, about a mile and a half northward of the parish : to this spot the citizens resorted as a temporary market, and it has since retained the name of the Market Hill.

The PARISH takes its name from the dedication of the church to St. Bride or Bridget. It is about ten miles in length, and varies from two to five miles in breadth, comprising an area of 22,786 acres, of which almost 18,000 are arable, and the remainder chiefly peat-moss and moorland, affording tolerable pasturage for sheep. The surface is greatly diversified with hills, from 200 to 1600 feet above the level of the sea. The lower lands are watered by various streams, the principal of which is the *Calder*, flowing for nearly seven miles along the eastern boundary of the parish ; the scenery on its banks, at Torrance and at Calderwood, is richly diversified, and near Calderwood House the river forms a beautifully picturesque cascade. The *Powmillon* has its rise in the south-eastern confines of the parish, and after a course of about two miles, runs into the parish of Avondale, and thence into the river Avon. The *Kittock* has its source in the northern portion of the parish, in a marsh about two miles from the village of Kilbride, and after a winding course falls into the river Cart near Busby. The *Cart*, after bounding the parish for four miles on the north-west, flows into the parish of Carmunnock near the village of Jackton.

The SOIL is chiefly a stiff wet clay ; it has been rendered more fertile by tile-draining within the last few years, and considerable improvement has been made in the system of agriculture. The crops are oats, barley, potatoes, and turnips ; but the principal reliance is on the dairy-farms, which have been greatly increased, and are under excellent management : their produce is sent to Glasgow, principally in butter and milk, many of the farmers sending about a cart-load every day during the summer. Much attention is paid to the treatment of the milch-cows, which are of the Ayrshire breed ; and considerable improvement has been made in the breed of cattle generally, under the encouragement of an agricultural society established in 1816, which holds an annual meeting here on the second Friday in June, when a cattle-show takes place. Numbers of sheep, also, are pastured on the hills and moors. The lands have been partly inclosed ; and the farm-buildings have been rendered much more commodious than formerly, and are still improving. The plantations are almost confined to the grounds of Torrance and Calderwood, and the lands belonging to Glasgow College. Around most of the farm-houses, however, even in the more exposed situations, are large trees of various kinds, the favourable growth of which is attributed to especial care in the preparation of the soil by draining previously to planting, and to their protection from early injury by the cattle. It is thought that the subdivision of property has alone operated as an obstacle to the increase of plantations throughout the parish. Coal, ironstone, and limestone are abundant : the coal was formerly wrought, but being of inferior quality, the works have been discon-

tinued, and a better supply is now obtained from the collieries in the neighbouring parishes. The ironstone, which is of a good kind, is wrought by the Clyde Iron Company, who employ about eighty men in their works in the parish. The limestone, which occurs in beds varying from three to ten feet in thickness, and much intermingled with seams of greenstone, is also extensively quarried, and burnt into lime for agricultural use. Freestone is found in several parts ; clay of good quality for tiles is also abundant, and Roman cement is made in considerable quantities. The annual value of real property in the parish is £24,190.

Torrance House is a spacious ancient mansion, with modern additions of various dates : in front are the arms of Scotland on a stone removed from the old castle of Mains by Colonel Stuart. It is beautifully situated, and the grounds are embellished with thriving plantations. *Calderwood House* is an elegant mansion, of a castellated form, to which some very tasteful additions have been made ; the demesne is richly planted, and the grounds command a fine view of the fall of the river Calder, and comprise much beautiful scenery. *Lawmoor* is a neat modern house, pleasantly situated ; and *Crossbasket* is a handsome residence, principally of modern character. *Kirkton Holm* is now in a dilapidated condition, and occupied by a number of families as tenants. *Cleughorn Lodge* is a good residence. There are several villages in the parish, namely, Kirkton or East Kilbride, Maxwellton, part of Busby, and the smaller hamlets of Aldhouse, Jackton, Braehead, Kittockside, and Nerston. *East Kilbride* was constituted a burgh of barony in the reign of Queen Anne, and had a charter for a weekly market on Tuesday, and four annual fairs. The market has, however, been discontinued many years ; and of the fairs, the only one that is still observed is held on the second Friday in June, for the sale of cattle and sheep. The village is pleasantly situated near the river Kittock, and is somewhat compact. A subscription library has been established in it, and it has a post-office subordinate to that of Glasgow, with a daily delivery. The cotton manufacture is carried on to a considerable extent, affording employment to about 300 of the inhabitants. A savings' bank has been instituted in connexion with the Glasgow National-Security Savings' Bank. Facility of communication is afforded to the inhabitants of the parish by the road from Glasgow to Strathaven, which passes through the village, and for nearly five miles through the parish ; and by other roads kept in good repair, one of which runs from the village to Eaglesham, and another from Busby to Carmunnock. At the southern boundary of Torrance is a bridge over the river Calder, leading to the parish of Glassford.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. The minister's stipend is £280. 8., with a manse, and a glebe valued at £18 per annum ; patron, the Crown. Kilbride church, which is situated in the village, is a plain neat structure, with a tower surmounted by a spire ; it was erected about 1774, and contains 913 sittings, which number, if the whole of the interior were rendered available, might be increased to 1200. There are places of worship for the Free Church and the United Presbyterian Church. The parochial school is at the village of Kilbride, and has branches at Aldhouse and Jackton ; the master receives a salary of

£34, and the fees average about £40 per annum. The master of the branch school at Aldhouse has a salary of £8, with a house rent-free, and the master at Jackton a salary of £8, without a house, the residue of their income being made up by the fees. There is also a very efficient school at Maxwellton, supported by Sir William Maxwell. A parochial library has been established, which has a good collection of volumes; and several friendly societies have tended materially to diminish applications for parochial aid. Near Kittockside were some remains of two fortifications, situated respectively on *Castle Hill* and *Rough Hill*, about 200 yards distant from each other; but the stones of both have been long removed, and the site of the former planted with trees. Near the latter, an ancient stone celt was found, six inches and a half in length and three inches in breadth, formed of a coarse kind of ironstone. About a mile northward of the church are the ruins of *Mains Castle*, the once stately baronial residence of the Cummins, and the Lindsays of Dunrode; and the same distance southward of the village, was the castle of *Lickprivick*, of which nothing remains except the mound near its site. There were also several cairns formerly in the parish, among which was *Herlaw*, where urns with fragments of human bones were discovered. One near Mains Castle was remarkable for having at the base a circle of flagstones, set on their edges, and sloping outwards; but the stones were long since removed. Dr. William Hunter, the eminent physician, and his brother, John Hunter, the distinguished surgeon and anatomist, both of whom were at the head of their profession in London, were born at Long Calderwood, in the parish.

KILBRIDE, WEST, a parish, in the district of CUNNINGHAME, county of AYR, $5\frac{1}{2}$ miles (N. W. by W.) from Saltecoats; containing 1885 inhabitants. This place derives its name from the dedication of its church (anciently an appendage of the monastery of Kilwinning) to St. Bride, a virgin occupying a distinguished rank in the Scottish calendar. In 1263, it was the scene of a severe conflict with a party of Norwegians that had made a descent on the coast of Largs under Haaco, who was here attacked and defeated by a body of Scottish forces commanded by Sir Robert Boyd, ancestor of the Kilmarnock family. As a reward for his conduct in this instance, Boyd obtained a grant of land in Cunninghame; and his services as the firm adherent of Bruce procured him the lands of Kilbride and Ardneil, in this parish. The PARISH is advantageously situated on a peninsular projection in the Firth of Clyde, below the Cumbray islands, the smaller of which, for all ecclesiastical purposes, is included within its limits. It is six miles in length and two and a half in average breadth, and comprises about 11,000 acres, of which 7500 are arable, and 3000 pasture and waste. The surface is diversified with hills forming part of the continued chain of the Renfrewshire range, and the highest of which within the parish, called *Kame Hill*, has an elevation of nearly 1000 feet above the level of the sea. There are also many hills of smaller elevation, partly cultivated, and some nearly to their summit; and others in detached situations, the chief of which are *Law*, *Ardneil*, and *Tarbert*. The coast is low, consisting of shelving rocks of sandstone, with the exception of the promontory of *Portincross*, which is precipitous, terminating in a point called *Ardneil Bank*, or *Goldberrie Head*. The sands of *Southanan* extend

for two miles in the north of the parish. Immediately to the south of them, the coast for nearly a mile is formed of the promontory, a wall of rock rising to the height of 300 feet, and separated from the sea only by a narrow slip of verdant land. This majestic rampart, whose base is thickly studded with coppice wood interwoven with oak, ash, hazel, and hawthorn, has a romantic grandeur of appearance as seen from the water: three detached cliffs that rise above the general height have obtained the appellation of the *Three Sisters*. To the south of the promontory is the bay of *Ardneil*, of semicircular form, the shores of which, a fine compact sand, afford a delightful promenade, with every facility for bathing, for which this part of the coast is peculiarly adapted. The *Gourock*, *Kilbride*, *Southanan*, and *Fairly burns*, which have their rise in the eastern confines, flow in various directions through the parish into the Firth. The *Southanan*, in part of its course between banks richly wooded, forms a pleasingly picturesque cascade; the others are not distinguished by any particular features. Numerous springs are also found in different parts, affording an abundant supply of excellent water.

In the lower lands near the coast the SOIL is in some places a rich loam, in others sandy and gravelly; the higher parts are of very inferior quality, generally thin, cold, and spongy moor, with the exception of some portions around the bases of the hills, which are of loam mixed with calcareous earth. The crops are wheat, oats, barley, a small quantity of rye, beans, peas, potatoes, turnips, and carrots; but, as well from the nature of the soil, as from the situation of the parish in a wide manufacturing district, most of the farms are appropriated to the dairy. The milch-cows, which receive great care and attention from their owners, number about 600, and the other cattle, 800: about 2500 sheep, chiefly of the black-faced breed, are pastured on the moorlands and hills; and about 220 swine are kept. The chief produce of the dairy is cheese, of which large quantities are sent to the neighbouring markets, where it is sold under the appellation of *Dunlop cheese*. The system of agriculture is advanced, and the implements of husbandry generally of the most approved kind. The farm-buildings, which were formerly of a very inferior description, have in many instances been rebuilt in a substantial and commodious style, and on most of the farms threshing-mills have been erected; the lands are all inclosed with hedges and ditches in the lower parts of the parish, and in some of the higher parts with stone dykes. In this parish the woods are of small extent, not more than 150 acres, and of these about one-third is coppice wood; the remainder consists of oak, ash, plane, elm, and beech, with a little fir. On some of the lands are fine specimens of old timber; but they are comparatively few, and in general the proper management of plantations is little regarded, though a great quantity of land, which from its quality is incapable of cultivation, might, on account of its favourable situation, be advantageously appropriated to this use. The substrata are, sandstone of brown and red colour, whinstone porphyritic and basaltic, some slight veins of limestone, and a white sandstone intermixed with quartz. The annual value of real property in the parish is £9805.

Underbank, a pleasing villa, erected near the site of the old mansion-house of the barony of *Southanan*, is finely situated in a richly-wooded demesne. *Crosby* has

been repaired in good taste. Hunterston is beautifully situated at some distance, towards the sea, from the ancient mansion-house of the same name, which is now occupied by a tenant, and of which the square tower is still in good preservation. The village stands about a mile from the sea, in a small secluded vale watered by the Kilbride burn, which in its course gives motion to five different mills, two of them for grinding oats, one for bark, one for grinding charcoal, and one for dressing flax. There is a public library, supported by subscription; and a post-office has been established. Part of the inhabitants of the parish are occupied in weaving for the manufacturers of Glasgow and Paisley, in which more than 100 hand-loom are at work; and a portion of the females are engaged in sewing and embroidering muslins. A few lobsters are taken in the season, and sent to the Glasgow market, and herrings are occasionally taken in large quantities; the other fish are cod, whiting, mackerel, &c., but they are not in any great abundance. The streams that flow through the parish abound in trout of good quality. A small quay was constructed at Portincross some years since, at the expense of the proprietor; it is accessible at high water to vessels of forty or fifty tons. The Clyde steamers from Glasgow to Ardrossan and Ayr pass by the coast, and facility of intercourse with the neighbouring towns is maintained by good roads, of which the turnpike-roads to Greenock and Portpatrick run through the whole length of the parish, and a line from the village communicates with the road to Glasgow at the village of Dalry.

Ecclesiastically the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of the Earl of Eglinton: the minister's stipend is £202. 12., with a manse, and a glebe valued at £13. 12. per annum. Kilbride church, situated on a gentle eminence in the centre of the village, was rebuilt in 1733; subsequent additions have been made to it, and within the last few years an aisle has been erected by voluntary subscription. It is now adapted for a congregation of 800 persons. There are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school affords instruction to about 130 children; the master has a salary of £27. 17. 8., with £40 fees, and a house and garden. Three friendly societies tend to diminish the number of applications for parochial relief. Along the steep banks opposite the sea are several circular mounds, at unequal distances, called the Castle Hills; the area on the summit, about forty feet in diameter, is inclosed with walls of undressed stone. Their origin is uncertain; by some they are ascribed to the Danes, by others referred to a more remote period. Tumuli have been explored in various places, containing urns with calcined bones and ashes; and in forming the new line of road along the coast, some years since, four entire urns, rudely formed of coarse red clay, were dug out of a stratum of gravel. A silver brooch, of exquisitely delicate workmanship, and bearing an inscription in Runic characters, was found at Hunterston a few years ago. The walls of the ancient castle of Portincross are still tolerably entire, and form a singularly romantic object, standing on a ledge of rock projecting into the sea; it is supposed to have been a residence of the Scottish kings. One of the large ships of the Spanish armada sank near the promontory, in ten fathoms of water; and an iron cannon which, with

others, was recovered from the wreck, is still remaining on the beach: the arms of Spain, and a crown engraved on it, may be faintly traced. On an eminence overlooking the village of Kilbride are the remains of a very stately tower called Law Castle, the walls of which are in perfect preservation. In the parish are also some remains of an ancient chapel, round which are some fine old trees, and which are not far distant from the ruin of Fairlie Castle in the parish of Largs. Dr. Robert Simson, professor of mathematics in the university of Glasgow, and the well-known translator of Euclid, had some property in the parish. General Robert Boyd, lieutenant-governor of Gibraltar during the siege of that fortress in 1782, was born here; and it is supposed that John Hunter, the celebrated surgeon, was remotely descended from the Hunterston family of this place.

KILBUCHO, county PEEBLES.—See BROUGHTON.

KILCADZOW, a village, in the parish of CARLUKE, Upper ward of the county of LANARK, 2 miles (E. S. E.) from Carluke; containing 160 inhabitants. It lies in the south-eastern part of the parish, on the high road from Carstairs to Carluke. Limestone of excellent quality abounds in its neighbourhood. Kilcadzow Law, the most elevated hill in the parish, is about 900 feet above the level of the sea; and from its summit is a magnificent view of the surrounding country. The Roman road which passed through Clydesdale to the western extremity of the wall of Antoninus may be traced here.

KILCALMONELL and KILBERRY, a parish, in the county of ARGYLL; containing, with the village of Tarbert, 3325 inhabitants. The former of these two ancient parishes, now united, derives its name from the Gaelic term signifying "the burial-place of Malcolm O'Neill". The word Kilberry is by some traced to the Gaelic term *Cill-a-Mhairi*, "the burial-place of Mary". Kilcalmonell is situated at the northern extremity of the peninsula of Cantyre; it stretches to Loch Fine on the north-east, and is bounded on the north-west, nearly throughout its whole length, by West Loch Tarbert and the Atlantic Ocean: the district is about sixteen miles long, and two and a half or three broad. Kilberry approaches in figure to an equilateral triangle, each side measuring eight miles, and is situated in the district of Knapdale; it is separated from Kilcalmonell by West Loch Tarbert, and bounded by the sea or the loch on all sides except the north-east. The surface of *Kilcalmonell* is irregular and varied, rising in some parts with a gentle acclivity and in others much more abruptly, and terminating on the south-east in a hilly range about 1500 feet high: it is diversified occasionally by low valleys, 100 or 150 feet above the level of the sea. The coast of this part of the parish is sandy, and altogether uniform and uninteresting, except in the vicinity of Loch Tarbert, where birch, alder, and other trees, displaying a wild profusion of foliage, relieve the tameness of the scenery. In the *Kilberry* district is a ridge of lofty hills running from west to east, and gradually increasing in elevation till it reaches Sliobhghoil. One of the two bases of this height spreads itself out into a large tract of sterile moorland, while the other affords a striking contrast in the superiority of its soil, and its eligibility for agricultural operations. The shore presented to the Atlantic is bold. The only bay of consequence in the parish is *Stornoway*, near which is the headland of Ardpatrik, the landing-place, according to

tradition, of St. Patrick, on his way from Ireland to Icolmkill. *West Loch Tarbert*, which divides the two parochial districts, is a branch of the Atlantic, nine miles long and one broad: at the northern extremity stands the populous fishing-town of Tarbert, where a narrow isthmus, separating East Loch Tarbert from West Loch Tarbert, makes Cantyre a peninsula. There are several fresh-water lochs; but they are small and unimportant, and contribute little to the improvement of the generally unattractive scenery.

A few of the farms are well cultivated: potatoes constitute the principal crop, and a large quantity of them is sent both to the English and the Irish markets. The tenants mostly hold their lands at will, and but little improvement in husbandry has taken place; but there are some exceptions, especially on the farm of Crear, in Kilberry, where the land has been brought into good cultivation, and received much embellishment. Limestone occurs in several places; but it lies in thin beds, and is not much used. The annual value of real property in the parish is £7563. The principal mansions are, Stonefield, situated in Kilcalmonell; Dunmore and Ardpatrick Castles, in Kilberry; and an elegant castellated edifice lately erected near Tarbert. The village of Tarbert, which is separately described, is supposed to have been anciently the county-town of Argyll; it is now chiefly famed for its harbour, and for the herring-fishery in which its inhabitants are actively and successfully engaged. Tarbert has a general post-office, communicating by steamer daily with Glasgow; and a road runs through Kilcalmonell to Campbelltown, by which letters are forwarded to the latter place. The produce of the parish is sent for sale, partly to Campbelltown, but chiefly (especially the potatoes) to Ireland and England. A fair, principally for horses, is held at Tarbert in the beginning of August. For ecclesiastical purposes the parish is in the presbytery of Cantyre, synod of Argyll, and in the patronage of the Duke of Argyll. The minister's stipend is £218, with a manse, and a glebe valued at £17. 10. per annum. The church of Kilcalmonell was built about the year 1760; that of Kilberry in 1821: the former contains 600 sittings, and the latter 700. A chapel is supported at Tarbert by Royal Bounty; and the Independents have a place of worship. There are two parochial schools, affording instruction in the ordinary branches; the masters each receive a salary of £25 per annum, with the fees. The parish contains the forts of Dunskeig, forming part of a chain of strongholds built along the coast of Cantyre; they are very ancient, lofty, and strong, and command extensive views. The castle of Tarbert, now in ruins, was, formerly, also a place of great strength; and there was once a large vitrified fort in the parish, the remains of which are still to be seen.

KILCHATTAN, ARGYLLSHIRE.—See KILDRANDON.

KILCHATTAN-BAY, a village, in the parish of KINGARTU, Isle and county of BUTE, 6 miles (S. by E.) from Rothesay; containing 167 inhabitants. This village derives its name from the fine bay on the south-east of the island, opening into the Firth of Clyde, and eastward of which, and immediately opposite to it, are the isles of Great and Little Cumbray. In the village, from which is a good coast-road to Rothesay, are about fifty inhabited houses; and there is a wharf for lading and unlading small vessels. A rapid increase has taken

place here, within the last few years, in the exportation of agricultural produce and of lime, which is very abundant in the neighbourhood. Near the north-east shore of the bay are two barrows, a short distance from each other.

KILCHENZIE, ARGYLLSHIRE.—See KILLEAN.

KILCHOMAN, a parish, in the ISLAY district of the county of ARGYLL, 12 miles (W. by S.) from Bowmore; containing 4505 inhabitants. This place, which is situated at the south-western extremity of the island of Islay, is supposed to have derived its name from a church founded here by St. Chomanus, who was sent by St. Columba from the monastery of Iona, to convert the inhabitants to Christianity. Little more of its ancient history is known than that, for many years, it was in the possession of the Danes and Norwegians, and subsequently became the property of the Macdonalds, lords of the Isles, the site of whose baronial seat is now occupied by the manse and gardens of the minister. In 1588, a sanguinary battle took place between the Macdonalds and the Macleans, of whom the latter, of the isle of Mull, landed a considerable force to dispossess the former of their territory. The conflict occurred near the shore of Loch Gruinard, and terminated in the defeat of the Macleans, whose leader fell in the action; and his followers giving way, many of them took refuge in the church of Kilnave, near the field of battle, pursued by the Macdonalds, who set fire to the building. The body of Maclean, being found among the slain, was buried in the church of Kilchoman.

The PARISH, which is of peninsular form, is bounded on the west by the Atlantic, and on the east by Loch Indal; and is deeply indented on the north by Loch Gruinard, between which and Loch Indal there is little more than a mile of land at high water. It is about twenty miles in extreme length, and five at its greatest breadth, comprising an area of upwards of 50,000 acres, of which not more than 5000 are arable, and the remainder, with the exception of twenty acres of plantations, is hill pasture and waste. The surface is diversified with ridges of hills of moderate elevation, the highest not exceeding 500 feet above the level of the sea; and between these undulating ridges are large tracts of level ground, covered with moss, and interspersed with lakes, the largest of which, Lochgorum, is about 600 acres in extent, and from five to seven feet in depth. There is no river of any importance. The coast, which is more than thirty miles in circuit, is mostly bold and precipitous, abounding on the east with creeks, and on the west with bays. The largest bay is that of Kilchoman; but it is so exposed to the swell of the Atlantic that fishing-boats, to be in safety, must be drawn above high-water mark. Loch Gruinard is about four miles in length, and affords shelter for small vessels, but is partly dry at low water; Loch Indal is twelve miles in length, and eight in breadth at the entrance, forming a good roadstead, and being much frequented by vessels in adverse weather.

In this parish the SOIL includes almost every variety: on the shore of Loch Indal is some rich alluvial land of great fertility; on the western shore the soil is less productive, and in other parts nearly sterile. The crops are oats, barley, potatoes, turnips, peas, and beans, with the usual grasses. The system of husbandry is improving on some of the farms; considerable progress has

been made in draining the lands, and several tracts of moss have been reclaimed. From the tenure of the smaller farms, however, the spirit of enterprise is much restrained. The chief attention is paid to the improvement of live stock : the cattle are generally of the West Highland breed ; the sheep, with the exception of a few of the black-faced, are of a very ordinary kind. The principal substrata are clay-slate, greywacke, alternating with thin beds of quartz, basalt, greenstone, and porphyry. There is no limestone ; but the want of it is supplied by the abundance of shell-marl found in the numerous creeks and bays. Slate of good colour and quality is extensively quarried at Kilchiaran. The annual value of real property in the parish is £7430. Sunderland House is a spacious mansion, erected by the proprietor in 1820, pleasantly situated on an acclivity, about a mile from the shore of Loch Indal, and surrounded with thriving plantations. Balinaby is also a handsome residence. There are three villages in the parish, viz., Portnahaven, Port-Charlotte, and Port-Wymss, which last has but lately grown into existence. At Bridgend, about nine miles distant, is a post-office, from which letters are brought daily by a private messenger ; and facility of communication is afforded by good roads, which intersect the parish in various directions.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Islay and Jura, synod of Argyll. The minister's stipend is £158. 6., of which two-thirds are paid from the exchequer ; with a manse, and a glebe valued at £15 per annum : patron, the Crown. The parish church, erected in 1825, is a handsome structure containing 700 sittings. A church has been built at Portnahaven. There is a place of worship for members of the Free Church ; and at Port-Charlotte is one for Independents. The parochial school is well attended ; the master has a salary of £25. 13. 4., with a house, an allowance in money in lieu of garden, and about £4 fees. Two schools are supported by the General Assembly, one by the Society for Propagating Christian Knowledge, and one by the Edinburgh Gaelic Society. There are also six Sunday schools. The poor have the interest of some charitable bequests and private contributions ; and the Kirk Session possess the privilege of recommending patients to the royal infirmary of Glasgow. There are numerous ruins of religious houses, to which are attached cemeteries still in use ; and in the present churchyard is an ancient cross, beautifully sculptured. On several of the hills are obelisks, whose history is unknown ; and on islands in the lakes, and in various ravines on the shores of the coast, are remains of fortifications. Under a large stone near Sunderland House, which had fallen from the erect position in which it originally stood, were found two golden ornaments, weighing nearly six ounces ; and in the hills around have been found rude coffins of stone, some containing human bones, and others urns of unbaked clay, rudely formed.

KILCHRENAN and DALAVICH, a parish, in the district of LORN, county of ARGYLL, 11 miles (W. by S.) from Dalmally ; containing about 700 inhabitants, of whom about 400 are in Kilchrenan. The names of these places, which are of Gaelic origin, signify respectively "the church or burial-place of Chrenan", the tutelary saint of the locality, and "the field of Avich", a

term descriptive of a level tract situated near the river Avich. This is an inland parish, lying on each side of the beautiful expanse of water named Loch Awe, and measures sixteen miles in length and eight in average breadth, comprising, it is supposed, between 70,000 and 80,000 acres, of which considerable portions are arable and pasture land. The surface is finely diversified, rising in each direction from the lake, in a gradual manner, for nearly four miles. On the east it reaches the summit of a range of hills called the *Muir of Leekan*, twenty-four miles long ; and on the west is another range, also twenty-four miles long, called the *Mid-Muir*. The scenery is of the highest order, consisting of a rich combination of almost every picturesque and romantic object usually to be seen in the most admired Highland districts. In *Loch Awe* are several wooded islands with interesting ruins ; numerous creeks intersect its shores, and the whole lake is relieved, with great effect, by the bold mountain heights overhanging the district. The average breadth of the loch is about a mile ; and on its banks are two ferries, one of them three-quarters of a mile from Dalavich, and the other a mile from Kilchrenan. The island of Inish-Chonnel, a beautiful spot opposite the church of Dalavich, exhibits an ivy-mantled ruin of great antiquity, for many centuries the chief residence of the Argyll family. Near this is the isle of Inish-Errich, containing the ruins of a chapel, and an old burying-ground still in use ; and at a small distance from Inish-Errich is *Eilean'n Tagart*, otherwise Priests' isle, formerly the priests' residence. *Loch Avich*, anciently called Loch Luina, a prominent feature in the scenery, is situated a little west of Loch Awe, and communicates with it by the Avich stream. It is of triangular form, measuring about eight miles along the entire line of its shores, and is well supplied with trout. The vicinity of this lake, which has a castle and several islands frequented by a great variety of water-fowl, was the scene of Cathluina, or the Conflict of Luina, described in an ancient Celtic poem ; and one of its isles was the scene of another event, the subject of a poem called Laoi Fraoich, or the Death of Fraoch. Many places in the parish are named after some of the heroes of Ossian. Besides the two lakes, contributing so largely to the embellishment of the scenery, there are several streams, tributaries of Loch Awe, flowing among numerous elevations and hollows, ornamented in some parts with good natural pasture, and in others with tracts of valuable wood.

The fertile banks of Loch Awe are well cultivated, producing good crops ; the mosses, covering a large space, are to some extent capable of improvement, and draining has lately been carried on in several places. The chief avocation of the inhabitants, however, is the rearing of black-cattle and sheep ; and the district is more distinguished for its imposing scenery than for agricultural operations. The annual value of real property in the parish is £4280. The rocks consist of mica, quartz, limestone, and whinstone. The mansion of Eridine House, and that of Sonachan House, are both situated here. A manufactory for pyroligneous acid has been erected, in connexion with an establishment at Camlachie, near Glasgow. Ecclesiastically the parish is in the presbytery of Lorn, synod of Argyll, and in the patronage of the Duke of Argyll. The minister's stipend is about £150, of which about a sixth is received

from the exchequer; with a manse, and a glebe of ten acres valued at £11 per annum. There are two churches, more than nine miles distant from each other: that of Kilchrenan was built in 1770, and the church of Dalavich a year later; the one containing 280, and the other 242 sittings. The incumbent generally takes the services alternately, but occasionally preaches in both churches on the same Sunday, though this is seldom practicable, the climate being rainy, and the roads very bad. The members of the Free Church have a place of worship in the parish. Kilchrenan parochial school affords instruction in the usual branches; the master, who keeps an assistant, has a salary of £17, with about £6 fees, and receives in addition £11. 10., of which £10 are the interest of a charge on the Marquess of Breadalbane's property, left for the education of poor children. This bequest is under the control of the kirk-session, and does not necessarily belong to the parish school. There are also two parochial schools at Dalavich: the masters have salaries respectively of £17. 4. and £17. 10., with £7 and £5 fees; they likewise receive £1. 15. and £1 from other sources.

KILCONQUHAR, a parish, in the district of Sr. ANDREW'S, county of FIFE; containing, with the burghs of Colinsburgh and Earlsferry, and the village of Kilconquhar, 2605 inhabitants, of whom 566 are in the village, $1\frac{1}{2}$ mile (N. by W.) from Elie. The lands of Kilconquhar and Balcarres belong to two branches of the family of Lindsay, of whom Walter and William de Lindsay, brothers, occupied stations of importance in the reign of David I.; the latter became the head of the family, and one of his descendants was created Earl of Crawford in 1398. Kilconquhar is now in the possession of Sir Henry Lindsay Bethune, Bart., a descendant of the family, whose baronetcy was conferred upon him for his services in Persia. John, second son of David, eighth Earl of Crawford, obtained the estate of Balcarres in the parish, which, together with other lands, was erected into a barony in 1592; and his son David, who was created Lord Lindsay of Balcarres, built a chapel at this place, in which he was interred. David's son, Alexander, who was the first Earl of Balcarres, was a firm adherent of Charles II., whom he attended while in exile at Breda, where he died a short time before the Restoration, and whence his remains were brought home, and deposited in the family chapel. The estate is now in the possession of his descendant, Colonel James Lindsay.

The PARISH derives its name from its situation at the head of a lake; of which the Gaelic term is descriptive. It is about nine miles in length, and two miles in average breadth; is bounded on the south by the Firth of Forth, and on the west by the bay of Largo; and comprises about 5400 acres, all of which are arable, and under high cultivation, except what is covered with wood. The surface varies greatly in elevation. From the south, where it is mostly flat, the land rises gradually towards the north until it reaches the middle of the parish, in the hills of Reres and Kilbrachmont, points of a ridge extending from Kellie Law on the east to Largo Law on the west, and having an elevation of more than 600 feet above the level of the sea. In the southern portion of the parish is the hill of Kinneraig; and in the northern part the hill of Duniker Law, which has a height of 750 feet. From the summit of this hill is an extensive

and varied prospect, embracing the estuaries of the Forth and the Tay, and, towards the north and west, the mountains in the counties of Perth, Angus, and Argyll. The Craig of Balcarres commands a diversified view of the adjacent lands, which are beautifully wooded; the towns on the coast extending from Dysart to Crail, with numerous handsome mansions surrounded by plantations; the Firth of Forth and the shipping in the harbour; the rich lands of East Lothian, the city of Edinburgh, the hills of Linlithgow, Pentland, and Lammermoor, and the German Ocean. The home scenery is greatly enriched by the beautiful loch of Kilconquhar, which is about half a mile in breadth and two miles in circumference, abounding with pike and eels, and frequented by swans, teal, wild-duck, and other aquatic fowl. The banks of the lake are ornamented with plantations; and from its proximity to the village, the whole forms an interesting and beautifully picturesque feature in the landscape. A small stream issuing from it falls into the sea at Elie. A burn which in its course drives several mills flows into Largo bay, and some streamlets that rise in the northern portion of the parish join the river Eden.

The SOIL, though generally fertile, varies considerably: in the portions near the sea, it is a light loam intermixed with sand; and in those more remote, a rich and deep loam producing abundant crops. The rotation plan of husbandry in its most improved state is practised, and the system of agriculture has been brought to great perfection; the crops are oats, wheat, barley, beans, potatoes, and turnips, with a small quantity of flax. Much attention is paid to the rearing of cattle, of the Fifehire breed, with an occasional mixture of the Teeswater; and in order to encourage improvement in this respect, the East Fife Agricultural Society hold annual meetings at Colinsburgh, for the public distribution of premiums to the successful competitors. The average number of cattle is 1500, and about 500 of them are annually fattened for the butcher. The number of horses employed in agriculture is 200, and about fifty horses are annually sold: the feeding of sheep has been introduced within these few years to a considerable extent, chiefly of the Cheviot breed. The plantations are oak, ash, beech, plane, and larch. Some most valuable timber is found on the lands of Balcarres and Kilconquhar, in which are many trees of majestic growth, more than two centuries old; and in that part of the Balcarres estate called the Den are about 100 acres, chiefly of hard-wood of great height, and which have been planted for above half a century. In general the farm-buildings are substantial and commodious, and roofed with slate; threshing-mills are in use on the various farms, and several of them are driven by steam-engines, which have been lately introduced, and appear to be on the increase. The lands have been much improved by draining; and the fences, usually stone dykes, are kept in good order. The annual value of real property in Kilconquhar is £10,998.

The general coal formation extends throughout the whole of the parish; and in its various sections are found basalt, greenstone, clinkstone, trap tuffa, amygdaloid, wacke, and porphyritic claystone, sandstone, shale, ironstone, and coal. The basalt is of a greyish black colour, and extremely hard, and is found in columnar groups of great beauty, on the south-west extremity of

the parish. Kincaig Hill, ascending abruptly from the beach to the height of 200 feet, abounds with all these varieties, comprehending every species of trap formation; and Balcarres Craig, which rises from a deep ravine to a similar height, and is completely detached from all the surrounding hills, displays near its summit a beautiful specimen of columnar formation, of a dark blue colour, exceedingly close-grained and hard, and which, though possessing the properties of felspar or clinkstone rock, is frequently supposed to be basaltic. The Balcarres coalfield comprises four distinct seams, two of which are splint and two common coal. The seams of splint coal are respectively six and two feet thick; and the seams of common coal, one of which is subdivided by an intermediate layer of marl, are about three feet in thickness. Coal is likewise found at Lathallan, Largoward, and Falfield, in the upper division of the parish, in which is also canal coal of very superior quality. Limestone is not plentiful, but is found at Kilconquhar, Balcarres, and some other places; and large boulders of greenstone, mica-slate, and granite occur along the sea-shore. In this parish the principal seats are Balcarres, Kilconquhar House, Charleton, Lathallan, Falfield, and Cairnie, all handsome mansions, situated in tastefully-disposed and richly-embellished demesnes. The produce of the agricultural districts is more than requisite for the supply of the population, and large quantities are consequently conveyed to the neighbouring towns, with which an easy intercourse is maintained by turnpike-roads kept in excellent repair. The village is neatly built and pleasantly situated: of its total population, namely 566, 232 are in that part called Barnyards. The inhabitants of the parish are chiefly employed in agriculture, and in weaving for the manufacturers of Dundee and Kirkealdy: the articles of manufacture are checks, sheetings, dowlas, &c., in the production of which about 230 persons are employed, of whom 120 are females; all working at handlooms in their own dwellings. There is also a tannery, in which a few men are engaged.

This parish, which formerly comprhended the whole of the parish of Elie, and the barony of St. Monan's, both separated from it in 1639, is in the presbytery of St. Andrew's and synod of Fife, and in the patronage of the Earl of Balcarres. The minister's stipend is about £300, with a manse, and a glebe valued at £27. 10. per annum. The church, erected in 1821, is a handsome edifice in the later English style of architecture, with a lofty tower, and is adapted for a congregation of 1030 persons. At Largoward is a chapel of ease, built in 1835, for the accommodation of the northern part of the parish; the service is performed by a missionary appointed by the presbytery. There are also places of worship in the parish for members of the United Presbyterian Church, Independents, and Baptists. Kilconquhar parochial school, situated in the village, affords a liberal course of instruction; the master has a salary of £34, with £60 fees, a house and garden, and the privilege of taking boarders. There is also a school at Largoward, to the master of which the heritors pay 100 merks per annum; and at Earlsferry and Colinsburgh are schools with upwards of 100 scholars each, but without endowment. Under Kincaig Hill is the picturesque and romantic cavern called Macduff's Cave, in which that thane, in his flight from the usurper Macbeth, is generally supposed to have concealed himself for some time.

KILDA, ST., an isle, in the county of INVERNESS. This island, also called Hirta, is the most remote of the Western Isles: the nearest land to it is Harris, from which it is distant sixty miles in a west-south-west direction; and it is 140 miles from the nearest point of the main land of Scotland. In length it is about three miles, from east to west, and in breadth two miles, from north to south. The whole island is fenced by one continued perpendicular face of rock, of prodigious height, with the exception of a part of the bay, or landing-place, lying towards the south-east, and even there the rocks are of considerable height. The bay is inconvenient; and the tides and waves are so impetuous that, unless in calm weather, it is extremely hazardous to approach. The surface of the island rises into four high mountains, covered with a blackish loam, except at their summits, where is moss about three feet in depth; but the soil is rendered fertile by the industry of the inhabitants, who manure their fields so as to convert them into a sort of gardens. There are several springs that form a burn running close by the village, which is situated about a quarter of a mile from the bay. The ordinary means of intercourse with the island is, by the packet from Dunvegan, in Skye, to Rodel, in Harris, and thence to the isle of Pabbay, at the extremity of the sound of Harris, whence a number of fishermen make the voyage in large open boats. It is accessible, also, by steamers in summer, and is visited occasionally by revenue cruisers.

KILDALTON, a parish, in the district of ISLAY, county of ARGYLL, 14 miles (E. by S.) from Bowmore; containing, with the village of Port-Ellen and the former quoad sacra district of Oa, 3315 inhabitants, of whom 904 are in Port-Ellen. This parish, which is supposed to have taken its name from one of the step-sons of the Macdonalds, who was buried in the church, forms the south-eastern portion of the isle of Islay, and is bounded on the north-east by the sound of Islay, and on the south-west by the Atlantic Ocean. It is twenty-four miles in length and seven in breadth; the number of acres has not been ascertained, and only a very small portion of the parish is arable. The surface is broken by a range of hills extending from south-west to north-east, and increasing in elevation towards the sound of Islay; of these, Benvigory and Mc Arthur's Head are the highest. To the north-west of the hills is a large extent of level ground, gradually coming into cultivation; and the valleys, which intersect the parish from east to west, are in general fertile, yielding good crops of oats, barley, and potatoes. There are numerous excellent springs in various places, but no rivers of any importance; also several small lakes, in most of which are found trout of large size, and in some pike. The coast extends for more than fifty miles; it is generally low and rocky, and is indented with bays, the principal of which are Port-Ellen, Lagamhulin, Lochknoek, Lochintallin, Ardmore, Kenture, Aross, Claigean, Ardtealla, and Proaig. The most prominent headlands are, Mc Arthur's Head on the north, Ardmore Point on the east, and the Mull of Oa on the south. In different parts the rocks are perforated with caverns of romantic appearance, one of which is about 300 feet in circumference, and nearly 200 feet in depth: the sea flows into this cavern through two apertures, one of them a lofty arch of considerable span, and the other a narrow fissure in the rock. There are also numerous small islands near the coast, the chief

of which are Texa, Ellan-nan-Caorach, Ellain-Imersay, the Ardelisters, and a cluster of islands in the bay of Ardmore.

In this parish the soil is extremely various. The system of agriculture is improving; and within the last few years considerable tracts of land have been brought into cultivation under the auspices of the proprietor, W. F. Campbell, Esq., of Islay, who has also formed plantations of large extent. These consist of oak, ash, fir, plane, horse-chestnut, and beech, which are all in a thriving state; and in the north-east of the parish are many acres of brushwood. Numbers of black-cattle of the native breed, and sheep, are reared in the pastures; and great attention is paid to their improvement. The annual value of real property in the parish is £4562. The principal substrata are slate, granite, whinstone, and limestone; and in some parts indications of ironstone are observed, with appearances of lead and copper ore; but the slate and limestone only are wrought. A neat shooting-lodge has been erected by Mr. Campbell, in which he occasionally resides during the season. There are five distilleries, employing about forty persons. Fairs for black-cattle are held at Port-Ellen, in the beginning of June, July, August, September, and November; and a runner from the post-office at Bowmore conveys letters three times a week to a receiving-house at Lagamhulin.

Ecclesiastically the parish is within the bounds of the presbytery of Islay and Jura, synod of Argyll. The minister's stipend is £158. 6. 8., of which two-thirds are paid from the exchequer; with a gratuity of £5 from the heritor, a manse, and a glebe valued at £25 per annum: patron, the Crown. Kildalton church, situated nearly in the centre of the parish, is a neat structure, erected in 1816, and enlarged in 1830, containing 600 sittings. A church has been built at Oa, in the south-west. The parochial school is well attended; the master has a salary of £25, with a house and garden, and the fees average £10 per annum. A school is supported by the Society for Propagating Christian Knowledge, who allow the master a salary of £16, with a house and some land; and there is another school, to the master of which the Gaelic Society pay £20. In Oa is a parliamentary school with a salary of £30; and at Kenture, Lagamhulin, and Kintraw are General Assembly schools. The poor have the interest of a bequest of £100 by Major McNeill. There are remains of several churches, consisting chiefly of the roofless walls: near the ruins of the old church of Kildalton are two crosses of grey granite, one of which is richly ornamented with sculpture. Vestiges of three ancient forts may be seen in the parish at the Mull of Oa, near Port-Ellen, and at the bay of Lagamhulin: the first is supposed to have been erected by the Danes; the fort near Lagamhulin, called Dun-naom-haig, is thought to have been built by the Macdonalds, and was the last stronghold that they possessed.

KILDONAN, a parish, in the county of SUTHERLAND, 9 miles (N. W. by W.) from Helmsdale; containing 256 inhabitants. This parish takes its name from *Kil*, a "cell or chapel", and *Donan*, the name of the saint who promulgated Christianity in this part, and whose memory has been handed down by tradition with great veneration. It is chiefly remarkable as having been, for several ages, the residence of the celebrated clan

Gun. They are supposed to have descended from the Norwegian kings of Man; and *Lochlin*, the Gaelic name for ancient Scandinavia, or at least for Denmark, is still spoken of by the Highlanders as the native country of the GUNS, the Macleods, and the Gillanders. The immediate ancestor of the GUNS is said to have been the son of Olave, fifth Norwegian king of Man, who had three sons by his third wife, Christina, daughter of Farquhar, Earl of Ross. These were, Gun or Guin, the founder of the clan Gun; Leoid, Loyd, or Leod, from whom sprang the Macleods; and Leaundris, the first of the clan Landers, or Gillanders, of Ross-shire, many of whom afterwards assumed the name of Ross. It appears that these several heads of clans were dependent on their grandfather the Earl of Ross, who possessed great power and influence in different parts of the country, and especially in Caithness. In that county, Gun was originally settled; and his first stronghold was the castle of Halbury, at Easter Clythe, usually called Crouner Gun's Castle, and which was situated on a precipitous rock nearly surrounded by, and overhanging, the sea. The clan of Gun continued to extend their possessions in Caithness till about the middle of the fifteenth century, when, in consequence of their rancorous feuds with the Keiths and others, they thought it expedient to establish their chief, and a strong detachment of the clan, in the adjoining county of Sutherland, where, by the protection of the Earls of Sutherland, they obtained, among other places, lands in the parish of Kildonan, which they held for a considerable period.

The PARISH is twenty-eight miles in extreme length, and varies in breadth from five to seventeen miles. It is bounded on the north by the parishes of Reay and Farr, on the south by Clyne and Loth, on the east by the county of Caithness, and on the west by Farr and Clyne. This is altogether an inland parish. Its northern division is lofty, and marked by several high and massive mountains. The southern part consists of two parallel ranges of mountains, separated by the beautiful valley of Helmsdale, through which runs the winding river of the same name, passing many verdant holms and haughs, and some ornamental clumps of birch, and falling into the North Sea at the village of Helmsdale, in the parish of Loth. Ben-Griam-more is a mountain nearly 2000 feet high, and, with the other lofty elevations, characterized by wide chasms, rent or worn by powerful torrents, gives to the scenery a wild and magnificent appearance. The upper district is remarkable for the number and size of its lakes, of which Loch-na-Cuen, one of the largest, is adorned with two or three small islands and several winding bays. The waters abound with char and trout, and some of them are famed for angling.

The SOIL of the haughs near the river is formed of deposits of mossy earth, with sand and decomposed rock: much of the upland consists of tracts of moss, lying contiguous to the pastures. The entire parish is the property of the Duke of Sutherland, and has been from time immemorial part of the ancient earldom of Sutherland. Almost the whole of it is occupied with sheep-farms, which are in the hands of six tenants; and the number of sheep grazed, all of the Cheviot breed, is estimated at 18,000. Previously to the year 1811, the land was let in small portions, and much attention was paid to the rearing of Highland cattle; but between that period and

1821 the cattle gradually yielded to the introduction of Cheviot sheep. In consequence of this change, and the consolidation of the small farms, the population was diminished in numbers from 1574 to 565; and it is now not half the latter number. There are two or three good roads in the parish, chiefly for local convenience. The principal communication of the people is with Helmsdale. Ecclesiastically the parish is within the bounds of the presbytery of Dornoch, synod of Sutherland and Caithness; patron, the Duke of Sutherland. The stipend is £158, of which £70 are received from the exchequer; and there is a good manse, with a glebe of fourteen acres, in addition to which the minister has the privilege of grazing sixty sheep. Kildonan church is a plain building, erected about 1740, and rebuilt in 1786. There is a parochial school, the master of which has the maximum salary, and about £3 fees, with a school-house. The remains of several circular or Pictish towers may still be seen in the parish, as well as numerous barrows or tumuli; it also contains some mineral springs, supposed to have been anciently used for medicinal purposes.

KILDRUMMY, a parish, in the district of ALFORD, county of ABERDEEN, 6 miles (W. by N.) from Alford; containing 627 inhabitants. This place, the name of which is of Gaelic origin, and signifies "the little burial mount", was distinguished for its castle, anciently the property of David, Earl of Huntingdon, and a seat of King Robert Bruce. The castle now presents a venerable ruin, situated on an eminence overlooking a rivulet that falls into the Don; but was originally an extensive and strongly-fortified pile, consisting, according to tradition, of one stately circular tower of five stories, known as the Snow tower, in the western corner of the fabric, and of six other towers of different dimensions. It was besieged by Edward I. in 1306, when the wife of Bruce, his daughter, his two sisters, and the Countess of Buchan, had fled to it for refuge; and it is supposed that they made their escape by means of a subterraneous passage, of which there are still traces. It was afterwards partly destroyed by fire, but, having been repaired, became the principal residence of the Earls of Mar, until the rebellion of the earl in 1715, after which the whole building was suffered to fall to decay. Among the ruins are the remains of a chapel, which was used as a magazine for forage during the siege of 1306.

The PARISH is bounded on the north by that of Auchindoir and Kearn, on the east by the parishes of Forbes and Alford, and on the west and south by the parishes of Leochel-Cushnie and Towie. It chiefly comprises a valley from two to three miles square, and is divided into two unequal parts by the river Don, upwards of twenty miles from its source. The soil is a rich loam, and very fertile; the Kildrummy oats are well known as a light thin grain, having plenty of straw, and ripening earlier than most ordinary kinds. The general surface of the parish is undulated; and a sandstone bed runs through it from north to south. A considerable extent of natural birchwood covers a bank overhanging the rivulet near the castle; and there are plantations at Clova, Brux, and other places in the vale. Cattle-markets are held on the first Tuesdays in February and May, O. S. On the edge of a romantic ravine, stands a mansion in the Elizabethan style; and at Clova is another, in a more modern style of architecture. The annual value of real property in the parish is £2282.

Ecclesiastically the parish is within the bounds of the presbytery of Alford, synod of Aberdeen, and the patronage is vested in the Crown. The stipend of the minister varies from £150 to £160, of which about a third is received from the exchequer; and there is a manse, with a glebe of six acres, valued at £10 per annum. Kildrummy church is a plain edifice, erected in 1805. The parochial school affords instruction in the usual branches: the master has a salary of £25. 13. 4., with a school and dwelling-house, built in 1822, and about £11 fees; also a portion of the Dick bequest. Lord Elphinstone, who was slain at the battle of Flodden, and the Earl of Mar, attainted in 1715, were buried in the churchyard of the parish.

KILFINAN, a parish, in the district of COWAL, county of ARGYLL, 30 miles (S. S. W.) from Inverary; containing 1816 inhabitants. The name of this place, signifying the "church or burial-place of Finan", is derived from a saint of the seventh century, a disciple of St. Columba, to whom the church was dedicated. The parish is situated in the south-eastern part of the county, and is girt by water in every direction except on the north. The west and north-west sides are bounded by Loch Fine; the east by Loch Riddon and part of the Kyles of Bute; and the southern point by the sea, which, by a channel three or four leagues across, separates it from the Isle of Arran. It extends longitudinally about seventeen miles from north to south, and varies in breadth from three to nearly six miles, comprising an area of about 50,000 acres, of which 4000 are arable, 2500 under natural wood, and plantations, and the remainder mostly hilly ground, fit only for the pasturage of sheep and cattle. The coast, which is of course of great extent, is frequently varied and relieved by pleasant slopes, or level tracts of arable land; and contains numerous headlands and bays. Among the headlands, that of Airdlamont is the most prominent, situated at the southern extremity of the parish. The chief bays are, Kilfinan bay, below the church; Achalick bay, two or three miles more southward; and Kilbride bay, still nearer Airdlamont. In the north is a sand-bank, of beautiful appearance at ebb tide, and measuring, it is said, above a mile from its margin to its termination at low-water mark.

The surface of the parish, though in general hilly, rises in no part to any remarkable height. The greatest eminences are those of a ridge, of moderate elevation, forming the boundary between Kilfinan and the parish of Kilmodan; commanding attractive views of the Kyles of Bute and part of Loch Fine, as well as of some of the Hebrides; and displaying on their bosom an agreeable variety of pleasant valleys containing good arable lands. There are four burns, of inconsiderable size, but increased by numerous tributaries which, in rainy weather, rush down from the mountains with great rapidity and violence. The fresh-water lochs are two: they extend about half a mile in length and between 300 and 500 yards in breadth, and though not of large dimensions, contribute to improve the scenery, and supply abundance of the common yellow trout. The soil differs to a great extent, according to the situation: that near the sea, on the more level ground, is a light fertile earth, somewhat sharp, resting on a fine gravelly subsoil, and when well cultivated producing good crops of grain and potatoes, and excellent grass. At some distance

inland, upon the higher grounds, there is a mixture of moss covering extensive tracts, much of which is in tillage; and the whole of this description of soil is thought capable of being brought under profitable cultivation by good management.

During the last fifteen years, great improvement has taken place in farming operations; there are now many well-cultivated farms, and both grain and potatoes are exported to a very considerable extent. In general, however, agriculture is still in rather a low condition. Many obstacles are presented by a variable, rainy, and stormy climate, and, in most places, a comparatively sterile soil; and all the crops, with the exception of the potatoes, show the necessity for the introduction of still further improvements in the system of tillage. Much dependence is placed on cattle and sheep. The sheep are generally of the black-faced breed, and of small size in consequence of the inferior character of the pasture, though latterly, by the construction of drains, and in other ways, attempts have been made to improve both the sheep and the cattle. In summer the maintenance of the poorer tenants is derived principally from the herring-fishing, in which most of them are engaged. The leases usually run only nine years, a circumstance unfavourable to the investment of capital for the improvement of the land. The annual value of real property in the parish is £5546. The rocks consist chiefly of mica-slate, mixed with white quartz; whinstone is found in small quantities, and limestone of good quality both for building and for agricultural purposes is plentiful in the north. Plantations are scattered in various directions, comprising oak, ash, fir, and the other kinds common to the country; and there are several oak-coppices, which are cut for sale every twenty years. Birch, ash, and hazel are also found growing in coppices; but they are entirely neglected.

In this parish are some well-built mansions, namely, Airdlamont House, a plain structure, situated not far from the point of the same name, and ornamented with good plantations; Ardmarnock House, near Loch Fine; Ballimore House, a neat and elegant residence, also near Loch Fine; and Otter House, on the bay of Kilfinan. All of these, except Otter House, have been built within the last few years. The only hamlets are the small clusters of tenements here and there, occupied by the farmers and cottars, and containing twelve or fifteen families each. A gunpowder manufactory was established at Kames, near the Kyles of Bute, in 1839, which has since been improved and considerably enlarged, and now produces from 8000 to 9000 barrels annually: more than thirty persons are employed in the different departments of the factory; and they receive considerably higher wages than any other class of workmen in the parish. The herring-fishing on Loch Fine is prosecuted with activity; upwards of 100 boats belong to the parish, and each of these requires three men, and produces from £50 to £60 per annum, a sum, however, far inferior to that formerly obtained, and found barely sufficient to meet the heavy expenses. Salmon-fishing is also carried on, in the Kyles of Bute. A post-office was established at Kilfinan about the year 1840, and is subordinate to that at Cairndow, thirty miles distant, with which it communicates three times a week. The roads are generally in bad order. There is a small pier at Otter Ferry, which was an important point of transit

for the people of this district of Argyllshire, in travelling to the low country: but since the use of steam-boats, it has been almost entirely neglected. Markets for cattle are held in May and October, near the ferry.

Kilfinan is in the presbytery of Dunoon, synod of Argyll, and in the patronage of Archibald James Lamont, Esq. The minister's stipend is about £200, with a manse, a glebe of four arable acres valued at £8 per annum, and the privilege of grazing on an adjoining farm. The church is situated at a short distance from the head of Kilfinan bay, and, among other objects, commands a good view of Loch Fine, which in this part is five or six miles broad. It is supposed to have been built about the beginning of the seventeenth century; was thoroughly repaired in 1759, and also underwent considerable repairs in 1845. An additional church, situated at the south end of the parish, eight miles distant from the parish church, was built, and opened in May 1839, by subscriptions from the district and various other quarters, aided by a grant of £174. 10. from the General Assembly's extension committee. The incumbent officiates alternately at Kilfinan and in the additional church. The parochial school affords instruction in the ordinary branches, and in Gaelic; the master has a salary of £34, with the legal accommodations, but £6 of the salary are deducted, and divided between two branch schools. He also receives about £26 fees, and the interest of £95. 10., part of which was bequeathed about a century since by a member of the Lamont family, and another part by John Lamont, Esq., in 1814. In addition to this school and its branches, in the upper district, there are three in the lower division, but all unendowed, with the exception of a grant of land to one of them by Mr. Lamont. On the border of one of the inland lakes stand the ruins of an ancient castle, a former residence of the Lamont family, which was destroyed by order of the Marquess of Argyll, in the reign of Charles II. The parish also contains several duns, consisting of rows of circular stones, generally on eminences; and there are remains of numerous cairns.

KILFINICHEN and KILVICEUEN, a parish, in the district of MULL, county of ARGYLL; containing 4113 inhabitants, of whom 250 are in the village of Bonessan. It takes its name from the churches of the two ancient parishes whereof it consists, one church in the district of Airdmeanach, and the other in that of Ross, by which latter appellation the whole parish is frequently designated. The parish comprises the south-west portion of the isle of Mull, and includes the isles of Iona, Inniskenneth or Inch-Kenneth, and Eorsa, with several small islets. It is bounded on the north and north-east by a ridge of mountains separating it from the parish of Torosay; on the south it is bounded by an arm of the Atlantic, and on the west by the Atlantic Ocean itself. Exclusive of the isles, it is about twenty-four miles in length and thirteen in extreme breadth, comprising an area of nearly 180 square miles. Of the four districts of Iona, Ross, Brolas, and Airdmeanach, into which the parish is divided, *Iona* is separated from Ross by the sound of Iona, and is three miles in length and almost one mile in breadth. *Ross* and *Brolas* are divided from Airdmeanach by Loch Seridain, and are each about twelve miles in length and from three and a half to seven miles in breadth; while *Airdmeanach*, which joins Brolas at the upper extremity of Loch

Scridain, is thirteen miles in length, and varies from three to six in breadth. The surface is hilly, and the lands generally are better adapted for pasturage than for the plough: in some portions the grounds are low and flat, consisting of heath, pasture, and arable land. Of the mountains that separate the parish from Torosay, the most conspicuous is *Beumore*, which has an elevation of 3097 feet above the level of the sea, commanding from its summit an unbounded view of the numerous islands in this part of the Atlantic, the whole of the circumjacent country, and Ireland in the distance. The promontory of *Burg*, also, at the western extremity of Airdmeanach, is especially worthy of notice, rising precipitously from the sea in an irregular series of basaltic columns.

The island of *Iona* is described in a separate article. *Inniskenneth*, which takes its name from Kenneth, a disciple and companion of St. Columba, who lived here in seclusion, is separated from the northern shore of Airdmeanach by a sound nearly half a mile wide; it is a mile in length and about half a mile in breadth. The isle belonged to the monastery of Iona, to which it was a cell; the remains of the ancient chapel are in tolerable preservation, and in the cemetery, which is still used as a place of sepulture, are numerous monuments. The remains of the cottage of Sir Allan Maclean, in which he hospitably entertained Dr. Johnson when on a visit to the Hebrides, are also preserved here. This island is now the property of Col. Robert Macdonald, who has built a handsome mansion, in which he resides. *Eorsa*, to the north-east of Inniskenneth, is about a mile in length, and the property of the Duke of Argyll; it is very fertile, formerly producing crops of grain, and at present pasturage for sheep, but it is uninhabited.

The sea-coast, including its numerous indentations, is not less than 100 miles in circuit; and the shores are bold and rocky throughout the whole of its extent. On the south side of Ross is the creek of *Portuisgen*, affording safe anchorage in favourable weather for vessels not exceeding thirty tons; and in the sound of Iona are the creeks of *Barachan* and *Poltairve*, in which vessels of large burthen may ride: there is, however, a sand-bank nearly in the middle of the sound, to pass which, with safety, vessels must keep within one-third channel of the island of Iona. To the east of the sound of Iona is *Loch Lahaich*, which extends for about two miles into the district of Ross, and has good anchorage for ships of considerable burthen. The whole of *Loch Scridain* forms a roadstead; and at Kilfinichen, vessels of the largest size may find excellent anchorage, and secure shelter from all storms. The headland of Burgh, and the entire north coast of Airdmeanach, are exceedingly dangerous, abruptly rocky, and without any harbour. There are numerous rivers, some of which in their descent from the rocks, precipitously steep and cragged, form strikingly romantic cascades; but none of the rivers are of sufficient importance to require particular description.

The SOIL of the arable land is chiefly clay, alternated with sand, and, though in some parts fertile, is in others thin and light, and better adapted for spade husbandry than for the plough. The principal crops are oats, bear (sold to the distillers of Oban and Tobermory), potatoes, turnips, and other green crops. The cattle, of which great numbers are pastured on the hills, are of a hardy breed; and on the larger farms are kept a few cows of the Ayrshire: the sheep, formerly of the small Highland

breed, are now the Cheviots and others, numbers of which are pastured. There are plantations at Kilfinichen, but not of any considerable extent; and in the district of Airdmeanach is some natural wood, consisting of oak, ash, and beech: none of the trees have attained any great growth. The rocks are mostly of the trap and oolite formations, and many of the cliffs are of basalt and greywacke. The substrata of Inniskenneth are red sandstone, and limestone; and on the south side of Ross, granite and micaceous schistus. Limestone is found at Carsaig, where, also, are some good quarries of freestone. Several indications of coal occur on the lands near the coast, and in the bed of a rivulet on the side of the mountain; there are also favourable appearances at Brolas and Gribund, and the proprietor of Carsaig is now boring for coal with every prospect of success. The annual value of real property in the parish is £4569.

The principal mansions are Kilfinichen House, Penny-cross House, and the house of Inniskenneth, the seat of Col. Macdonald, previously noticed. The only village is Bonessan, containing several shops well stocked with various kinds of merchandise for the supply of the adjacent district: a post-office, subordinate to that of Aros, has been established here; and fairs for black-cattle are held on the Friday before the Mull markets in May and October. Facility of communication is afforded by numerous steam-boats, which, during the summer especially, convey visitors to the islands of Iona and Staffa. Ecclesiastically the parish is within the bounds of the presbytery of Mull, synod of Argyll. The minister's stipend is £180. 10., with an allowance of £42 in lieu of manse, and a glebe valued at £15 per annum; patron, the Duke of Argyll. There are two churches, one at Bonessan, in the district of Ross, and the other at Kilfinichen, in Airdmeanach, both built in 1804, and repaired in 1828, the former containing 350 sittings, and the latter 300. Divine service is performed for two Sundays at Bonessan, and on the third at Kilfinichen; and a church has been erected in the island of Iona, forming a separate charge for that island and another district of the parish. There are two parochial schools, the masters of which have respectively salaries of £30 and £21. 6. 3., with fees averaging £8 for each master, and a house and garden. A school is supported by the General Assembly, who pay the master a salary of £22; and two Gaelic schools are maintained in the parish, the teachers receiving £20 and £15 respectively, and having a house and garden each. The schools together are attended by about 800 children.—See IONA.

KILLALLAN, in the county of RENFREW.—See HOUSTON and KILLALLAN.

KILLARROW, county ARGYLL.—See KILLARROW.

KILLEAN and KILCHENZIE, a parish, in the district of CANTYRE, county of ARGYLL, 18 miles (N. N. W.) from Campbelltown; containing 2402 inhabitants. The name of the first of these two ancient parishes, now united, is of doubtful origin, but is supposed to be derived either from Killian, a saint of the seventh century, or from a Gaelic term signifying a "river churchyard", in allusion to a rivulet forming the northern boundary, and, in union with a tributary stream, surrounding the site, of the church and burying-ground. Another saint, called St. Kenneth, is considered to have given name to Kilchenzie, and to have been the tutelar saint of that district. The PARISH is situated on the western coast

of the peninsula of Cantyre, and is eighteen miles in length and about four and a half in breadth, comprising 51,840 acres, of which between 5000 and 6000 are arable, several portions pasture, and the remainder, to a great extent, barren moors and wild mountains altogether incapable of cultivation. The coast is much varied. In many parts it is low and sandy, especially in the direction of the islands of Gigha, Cara, Jura, and Islay, which afford great protection against the fury of the waves. Farther south, it is more rocky and elevated; and though neither harbour nor secure anchorage is to be found, for want of those arms of the sea which penetrate many Highland districts, yet the shores are marked by numerous headlands, small bays, caves, and piles of rocks, serving to vary the uniformity of outline, and to form interesting scenery. The principal headland towards the north is Runabaorine point, consisting of a narrow neck of mossy land, stretching about a mile into the sea, opposite to the north end of the island of Gigha, and, with a promontory in the parish of Kilberry, forming the entrance into West Loch Tarbert from the Atlantic Ocean. Bealochintie bay, more southward, comprehends a circuit of nearly two miles, and has in its vicinity a projecting mass of rocks and stones of vast dimensions, overhanging the water. The sea is thought to have receded to a considerable extent. Traces of its ancient limits are evident in many places; and among these especially is a strip of alluvial land, extending near the shore, throughout the whole line of coast, and bearing marks of its former subjection to the element. The inhabitants are, indeed, of opinion that this recession is still gradually going on. The sound between the main land and the islands of Gigha and Cara is rendered perilous by numerous sunken rocks; and vessels approaching the coast, having no harbour here, are often obliged, upon a change of wind, to retreat suddenly to Gigha, and wait for a favourable opportunity of returning.

The surface of the interior is also considerably varied, the land gradually rising from the shore to the height of 700 or 800 feet, and exhibiting several glens, and elevations of some magnitude. The scenery, however, is in general uninteresting, and is almost entirely destitute of natural wood. The hills range in a direction from north to south: the most conspicuous on account of its height is Beinn-an-tuire, or "wild boar mountain", at the head of Glen-Barr, which rises 2170 feet above the level of the sea. The slopes of the hills towards the shore, for about half a mile, are well cultivated, and afford crops of grain, peas, and beans; but beyond, the ground is dreary, bleak, and barren, consisting of lofty moors abounding in small lochs, and tracts covered with heath, coarse grass, and rushes. The soil varies very much in different parts, comprising clay, moss, loam, sand, and gravel; but that which most prevails is a light gravelly loam. Near the sea the soil is very sharp and sandy. In most parts it has from time immemorial been plentifully manured with sea-weed. The crops comprise peas, beans, oats, and bear, especially the last, which is cultivated in large quantities. Potatoes likewise form an important article; they have been in great demand for seed since the opening of a communication with the English and Irish markets, and are the staple on which the tenants chiefly rely for the payment of their rents. The rotation system is in operation; but the successful prosecution of this method of husbandry is much retarded by the want of sub-

divisions in the land, and the scarcity of good inclosures; and with respect to farming generally no little difficulty arises from the distance of the market, the farmers being compelled to cart their produce to Campbelltown. The cattle are of the Highland breed; they are small in size, and altogether inferior: the sheep are of the ordinary black-faced kind. Great efforts have been made for many years past to improve the breed of horses, and those used for agricultural and other purposes are now of a superior description. The annual value of real property in the parish is £9532.

The rocks consist principally of mica, quartz, limestone, and whinstone, which, in some parts near the shore, are varied with different admixtures. The district is bare of natural wood, the very small portion to be seen being only brushwood, and in detached spots; but within the last forty or fifty years, plantations of larch and other forest-trees have been formed to some extent, and are kept in good order. Great discouragements, however, operate against planting, for though the soil is particularly suited to the growth of trees, the severity of the climate, the fury of the winds, and the sea air unite together to neutralize, in a considerable degree, the efforts of the planter. The chief seats are Largie and Glenbarr, the former an ancient family mansion, and the latter a modern residence built in the style of a priory. There are only two small hamlets, and the great bulk of the population are cottars or day labourers, dwelling in very humble tenements, and but scantily provided with the necessaries of life. A few persons are employed in taking lobsters, which they send by steamer to the Irish and Liverpool markets; but the fine fish of the usual kinds abounding on the western coast, and the shoals of herrings that might be taken, are almost entirely neglected. Turf and peat are the ordinary fuel, obtained from a considerable distance, and with great labour. The public road from Inverary to Campbelltown passes through the district. An annual fair is held for the hiring of harvest servants.

Ecclesiastically the parish is in the presbytery of Cantyre, synod of Argyll, and in the patronage of the Duke of Argyll: the minister has a stipend of £178, with a manse, and a glebe of nearly eight acres, valued at £10 per annum. There are two churches, one erected in 1787, and the other in 1826, containing respectively 650 and 750 sittings. Two parochial schools afford instruction in the ordinary branches: the master of the first school has a salary of £31. 6., and a house and garden, and the master of the second, a salary of £20; the fees of both are about £15. A school is supported by the Society for Propagating Christian Knowledge, the master having a salary of £22, with a house, and two acres and a half of land purchased by a bequest; and another school is maintained by the General Assembly's Committee, the master of which has £25 per annum, with a house and a portion of land. The poor enjoy the interest of a bequest of £1000 by Colonel Norman Macalister, late governor of Prince of Wales' Island. Near the middle of the parish is the ruin of an old castle, said to have belonged to the Macdonalds, lords of the Isles; and in several places are tumuli, and circles of stones, usually called Druidical circles.

KILLEARN, a parish, in the county of STIRLING; containing 1224 inhabitants, of whom 390 are in the village of Killearn, 4 miles (E. S. E.) from Drymen. The name of this place is supposed to have been derived

from the compound Celtic term *Kill-car-rhin*, signifying "the church of west point", which is descriptive of the situation of the church near the western extremity of a mountainous ridge about twenty miles in length, extending from Killearn to Kilsyth, and called Campsie Fells. The parish lies in the western part of the county. It is twelve miles in length, varies in breadth from two and a quarter to four miles, and comprises about 17,000 acres, of which 7000 are under tillage, 1140 in plantations, and the remainder pasture and waste. The river Endrick runs along the northern boundary, separating the parish from Drymen and Balfron; and from this stream the surface gradually rises towards the south, where the mountainous ridge already referred to has an elevation of 1200 feet above the level of the sea. The intermediate lands comprehend, in succession from the river, first, a rich though narrow tract of alluvial soil on its banks; secondly, an arable portion from one to two miles broad, on which are situated the village and church, and which from its commanding height, in some parts, of 500 or 600 feet above the sea, affords extensive and beautiful prospects; and, thirdly, a belt of pasture land about a mile broad, which is followed by the lofty ridge of trap rock, at the southern boundary. In the western extremity of the ridge of trap rock are several semicircular excavations, known by the name of Corries. Some of these measure a mile in diameter, and have a highly interesting aspect, from the variety of stone of which the rocks consist; and in the same part of Killearn, where it joins Kilpatrick, is an artificial lake of 150 acres, affording a supply of water in summer to the Partick mills, situated on the Kelvin, near Glasgow. The Endrick is a turbid impetuous stream, which is joined by the river Blane in the lower part of the parish, and flows in a western direction, for several miles, till it falls into Loch Lomond. There are also numerous rivulets and mountain streams, forming strikingly picturesque cascades in their precipitous courses through rocky fissures: the most romantic of these cascades is in the glen of Dualt, where there is a fall of sixty feet.

The soil is various, but in general mossy; in some places it is rich and fertile: it produces barley, abundance of oats, a little wheat, and good crops of potatoes, hay, turnips, and beans. The annual value of the milch-cows, fat-cattle, Highland and English sheep, and other live stock, kept or reared in the parish, is about £6000. A large portion of the waste land is capable of being brought under the plough; but little attention is paid to this circumstance, the extensive and effectual draining of the parts already under cultivation being found to make a better return for the employment of capital. The estate of Killearn, especially, has received the advantage of this kind of improvement; and in 1837 the proprietor built a kiln, in which about 500,000 tiles for draining are annually made. This parish is not so forward as many others in scientific husbandry; but much has been effected within the last thirty or forty years, and the amount of produce has been doubled. The annual value of real property in Killearn amounts to £6850. The prevailing substratum is red sandstone; in several places are limestone and freestone, and of the latter some quarries are in operation, the material being used for building, and occasionally formed into mill-stones, which, however, are in little repute for durability. The higher parts of the mountains are trap rock, which

is supposed, from the numerous fissures, to have been thrown up through the sandstone, in a state of fusion. Coal is said to exist, but the numerous attempts to find it have all failed. In this parish the wood consists chiefly of young oak, which has been cultivated for the sake of the bark: on account, however, of the deteriorated value of this article, the firs are beginning to receive more attention. The original plantations, comprising larch-fir and a variety of other trees, were formed about the beginning of the last century by one of the Graham family, whose ancestors had possessed almost the whole parish; and the late Mr. Dunmore, who many years afterwards projected turnpike-roads, and introduced the cotton manufacture and various rural improvements, encouraged also the planting of waste lands. In the vicinity of his residence at Ballikinrain are some fine yew-trees, of large bulk, and in a very flourishing condition; and near the old mansion-house of Killearn are beautiful specimens of oak and silver-fir, of great height. On the last-named estate, an elegant seat has lately been erected, on the margin of the river Blane; and there is a mansion in the castellated style at Carbeth, which, as well as several other neat residences of proprietors, is richly ornamented with wood.

The village of Killearn, which is traversed by the turnpike-road to Glasgow, is built in an irregular straggling form. It is principally inhabited by families occupying small plots of ground, let on long leases by Sir James Montgomery about 1770 with the privilege of building, a circumstance which operated to produce a gradual increase of the population, previously to that year reduced by the consolidation of several small farms. There is a woollen-factory, in which the raw material, amounting to about 400 cwt. annually, passes through the various processes till made into cloth. A post-office has been established under Glasgow. For ecclesiastical purposes the parish is in the presbytery of Dumbarton, synod of Glasgow and Ayr, and in the patronage of the Duke of Montrose. The minister's stipend is £152, with a manse, built in 1825, and a glebe of eight acres, valued at £12 per annum. Killearn church was rebuilt in the year 1826, and contains 500 sittings. The parochial schoolmaster receives a salary of £31, with £8 in lieu of house and garden, and about £10 fees. There is a mineral spring in the parish, one of the ingredients of which is lime, and which petrifies the moss growing near it. At a place called Blaessen Spout-head, marked by several erect stones, tradition asserts that a battle was fought between the Romans and the Scots. George Buchanan, the celebrated historian, was born in 1506, at Moss, to the south of the church, in a farm-house occupied by his father, part of which remained till 1812, when a modern edifice was erected on its site. An obelisk 103 feet high, after the model of that erected on the Boyne in Ireland in honour of the victory gained there, was raised in the village in 1788, by several gentlemen, in memory of this distinguished Scotsman. Napier of Merchiston, also, the inventor of logarithms, held property in Killearn.

KILLEARNAN, or KILLJERNAN, a parish, in the county of Ross and CROMARTY, 4 miles (N. E. by E.) from Beaul; containing 1643 inhabitants. It is said to have derived its name from the circumstance of its having been the burial-place of *Irenan*, a Danish prince, the prefix *Kill* signifying a chapel, church, or cemetery.

On the northern boundary of the parish is a sepulchral monument called Cairn-Irenan; and it is probable that the Danes had a settlement here, or were often engaged in conflicts with the original inhabitants. Tradition states that two religious houses formerly existed in Killearnan, and though nothing certain is known about them, the names of two hamlets, Chapel-town and Spital, give some authority to the assertion. More recently, the family of Mackenzie, so well known in Scottish history, resided at Redcastle and Kilcoy. The three parishes of Killearnan, Kilmuir Wester, and Suddy were formed into two in the year 1756, and the ecclesiastical stipends equally apportioned. The parish of Killearnan is between five and six miles long, and between two and three broad. It is bounded on the north by the parish of Urquhart, on the south by the Firth of Beauly, on the east by the parish of Kilmuir Wester and Suddy, and on the west by the parish of Urray. The ground rises gently from the southern boundary to the top of Mulbuy, where it has its greatest elevation. Along the shore it is smooth and level, and unbroken by bays or headlands. The water of the Firth is of a dark hue, from the large quantities of moss and mud brought into it by the river of Beauly.

The soil varies considerably; and very frequently, on the same farm, light loam, red and blue clay, and gravel succeed each other. Deep clay is common on the shore; it is used as compost, and often for mortar in buildings. Many of the lands are covered with small stones, which require clearing every year; and throughout the larger part of the parish, broom grows spontaneously, and, if left to itself, would shortly overspread the fields. The whole parish is the property of two families, whose estates are called Redcastle, and Kilcoy and Drumnamarg: the former comprises 3796 acres, of which 1566 are arable, 577 pasture, and 1653 wood; the latter contains 3041 acres, of which 977 are arable, 882 wood, and 1182 pasture. The crops consist of wheat, barley, oats, rye, clover, turnips, and potatoes; and the annual value of real property in the parish amounts to £4275. Many agricultural improvements have been made within the last twenty or thirty years, and the lands have assumed an entirely different appearance. The native heath and broom are gradually yielding to valuable crops of grain; and the gratuity of £5 allowed for the improvement of every Scottish acre, and the permission to enjoy it rent-free during the remainder of the current lease, have given an impulse to the energies of the cultivator, the effects of which are conspicuous in every direction. The union of several small farms, and the building of good houses and offices, with the formation of inclosures, especially on the Redcastle property, have introduced superior tenants, and, with them, better means of cultivation; and the encouragement afforded by the spirited proprietors in the parish bids fair to raise it, in a few years, to a level with the best cultivated districts in the country. In general the farmers breed only the cattle necessary for ploughing, &c., on their own ground; but at the close of harvest, they purchase young cattle in considerable quantities to consume their straw, and others for the purpose of fattening them upon turnips with the sheep in winter, by which they make a considerable profit at the markets in the summer time. The substratum of the parish is one continued bed of red freestone, which is easily prepared,

and well suited to buildings of every description. A quarry of this stone has been wrought for some centuries, from which Inverness has been freely supplied, and from which the stones used in the locks of the Caledonian canal were taken.

Formerly each of the estates had a castle in which the proprietor resided. That on the Kilcoy estate is now in ruins; but the mansion on the property of Redcastle, so named from the colour of the stone of which the building is constructed, is in good and habitable condition. It is a large pile, and is surrounded with beautiful plantations, which occupy many hundreds of acres, and consist of oak, ash, birch, Scotch fir, and larch. In other parts, also, the same trees are to be seen. There are two villages: that of Miltoyn, a name common to other villages in this district, is chiefly remarkable for its delightful situation, and its miniature likeness to a town; Quarry consists of a line of neat cottages, extending along the base of a sandstone rock, which rises to the height of a hundred feet above the village, giving it a very singular appearance, and conferring upon it its name. There is a corn-mill on each of the two estates, for the use of the parish. Two fairs are held which are the staple horse-markets of the country, one in February, and the other in July. Facility of communication is afforded by a good road from the ferry at Kessock to Dingwall, Invergordon, and Fortrose, the repairs of which are defrayed by a regular toll; and there are two small vessels belonging to the parish, employed in carrying timber and coal between Killearnan and Newcastle in England. Ships, also, touch here, and land their cargoes on the shore at the eastern extremity of the parish, as there is no harbour.

Ecclesiastically the parish is within the bounds of the presbytery of Chanornry, synod of Ross; and the patronage is vested in the Marchioness of Stafford. The stipend of the minister is £200, with a manse, built about a century ago, and repaired and enlarged some years since. The glebe consists of about six acres of arable land; and one-half, also, of the glebe of Kilmuir Wester has belonged to Killearnan since 1756. The church, which is built in the form of a cross, is very ancient, and of considerable size. It was thatched with heather until about fifty years ago, when it was roofed with slate, and also supplied with fresh seats; it has lately been again repaired, and is now a very comfortable building. The members of the Free Church have a place of worship. There is a parochial school, in which Greek and Latin, English grammar, geography, and practical mathematics are taught: the salary of the master is £30, with a house, an allowance in lieu of garden, and about £8 fees. Another school is endowed by the Society for Propagating Christian Knowledge; English, Gaelic, writing, and arithmetic are taught, and the master has £15 per annum, and a small house. There is also a female school supported by the society. The chief relics of antiquity are, the ruins of Kilcoy Castle; the cairn already referred to, supposed to have been raised to commemorate the murder of a Danish prince; and, in the vicinity of the cairn, the remains of a Druidical temple.

KILLELLAN, in the county of RENFREW.—See HOUSTON and KILLALLAN.

KILLIGRAY, an island, in the parish of HARRIS, district of LEWIS, county of INVERNESS; containing 7 inhabitants. This is one of numerous isles in the

sound of Harris, and lies a short distance south of Ensay, and four miles and a half east of Bernera ; its length is about two miles, and its breadth one. The south end is a deep moss ; but the isle is verdant all over, and has in general a good soil, latterly well cultivated. In the northern part, particularly, the ground is managed with care, and the crops are early. Here, however, as in the neighbouring isles, the inhabitants live chiefly by fishing and the manufacture of kelp. A temple to the goddess Annat, of Saxon mythology, who presided over young maidens, anciently existed on the island.

KILLIN, a parish, in the county of PERTH ; containing, with part of the former quoad sacra district of Strathfillan, 1702 inhabitants, of whom 426 are in the village of Killin, 8 miles (N. by W.) from Lochearnhead. This parish, which is situated in the Highland district of Breadalbane, extends from Loch Tay on the east to Loch Lomond on the west, and is about twenty-four miles in length, varying from five to nine miles in breadth, and comprising an area of 90,000 acres, of which 2500 are arable, 1000 woodland and plantations, and the remainder mountain pasture. Its surface is strikingly diversified with ranges of lofty mountains interspersed with deep and richly-wooded glens and fertile valleys, and is enlivened with numerous streams descending from the heights, and, after a devious course through the lower lands, forming tributaries to the rivers that intersect the parish. The highest of the mountains is *Benmore*, which has an elevation of 3900 feet above the level of the sea ; it rises from the plains of Glendochart in a conical form, and the whole of the range that reaches to the head of Loch Lomond displays a character of romantic grandeur not surpassed in any part of the Highlands. The range of *Craig Chailleach*, ascending abruptly from the lands of Finlarig, near the western extremity of Loch Tay, and richly wooded from its base nearly half way to its summit, extends westward to the vale of Lochay or Glenlochay, forming, from the intervals between its several points of elevation, an apparent succession of forts. The hills, also, though of very inferior elevation, still rise to a considerable height, and, clothed with verdure to their summits, afford excellent pasturage for sheep and cattle.

Among the principal valleys is *Glendochart*, spreading westward for nearly ten miles, and watered by the river Dochart, which, issuing from a lake of that name within the glen, passes through a tract of romantic beauty into Loch Tay. The valley of *Strathfillan* extends for almost eight miles, in a similar direction, to the borders of the parish of Glenorchay, and is enlivened by the river here called the Fillan, which flows into the lake in Glendochart, and, issuing thence, is for the remainder of its course designated the Dochart. The valley of *Glenfalloch*, branching off to the south from that of Strathfillan, reaches to the confines of Dumbartonshire, and is watered by the river Falloch, which runs into Loch Lomond. The *Braes of Glenlochay*, in which the river Lochay has its source, extend for about fourteen miles from the village of Killin, towards the west, in a direction nearly parallel with Glendochart, from which they are separated by a chain of hills called the Mid hills ; they are partly in the parishes of Kenmore and Weem, and form a rich and fertile district, abounding with romantic beauty. The scenery of the parish, indeed, almost in every point, is marked with features of interesting cha-

racter. The streams which issue from the heights make pleasing and picturesque cascades in their descent ; and the rivers that flow through the lower lands, in various places obstructed in their course, fall from considerable heights with great effect. The cataracts on the *Dochart* near the village, and those of the *Lochay* about three miles distant from it, are strikingly romantic ; and the latter falls have been considered equal in beauty to the falls of the Clyde.

The SOIL, though generally light and dry, resting on a substratum of limestone, is in some places wet and marshy, particularly in the valleys of Glendochart and Strathfillan, rendered so by the occasional inundation of the rivers. Crops are raised of oats, barley, potatoes, and turnips ; but the principal resource of the farmers is the pastures, which in many parts are luxuriantly rich. The sheep, of which more than 30,000 are fed, are chiefly of the black-faced breed, with a few of the Leicestershire and South-Down kept on the lands of the proprietors. The cattle, of which 1200 are pastured, are of the West Highland breed, with some of the Ayrshire on the dairy-farms. Considerable improvements are gradually taking place in the system of husbandry : draining has been extensively practised, under the assistance and encouragement of the proprietors ; and the farm houses and offices, though usually of an inferior description, are giving way to others of more commodious construction. It is in contemplation to deepen and embank the rivers. The plantations are for the greater part of recent formation, and are in a thriving state. They consist chiefly of Scotch, silver, spruce, and larch fir : and the natural woods, which were formerly much more extensive, especially in the higher parts of Strathfillan, are oak, ash, mountain-ash, birch, elder, hazel, and hawthorn. At Finlarig are some yew-trees, and a plane supposed to be three hundred years old. Holly and laburnum are also frequent, and the district abounds in interesting botanic specimens. Limestone of a greyish colour, and of crystalline formation, is plentiful, and there are veins of trap and greenstone ; lead-ore is also abundant, and some mines of it are at present in operation at Tyndrum, where a large crushing-mill has been erected. Cobalt, containing sixty ounces of silver in one ton of ore, is found ; and in Craig-Chailleach is a rich vein of sulphuret of iron. The annual value of real property in the parish is £18,137.

The principal seats are, *Kinnell*, for centuries the baronial residence of the Mc Nabs, and now the property of the Marquess of Breadalbane, finely situated on the river Dochart ; *Finlarig Castle*, now in ruins, formerly the seat of the Breadalbane family, an ancient structure at the north-west extremity of Loch Tay, near which is the family mausoleum, embosomed in woods of venerable growth ; *Auchlyne House*, occupied during the shooting season by the Duke of Buckingham ; *Glenure*, the seat of T. H. Place, Esq., the only resident proprietor, beautifully seated on the banks of the Lochure, near Benmore ; *Auchmore*, a handsome mansion belonging to the Breadalbane family ; and *Borland*, romantically situated in the woods of Glenlochay. The village of *Killin* stands at the head of Loch Tay, near the confluence of the rivers Dochart and Lochay ; and the environs abound with some of the most romantic scenery in Britain. It is irregularly built, and a few of the inhabitants are employed in the carding and spinning of wool, for which

there is a mill; there are several shops for the sale of various kinds of merchandise and wares, and an excellent inn. A branch of the Central Bank of Scotland, and a savings' bank, have been established; there is a daily post to and from the south of Scotland, and a post communicates three days in the week with Kenmore and Aberfeldy. Fairs are held on the third Tuesday in January, for general business; the first Tuesday in May, also for general business, and on the 12th for cattle; on the 27th of October, for cattle; and the first Tuesday in November, O. S., for general business. Facility of communication is maintained by good roads, and bridges over the several rivers, all kept in excellent order; one road communicates with Loch Lomond, where a steamer plies daily during the summer.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Weem, synod of Perth and Stirling. The minister's stipend is £240. 19. 5., with a manse, and a glebe valued at £13 per annum; patron, the Marquess of Breadalbane. Killin church, erected in 1774, and repaired in 1832, is a neat structure conveniently situated, and containing 905 sittings. A church, now in connexion with the Free Church, was erected towards the close of the last century, on the lands of Strathfillan; and at Ardeonaig is a mission under the Society for Propagating Christian Knowledge, for which a church was built by the late Marquess of Breadalbane, at an expense of £600. The latter church contains 650 sittings, and the minister has a stipend of £60, of which one-half is paid by the marquess, and the other by the society; he has also a manse, and a glebe of seventeen acres and a half, valued at £12 per annum. The members of the Free Church have a place of worship at Killin; and there are small congregations of Baptists and Independents, who assemble in a room, but have no regular minister. The parochial school is attended by about eighty children; the master has a salary of £34, with a house and garden, and the fees average £10 per annum. Three schools are supported by the Society for Propagating Christian Knowledge, the masters of which have salaries varying from £15 to £18, with a house, and land for a cow, in addition to the fees. Two schools, also, are endowed by the Marchioness of Breadalbane, in one of which, at Killin, ten boys and fifty girls are instructed gratuitously by the master, who has a salary of £20, with a house and garden; the girls are also taught sewing and knitting. In the village is likewise a school for young children, to the mistress of which the marchioness gives a house and garden rent-free. The parochial library contains a collection of about 300 volumes, principally on religious subjects; and the Breadalbane Philanthropic Association furnishes a supply of Bibles and school-books to the poor at a very reduced cost. The poor are supported partly by the liberality of the Breadalbane family, who allow, almost to each, a house and garden rent-free, with the liberty of cutting peat, and distribute annually among them meal to the amount of £40, and a supply of clothing at Christmas.

In Loch Dochart are some remains of one of the seven towers built by Sir Duncan Campbell, which during a frost was taken by the Mc Gregors, who, approaching on the ice, put the whole of its inhabitants to death. In the possession of Mr. Sinclair, tenant of Inverchagarnic, are the powder-horn, and a gold brooch, worn by the celebrated Rob Roy Mc Gregor, who was a na-

tive of Glendochart. The same gentleman has an old rifle which belonged to the Mc Nabs; it is four feet in length, with an octagonal bore, and in the stock is a recess for holding a supply of bullets. Sir Walter Scott in his *Lord of the Isles* states, that Lord Bruce's party, after their fierce struggle with the enemy at Dalry (or King's Field), entered, in their retreat, a narrow pass between Loch Dochart and a precipice, where the king had scarcely room to manage his steed. Here three of his foes attacked him at once. One seized his bridle, but was cut down with a blow that hewed his arm off. The second grasped Bruce by the stirrup and leg, and endeavoured to dismount him; but the king putting spurs to his horse, threw him down, the man still holding by the stirrup. The third assailant, taking advantage of an acclivity, sprang up behind the king on the horse: Bruce, however, whose personal strength is uniformly reported as exceeding that of most men, extricated himself from his grasp, hurled him to the ground, and cleft his scull with his sword. By similar exertion, he wrested his stirrup from the grasp of the man he had overthrown, and despatched him also with his sword, as he lay under his horse's feet. The battle of Dalry, above mentioned, was fought on a small plain in the parish, in 1306, between Robert Bruce, and the forces of the shire of Argyll, under Macdougall, chieftain of Lorn; the former suffering defeat. A spot near the village of Killin, within what was the site of the ancient churchyard, is pointed out as the grave of Fingal. The present translation of the Bible into the Gaelic language was commenced by the Rev. James Stewart, minister of this parish, who died in 1789, having at that time translated the New Testament; the remainder was performed by his son, Dr. Stewart, of Luss, who was born here. Dr. Dewar, principal of Marischal College, Aberdeen, and eminent in literature and theology, is a native of the parish.

KILLOCHYETT, a hamlet, in the parish of Stow, county of EDINBURGH, $\frac{1}{2}$ a mile (N. N. W.) from Stow; containing 42 inhabitants. It lies in the south-eastern part of the parish, near the confluence of the Cockham rivulet with the Gala water, and on the high road from Stow to Middleton.

KILMADOCK, an important parish, in the county of PERTH, 9 miles (N. W.) from Stirling; containing, with the former quoad sacra parish of Deanston and part of that of Norrieston, the town of Doune, and the villages of Buchany and Drumvaich, 4055 inhabitants. This place derives its name from the dedication of its ancient church to St. Madocus or Madock, one of the Culdees, who lived here in sequestered solitude. It is sometimes called the parish of Doune, from the removal of the parochial church to the town of that name. The parish, which is situated in the western part of the county between the Ochil and the Grampian hills, includes a portion of the old stewardry of Monteith, and is about twelve miles in length and nearly of equal breadth, comprising an area of 51,200 acres, of which a considerable part is waste. Its surface is varied with hills, of which the most conspicuous is Uamvar or Uaighmor, referred to in the *Lady of the Lake* as "the wild heights of Uamvar"; and commanding an extensive and richly-diversified prospect over the adjacent country: the lands are intersected, also, with numerous small vales. The ground rises from the river Forth, which

bounds the parish on the south, by a regular and gradual ascent, to a great elevation: and on the acclivity of Uamvar is a large cavern, said to have been, till the year 1750, the retreat of bands of robbers. The river Teith rises in two streams, one of which flows through Lochs Katrine, Achray, and Vennachar, and the other passes by the braes of Balquhider, and runs through Lochs Voil and Lubnaig: above Callander they form one stream, which intersects the parish, and falls into the Forth about two miles above Stirling. The river Ardoch issues from Loch Maghaig, and uniting with the burn of Garvald, joins the Teith below the castle of Doune. The river Kelty bounds the parish on the west, and flows into the Teith at Cambusmore; and the Annat, or Cambus, which makes some picturesque cascades near the site of the old mansion of Annat, and has formed a deep glen in the solid rock, called the Caldron Linn, runs into the Teith at the ancient church of Kilmadock. There are two considerable lakes in the parish, Loch Watston on the lands of Gartincaber, and Loch Maghaig in the braes of Doune, each of circular form, and about a mile in diameter. Numerous springs flow from the sides of the Grampians, and from the acclivities of Uamvar. Near the burn of Garvald is one issuing out of the solid rock, in the form of a spout; the water is supposed to possess mineral qualities, but has not been fully analysed.

In this parish the soil is exceedingly various; near the Forth, a fine carse clay; on the rising grounds to the north, rich garden mould; upon the south bank of the Teith, a tilly loam, but on the north bank less productive, being alternated with sand. The soil around Doune, being enriched with the manure of the town, is luxuriantly fertile. The crops are wheat, barley, oats, beans, peas, potatoes, and turnips, with rye-grass, flax, and clover. Of late years, the system of agriculture has been much improved; and considerable tracts of waste land have been rendered fertile, and brought into profitable cultivation, by the adoption of the Deanston plan of thorough-draining and subsoil ploughing, introduced by Mr. Smith. The farm-buildings have also been much improved, and are in general substantial and commodious. The cattle are principally of the Highland breed, for which the pastures are better adapted than for feeding sheep: a few sheep, however, are kept, chiefly on the braes of Doune, and on the moors of Lanrick and Cambusmore. There is little wood of native growth; but plantations have been formed on the lands of the Earl of Moray, to whom one-third of the parish belongs, and on the pleasure-grounds of Cambusmore and Newton, which are celebrated in his *Lady of the Lake* by Sir Walter Scott, who visited here in his youth. The mansions are Doune Lodge, Gartincaber, Lanrick Castle, Cambusmore, Newton, and Argaty. Doune is a post-town, and the cotton manufacture is carried on extensively at Deanston, besides which there are several villages in the parish, noticed under their respective heads. Facility of communication is afforded by statute-labour roads; and a suspension-bridge has been thrown over the river Teith, at Lanrick, under the superintendance of Mr. Smith of Deanston. The annual value of real property in the parish is £18,200.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Dunblane, synod of Perth and Stirling. The minister's stipend is about £260, with

a manse, and a glebe valued at £7 per annum; patroness, Lady Willoughby de Eresby. The ancient church of Kilmadock, with the exception of the eastern gable, was taken down in 1744, and a church was erected at Doune, which is now the parish church; it is a handsome structure in the later English style, and is seated for 1121 persons, but capable of holding a congregation of 1400. A service of communion-plate, consisting of silver cups, &c., was presented by William Mitchell, Esq., of Jamaica, a native of the town of Doune. In the town are two places of worship for members of the Free Church, a meeting-house for Wesleyans, and a congregation of Independents; and at Bridge of Teith a place of worship in connexion with the United Presbyterian Synod. The parochial schoolmaster has the maximum salary and the legal accommodation, and the school, though not sufficiently commodious, with the other schools in the parish, two of which are partially endowed, may afford instruction to about 600 children.

KILMAHOG, a village, in the parish of CALLANDER, county of PERTH, 1 mile (N. W. by W.) from Callander; containing 116 inhabitants. It is situated in the south-eastern part of the parish, and on the road from Doune to Lochearnhead, the principal road to the Western Highlands. On the west and south flows a stream issuing from Loch Lubnaig, and which, uniting with a rivulet from Loch Vennachar, forms the Teith. The village, the only one besides Callander in the parish, is beautifully seated on a plain; and in its vicinity is Leney House, the property of the Buchanan family.

KILMALCOLM, a parish, in the Lower ward of the county of RENFREW, 4 miles (S. E. by S.) from Port-Glasgow; containing 1616 inhabitants, of whom 377 are in the village. This parish is situated on the Firth of Clyde, and is about six miles in length and nearly of equal breadth. It comprises 25,000 acres, whereof 8000 are arable land in a state of profitable cultivation, to which 1000 might be added; about 250 natural wood, and plantations; 6000 moorland in undivided common; and 10,000 pasture and waste. The surface is gently undulated, rising from the bank of the Clyde, and in various parts relieved by tracts of ornamental planting, that add much to the beauty and variety of the scenery. The village has an elevation of nearly 400 feet above the level of the sea, and commands an extensive and interesting view of the surrounding country, embracing the Firth, which skirts the parish for nearly four miles. The rivers Gryfe and Duchal have their source in the western confines, and after intersecting the parish unite their streams, and flow into the river Cart, which falls into the Clyde at Inchinnan. These streams abound with trout, and, towards the close of the year, with salmon, which come up from the Clyde to spawn.

In general the soil is light and unproductive, and consequently a very small proportion is under cultivation: the system of husbandry is, notwithstanding, considerably improved; and with due encouragement, a great part of the waste lands might be reclaimed. The farm-buildings are also improving in their style; and the crops of grain are favourable, and equal in quality those of any neighbouring parish. Great numbers of sheep and cattle are fed on Duchal moor, which comprises nearly 6000 acres of undivided common; the cattle are generally of the Ayrshire breed. Some improvement has taken place in draining and inclosing the lands; but the fences are

badly made, and indifferently kept. The rocks with which the parish abounds are of granite, and frequently extend to a great depth; but few minerals of any value have been found. The annual value of real property in Kilmalcolm is £9025. There are four modern mansions in the parish, namely, the houses of Finlayston, Duchal, Carruth, and Broadfield: that of Finlayston commands a beautiful and extensive view of the Clyde. Three mills are employed for grinding oats and barley. The parish is intersected by various roads, and by the line of the Glasgow, Paisley, and Greenock railway. Ecclesiastically it is within the presbytery of Greenock, synod of Glasgow and Ayr, and in the patronage of Dr. Anderson; the minister's stipend is £246, with a manse, and a glebe valued at £16 per annum. Kilmalcolm church, which is situated in the village, and has been rebuilt within the last few years, is adapted for a congregation of 1000 persons. There are places of worship for Baptists and Reformed Presbyterians. The parochial school, also situated in the village, is well attended; the master has a salary of £34, with £10 fees, and a house and garden. A circulating library has been formed. John Knox, the celebrated Reformer, dispensed the sacrament at Finlayston House, since rebuilt, then occupied by the Earls of Glencairn. On this occasion the wine was put into the hollow of the lower parts of two silver candlesticks, which, while the family remained at Finlayston, were regularly used in the church; but upon the removal of the family from the parish, they were exchanged for four cups of gilt copper, by the last Countess of Glencairn, who is said to have taken the candlesticks away with her. The Lords Lyle, as well as the Earls of Glencairn, had property anciently in the parish; and several members of the two families are interred in the cemetery of the church.

KILMALIE, a Highland parish, partly in the district and county of ARGYLL, and partly in the county of INVERNESS; containing, with the village of Fort-William, and the quoad sacra district of Ballichulish and Corran-of-Ardgour, 5397 inhabitants, of whom 2741 are in the county of Inverness. The wide district comprehending the present parishes of Kilmalie and Kilmonivaig at one time formed one parish, under the appellation of Lochaber; but the parish was divided into two distinct parishes about the middle of the seventeenth century. Kilmalie is supposed to have derived its name from the dedication of its church to the Virgin Mary. It derives much historical interest from its being the head-quarters of the clan Cameron. In the seventeenth century, when General Monk found great difficulty in subduing Sir Ewan Cameron of Locheil, he planted a garrison at the place now called Fort-William, in order to keep that chief and his dependents in awe. A severe conflict soon afterwards occurred between the Camerons and a considerable party of the English, on the shore of Loch Eil, in which the former were victorious; and the bold and resolute chief continued in various ways to harass the new garrison in his neighbourhood, till at last, finding his country impoverished, and the people almost ruined, he submitted on terms of his own dictating, and Monk immediately wrote him a letter of thanks, dated at Dalkeith, the 5th of June, 1665. During the rebellion of 1745-46, the district suffered in some degree from the devastations of the royal forces, who, after their victory at Culloden, encamped at Fort-

Augustus, whence they sent detachments to Lochaber; and a party of troops was finally stationed at the head of Loch Arkaig, to check the movements of the clan Cameron, whose chief, Locheil, had joined the Young Pretender. The PARISH is about sixty miles in length and thirty miles in extreme breadth. Its scenery is most magnificent, scarcely equalled in the Highlands. The surface is mountainous and wild, and is deeply indented with lochs, and diversified with ravines which, when they intervene between the higher mountains, are narrow and precipitous, and when between those of inferior elevation, assume more the appearance of valleys. Ben-Nevis, to the east of Fort-William, the loftiest mountain but one in the whole country, has an elevation of 4370 feet above the level of the sea, commanding from its summit, which is difficult of ascent, a most unbounded prospect. The summits of most of the higher mountains are perfectly sterile, and have a dreary aspect; and in the clefts on the north-east, snow in a frozen state is to be found at all times.

The principal inlets from the sea, connected with the parish, are, Loch Linnhe, in the south-west, reaching along the shores of Ardgour to the entrance of Loch Eil; Loch Leven, about ten miles to the south of Fort-William, branching from Loch Linnhe towards the east, for almost twelve miles, between the mountains of Glencoe and Lochaber; and Loch Eil, stretching in a north-eastern direction to Fort-William and the Caledonian canal, and then taking a north-western direction for nearly ten miles towards Arisaig. The only inland lake wholly within the parish is Loch Arkaig, situated among the mountains, and skirted by the military road from Fort-William by Corpach ferry. This lake is about sixteen miles in length and a mile broad; and near one extremity is a densely-wooded island, which has been for ages the burying-place of the family of Locheil and its chieftains. Loch Lochy, part of the line of the Caledonian canal, and about a mile and a half to the east of Loch Arkaig, is chiefly in the parish of Kilmonivaig, but extends for nine miles into this parish. The valley between these two lakes abounds with romantic scenery. The river Lochy, issuing from the lake of that name, forms a confluence with the Spean at Mucomre Bridge, and for about eight miles constitutes a boundary between the parishes of Kilmalie and Kilmonivaig: it flows into the sea at Fort-William, where it is met by the river Nevis, which descends from Ben-Nevis in an impetuous torrent forming a magnificent cascade. The Lochy abounds with salmon, which are taken in great quantities, and sent to the London market; and herrings of small size but of excellent quality, salmon, cod, whittings, haddocks, and flounders, with other kinds of fish, are found in the salt-water lochs. A considerable quantity of salmon is packed in tin boxes, hermetically sealed, at Corpach Ferry, and forwarded to India. There are commodious bays at Corran-Ardgour, where is likewise a ferry; at Eilan-na-gaul; and at Camus-na-gaul, near the south entrance of the Caledonian canal, opposite to Fort-William. There is also a ferry on the Lochy, where are good quays on both banks of the river, and where, from the great intercourse with Fort-William, about two miles distant, a substantial bridge would afford very desirable accommodation.

The quantity of arable land in this extensive parish is very inconsiderable. Some attempts to reclaim portions

of waste, and bring them under cultivation, have recently been made, and the result has been such as to encourage further efforts; but the people at present are chiefly dependent on the rearing of sheep and cattle, and on the fisheries. The soil on the coast, and along the shores of the rivers, is tolerably fertile, but in other parts sandy and shallow; the chief crops are oats and potatoes, of which latter great quantities are raised. The sheep-farms are well managed, and considerable attention is paid to the rearing of cattle, for which the hills afford good pasture; both the sheep and cattle are sent to the Falkirk trysts, where they find a ready sale. The annual value of real property in the parish is £8079. In some respects the geology of the parish is very remarkable. The rocks are mostly gneiss and mica-slate, and there are extensive beds of quartz and hornblende. At North Ballichulish is a quarry of slate, which has not yet been much wrought; and at Fassfern is a quarry of good building-stone, from which materials were raised for the construction of the Caledonian canal, and the quay at Fort-William. In the mountain of Ben-Nevis are found large detached masses of grey granite, weighing from ten to forty tons. The ancient woods, which were very extensive, have been partly cut down; but there are still remaining great numbers of venerable oaks, and firs of luxuriant growth. Extensive plantations, also, have been formed on the lands of the principal proprietors, and are in a thriving state. *Achnacarry*, the seat of Cameron of Locheil, is an elegant modern structure, built of materials found near the spot. *Ardgour*, the seat of Colonel Mc Lean, is a handsome mansion of more ancient style, but recently repaired and enlarged; it is pleasantly situated near Corran Ferry, in grounds tastefully laid out, and enriched with plantations. *Cal-lart*, the seat of Sir Duncan Cameron of Fassfern, Bart., is beautifully situated on the banks of Loch Leven. The villages in the parish are, *North Ballichulish* and *Fort-William*, both of which are described under their respective heads; and *Corpach*, near the southern extremity of the Caledonian canal, where the parish church is situated, and where a post-office has been established. Facility of communication is afforded by steamers twice a week during summer, and once a week during winter, between Inverness and Glasgow.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Abertariff, synod of Glenelg. The minister's stipend is £237. 15. 8., with a manse, and a glebe valued at £60 per annum; patron, Cameron of Locheil. Kilmalie church is a neat plain structure, erected in 1783, at a cost of £440, and contains 1000 sittings. A church has been erected at Fort-William, where are also an episcopal and a Roman Catholic chapel; and there are two churches in the quoad sacra district of Ballichulish and Corran-of-Ardgour. The members of the Free Church have a place of worship. The parochial school, situated at Fort-William, is well conducted; the master has a salary of £34, with a house and garden, and the fees average £45. Three schools are supported by the Society for Propagating Christian Knowledge, who allow the masters a salary of £17 each, with a house and garden; and there is also a female school, at Fort-William, of which they give the teacher £8. A school is supported by the Gaelic School Society, who allow £20 per annum for the gratuitous instruction of fifty children; and there is a school on the grounds of Achnacarry,

near the mansion, the teacher of which receives £10 per annum from Mrs. Cameron. Of the other schools in the parish, one, at Ballichulish, is maintained by government. At the western extremity of the parish is a monument, erected on the spot where Prince Charles Edward first unfurled his standard for the gathering of the clans, in the rebellion of 1745. In the churchyard is a monument to the memory of Colonel John Cameron of Fassfern, of the 92nd regiment of Scottish Highlanders, who was killed at the battle of Waterloo. Evan Mc Lachlane, of the grammar school of Aberdeen, an eminent scholar, who translated part of Homer's *Iliad* into Gaelic verse, was a native of this parish.

KILMANY, a parish, in the district of CUPAR, county of FIFE; containing, with the village of Rathillet, 659 inhabitants, of whom 58 are in the village of Kilmany, 5 miles (N. by E.) from Cupar. This parish, the name of which is supposed by some writers to signify "the church of the monks", and by others "the church of the valley", is situated in the north of the county, and forms part of a rich and fertile vale. It is about five miles in length, and one in average breadth, and comprises 4477 acres, whercof 200 are woodland and plantations, and the remainder all arable. The surface is diversified with hills, the highest of which have an elevation of about 400 feet above the level of the sea. The scenery is generally pleasing, being partially enriched with plantations, and in some parts picturesque. An aperture in the hill of Kilmany forms a romantic glen, called Goales Den, which has been finely planted. Several of the hills, also, have been covered with thriving plantations; and on those that separate the parish from the Tay are some rich woods through which walks have been cut, affording beautiful views of the river, the Carse of Gowrie, and the hills of Angus. The plantations are of larch, fir, beech, and ash, interspersed with a few oaks; the old wood is chiefly in the grounds of Mountquhanie, Lochmalonie, and Rathillet. The valley is watered by the river Motray, which has its source in the height of Norman Law, from opposite sides of which descend two small streams: these unite their waters on the confines of the parish to make the Motray, and, flowing near the base of the eminence whereon the church is built, it runs into the river Eden. The Motray, though an inconsiderable stream, frequently in winter overflows its banks. A small rivulet called the Cluthie, which rises within the parish, after a course of about a mile falls into the Motray below the church; and there are also two small burns which, flowing through the pasture lands, add to their fertility. The climate is temperate, the air salubrious; and the inhabitants generally are of robust health.

The SOIL is good, and the system of agriculture improved; draining has been practised with success; lime has been long used with advantage, and within the last few years bone-manure has been introduced. The crops are wheat, barley, oats, peas, potatoes, and turnips. The sheep are principally of the Leicester, Cheviot, and Highland breeds, of which 1000 are annually fed for the butcher upon turnips; the cattle are of the Old Fife breed, with an occasional mixture of the Teeswater, and on an average about 200 head are annually reared in the parish. No horses are reared, except for agricultural purposes. The lands are but very imperfectly inclosed; and there is still great room for improvement in the fences and plantations, which are comparatively on a limited scale.

The substratum of the hills is mostly trap rock or whinstone; in some places of a dark-blue colour, and extremely brittle; in others of a reddish white, and not easily worked. This stone is occasionally quarried for building, but generally for the roads, and for the construction of drains and dykes. The annual value of real property in the parish is £7937. Mountquhanie, Kilmary Cottage, Lochmalonie House, Hill-Cairnie, and Rathillet House are handsome mansions, pleasantly situated.

The village consists of a few cottages, the residence of such as are not employed in agriculture, and who carry on the pursuit of weaving, at their own homes, for the manufacturers of Dundee and Cupar; many of the females are also employed in weaving during the winter. There are three corn-mills and a saw-mill, the last employed in converting inferior timber into staves for barrels, great numbers of which are sent to Leith and other places connected with the herring-fishery. All the farms in the parish have threshing-mills; they are seventeen in number, eleven of them driven by horses, three with water, two with water and horses, and one with steam. The roads are good; and there are tolerable facilities of intercourse with the neighbouring market-towns, of which Cupar is the nearest. Ecclesiastically the parish is in the presbytery of Cupar, synod of Fife, and in the patronage of the United College of St. Andrew's: the stipend is about £220, with a manse, and a glebe valued at £30 per annum. Kilmary church, situated on rising ground overlooking the river Motray, is a plain edifice erected in 1768, in good repair, and adapted for a congregation of about 350 persons. There is a place of worship for the United Presbyterian Church. The parochial school is at Rathillet, nearly in the centre of the parish; the master has a salary of £34, with from £15 to £20 fees, and a house and garden. Two other schools, for younger children and for girls, are supported by Mrs. Gillespie of Kirkton and Mrs. Thomson of Charleton; the teachers have each an allowance of £10 per annum, with a house and garden, and the fees. The late Rev. Dr. John Cook, professor of divinity in the university of St. Andrew's, and the late distinguished Dr. Chalmers, were ministers of this parish.

Burgh Seal.

KILMARNOCK, a burgh of barony and a parish, in the district of CUNNINGHAME, county of Ayr; containing 19,956 inhabitants, of whom 17,846 are in the burgh, 12 miles (N. N. E.) from Ayr, and 22 (S. W. by S.) from Glasgow. This place, which is of great antiquity, derives its name from the foundation of a church by St. Marnoch, an eminent apostle of Christianity, who flourished in the fourth century, and to whose memory many churches in various parts of the country have been dedicated. The lands, at an early period, were part of the possessions of the ancient family of Boyd, descendants of Simond, brother of Walter the first high steward of Scotland, and of whom William, the ninth Lord Boyd, was created Earl of Kilmarnock in 1661. Dean Castle, the baronial residence of the Earls of Kilmarnock, was destroyed by an accidental fire in 1735. In 1746 William, the fourth earl, having

joined in the rebellion, was taken prisoner at the battle of Culloden, and sent to London, where he was beheaded; and the title and estates became forfeited to the crown. This place, originally a small hamlet depending solely on the baronial castle, which now forms an interesting ruin, gradually acquired importance from the introduction of various manufactures, for which the abundance of coal in the vicinity, and the facilities of water-carriage, rendered it peculiarly appropriate; and in 1592, it had so far increased in population and extent as to obtain from James VI. a charter erecting it into a burgh of barony. In the year 1800, an accidental fire, originating in some thatched buildings in the lower part of the town, spread with amazing rapidity to the houses on both sides of the street, which was nearly destroyed.

The town is pleasantly situated in the south-western part of the parish, on a stream called the Kilmarnock water, about half a mile above its influx into the river Irvine; and over the stream are five substantial bridges, affording facility of communication. In the older portion of the town the streets are narrow and irregularly formed, but in the central portion of it spacious and well built, consisting of handsome houses of freestone, many of which are of elegant aspect; and towards the south and east, in which directions the buildings have been greatly extended, are numerous pleasant villas that add much to its appearance. Considerable improvements have recently taken place: the streets are well paved, and lighted with gas from works erected by a company of £10 shareholders, established in 1823; and the inhabitants are amply supplied with water, under an act of parliament passed in 1846. A public library, having an extensive collection of volumes on general history and literature, is supported by subscription; and there is a good library attached to a mechanics' institution. A handsome structure called the Exchange buildings, containing a commodious reading and news room, was erected in 1814, and is under the management of a committee of directors; there is also a news-room for tradesmen, well supplied with daily journals and periodical publications. Two weekly newspapers are published in the town; the Kilmarnock Journal, which has been established for many years, and has an extensive circulation; and the Ayrshire Examiner, which is of more recent date.

The first MANUFACTURE carried on here was that of the broad flat bonnets originally worn by the peasantry, and of the red and blue caps called Kilmarnock cowls, which was the chief trade till about the middle of the eighteenth century. The manufacture of carpets, however, was subsequently introduced, and soon became the staple trade of the place, which is still celebrated for this manufacture, the weaving of carpets of every variety of pattern and texture being carried on to a great extent, and affording employment to 1200 persons. The principal kinds are Brussels, Venetian, Turkey, and Scotch carpets, for the finest specimens of which premiums were in 1831 awarded by the commissioners to the manufacturers of Kilmarnock, to the amount of £210. The value of the carpets made annually in the town is estimated at £150,000. About the same number of persons are engaged in the manufacture of worsted and printed shawls, of which more than 1,250,000 are sold every year, estimated at £230,000: this trade, which was introduced in 1824, also affords employment to

200 printers. The number of bonnets annually made, the manufacture being still carried on, is about 20,000; and 2400 pairs of boots are made weekly, of which three-fourths are exported. There are also extensive tanneries and establishments for the dressing of leather, in which nearly 150,000 sheep and lamb skins are annually prepared. Considerable improvements in machinery have been effected by Mr. Thomas Morton, of this town, which have been adopted in the carpet factories with great advantage; and the same ingenious mechanist has built an observatory, and furnished it with telescopes of a very superior description, the high character of which has enabled him to establish a manufacture of telescopes. A piece of massive plate was presented to Mr. Morton by the inhabitants of the town, in 1826, in acknowledgment of his having so eminently contributed to the prosperity of their manufactures. There are also manufactories for machinery of all kinds, tobacco, candles, hats, hosiery, and saddlery, in all of which an extensive trade is carried on; and numerous handsome shops in the town are amply stored with various kinds of merchandise. Several branch banks have been opened. The market days are Tuesday and Friday, on both of which business is transacted to a very great extent. Fairs are held on the second Tuesday in May, for cattle; the last Thursday in July, for horses, black-cattle, and wool; and the last Thursday in October, for horses. The post-office has a good delivery; and facility of communication is maintained by excellent roads, of which the turnpike-road from Glasgow to Portpatrick passes through the town. In addition to the bridges across the Kilmarnock water, there are two over the river Irvine, which bounds the parish on the south, communicating respectively with the town. The Kilmarnock and Troon railway, the first public railway formed in Scotland, was commenced under an act passed in 1808, with a view to connect the port of Troon, on the coast near Ayr, and the collieries in the neighbourhood, with the town of Kilmarnock and the north-eastern part of Ayrshire. It is upwards of nine miles in length, and was opened in 1812, at a cost of £50,000. Originally the line was worked by horses; but in 1846 an act was obtained authorizing the company to let it on lease to the Glasgow, Kilmarnock, and Ayr railway company, who were empowered to change it from a tramroad into a locomotive railway. The Glasgow, Kilmarnock, and Ayr railway separates near Dalry, into two branches, one of which runs direct to Kilmarnock; this branch is about eleven miles in length, and was opened on the 4th of April, 1843. At Kilmarnock commences the Dumfries and Carlisle railway; and an act has been passed for the construction of a railway from the Neilston terminus of the Glasgow and Neilston railway, to Kilmarnock, and to the Ardrossan line.

The government of the BURGHS, under the charter of James VI., confirmed by charter of Charles II. in 1672, is vested in a provost, four bailies, a treasurer, dean of guild, and eleven councillors, chosen under the provisions of the Municipal Reform act, and assisted by a town-clerk, who is appointed by the Duke of Portland, superior of the burgh. There are five incorporated trades, viz., the skinners, tailors, weavers, bonnet-makers, and shoemakers, the fees for admission into which vary, for sons of burghesses from 10s. to £2. 2., and for strangers from £1. 11. 6. to £7. Persons holding leases under the

Duke of Portland are privileged to carry on trade in the burgh. The magistrates exercise the usual civil and criminal jurisdiction. Bailie-courts are held for the determination of civil actions to any amount, in which the town-clerk acts as assessor; there is also a convener's court, in which debts not exceeding 6s. 8d. are recoverable, and the jurisdiction of the dean of guild is exercised by the bailie-court. The criminal jurisdiction is almost confined to cases of assault and police matters, weighty offences being transferred to the sheriff of the county. In 1847 an act of parliament was passed for amending the acts relating to the police and improvement of the burgh. Kilmarnock is associated with Dumbarton, Port-Glasgow, Renfrew, and Rutherglen, in returning a member to the imperial parliament. The town-hall, a handsome building two stories high, crowned with a campanile turret, was erected in 1805, and contains the several courts, and apartments for the transaction of the public business.

The PARISH is about nine miles in extreme length and four in breadth, comprising an area of nearly 9000 acres, of which by far the greater part are arable. Its surface slopes gently to the river Irvine, and is pleasingly diversified with wood: the Kilmarnock water, which rises in the upper part of the parish of Fenwick, intersects the parish, and flows into the Irvine. In this district the soil is generally fertile, and the lands are under good cultivation, producing excellent crops of oats, wheat, barley, beans, potatoes, and turnips: the system of husbandry is in a highly-improved state; the lands have been well drained, and inclosed with hedges of thorn; and the farm-buildings are substantial and well arranged. The pastures are rich, and great attention is paid to the management of the dairy-farms, on which about 800 cows of the Ayrshire breed are kept; about 12,000 stone of cheese are annually produced, and abundant supplies of milk for the use of the town. The sheep bred on the pastures are of the black-faced and Cheviot breeds. Coal is found in abundance, and ironstone in sufficient quantity to remunerate the establishment of works. Freestone occurs in several places, in seams ten feet thick; and near Dean Castle is a bed forty feet thick, the stone of a fine white colour, and well adapted for buildings of the higher class. Coal-mines are in operation on the lands of the Duke of Portland, affording employment to about 300 men, and producing annually 90,000 tons of coal, of which 30,000 are consumed in the parish, and the remainder sent by the Kilmarnock and Troon railway for exportation. Fire-bricks, for which clay of good quality is abundant, are made in great quantities on the lands near Dean Castle. The principal mansion in the parish is Crawfordland Castle, an ancient structure in the early English style of architecture, of which the central portion was erected by the present proprietor; it is beautifully situated to the north-east of the town, and the older part of the building is remarkable for its strength and solidity. The annual value of real property in the parish is £37,570.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Irvine, synod of Glasgow and Ayr. The Laigh or parish church is collegiate, being under the care of two ministers, whose stipends are £150 each, with a manse and glebe; the glebe of the minister of the first charge is valued at £30, and that of the second at £12 per annum: patrons of each charge, the

Duke of Portland and the Marquess of Titchfield. The church, with the exception of the tower and spire, was taken down in consequence of an alarm excited by the falling of some plaster from the ceiling in 1801, which, creating a panic in the minds of the congregation, produced a simultaneous rush to escape, when many lives were lost. It was rebuilt in 1802, and repaired in 1831 at an expense of £1200, and contains 1457 sittings. The High church, to which a district of the parish, containing 3237 persons, was for a time annexed, was erected in 1732, by subscription, at a cost of £1000; it is a handsome structure in the Grecian style, with a tower eighty feet high, and has sittings for 902 persons. The minister's stipend is £150, with £50 in lieu of manse and glebe: patrons, Eight Directors. St. Andrew's, another incumbency in Kilmarnock, is in the patronage of the Communicants. There are places of worship for members of the Free Church, the United Presbyterian Church, the Synod of United Original Seceders, Reformed Presbyterians, Independents, and Wesleyans. The Academy, a spacious building, erected in 1807, at the joint expense of the heritors and the burgh, is under the superintendence of a committee of fifteen directors, of whom five are nominated by the town council. There are a classical master, who has a salary of £34, with a house and garden, and an English master and commercial master, each of whom has £15, without either house or garden; in addition to the fees, which are fixed by the directors. The academy is attended by more than 300 pupils. There are branch schools at Rowallan and in the barony of Grongar, the masters of which have houses and gardens in addition to the fees, and numerous other schools throughout the parish, in which, collectively, above 2000 children receive instruction. A dispensary was established in 1827, and is supported by subscription; it is gratuitously attended by most of the medical practitioners, and administers extensive relief to the sick poor. There are also numerous benefit and friendly societies, and a savings' bank in which are many depositors. The late Mrs. Mary Cunninghame bequeathed £200, and John Mac Nider, Esq., £40, in trust to the minister of the High church, to be lent out in small sums, and the interest given to the poor.

Rowallan Castle, about three miles north-westward of the town, for many generations the seat of the barons of Rowallan, is a very ancient structure, and is supposed to have been the birthplace of Elizabeth More, first wife of Robert, high steward, and afterwards king of Scotland as Robert II.: the more modern portion of it was built about the year 1560. It is beautifully situated, and surrounded with plantations; but the whole is passing rapidly into decay. The former Soules Cross, a rude stone pillar about nine feet high, surmounted with a gilt cross, was erected to the memory of Lord Soules, an English nobleman, who was killed on the spot by an arrow from one of the Boyds of Kilmarnock, in 1444. A handsome fluted column, supporting a vase, was placed in a niche in the wall surrounding the churchyard, in 1825, in lieu of the old cross: on the pedestal is an appropriate inscription referring to Lord Soules' death. The Earl of Errol bears the title of Baron Kilmarnock.

KILMARONOCK, a parish, in the county of DUMBARTON, 1 mile (W. by S.) from Drymen; containing 931 inhabitants. The name of this place signifies "the cell, chapel, or burial-place of St. Marnoch". The parish

is beautifully situated on the southern bank of the river Endrick, and on Loch Lomond, and is about five miles in length and three in mean breadth. In some places the surface rises to an elevation of 500, and in others to 1000, feet above the level of the sea: the highest parts are, the range of hills on the west, commonly called Mount Misery; Duncruin, in the centre; and the elevation towards Dumbarton moor, on the south. The lands are, however, mostly in tillage, the quantity of hill or moorland being very inconsiderable. Plantations, hedges, rows, and natural wood enrich the scenery; and the parish is watered by several springs and rivulets, and by the river Endrick, along which commodities are conveyed in flat-bottomed craft, as far as from Drymen bridge to Loch Lomond, a distance of nearly eight miles. The river contains pike, perch, eels, trout, and other fish. The best land in the parish lies along the banks of the river, the soil being deep and rich, and producing excellent crops, though exposed in rainy seasons to injury from sudden and violent floods. In the higher parts the soil is damp and tilly, and at length degenerates into a sterile moss. Several impediments peculiar to the locality have retarded the advance of the improved system of husbandry, which has been some time introduced. In spite, however, of every obstacle, a spirit of industry and enterprise prevails, which is leading to many considerable changes. Above 660 acres are occupied by wood. On the moorland grounds about 500 sheep are reared, of the black-faced or Highland breed; and a few Cheviots and Leicesters are kept on the lower grounds. The cattle are of the Argyllshire and the Ayrshire breeds, to the improvement of which considerable attention is paid. In general the fences are thorn hedges or stone dykes, which in many parts are in very bad condition. The rocks in the parish principally consist of red or grey sandstone; and limestone of good quality is also found. The annual value of real property in Kilmarnock is £7444.

The chief seat is Baturrich Castle, which is built on part of the ruin of the ancient castle of the same name, upon rising ground about half a mile from Loch Lomond; it commands a very fine view of the lake, studded with its numerous wooded islands, and also of the whole vale of Leven to the river Clyde. Ross Priory, which is situated on the south-east bank of Loch Lomond, is about two miles from Baturrich; it is beautified with some very handsome trees. Catter House is an old mansion, seated on an eminence near Drymen bridge, on the river Endrick, and occupied by the factor of the Duke of Montrose, who is the principal heritor in the parish. There are two annual fairs, one for horses, at Craftammie, on the second Tuesday in February; and the other chiefly for milch-cows, at the farm of Ardoch, on the last Thursday in April. The roads from Dumbarton and from Glasgow, to Drymen, pass through the parish. There is a bridge across the Endrick, an old structure of four arches, situated at the boundary of the parish, on the road to Drymen. Ecclesiastically Kilmarnock is within the bounds of the presbytery of Dumbarton, synod of Glasgow and Ayr; patron, the Duke of Montrose. The stipend of the minister amounts on an average to nearly £200, with a manse, and a glebe of seven acres, valued at £11 per annum. The church was built in 1813, and is in good repair; it contains 400 sittings, but on account of its situation near the northern extremity

of the parish, it is found inconvenient for a great part of the population. There is a meeting-house in connexion with the United Presbyterian Church. The parochial schoolmaster has a salary of £31 per annum, with a house, and about £26 fees. A parochial library was instituted in 1838, and is under the management of the Kirk Session.

KILMARTIN, a parish, in the district and county of ARGYLL, $7\frac{1}{2}$ miles (N. N. W.) from Lochgilphead; containing 1233 inhabitants. This place, which is supposed, like so many others, to have derived its name from the dedication of its ancient church, formed part of the possessions of the Campbell family, of whose baronial residence of Duntroon Castle there are still considerable remains. The parish is bounded on the north-east by Loch Awe, on the north-west by Loch Craignish, and on the south-west by Loch Crinan. It is about twelve miles in length and three and a half in breadth, comprising 24,530 acres, of which 3456 are arable, 400 meadow, 1200 woodland and plantations, and the remainder rough pasture and waste. The surface, towards the north-east, for some miles along the shore of Loch Awe, rises abruptly from the margin of the lake to an elevation of 1000 feet, whence it descends precipitously in the direction of Loch Craignish, forming a continuous ridge of hills, the highest of which, Benvan, adjoining the hill of Kilmartin, is 1200 feet above the level of the sea. The beautiful valley of Kilmartin extends from within a mile of Loch Awe, for nearly three miles, towards the west, between lofty hills ascending perpendicularly from their base. Not far from its termination at the village, it expands into a level plain almost 6000 acres in extent. Throughout the windings of the vale may be traced the channel of a large river, by which the waters of Loch Awe anciently discharged themselves into the bay of Crinan; and in several parts are terraces at a height of fifty or sixty feet above the level of the valley, supposed to have been formed by the river in its course.

In general the soil is a light friable mould, alternated in some parts with tracts of greater depth and fertility; the chief crops are oats, bear, and barley, with turnips and potatoes, for which last the soil is more especially adapted. The system of husbandry is in an advancing state; draining is extensively practised, and tiles for that purpose are made in the vale of Kilmartin, where good clay is found. Great quantities of waste land have been reclaimed and brought into cultivation on the Paltalloch estate. The cattle are of the West Highland breed, with a few of the Ayrshire, Galloway, and Durham breeds, to the improvement of which much attention is paid: about 2000 head of all kinds are pastured in the parish. The sheep, of which 9000 are kept on the several farms, are of the black-faced native breed, with some of the Cheviot, Leicestershire, and South-Down breeds recently introduced. In this parish the plantations are ash, oak, birch, alder, hazel, larch, poplar, beech, plane, lime, holly, elm, and Scotch and silver firs, all of which are in a very thriving state. The substrata are chiefly mica and chlorite slate, with veins of crystalline limestone and hornblende: copper-ore has also been found, and was formerly worked, but with what success is uncertain. The annual value of real property in the parish is £5852. Kilmartin House is a handsome mansion, pleasantly situated about half a mile from the village; and the remains of the ancient

castle of Duntroon have been repaired, and formed into a comfortable residence. The VILLAGE has been entirely rebuilt within the last few years, and consists of substantial and neat cottages roofed with slate, to each of which is attached a garden and shrubbery, inclosed with railings. Large markets for the sale of horses and the hiring of servants are held in the village, on the first Thursday in March and the fourth Thursday in November; and at the Ford, near Loch Awe, are markets on the first Thursdays in August and September, at which considerable sales of lambs, sheep, and wool take place. A private runner brings letters daily from the post-office at Lochgilphead; and facility of communication is afforded by good roads, and by steamers from Lochgilphead to Glasgow and the intermediate ports, daily in winter, and twice a day during the summer. There is an excellent harbour at Crinan, which is much frequented by vessels taking shelter in stormy weather. In Her Majesty's visit to Scotland in 1847, the royal party proceeded by Crinan both on their way to and their return from Ardverikie Lodge, in the parish of Laggan.

Ecclesiastically the parish is within the bounds of the presbytery of Inverary, synod of Argyll. The minister's stipend is £189, with a manse, and a glebe valued at £15 per annum; patron, the Duke of Argyll. Kilmartin church, erected in 1835, is a handsome structure in the early English style of architecture, with a square embattled tower, and contains 520 sittings: divine service is performed both in the English and Gaelic languages. The parochial school is well attended; the master has a salary of £34, with a house and garden, in addition to the fees. There are two other schools at the extremities of the parish, for younger children, who, from its distance, are unable to attend the parochial school: Mr. Malcolm gives a salary to the masters. A school of industry for girls has been established within a mile of Kilmartin, for the tenants on the Paltalloch estate, and Mr. Malcolm has built a handsome house for it at a cost of £1000: in addition to the usual routine of instruction, the children are taught all the most useful branches of needle-work, knitting, and laundry-work. In the valley of Kilmartin are several large circular cairns, in which have been found stone coffins about four feet in length, containing ashes and human bones; and in one of them were some silver coins of Ethelred, and in others implements of war. Near the cairns are numerous upright stones. Not far from Duntroon is an ancient circular building of great thickness, inclosing a large area, into which is only one narrow entrance, and which is supposed to have been a place of safety for cattle and other property in times of danger. On an eminence northward of the village are the ruins of the old castle of Kilmartin; and at the head of the valley are the remains of the castle of Carnassary, the residence of Bishop Carswell, who was appointed to the see of Argyll soon after the Reformation, and whose name is intimately associated with the controversy carried on in the last century respecting the authenticity of Ossian's poems.—See KNAPDALE, SOUTH.

KILMAURS, a burgh of barony and a parish, in the district of CUNNINGHAME, county of Ayr; containing, with the villages of Crosshouse, Gatehead, Kirkton, Knockentiber, and Milton, 2617 inhabitants, of whom 1035 are in the burgh, 2 miles (N. N. W.) from Kilmarnock. This place, the name of which is obviously

derived from the dedication of its church to St. Maura, was granted in the twelfth century to the ancestor of the Glencairn family, who came from England in the reign of Malcolm IV., and assumed the surname of Cunninghame from the manor. The family obtained additional lands from Robert Bruce; and Sir William Cunninghame having enlarged his possessions by marriage about the beginning of the fifteenth century, his descendant Alexander was created Earl of Glencairn by James II. in 1448. William, the ninth earl, for his zealous attachment to the royal cause during the usurpation of Cromwell, was made chancellor of Scotland; he died in 1664. Upon the death of John, the twenty-fifth earl, without issue, in 1796, the title became extinct; and the lands are now divided among several proprietors.

The town of Kilmaurs is pleasantly situated on the north bank of the river Carmel, and consists of two streets which run transversely. It is inhabited chiefly by persons engaged in making shoes, or weaving. At a distant period, the place was celebrated for the manufacture of cutlery; and the clasp knives, or whittles, made here were in great repute: "as sharp as a Kilmaurs whittle" is to this day a common saying in the west of Scotland. The weekly market has fallen into disuse; but fairs, chiefly for cattle, are held in June and at Martinmas. A branch office, under the post-office at Kilmarnock, has been established; and facility of communication is maintained by the turnpike-road from Stewarton to Kilmarnock, and by good statute roads which intersect the parish. The branch of the Glasgow and Ayrshire railway that leads to Kilmarnock, &c., also passes through the parish, in which terminates the Busby branch, leading from Irvine, on the main line of the Glasgow and Ayrshire railway, to the Kilmarnock branch. Kilmaurs was erected into a burgh of barony by charter of James V., granted to the Earl of Glencairn in 1527; and the government is vested in two bailies, and a council of burgesses, who derive their qualification from the tenure of certain lands leased to them in free burgage by charter of Cuthbert, Earl of Glencairn, and his son, Lord Kilmaurs. The magistrates have all the jurisdiction of royal burghs, both in civil and criminal cases, but hold no regular courts, the number of causes not exceeding two or three in a year. There are no exclusive privileges enjoyed by the burgesses; and the only patronage is that of a vote in the appointment of the parochial schoolmaster, which they have merely as being joint-trustees on a half-tenement of land left for the endowment of the teacher. The town-hall, standing in the centre of the main street, is a small structure with a steeple; it contains the necessary arrangements for transacting the public business of the burgh.

The PARISH, which is situated on the confines of the district of Kyle, is partly bounded on the south by the river Irvine, which separates it from the parish of Dundonald, and on the west by the Garrier burn, which divides it from the parish of Dreghorn. It is nearly six miles in length, and two miles and three-quarters in extreme breadth, comprising an area of almost 6000 acres, of which the whole, except three acres, is arable and pasture in about equal portions. The surface is generally undulated, rising in some places into hills of moderate elevation, whose summits are richly wooded, and command interesting views over the surrounding

country, which is in a high state of cultivation. The river Carmel, which has its source in the adjoining parish of Fenwick, divides this parish into two nearly equal parts; it then receives the waters of the Garrier burn, and flows westward into the Irvine. The SOIL is exuberantly fertile, producing abundant crops of wheat, beans, barley, oats, and potatoes; and the system of husbandry has been brought to great perfection. The lands have been drained and inclosed; the farm-buildings are substantial and commodious, and all the more recent improvements in agricultural implements have been extensively adopted. The pastures are luxuriantly rich; the cattle reared in the parish are chiefly of the Ayrshire breed, and the dairies, whether for extent or management, are not surpassed by any in the county. Large quantities of butter and cheese of excellent quality are produced, the latter of the Dunlop kind; and both obtain a ready sale in the markets. The annual value of real property in the parish is returned at £12,970. Though not extensive, the plantations are in a very flourishing state, and, from their situation generally upon the hills and rising grounds, add much to the beauty of the scenery. The main substratum is coal, of which there are several mines in operation in the parish and the immediate vicinity; the principal of these is at Gatehead, where a considerable number of persons are regularly employed. The chief seats in the parish are, Kilmaurs House, an ancient mansion, formerly the seat of the Cunninghame family; and Thornton House, Carmel-Bank, Craig, and Tour, all modern mansions beautifully situated.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Irvine, synod of Glasgow and Ayr. The minister's stipend amounts to about £260, with a manse, and a glebe of three and a half arable acres; patroness, Lady Mary Montgomerie. Kilmaurs church, a very ancient structure, was originally founded in 1403, by Sir William Cunninghame, who endowed it with lands for the support of a provost, seven prebendaries, and two choristers, which establishment was dissolved at the Reformation. The structure was repaired in 1804, and contains 550 sittings. In the aisle, which was the sepulchral chapel of the Glencairn family, is a monument to the memory of William, the ninth earl, chancellor of Scotland. There are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school is well attended; the master has a salary of £25. 13., with a house and garden, and the fees. John Norrie in 1699 left a half-tenement of land for the benefit of the schoolmaster, and in 1708 Sir Hugh Cunninghame of Craigend, at one period lord provost of Edinburgh, left a tenement of land, the rental of which was to be applied in educating the children of the poor, the scholars on the fund to be selected by the magistrates and minister of the parish. Among the monuments of antiquity are the remains of some tumuli, one of which, near Carmel-Bank, whose fosse may still be traced, is supposed to have been a place for administering justice. In the year 1845, in excavating a hillock on the farm of Water-park, several stone-chests were discovered, measuring two feet and a half by a foot and a half, and containing calcined human bones; the relics, no doubt, of some battle that was fought in the locality. The ruins of Busby Castle, an ancient seat of the Barclay family, are now the property of the Duke of Portland.

KILMELFORD, in the county of ARGYLL.—See **KILNINVER**.

KILMENY, a large quoad sacra parish, in the parish of **KILARROW** and **KILMENY**, district of **ISLAY**, county of ARGYLL; containing 1756 inhabitants: the church is 4 miles (S. W. by S.) from Portaskaig. This district lies in the north-eastern part of Islay, and is between eleven and twelve miles in its greatest length, and from eight to nine miles in its greatest breadth, forming an area of sixty-six square miles. The description of the surface and of the soil is comprehended in the account given of Kilarrow and Kilmeny, *which see*. There are lead-mines, but they have not been worked to any extent for a number of years; and limestone and mica-slate abound. The road from Bowmore to Portaskaig passes through; and the latter village, which is within Kilmeny, is the place of communication from Islay with the isle of Jura. A horse-market is held two or three times annually. Kilmeny was formed into a quoad sacra parish a few years ago. It is in the presbytery of Islay and synod of Argyll, and the patronage is vested in the Crown: the stipend of the minister is £120, received from the exchequer; with a manse, and a glebe valued at £8 per annum. The church, built about seventy years ago, and repaired in 1826, is a plain structure. Kilmeny parochial school has been lately erected, by government; the salary of the master is £35. There are some remains of encampments; and in Portanellan lake are the ruins of a chapel and dwelling-house, the latter said to have been inhabited by the Mac Donalds of the Isles.

KILMICHAEL-GLASSARY, a parish, in the district and county of ARGYLL, 18 miles (S. W.) from Inverary; containing, with part of the quoad sacra parish of Lochgilphead, 4700 inhabitants. This place, the early history of which is almost unknown, is supposed to have derived its name of Glassary from the general appearance of its surface, as being more adapted for pasture than for tillage. It is said to have formed part of the possessions of the Mac Donalds, of whose baronial castle, situated on the northern bank of Loch Awe, and which according to tradition was destroyed by fire, there are still considerable remains. From the eleventh to the thirteenth century, the place appears to have been exposed to frequent incursions of the Danes, who held nearly the whole of the western coast; and there are several watch-towers yet existing, which were erected to give notice of their approach. The **PARISH** is bounded on the south and south-east by Loch Fine, and on the north-east by Loch Awe, and varies from twelve to sixteen miles in length, and from eight to ten miles in breadth, comprising an area of nearly 150 square miles. Its surface, which rises gradually from both sides towards the centre, is diversified with hills of no great elevation; and on the west is an extensive valley, varying in height from 200 to 600 feet above the level of the sea. The acclivities of the valley are partially wooded, and in the centre is the small lake of Lochan Leamhan. There are other lakes in the parish, the principal of which is Loch Ederlin, about a mile to the west of Loch Awe, beautifully embosomed in hills crowned with thriving plantations; and Loch Glaissean and Loch Shineach, from which latter issues the river Ad, are situated in the moorlands. The chief river is the Ad, which flows through the valley of Glassary: this stream, which is subject to great inundations from heavy rains, abounds with trout and sal-

mon, and a fishery for the latter is conducted under the superintendance of the proprietor.

Along the banks of Loch Fine, towards the south-east, the **SOIL** is gravel intermixed with peat; and towards the south-west, a deep rich loam of great fertility. Considerable portions of land have been improved by furrow-draining; but much yet remains in an unprofitable state. The system of husbandry, also, has made some progress under the auspices of the agricultural society established here, which includes also the neighbouring parishes of Craignish, Kilmartin, and North and South Knapdale; but the lands are but very partially enclosed, and the farm-buildings are still of an inferior description. The cattle reared in the pastures are generally of the Argyllshire or West Highland breed, and the sheep principally the black-faced, with some of the South-Down breed on the lands of Kilmory, which thrive well. There are considerable remains of natural wood, consisting chiefly of oak, birch, and hazel, of which fine specimens are to be seen on the shores of Loch Awe; and extensive plantations of oak, Scotch and silver firs, larch, ash, and other trees, have been formed in several parts, all of which, with the exception of the ash, are in a thriving state. The principal substrata are mica-slate, greenstone, and limestone. Copper-ore has been found, and a mine was opened by the Duke of Argyll; but though the ore was of good quality, it did not occur in sufficient quantity to remunerate the expense of working it, and the mine was abandoned. The annual value of real property in the parish is £11,343. Kilmory House is the seat of Sir John P. Orde, Bart., by whom it has been enlarged and greatly improved: the present structure, which is of blue ashler stone, is spacious, and surmounted at the south-west angle by a lofty octagonal tower, containing a dining-room twenty-nine feet in diameter, and other stately apartments. Over the entrance hall is what is called a Chinese drawing-room, fifty-seven feet long, and twenty-seven feet wide, fitted up in appropriate style, and furnished with hangings and drapery made for the purpose in China. From the summit of the tower is obtained an extensive prospect, embracing the mountain of Ben-Ghoil in Arran, the Mull, and the hills of Cowal. The village of Kilmichael is small, and not distinguished by any important features: that of Lochgilphead is separately noticed. Fairs for cattle are held at Kilmichael in May and October, and on the following days at Lochgilphead; and they are so regulated, that the stock remaining unsold may be driven to the Inverary markets.

For **ECCLESIASTICAL** purposes the parish is within the limits of the presbytery of Inverary, synod of Argyll. The minister's stipend is £266, with a manse, and a glebe valued at £28 per annum; patron, Campbell of Auchinellan. Kilmichael church, erected in 1827, is a spacious structure containing 1500 sittings. A government church was erected at the village of Lochgilphead in 1828; and in 1841 a church was built by the committee of the General Assembly at Camladden, for the benefit of that portion of the parish and an adjacent district of Inverary. There are preaching stations at Lochfineside and Lochaweside, where a missionary preaches alternately; also places of worship in the parish for Independents and members of the Free Church. The parochial schoolmaster has a salary of £25, with a house and garden, and the fees average £35. There is

a female school in the village of Lochgilphead, maintained by the heritors; and a school in the Camlodden district is supported by the General Assembly, who pay £25 per annum to the master, for whom a house and garden are provided rent-free by Sir Archibald Campbell, Bart. Remains of ancient churches exist in various parts of the parish, of which the most prominent are those of Kilbride, on the west; Killevin, on the shore of Loch Fine; Kilmory, near Lochgilphead; and Kilneuir, on the bank of Loch Awe. The remains of Kilneuir display much beauty of style; the cemetery of Kilmory is still used as a place of sepulture.

KILMODAN, a parish, in the district of COWAL, county of ARGYLL, 16 miles (N. W. by N.) from Rothesay; containing 567 inhabitants. It derives its name from the dedication of its church to St. Modan soon after the introduction of Christianity into Britain. The parish is separated from Loch Fine, with the exception of about three miles of coast, by the intervening parish of Kilfinan; it is twelve miles in length, and the arable lands principally lie in the bottom of a deep glen scarcely half a mile in breadth. The surface is boldly diversified with hills of mountainous elevation, chiefly covered with heath, and affording tolerable pasture for sheep and cattle. Along the glen flows the river Ruail, which after a course of a few miles falls into Loch Ridon, and forms a small bay, affording shelter for a few vessels of from twelve to thirty tons' burthen, employed in the herring-fishery. The Ruail once abounded with salmon and trout; but within the last few years, the number has greatly diminished. The sea-shore of the parish, three miles in extent, is flat and sandy; and off the coast are found cod, ling, haddocks, mackerel, and other white-fish. Of the lands, about 1500 acres are arable, 1000 woodland and plantations, and nearly 20,000 chiefly moorland pasture and waste. The soil of the arable ground is deep and fertile, and the system of agriculture has lately been much improved; the lands have been drained, and a due rotation of crops is regularly observed. Large quantities of potatoes are shipped from the bay of Ruail to the several ports on the Clyde, in smacks which return laden with manure. The sheep pastures have been greatly benefited by surface-draining; and much attention is paid to the management of the stock, under the inducements held out by a pastoral association in the district. The annual value of real property in the parish is £3439.

There is a considerable tract of natural wood, mostly copse; and very extensive plantations have been formed at Dunans, Glendaruel, and Ormidale, consisting chiefly of the various kinds of fir, all of which are in a thriving state. The principal substrata are limestone and pipe-clay; but the scarcity of fuel renders the former inapplicable to the purpose of the farmer. The mansion-houses in the parish are Dunans, Glendaruel, and Ormidale, which last estate has been greatly improved and embellished with plantations. Ecclesiastically the parish is within the bounds of the presbytery of Dunoon, synod of Argyll. The minister's stipend is £150, of which sum £6. 8. are paid from the exchequer; with a manse, and a glebe valued at £20 per annum: patron, the Duke of Argyll. Kilmodan church, which is conveniently situated, was built in 1783. There is a place of worship for members of the Free Church. The parochial schoolmaster has a salary of £27. 10., with a house and garden,

and the fees average £10 per annum. In the parish are several cairns; and some stone coffins have been found, supposed to have contained the ashes of chieftains slain in battle with the Danes. Colin Maclaurin, professor of mathematics in the university of Edinburgh, and the Rev. John Maclaurin, an eminent divine, were born in this parish, of which their father, the Rev. John Maclaurin, was minister in 1698.

KILMONIVAIG, or KILMANIVAIG, a parish, in the county of INVERNESS, 10 miles (N. N. E.) from Fort-William; containing 2791 inhabitants. It is situated towards the western extremity of the county, in the district of Lochaber, and was the territory of Bancho, thane of Lochaber, and ancestor of the royal house of Stuart. That chief, as well as other thanes of Lochaber, is supposed to have occupied either the castle of Inverlochry, now in ruins, or a more ancient structure standing on the site; and their fortress was the most conspicuous feature in the once thriving burgh of Inverlochry, which some of the old historians call "the emporium of the west of Scotland". The castle is traditionally reported to have been originally a royal residence; and it is said that the celebrated league between Charlemagne, and Achaüs, King of the Scots, was signed here about the end of the eighth century. Near this spot, a fierce encounter took place in 1431 between Donald Ballael, cousin of Alexander, Lord of the Isles, then a state prisoner in Tantallan Castle, and the Earls of Caithness and Mar, the king's lieutenants: in this battle the royal forces were defeated, the Earl of Caithness was slain, and the Earl of Mar escaped with difficulty with his life. Again, in 1645, an encounter took place in the same vicinity between Montrose and Argyll, in which, after a severe contest, the latter was entirely routed. In a field named Dail-ruairi, at the east end of Loch Lochy, a battle was fought on the 3rd of July, 1544, between the Macdonalds and the Frasers: the slaughter was great on both sides; Lord Lovat, with 300 of his name, fell, and his eldest son was mortally wounded. Near Keppoch, also in the parish, is a place called Mulroy, the scene of the last feudal battle which was fought by clans in Scotland, when, after a sanguinary engagement between the Macintoshes and the Mc Ronalds, the former were completely routed, and their chief taken prisoner. Kilmonivaig, and part of the adjacent country, have been denominated "the cradle of the rebellion" of 1745. The Young Pretender, in that year, erected his standard in this dreary and mountainous district, and was joined by the famous Cameron of Lochiel; and the first act of rebellion was an attack on the royal troops by the Macdonalds of Keppoch. After the suppression of the rebellion, Prince Charles Edward availed himself of the secluded glens of this district as a convenient refuge.

The PARISH is divided into the two districts of Lochaber and Glengarry. At one time it was united to Kilmalie, the two together being called the parish of Lochaber; but it was separated by the authority of the Church courts, about the beginning of the eighteenth century. It is said to be the most wild and mountainous district in the kingdom, measuring about sixty miles in length from north to south, and twenty-five miles at its greatest breadth, and comprising 300,000 acres, of which a small portion is under natural wood and in plantations, a much smaller part under tillage, and the remainder natural pasture. Glenspean, forming the chief part of

the parish, is bounded on the south by Ben-Nevis, and its subordinate range, which stretches towards the east; and on the north by a series of elevations which, though lofty, reach a far less altitude than those on the opposite boundary. It commences near Ben-Nevis, and contracts in width gradually towards the middle until, a little above Keppoch, its whole breadth is occupied by the rapid stream of the Spean, a river issuing from Loch Laggan, and augmented by the Treig from the south-west, and several other tributaries. After this, the glen expands again, and extends to the west end of Loch Laggan. It is joined near the centre by Glenroy; and in the parish is also a part of the great Caledonian glen, extending from the west end of Loch Lochy to the east end of Loch Oich, a distance of nearly fifteen miles: between these two lakes a portion of the Caledonian canal is cut. The Spean empties itself into the river Lochy, which runs into Loch Eil, a branch of the Atlantic, at Fort-William.

The SOIL in some places is excellent, especially in Glenspean; but very little has been done in the way of husbandry, the hills and glens affording superior pasture, and being appropriated to sheep and black-cattle, which engross the chief attention. Upwards of 100,000 sheep are reared in the parish every year. Two of the sheep-farms exceed 100 square miles in extent; and the stock reared supplies large quantities of valuable wool, purchased by staplers from England, and from Glasgow and Aberdeen. Very few agricultural improvements have been attempted; but the large number of acres of superior land in Glenspean alone, capable of the highest cultivation, offers a temptation to wealthy proprietors, and might make an ample return for an outlay of capital. The annual value of real property in the parish is £12,745. The substrata consist chiefly of gneiss and mica-slate, and occasionally enormous masses are to be seen of protruding granite and of compact felspar rocks. There is a plumbago-mine in Glengarry, but it is not in operation. The only mansion of importance is Glengarry House, the seat of Lord Ward, beautifully situated on the margin of Loch Oich, erected shortly after the demolition of the ancient castle of the same name by order of the Duke of Cumberland. The roads to Inverness and Edinburgh pass through the parish; and at High-Bridge is a fine bridge of three arches over the Spean, built by General Wade. The chief traffic consists in sheep, black-cattle, and wool, mostly disposed of at the southern markets and in England; and there are salmon-fishings on the Garry, on Loch Oich, and on the Lochy river. There are five annual fairs for the sale of black-cattle and sheep, or for general business, respectively held in June, July, September, October, and November.

Ecclesiastically the parish is in the presbytery of Abertarff, synod of Glenelg, and in the patronage of John Walker, Esq., of Lochtrieg: the minister's stipend is £289, with an allowance of £70 per annum in lieu of manse and glebe. Kilmonivaig church is a very plain edifice, built about the year 1814. There are two missionaries in connexion with the Establishment, supported by the Royal Bounty; one officiates in the district of Brae Lochaber, and in a district of the parish of Kilmalie, alternately, and the other at three preaching stations in the district of Glengarry. There is a chapel at Brae Lochaber for Roman Catholics, who make about half of

the population of the parish. The parochial school affords instruction in the usual branches; the master has a salary of £34, with £20 fees. There is also an Assembly's school at Bunroy, another in Glengarry, and a Society's school at Invergarry. The antiquities comprise the ruin of Inverlochry Castle, and a vitrified fort. The parallel roads of Glenroy are highly celebrated, and have exercised the ingenuity of antiquaries in the attempt to account for their formation. They are situated in Glenroy, a tract eleven miles in length and one mile in breadth, skirted with tolerably steep banks, on which are the terraces or roads, three in number on each side of the glen, and composed of gravel and clay. The roads are quite level, and exactly parallel with each other, varying from sixty to seventy feet in breadth, and accommodating themselves, throughout the whole extent of the glen, to the curvatures and windings of the mountains on each side. Imperfect terraces of a similar kind have been traced in some of the neighbouring glens. The prevailing opinion with regard to the origin of the Glenroy roads is, that they are deposits from the adjacent heights, brought down at three different periods, when the valley was a lake. It is thought that the loose materials carried down by floods met with a check when they reached the waters, and thus formed the highest road; that the lake afterwards was partially drained, which allowed of the formation of the second road; and that the third was subsequently made, in a similar manner. Ian Lom, the Jacobite Gaelic poet, well known in the era of the rebellion, resided in the parish.

KILMORACK, a parish, in the county of INVERNESS, 11 miles (W.) from Inverness; containing, with the village of Beauly, 2694 inhabitants. The church of *Kilmorack*, a Gaelic term meaning literally "the church of Mary", was dedicated, like so many other churches, to the Blessed Virgin. The parish is of great extent, and chiefly a sylvan and pastoral district. It is partly situated on the northern bank of the Beauly river, by which it is separated from the parish of Kiltarlity; while in the opposite direction it reaches to the southern confines of the county of Ross. The surface is richly diversified, and the scenery in several places exquisitely beautiful, consisting of hill and mountain covered with pasture and wood, and rural valleys, well-cultivated tracts, and rivers and lochs. The western portion of the parish is exceedingly wild and mountainous, and indebted for its imposing character principally to the three great glens of Strath-Glass, Glen-Farrar, and Glen-Cannich, which are named from the several streams that run through them and contribute to form the principal river, the Beauly. This river, in its course through that part of the eastern division of Kilmorack called Dhruim, which extends two or three miles west of the church, passes between ranges of lofty mountains covered with birch and fir; its banks are fringed with oak, alder, and weeping-birch, and it here presents numerous cascades, falling over broken sandstone rocks, especially at the farm of Teanassie. Its finest display, however, is about two miles west of the village, where a splendid cataract called the Falls of Kilmorack is formed by the stream dashing over a succession of precipitous rocks. The river joins Loch Beauly at the eastern extremity of the parish, having gently glided along the southern boundary of Kilmorack, through a large open plain. The parish contains a number of inland lakes; the chief are Loch Monar and Loch

Moyley, situated among the remains of an extensive pine-forest, and seldom surpassed in striking scenery. The mountain of Maum-Soule, on the south side of Loch Moyley, is distinguished for its summit of perpetual snow, which, even in the hottest summer weather, yields but very slightly to the rays of the sun. In one part of Glen-Farrar is Loch Muilie, containing an island where, it is said, Lord Lovat found a retreat after the defeat at Culloden, and on which the present proprietor has erected a shooting-box, the neighbouring hills and mountains abounding with grouse, partridges, and almost every kind of game. Four or five miles westward is the mountain of Scour-na-lapich, almost as high as Ben-Nevis, and about two miles north of which is Loch Monar, where there is an excellent fishing-station, which is frequently resorted to by those fond of the sport. In general the lochs are well stocked with various kinds of trout and pike, the latter of which are sometimes found also in the Beaully: this river is distinguished for its salmon, grilse, and trout, the fishery of which is rented at £1600 per annum.

The parish belongs to Lord Lovat and The Chisholm of Chisholm; but from its great size, and the different situations of the farms, pastures, and woods, no correct estimate of the extent has been made. Many thousands of acres are under natural wood and in plantations, which are managed with great care, and annually thinned; the firs are usually sold for railway sleepers, and the birch made into staves for barrels. The upper part of the parish is more particularly pastoral, and the little attention paid to tillage is merely for the supply of domestic wants. The Lovat property is supposed to contain about 2000 arable acres, and the Chisholm 900; and the farms, some of which have been united within the last few years, to the exclusion of a considerable part of the population, many of whom have emigrated, are now remarkably well cultivated: they are subject to the five-shift rotation, producing wheat, barley, oats, and the usual green crops. Numerous improvements have been introduced, comprising the use of lime, and bone-dust for manure; and draining, also, is making progress: this is much required in some parts, as the soil, though it consists to a great extent of rich loamy, sandy, clayey, and gravelly earth, is frequently heavy and wet. There are few inclosures; and the farm-buildings are in general indifferent, the want of capital on the part of the tenant being an obstacle to more extensive advancement. The sheep, which traverse the pastures in very large flocks, are of many different breeds; but those most common are the Cheviot and the black-faced. The rocks in the district comprehend gneiss; inferior red sandstone, which is quarried; and conglomerate. A lead-mine was opened some years since on the Lovat property; but the operations having been found difficult, and the material of inferior quality, it is no longer worked. The annual value of real property in the parish is £9931.

The only village is that of Beaully (*which see*), pleasantly situated at the eastern extremity of the parish. Its buildings are of some extent, and in the principal street, the houses of which are slated, are some good shops, a post-office for the surrounding district, and a branch bank of the North of Scotland Banking Company, lately established. Here is a small harbour formed by the river Beaully, which expands at the village into the basin called Loch Beaully, communicating with the Moray

Firth. Two small vessels belong to the place; and it is visited by many others, chiefly from Inverness, Leith, Glasgow, and Liverpool: coal, lime, and various other articles are imported, and the vessels take in return, among other produce, cargoes of timber, many thousands of trees being annually cut down in the woods around. A parliamentary road runs through the whole of the parish. A handsome bridge of five arches was some time since erected over the Farrar; and one was built across the Beaully in 1810, at a cost of nearly £10,000. The largest cattle-fairs in the north of Scotland are held on the Muir of Ord, and attended by dealers from every part of Scotland, particularly the south, on the third Wednesday in April, the second Wednesdays in May and June, the third Thursday in July, the third Tuesdays in August, September, and October, and second Wednesday in November. There are also four annual fairs in the village of Beaully, in May, August, October, and November, the two last for the sale of country produce, and that in August for engaging shearers; but these fairs are ill attended.

Eclesiastically the parish is in the presbytery of Dingwall, synod of Ross, and in the patronage of Professor Scott, of King's College, Aberdeen, to whom the presentation has been transferred by Lord Lovat. The minister's stipend is £244, with a manse, and a glebe valued at £8 per annum. Kilmorack church is conveniently situated a few miles from the eastern boundary; it was enlarged in 1786, and lately new-seated, and now contains 506 sittings. A missionary, supported by the Royal Bounty, divides his services between this and the adjoining parish of Kiltarlity; and some of the inhabitants attend a church in the latter parish, built a few years since by the late Chisholm on his own property, and which accommodates 300 persons. For the convenience of the two parishes there are also two Roman Catholic chapels, one situated at Wester Eskadale, and the other not far from the house of Fasnacoil, together accommodating about 500 persons. Kilmorack parochial school affords instruction in English and Gaelic reading, the classics, algebra, and mathematics, in addition to other branches; the master has a salary of £25. 13., with a house and garden, and £24 fees. A school, also, is supported by The Chisholm; and the inhabitants enjoy the advantages of two schools belonging to the adjoining parish. There are remains of several Druidical temples, and a chain of walled structures along the course of the Beaully and the other streams; but the principal antiquity is the ruin of the priory of Beaully. This establishment was founded in 1230 by James Bisset, of Lovat, for monks of the order of Valliscaulium, a reformed branch of the Cistercians, and followers of the discipline of St. Bennet, who were brought into Scotland by Malvoison, Bishop of St. Andrew's, early in the thirteenth century. There are no traces, however, of turrets, or any kind of ornament; and the inclosed area is merely covered with tombstones, many of them without letters, and the earliest inscription dated 300 years after the foundation of the priory. The north aisle is the property of the Mackenzies of Gairloch; and Sir Kenneth Mackenzie, eighth laird of Kintail, who died in 1493, is represented by the effigy, in a recumbent posture, of a knight in full armour, under an arched canopy. The other portions consist of the burying-grounds of the chief branches of the clan Fraser, of the Chisholms, and

others. Farquharson, a collector of Gaelic poetry, and conspicuous in the controversy concerning the poems of Ossian, resided for upwards of thirty years in the Strath-Glass district, in the capacity of Jesuit missionary.

KILMORE, county ARGYLL.—See KILNINIAN.

KILMORE and KILBRIDE, a parish, in the district of LORN, county of ARGYLL, $3\frac{1}{2}$ miles (S. by E.) from Oban; containing, with the island of Kerera, and the former quoad sacra district of Oban, 2773 inhabitants. These two ancient parishes, which appear to have been united soon after the Reformation, are supposed to have derived their names, of Gaelic origin, from the dedication of their churches respectively to the Virgin Mary and St. Bridget. The early history of the place is involved in great obscurity, referring to a period of remote antiquity, of which few authentic records have been preserved. DUNSTAFFNAGE CASTLE, of which neither the name of its founder nor the date of its erection is known, seems to have been either the seat of government, or the occasional residence, of the Pictish kings, till their subjugation by Kenneth Mc Alpine, who about the year 834 finally established the Scottish monarchy. In this castle, which Kenneth for a time made his chief seat, was preserved the celebrated stone whereon the kings of Scotland were crowned, till its removal to the abbey of Scone by Mc Alpine, who in 843 transferred the place of government to Forteviot, in the county of Perth, where he died. Alexander II., King of Scotland, having assembled a fleet in the bay of Oban, in order to exact from Angus, Lord of Argyll, that homage for his territories which the lords of Argyll had previously paid to the kings of Norway, was seized with a fever, of which he died in the island of Kerera in July 1249. In 1305, Robert Bruce, having defeated the Mc Dougals at the pass of Loch Awe, laid waste the lands of Argyll, and besieged the castle of Dunstaffnage, which he reduced, and garrisoned with his own forces. In 1436, the castle, and the lands belonging to it, were granted by James II. to Dougald, son of Colin, Knight of Lochawe, in whose descendants, as "Captains of Dunstaffnage", they have remained till the present time. The castle was maintained as the principal stronghold of the Campbells, and, in the rebellions of 1715 and 1745, was garrisoned by the royal troops. The remains of this ancient palace are situated on a rock washed on the west by the Atlantic, and on the north skirted by Loch Etive. They consist chiefly of the walls, inclosing a quadrangle defended at three sides of the angles with circular towers. On three sides, the building is little more than a ruin; on the fourth, it is in tolerable preservation. A commodious tenement has been erected as a residence for the steward of the Duke of Argyll, who is hereditary keeper; and near it are the remains of a small roofless chapel of elegant design, in which many of the kings of Scotland are interred, and of which the cemetery is still used as a burying-place by the inhabitants of Oban. Some remains also exist of Gylen Castle, one of the strongholds of the Mc Dougals, romantically situated on a rocky promontory in Kerera: in 1647 the castle was besieged and taken by the forces under General Leslie.

The PARISH is bounded on the north by Loch Etive, on the south by Loch Feochan, and on the west by the sound of Mull. It is twelve miles in length and nearly nine in breadth, but the number of acres has not been ascertained. The surface is diversified with hills of

moderate elevation, and with valleys which are fertile and in good cultivation. There are several lakes in the parish, exclusively of the salt-water lochs that form its boundaries: the largest lake is Loch Nell, abounding with trout; and in the river issuing from it are found salmon. The coast is indented with numerous bays, of which those of Oban and Dunstaffnage are excellent harbours; and in the north of the sound of Kerera is the Horse-shoe bay, which also forms a good harbour. The island of Kerera, inclosing the bay of Oban on the west, is about three miles in length and nearly two in breadth. The soil of the parish is in general light and sandy, and there are some extensive tracts of moss, of which considerable portions might be reclaimed; the chief crops are barley, oats, potatoes, and turnips. The system of agriculture has been much improved; and great attention is paid to the rearing of live stock, for which the hills afford good pasture. The cattle are of the West Highland breed, with the exception of some Ayrshire cows kept in a few places; the sheep are the black-faced, with some South-Downs on one of the farms. Freestone of superior quality, and slate, are found in abundance; and on the lands of Gallanach are quarries in operation. There are several fishing-stations, chiefly for salmon and trout; and herrings are frequently taken in Loch Etive and Loch Feochan: shell-fish are found on the shores, and various kinds of white-fish off the coast. The annual value of real property in the parish is £8744.

Dunolly Castle, the ancient seat of the lords of Lorn, became forfeited together with the lands on the rebellion of 1715; but the property was subsequently restored to the crown to Alexander, grandfather of the existing proprietor, Capt. John Mc Dougal, R. N. The present family mansion is situated beneath the romantic ruins of the old castle, on the border of Loch Etive, about a mile from Oban: the principal remains of the castle are the keep and some portions of other buildings, overgrown with ivy. In the grounds is an upright pillar called the Dog's Pillar, said to have been used by Fingal for fastening his dog Bran. Many ancient relics are preserved in the house, among which is the brooch of Robert Bruce, taken by Allaster Mc Dougal from the owner, whom he had defeated at the battle of Dalree, near Tyndrum, and which, after passing through various hands, was purchased by General Duncan Campbell of Lochnell, who in 1826 restored it to the proprietor of Dunolly. Fairs are held four times a year in Kilmore, but they are not well attended. Facility of communication is afforded by good roads, and by ferries at Oban, Dunstaffnage, Kerera, and other places, and by a ferry to the island of Mull. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lorn and synod of Argyll. The minister's stipend is £249. 8., with a manse, and a glebe valued at £40 per annum: patron, the Duke of Argyll. Kilmore church was erected about 1490, and contains 350 sittings; the church of Kilbride, of a later date, contains 300 sittings. Divine service is performed in each on alternate Sundays. A church has also been erected at Oban, where are likewise places of worship for dissenters. There are two parochial schools, one at Kilmore, and the other in the island of Kerera; the master of the former has a salary of £25, with fees averaging £10, and the master of the latter a salary of £21, with £6 fees: both have houses and gardens.

KILMORIE, a parish, in the isle of **ARRAN**, county of **BUTE**, 24 miles (S. W. by W.) from Saltcoats; containing 3455 inhabitants. This place, which occupies the western portion of Arran, and derives its name from the dedication of its ancient church to the Virgin Mary, is in all its historical details identified with the parish of Kilbride, which occupies the eastern portion of the island. Kilmorie is bounded on the south by the Firth of Clyde, and on the west by the sound of Kilbrandon, which separates it from Cantyre, and is from six to ten miles wide. It extends from Largybeg Point, in the south-east, to Loch Ranza in the north-west, and is thirty miles in length and six miles in breadth, comprising an area of nearly 93,000 acres, of which 8300 are arable, and the remainder hill pasture and waste. The surface is generally mountainous, and diversified with hills interspersed with deep and narrow glens; the lands are watered by numerous rivulets descending from the heights, and some of the rivulets are of great rapidity, forming in their course a variety of beautiful cascades, of which the falls of Essmore and Esscumhan are the most prominent. The highest of the mountains is Beinn-Bharbhionn, or "the white-topped mountain", so called from its summit being usually covered with snow, and which has an elevation of more than 3000 feet above the level of the sea. There are several lakes in the parish, the principal of which are Loch Tanna, about two miles, and Loch Iorsa, about one mile, in length; they are both very narrow; the former abounds with trout, and the latter with salmon. Trout are also found in the rivulets, all of which afford good sport to the angler.

The **SEA-COAST**, more than thirty miles in extent, is generally bold and rocky. The chief headlands are Dippen Point, Benan Head, Brown Head, and Drumidoon; and the bays are Pladda Sound, Drumidoon, Machray, and Loch Ranza, the last-named situated at the north-western extremity of the parish, and affording safe anchorage for vessels. Opposite to Kildonan, in the sound, is the island of Pladda, on which a lighthouse was erected in 1800, and another, of greater elevation, in 1826, both exhibiting fixed lights, visible at a distance of five leagues. Fish of various kinds are taken off the coast; the chief are haddock, whiting, mackerel, and cod. Ling and turbot are found towards the south; lobsters and crabs are caught in abundance near Kildonan, for the Glasgow market; and off the northern coast, the herring-fishery is carried on with considerable profit by the inhabitants. The rocks are indented with numerous caverns, one of which, at Drumidoon, called the King's Cave, was for some time the retreat of Robert Bruce, during his reverse of fortune, when contending for the throne. This cavern is 114 feet long, forty-four feet broad, and forty-seven and a half in height; and at the upper end is a hunting-scene rudely sketched in the rock, said to have been done by that monarch while in concealment.

The **SOIL**, varies in different parts of the parish: near the shore, it is sandy and gravelly; towards the interior, clayey; and in the vicinity of the hills, mostly moss; while the valleys, along the banks of the rivers, are generally a loam. The arable lands in the vale of Shisken and near the sea-coast are usually fertile, and in good cultivation; the crops are wheat, oats, barley, potatoes, and the various grasses. Within the last few years the system of husbandry has been greatly bettered;

the lands have been drained, and inclosed with hedges of thorn; and the farm buildings and offices are now substantial and well arranged. The cattle, formerly a mixture of the Galloway, Ayrshire, and Argyllshire breeds, are gradually improving under a more careful management; and the native breed of sheep, supposed to have been originally Norwegian, has been exchanged for the black-faced and for Cheviots. The moors abound with black game, and grouse are found in profusion; but since the destruction of the ancient forests, the roe, the wild-boar, and other animals of the chase have disappeared, with the exception of a few red deer in Glen Iorsa. There are still some small remains of old wood; and plantations have been formed upon a moderate scale, which are in a thriving state. The rocks present a great variety, and afford a deeply-interesting field for the geological student: there are granite, mica and clay slate, conglomerate, trap, sandstone, &c., and a number of minerals. The annual value of real property in the parish is £6806. There is a shooting-lodge at Dugharidh, about a mile below Loch Iorsa. The only village is Shisken, and this is but inconsiderable; at Shedog is a grain-mill, and there is a mill for lint and wool at Burican. About ninety boats are engaged in the herring-fishery, which are of the burthen of four tons and a half on an average, each having a crew of three men. Fairs are held at Shedog in November and December, and a fair, chiefly for horses, at Lag about the third week in November. The nearest post-offices are at Brodieck and Lamdash, in the parish of Kilbride. Facility of communication is maintained by the turnpike-roads to Brodieck and Lamdash, and by packet-boats from Southend to Ayr, and from Blackwater to Campbelltown.

For **ECCLESIASTICAL** purposes the parish is within the bounds of the presbytery of Cantyre and synod of Argyll. The minister's stipend is £237, with a manse and glebe valued together at £28 per annum; patron, the Duke of Hamilton. Kilmorie parish church, rebuilt on the original site in 1785, and enlarged in 1824, is a neat structure containing 832 sittings. A church at Shisken was rebuilt in 1805, at a cost of £700, raised by subscription, and contains 640 sittings: divine service is performed every third Sunday by the minister of the parish. The church at Loch Ranza, noticed in the account of Kilbride, is open to the inhabitants of both parishes. The members of the Free Church have a place of worship at the southern extremity of the parish. There are three parochial schools, situated respectively at Kilmorie, Shisken, and Imachar; the masters of the two first have salaries of £17. 10. and £15 respectively, with a house and garden and some land, and the master at Imachar has a salary of £5. 16.: the fees in the aggregate do not average above £10. There is also a school at Loch Ranza, common to both parishes. The principal relics of antiquity are, the ruins of Danish forts, Druidical monuments, obelisks of unburnt stone, cairns, and tumuli, which last are scattered in profusion over the whole island. On the lands of Drumidoon are the remains of a large fortress called the Doon, in front of which the cliff's rise perpendicularly from the sea to a height of 300 feet. Around the summit of the hill, which has a steep declivity towards the land, is a wall of dry stones, inclosing a level area of several acres, in which are the ruins of various rude buildings; the walls

have been partly removed for the sake of the materials, but the gateway is still plainly to be seen. The largest of the cairns in the parish is Blackwater-Foot, originally 200 feet in diameter at the base, but of which a great part has been used for building. To the north of it is a tumulus where Fingal is said to have held his courts of justice. There are also vestiges of numerous ancient chapels; and in the burying-ground at Shisken is the grave of St. Molios, who removed from the isle of Lam-lash, and ended his days here. The Rev. William Shaw, author of the first Gaelic grammar and dictionary ever published, was a native of the parish; he was favoured in his difficult undertaking by the patronage and advice of Dr. Johnson and the then Earl of Eglinton.

KILMUIR, a parish, in the Isle of SKYE, county of INVERNESS, 18 miles (N. by W.) from Portree; containing, with nearly all of the quoad sacra parish of Steinscholl, 3625 inhabitants. This place, which forms the northern extremity of the Isle of Skye, derived its name from the dedication of its church to the Virgin Mary. Its early history is involved in great obscurity; but it is generally supposed to have been inhabited, in common with the adjacent districts, by the ancient Caledonians, or the Picts, and subsequently by a colony of Norwegians, whom the tyranny of Harold Harfager, their king, induced to quit their native country and to settle here. From this and the surrounding islands the settlers made frequent piratical incursions upon the coast of Norway. For the suppression of these, the king, in concert with his allies, assembled a powerful fleet, which he sent against his revolted subjects; and he ultimately succeeded in annexing the islands to the crown of Norway. After the defeat of the Norwegians in the battle of Largs, by Alexander III., the Western Isles were ceded to the kingdom of Scotland, but were still under the government of the lords of the Isles, who exercised a kind of sovereignty independent of the crown. Of these chieftains the most important were the Macdonalds, descendants of Somerled, Lord of Argyll, between whom and the Macleods of Dunvegan, and other clans, feuds prevailed to such an extent as to induce James V., in 1540, to arm a fleet to reduce them to subjection. The king in person visited the different islands of the Hebrides, and in the parish of Kilmuir was met by a number of chiefs who claimed relationship with the lords of the Isles. In 1715, Sir Donald Macdonald sent a strong body of his vassals from this and neighbouring parishes to the battle of Sheriffmuir; but neither he nor Macleod of Dunvegan could be prevailed upon to join the forces of the Young Pretender at the battle of Culloden. Of this family was the heroic Flora Macdonald, who, in the disguise of a servant, conducted Prince Charles from Loog Island to Monkstadt, in this parish, and was sent as a prisoner to the Tower of London, from which, however, she was released at the intercession of Frederick, Prince of Wales. Her remains were interred in the burying-ground of Kilmuir.

The PARISH is bounded on the north, east, and west by the sea, and on the south by the parish of Snizort. It is about sixteen miles in length, varying from six to ten miles in breadth, and comprising about 30,000 acres, of which 5000 are arable, nearly the same quantity meadow and pasture, and the remainder chiefly moorland, hill pasture, and waste. The surface is intersected by a range of hills, the highest of which has an elevation

of 1200 feet above the level of the sea; and there are several smaller hills, covered with verdure, and of picturesque appearance. Within the bosom of a mountainous height, of precipitous acclivity on the west, and on the north-east inaccessible on account of rugged rocks and masses of columnar basalt, is a fertile plain of singular beauty, designated Quiraing, of sufficient extent to afford standing-room to 4000 head of cattle, and which was formerly resorted to as a place of safety in times of danger. The coast is indented with numerous bays, the principal of which are Cammusmore, Duntulm, Kilmaluag, and Altivaig; but Duntulm alone affords safe anchorage. The chief islands off the coast are Iasgair or Yesker, Fladdachuain, Tulm, Trodda, Altivaig, and Fladda: of these, Fladdachuain, about three-quarters of a mile in length and 300 yards in breadth, was the site of a Druidical temple. The isles are uninhabited, affording only pasture for cattle. There are some small lakes, in which black and yellow trout are found: one lake has been lately drained, and converted into good arable ground.

The land in cultivation is principally a tract about two miles in breadth, along the shores; and the soil in that part is tolerably fertile: the system of husbandry, however, is still in a very imperfect state. The chief crops produced are oats and potatoes. In general the sheep reared in the pastures are of the black-faced, Cheviot, and small Highland breeds; the cattle are of the Highland breed, with the exception of a few milch-cows of the Ayrshire. There is no village of any importance: a post-office, under that of Portree, has been established, from which letters are conveyed to the Kilmaluag and Steinscholl districts by a private runner. A road along the south-east boundary of the parish was opened about the year 1830, and is kept in repair by statute labour. Ecclesiastically the parish is within the bounds of the presbytery of Skye, synod of Glenelg. The minister's stipend is £158. 6. 8., with a manse, and a glebe valued at £10 per annum; patron, the Crown. Kilmuir church was built in 1810, and contains 700 sittings. The parochial school is well attended; the master has a salary of £30, with a house and garden, and the fees average £3 per annum. There is also a school, the master of which has a salary of £15, with a house and a portion of land, supported by the Society for Propagating Christian Knowledge; and another school is maintained by the Gaelic School Society. In the parish are some interesting remains of the once magnificent castle of Duntulm, the ancient residence of the Macdonalds, situated on a lofty rock overlooking the bay of that name. There are also vestiges of Culdee cells, and numerous remains of ancient forts supposed to be chiefly Dauish.

KILMUIR EASTER, a parish, in the county of Ross and CROMARTY, 6 miles (S. S. W.) from Tain; containing, with the villages of Barbaraville, Milntown, and Portlich, 1486 inhabitants, of whom 1023 are in the rural districts of the parish. This place, which is situated on the shore of the Firth of Cromarty, derives its name from the dedication of its ancient church to the Virgin Mary; and the adjunct by which it is distinguished, from its relative position with reference to the parish of Kilmuir in the district of Wester Ross. The lands formed part of the ample possessions of the Earls of Cromarty, of whom George, first earl, obtained the privilege of erecting his estates in this parish, and in

the adjacent parts of Ross, into a separate county, called after him Cromarty. These estates became forfeited to the crown on the attainder of George, third earl, for his participation in the rebellion of 1745; and the baronial mansion, Tarbat House, which had been the family residence, was suffered to fall into a state of neglect and dilapidation. The forfeited estates were, however, restored, in 1784, to the late Lord Macleod, son of the last earl, who erected the present house of Tarbat, and extended and improved the ancient demesne, which was one of the most splendid and magnificent in the country; and the lands of Kilmuir are now the property of his descendant, the Marchioness of Stafford, the principal landed proprietor.

The PARISH is bounded on the south by the Firth, and is about ten miles in extreme length and four miles in breadth, comprising 21,500 acres, of which 3500 are arable, 5600 woodland and plantations, and the remainder meadow, pasture, and moorland. Near the shore the surface is generally level; in other parts, diversified with rising grounds; and towards the north, skirted by a range of hills of moderate elevation, cultivated nearly to their summits. The Balnagown, a small stream, after bounding the parish on the north-east, flows into the Firth of Cromarty; it contains trout, and salmon of small size are sometimes found in its waters. From the higher grounds are obtained extensive views of the Moray Firth and country adjacent, which are seen with beautiful effect in the opening between the rocks called the Souters, at the entrance of the bay of Cromarty, in which the ships passing and repassing form an interesting feature in the landscape. The scenery of the parish is enriched with wood, and enlivened with the highly-ornamented grounds of Tarbat House and other handsome mansions; it is generally pleasing, and in some parts strikingly picturesque. The coast, however, is flat and sandy; and at low water, the bay, which is here from three to four miles in breadth, is almost dry, and is fordable to the opposite coast of Nigg, but full of quicksands. The sands on the sea-shore abound with cockles and muscles of fine quality; and there are some oyster-beds, which are tolerably productive.

In this parish the SOIL is various; in most of the low lands, of a light gravelly quality, which has been greatly improved by careful management; in the higher lands, principally moor; and in others, alternated with tracts of moss. The crops raised are oats, wheat, barley, potatoes, turnips, peas, and beans. The system of husbandry has been steadily improving; the lands have been partly drained and inclosed, and the farm-buildings generally are substantial and commodious. The sheep, of which more than 2000 are pastured, are of the black-faced, Cheviot, and Leicestershire breeds; the cattle, of which about 1000 are fed in the parish, are likewise of different kinds. A considerable number of swine are also reared. Butter and cheese are made. There are still some very interesting remains of natural wood, though, during the continuance of the forfeiture, vast quantities of timber were cut down in the grounds of Tarbat House. On that demesne is a fine grove of venerable and stately trees; and on the estate of Balnagown is a splendid avenue of oak, elm, birch, and chestnut, all of ancient and majestic growth. The plantations consist chiefly of larch and Scotch fir. The substrata in the parish are principally red and white sandstone.

White freestone of fine texture, resembling the Craig-leith stone, and susceptible of a high polish, is quarried at Kenrive, on the lands of Kindace; and there are also several quarries of red sandstone, but of inferior quality. The annual value of real property in Kilmuir is returned at £3391.

Tarbat House, on the shore of the Firth, the property of the Marchioness of Stafford, is a commodious structure, beautifully situated in an extensive and richly-embellished demesne, and greatly improved since the date of its erection. Within the grounds are some remains of the old castle, the seat of the Earls of Cromarty. The plantations have been extended, and the place is rapidly recovering its ancient magnificence. Balnagown Castle, the seat of Sir Charles W. A. Ross, Bart., is an old structure, originally the residence of the Earls of Ross, and much improved by the present proprietor, who has erected some additions in a very elegant style; it is seated in a demesne adorned with stately timber, and commanding an extensive view over the surrounding country. Milnmount House, near the village of Milntown, was pulled down in the year 1845. Kindace House, in the upper part of the parish, and Rhives, are both handsome mansions. The villages of Barbaraville, Milntown, and Portlich are separately described. At Parkhill, in the village of Milntown, is a post-office, which has a daily delivery; and facility of communication is maintained by the high road from Tain to Inverness, and other good roads that intersect the parish. At Balintraid, on the shore of the Firth, is a small harbour affording accommodation for vessels from Leith and Aberdeen, and others, which bring supplies of coal and various kinds of goods; and considerable quantities of grain from Easter Ross, and fir timber for the use of the collieries, are shipped from the pier. Ecclesiastically the parish is within the limits of the presbytery of Tain and synod of Ross. The minister's stipend is about £180, with a manse, and a glebe valued at £12 per annum; patron, the Marchioness of Stafford. Kilmuir church, erected in 1798, is a substantial structure containing 900 sittings; at the east end is a round tower, used as a belfry, on which is the date 1616. The members of the Free Church have a place of worship about a mile from the parish church. The parochial school affords instruction to more than sixty children; the master has a salary of £32, with a house, and £2 in lieu of garden, and the fees average about £12 per annum. On a small hill covered with wood, on the lands of Kindace, were the remains of a Druidical circle, of which the stones were removed some years since by the farmer, to afford materials for building a dyke. The hill of Kenrive, on the same property, is supposed to have been so called from a king who was killed in a battle near the spot, and over whose remains was reared the large cairn that crowns the eminence.

KILMUIR WESTER, ROSS-SHIRE.—See KNOCK-HAIN.

KILMUN, county of ARGYLL.—See DUNOON.

KILNINIAN and KILMORE, a parish, in the district of MULL, county of ARGYLL; comprising the quad sacra districts of Tobermory and Ulva, and part of Salen; and containing 4335 inhabitants. These two ancient parishes, now united, and the names of which respectively express to whom the churches were dedicated, chiefly occupy the north-western part of the island

of Mull. To speak more particularly, the parish consists partly of a peninsula, separated from the southern portion of the island by an isthmus formed by the sound of Mull on the east, and by the estuary called Loch-nan-gaul, a large bay of the Atlantic Ocean, on the west; and partly of two groups of islands. Of these groups, one comprehends Ulva, Gometray, Little Colonsay, and Staffa, situated in the entrance of Loch-nan-gaul; while the other group, called the Treshinish Isles, comprehends Fladda, Lunga, Bachd or the Dutchman's Cap, and the two Cairnburghs, and lies a little further to the west. Exclusive of the islands, the parish is supposed to cover about 150 or 160 square miles; and the whole number of acres, including the islands, is computed at 90,000 or 100,000, of which 15,000 are capable of tillage, 14,000 are under pasture, 1000 in plantation, and the remainder hilly ground producing only coarse grass or moss. *Loch Sunart*, a large arm of the Atlantic, washes the parish on the north, separating Mull from the district of Ardnamurchan, the headland of which is the western extremity of the main land of Scotland, and is distinctly seen from this locality, with the isles of Canna, Rum, Eigg, and Muck, farther north. The *Sound of Mull* separates the parish on the east from that of Morvern, and the *Atlantic* washes it on the west, the most violent gales here known proceeding from this and the south-west points. The coast is much varied in its outline, but without exhibiting any remarkable indentations, except on the north-west, where a long narrow inlet forms a partial division of the Kilmore district of the united parish. On the eastern shore, where there is a flexure of the sound of Mull, is the *Bay of Aros*, once protected by an ancient castle of the same name, now in ruins, said to have been built and inhabited by Mc Donald, Lord of the Isles. There are also in different parts of the coast several small creeks, especially on the north side; comprising those of Laorin, Lochmingary, Pollach, and Calgarry, the last of which opens towards Tiree. The principal harbour, however, is the bay of Tobermory, a bustling sea-port in the north-east.

ULVA, the largest of the islands, contains an area of eighteen square miles, and is separated from Mull by the sound of Ulva, which is about 100 yards wide, and offers safe and convenient anchorage, as does also the bay of Ardnacallich, situated here. On the north of Ulva, the bay of *Soribi*, and on the south, that of *Cra-kaig*, afford good anchorage, especially the former, which is sufficiently capacious for shipping of any tonnage. The shores of Ulva are marked by many headlands, islets, and rocks, several of them agreeably clothed with verdure, and depastured by sheep and cattle. On the east is the promontory of *Ardnacallich*, or "Old Wife's point", so named from the summit, which, as seen from a certain point in sailing out of the sound of Ulva towards Inchkenuth or Gribon, resembles the head and face of a woman, with the features distinctly portrayed. Towards the southern side of the island, near a cluster of columns called the *Castles*, is an extensive and remarkable cave, occupying an area of nearly 3500 square feet, and displaying at its arched entrance and in the interior a singular combination of natural beauties, many of the portions assuming the character of a finished artificial structure. Not far distant, on the Ormaig shores, is *Chirsty's Rock*, also called *Sceair Caristina*, from a tragical event of ancient times. The basalt and wacken strata,

beautifully varied in many instances by mixtures of zeolite, and sometimes phrenite and chalcedony, give a peculiar interest to the geological character of the island; but its fine assemblage of basaltic columns attracts comparatively but little notice, being eclipsed by the surpassing compositions of the celebrated Staffa. *Gometray*, situated on the west of Ulva, and separated only by a very narrow channel, is of much smaller extent and importance: attached to it, however, are two harbours, one on the north, and the other on the south. The islet of *Colonsay*, on the south of Ulva, is of still smaller size, and contains but a few inhabitants.

STAFFA, lying at some distance to the south-west, is about a mile long and a quarter of a mile broad, and totally uninhabited. This rocky spot, diminutive in size, is, however, the centre of attraction to the tourist, and in the grand assemblage and composition of its basaltic columns and caves exhibits one of the most striking geological phenomena in the world. The name is of Scandinavian origin, and signifies "the island of columns". At its loftiest part the isle has an elevation of 144 feet above the sea; but in some places, especially in the north, it is nearly level with the water, and towards the west the cliffs are much depressed, and comparatively destitute of interest. What is called the great face is at its highest point 112 feet above high-water mark, but sinks towards the west, the extreme elevation near Mackinnon's cave being only eighty-four feet. At the *Clamshell cave*, also, the same appearance is exhibited, the vertical cliffs being here displaced by an irregular columnar declivity, beneath which the landing-place is seen, in the midst of columns stretching in almost every direction, and of various forms. *The Boat cave*, which can be approached only by sea, is sixteen feet high, twelve broad, and 150 feet long; and *Mackinnon's cave*, or the *Cormorant*, approached by a gravelly beach, is fifty feet high at the entrance, forty-eight feet wide, and 224 feet long. There is also a celebrated rock called *Buachaille*, or "the Herdsman", a columnar pile about thirty feet high. But the chief point of interest is *Fingal's cave*, which is forty-two feet wide at the entrance, 227 feet long, and measures, from the top of the arch to the surface of the water at low tide, sixty-six feet. The whole of this part of the island is supported by ranges of basaltic colonnades, much diversified in appearance. The columns along the sides of the cave are perpendicular, from two to four feet in diameter, and generally hexagonal and pentagonal in form, though often varying from these geometrical figures. The shores of all the islands attached to the parish, as well as those of the Mull portion, afford a large supply of excellent fish, especially about Ulva; comprising skate, flounders, soles, and turbot, with lobsters, crabs, and other shell-fish. An almost incredible number of sea-fowl, also, and various migratory birds, frequent the district.

The surface of the Mull portion of the parish is hilly, though no where assuming a mountainous appearance. The eminences are mostly covered with heath; but the inland parts of the more level ground consist of good pasture, interspersed with moss and heath, and along the sea-shore is a considerable quantity of arable land. The scenery is much improved by the lakes, which are five in number, and supply good trout and pike, the former also and salmon being found in the rivers. The soil is principally a light reddish earth, frequently mixed

with moss, and occasionally marshy, and lying under water. That in Ulva, though sharp, is very fertile, and produces good crops of oats and bear. Wheat and peas were tried in the island a few years since, and have succeeded far beyond expectation; potatoes and turnips, also, attain a great size. The grass-land in the parish forms good nutritious pasture. Lime-shell sand, found in abundance round the shores, and sea-weed, furnish excellent manure; and from the sea-weed, about 100 tons of the best kelp are annually manufactured in Ulva. The farms are small, and well fenced with stone dykes; every tenant in Ulva is the owner of at least one boat, and has the privilege of feeding his horses and cattle, which are numerous, on the hilly grounds. Leases have recently been introduced; and an allowance is now made by the landowner of Ulva for the cultivation of every acre of waste ground, in consequence of which many improvements have taken place. A very great impediment, however, is found in the bad condition of the roads of the parish. The annual value of real property in Kilninian and Kilmore, including the isles, is £7900. The strictures of Dr. Johnson show that, when he visited Ulva in his tour through the Hebrides, it was entirely destitute of wood; but plantations have since sprung up in different parts, to the advantage of the scenery, and others are in progress. These plantations, with the other improvements already noticed, the recent introduction of turnips and clover, and the encouragement of the Cheviot breed of sheep, have produced a great change in the aspect and the agricultural character of the parish.

The most commanding mansion is a modern building in the island of Ulva, situated in the midst of a large park, and about 400 yards distant from the old mansion of the Macquaries, the former owners of the property. The picturesque beauties of the grounds, and the plantations in the vicinity, greatly enrich the district; and a fine view is obtained of the mountains of Mull, the verdant islands in the sound of Ulva, and the striking cataract of Esse-forse on Laggan Ulva. Other residences in the parish are, Coll House, near Tobermory, an elegant modern structure; Quinish Lodge, towards the west; the Retreat Cottage; Morinish Castle, a small neat modern building; Achadashenag House; and Torloisk, surrounded by beautiful plantations, and commanding a fine view of the Treshinish islands. The chief traffic is carried on at Tobermory, whence fine black-cattle are exported in considerable numbers, as also sheep, horses, pigs, potatoes, bear, and eggs, with a portion of kelp; and besides a variety of other merchandise, oatmeal, seeds, corn, leather, and salt are imported, with coal for the use of part of the population. There are two quays; and the town contains the post-office for the surrounding district, a branch of the Western Bank, and the court of the sheriff-substitute. It is also the polling-place, at county elections, for the electors residing in Mull, Ulva, Iona, Tirce, Coll, and Morvern.

The parish is ECCLESIASTICALLY in the presbytery of Mull, synod of Argyll, and in the patronage of the Duke of Argyll. The minister's stipend is £231, with an allowance in lieu of a manse and glebe. There are two churches, about seven miles distant from each other, one situated in Kilninian, and containing 300 sittings, and the other in Kilmore, having 350; they were both erected in 1754, and thoroughly repaired in 1842. In the year

1827 two quoad sacra parishes were formed by the parliamentary commissioners, with a church and manse to each; and a part of the parish is comprised in the quoad sacra parish of Salen. One of the two parishes, called Ulva, consists of the islands of Ulva, Gometray, Little Colonsay, Staffa, and a part of Mull; covering about sixty square miles. The other parish, named Tobermory, extends about six miles in length and nearly two in breadth, comprehending about twelve square miles. The parochial school is situated in the district that is under the superintendence of the parish minister; the salary of the master is £25, with a house and garden, and about £3 fees. There is also a school supported by the General Assembly; and others are maintained by the Society for Propagating Christian Knowledge, and other societies. The Ulva district contains three schools; two are branches of the parochial school, and the other is supported by the Society for Propagating Christian Knowledge. One of these is on the main land of Mull, and the remaining two in the island of Ulva. In the Tobermory district is a school supported by government; and a female school of industry was maintained chiefly by the Queen Dowager. Ruins of religious edifices are to be seen in different places; and on the height above Kilmore is a Druidical circle, consisting of five large stones. Cairnburgh, one of the Treshinish isles, a lofty rock, was taken by Cromwell's troops in the time of the Commonwealth, and was garrisoned by the Mc Leans in 1715. This, and the adjacent rock, called Little Cairnburgh, are said to have been the boundary between the Nodorees and Sodorees, or Northern and Southern isles, which formed two distinct governments when the Hebrides were subject to Denmark.—See STAFFA, TOBERMORY, ULVA, &c.

KILNINVER and KILMELFORD, a parish, in the district of LORN, county of ARGYLL, 8 miles (S. by W.) from Oban; containing 896 inhabitants. The name of the first of these two ancient parishes is formed from the Gaelic words, *kil*, a "cell, chapel, or burying-place," and *inver*, "the foot of the river or water," which are descriptive of the situation of the ancient chapel or place of sepulture. *Kilmelford*, corrupted from Kilnameallphort, or Kilnameallphort, or perhaps Kilnameallard, is also formed from two Gaelic words, signifying, as is generally supposed, "the burial-ground of the smooth or round bays", though some think the name means "the promontory's bay". Each derivation of the name is strictly applicable to a rocky point of land projecting into the head of Loch Melford, and forming on either side two round bays. The PARISH, which covers about twelve square miles, is situated on the sea, embracing a line of shore fourteen miles in extent, marked by numerous inlets and bays affording convenient and safe anchorage. Kilninver is washed on the north by Loch Feuchan, and Kilmelford on the south by Loch Melford, both of them branches of the Atlantic Ocean, which also forms channels or sounds that bound the parish on the west side. *Loch Feuchan*, separating Kilninver from the parish of Kilbride (usually called Mid Lorn), is a boundary of the parish for three miles; it is about a mile broad, and the depth is fifteen fathoms. *Loch Melford* is nearly four miles long, about half as wide, and thirty-five fathoms deep: the line of its northern shore, from the numerous indentations and curvatures, forming many excellent inlets and bays, measures not less than six miles.

On the western coast of the parish, for about five miles, from the estuary of the *Euchar* to the sound of *Clachan-Seil*, is a spacious and beautiful bay, formed by two lofty rocky promontories; it has a clayey bottom, and a fine smooth sandy beach. After this, and as far northward as the sound of *Clachan*, the rugged nature of the coast exposes shipping to great danger. The sound of *Clachan*, which is a part of the western boundary of *Kilninver*, is two miles long, and eighty feet broad, exhibiting, on account of its smooth and straight course, the appearance of a fine canal. It may be crossed in some places at low water, and at all times by the ferry; but for greater convenience, a bridge has been thrown over, consisting of one arch, seventy-two feet in span and twenty-seven feet above the highest water-mark. Under this bridge vessels of twenty tons' burthen can pass with ease, and obtain good anchorage either at the northern or southern end of the sound. The whole of the coast supplies abundance of salmon, mackerel, turbot, herrings, ling, haddock, skate, and a variety of other fish; and on the shores of the two lochs are found oysters, lobsters, crabs, muscles, cockles, and welks.

The general SURFACE of the parish is much diversified, comprising high mountains, and hills and dales; it is intersected by rivers, and ornamented with lakes, amidst a great profusion of beautiful and interesting scenery: there are also some tracts of level ground. The most lofty eminence is *Ben-Chapull*, or "Mares' mountain", rising about 1500 feet above the level of the sea, and commanding extensive and magnificent views to the west and north. The other hills are comprehended in four different ranges, which extend to the sea-coast. *Glen-Euchar*, taking its name from the river that runs along it, and stretching for about six miles through the *Kilninver* district from east to west, confers much pleasing variety on the scenery; its elevations in rainy seasons afford fine pasture, and the lower parts of the vale yield good crops of corn and potatoes. Another strath, called the *Braes of Lorn*, in the south, and parallel with *Glen-Euchar*, though not so extensive or well cultivated, yet surpasses it in the richness of its pasture, and is remarkable also for its plentiful supply of limestone and of peat, the latter forming the principal fuel. A tract in the west of the parish, called *Nether Lorn*, extending about three miles, and having in general a clayey soil, but being in some parts loamy, on a sandy and slaty bottom, is exceedingly rich and fertile, yielding potatoes, grain, turnips, and fancy grasses.

The *Euchar*, the largest stream, which flows from *Loch Scamadale*, after running westward for about two miles, takes for the same distance a northern course, and falls into the sea at *Kilninver*. It is swelled by numerous tributary streams, and passes for the most part between finely-wooded banks. About a mile from the sea-shore, it flows through a deep rocky ravine, and forms a waterfall, distinguished both for its strikingly romantic scenery and as the resort of fine salmon: near this spot, on the southern bank, stood the mansion of the *Mc Dougalls of Raray*. The river *Oude*, which rises in *Loch Trallaig*, and is nearly five miles in length, in its course from north-east to south-west runs for two miles through the *Braes of Lorn*, in the parish of *Kilninver*. About a mile from its junction with the sea at the expansive bay north of the head of *Loch Melford*, it traverses a locality crowded with grand and romantic

scenery, and crossed by the great road between *Lochgilphead* and *Oban*: the rocks in many places overhang the road, and rise on each side several hundred feet high. Of the various inland lakes, about twenty in number, the largest is *Loch Scamadale*, measuring two miles in length and half a mile in breadth. The water is twenty fathoms deep; and the beautiful scenery in the vicinity is enlivened by tributary streams and mountain torrents, which, in time of flood, pour with impetuosity and deafening roar through the deep and narrow ravines around. *Loch Trallaig*, more than a mile long and half a mile broad, is situated in the *Braes of Lorn*: near it, at the base of a very lofty rock, is the school-house of the district; and on its northern side, a range of hills, 800 feet high, forms a conspicuous and striking feature in the scenery. Of the other lakes, that called *Parson's lake* is distinguished for the wildness of the scenery in its vicinity, for its beautifully-wooded island, and the ruins of a castle or monastery containing twelve apartments. All the lakes, as well as the rivers, contain fine trout and perch, especially *Line*, or *String*, lake, in the eastern quarter, in which the trout are said to surpass all other trout in the county for size and flavour.

Near the rivers is a quantity of alluvial deposit on clay or sand, and in other parts the soil exhibits several varieties: there are tracts of loamy, clayey, and sandy earth. The husbandry approximates, as nearly as is practicable, to that in the southern districts of the country; and the tenants of the *Marquess of Breadalbane*, who holds two-thirds of *Kilninver*, as well as the proprietors who farm their own estates, are emulous to promote every agricultural improvement. Cattle-shows and ploughing-matches are annually held. The cattle are chiefly of the native Highland breed, of which about 1200 are kept; and there are 15,000 sheep. The rocks on the coast are principally sandstone and slate, with mixtures of whinstone; and limestone abounds in the hills that skirt the parish on the east and south-east. The native trees comprise oak, ash, elm, alder, birch, mountain-ash, and hazel; the plantations consist of Scotch fir, larch, spruce, plane, poplar, lime, beech, and chesnut, and cover altogether a considerable portion of ground. The annual value of real property in the parish is £4882. *Melford* and *Glenmore* are the only seats of importance. The inhabitants, who have diminished in number about 100 since the year 1831, are engaged in agriculture, with the exception of those employed at a large distillery, and in the salmon and herring fisheries. There are two salmon-fisheries, one at the confluence of the *Euchar* with *Loch Feuchan*, and the other at the mouth of the *Oude*, producing together about £70 per annum: the herring-fishery is carried on in *Loch Melford*, and supplies a large stock of fish for the parish and surrounding district. About fourteen miles of public road pass through the parish; and important facilities for exporting agricultural produce are afforded by the extent of sea-coast. A fair or market is held in May, and another in November, for the hiring of servants.

The parish is ECCLESIASTICALLY in the presbytery of *Lorn*, synod of *Argyll*, and in the alternate presentation of the *Duke of Argyll* and the *Marquess of Breadalbane*, the former as possessing the old patronage of *Kilmelford*, and the latter that of *Kilninver*. The minister's stipend is £166, with an allowance of £50 in lieu of a manse; the glebe, situated chiefly at *Kilmelford*, is valued

at £20. 10. per annum. There is a church in each district, kept in excellent order, and sharing alternately the ministry of the incumbent. That at Kilninver, built about 1793, accommodates 450 persons; and the edifice at Kilmelford, distant from the former eight miles, seats 250. The parochial school at Kilninver affords instruction in the usual branches; the master has a salary of £34, with an allowance of £6. 8. in lieu of house and garden. In the school at Kilmelford the same kind of instruction is given; the master receives a salary of £25, and the sum of £4 in lieu of house and garden. The fees respectively amount to £20 and £15. There is also an Assembly's school, the master of which has £25 per annum, with an allowance for house and garden. The antiquities comprise tumuli, cairns, and perpendicular stones, with the ancient ruin called Dun-Mhic Raonaill, or "Ronaldson's tower", formerly used as a watch and signal station. A tower or stronghold in Line lake served a desperate band of adventurers, for upwards of a century, as a secure retreat, whence they made predatory incursions throughout the neighbouring country. There is also a place called the "Bones' barn", where the well-known Alexander Mc Donald, usually called in the Highlands Alastair Mac Cholla, burnt to death a large number of women and children who had fled thither to escape from his violence.

KILPATRICK, NEW, or EAST, a parish, partly in the county of DUMBARTON, and partly in the county of STIRLING, 6 miles (N. W. by N.) from Glasgow; containing, with the village of Milngavie in the latter county, and in the former the villages of Blue-Row, Cannesburn, Craigton-Field, Dalsholm, New Kilpatrick, Knightswood, and Netherton-Quarry, 3457 inhabitants, of whom 1748 are in the county of Dumbarton, and 1709 in that of Stirling. This place occupies the eastern portion of the ancient parish of Kilpatrick, from which it was separated in 1649, and erected into an independent parish by the civil and ecclesiastical authorities. It is about seven miles and a half in extreme length, and more than three miles in average breadth, comprising 13,500 acres, of which about 7000 are arable, 800 woodland and plantations, and the remainder meadow, pasture, and waste. The surface is diversified with pleasing undulations, which increase in boldness as they recede from the banks of the rivers, and with numerous large knolls, which are partly arable and partly wooded. The Kirkpatrick range of hills, some of which have an elevation of nearly 1200 feet, skirt the parish from east to west. The principal river is the Kelvin, which has its source in the hills of Kilsyth; and though for the greater part of its course an inconsiderable stream, it expands into a broad and rapid current as it approaches Garscube House, in this parish, and, flowing between richly-wooded banks along the south-eastern boundary of the parish, falls into the Clyde below Glasgow. A small stream called the Allander, issuing from a reservoir in the parish of West Kilpatrick, after skirting the northern boundary of this parish for more than a mile, takes a south-eastern course, and, supplying the bleachfields of Clober, and turning the mills of Milngavie, joins the Kelvin. The Forth and Clyde canal passes through the southern portion of the parish, and is carried over the river Kelvin by a noble aqueduct, 350 feet in length, fifty-seven feet in width, fifty-seven feet in height from the surface of the river to the top of the parapet, and supported on four

arches of fifty feet span. There are several lakes in the parish, the largest of which, in the pleasure-grounds of Dugalston, is nearly thirty acres in extent. Another, in the grounds of Kilmardinny, of about ten acres, beautifully encompassed with shrubberies and plantations, abounds with perch, eels, and pike; and the still smaller lake of St. Germanus is enriched with many rare aquatic plants.

In general the soil is a retentive clay, of no great depth, resting upon a substratum of till; and along the banks of the rivers, a deep rich loam: several of the knolls are of a light dry quality, and on the higher grounds are extensive tracts of moorland and peat-moss. The crops are wheat, oats, barley, beans, potatoes, and turnips; the system of husbandry is in a very improved state, and a due rotation of crops is regularly observed. The lands have been drained, and inclosed partly with hedges of thorn, and partly with stone dykes. In this parish the farms vary from forty to 400 acres in extent; and the buildings, several of which are of recent erection, are usually substantial and commodious. Great attention is paid to the management of the dairies, and considerable quantities of butter are sent to the Glasgow market. The cattle fed on the pastures are of the West Highland breed, and on the dairy-farms, of the Ayrshire; they are mostly bought in at the neighbouring fairs, few being reared in the parish. The sheep are chiefly of the common black-faced breed. The plantations consist of ash, elm, beech, sycamore, and other forest-trees, with Scotch, silver, and spruce firs, of all of which, on several of the lands, are some remarkably fine specimens. In most of the more recent plantations, the oak has been introduced with every prospect of success. The substrata are principally coal, forming part of the spacious basin surrounding the city of Glasgow, sandstone, whinstone, trap, and basalt; the coal is wrought at Garscube, Law Muir, and Castle-Hill, where it occurs at depths varying from eighteen to fifty fathoms from the surface. Limestone is worked at Culloch; and various strata of clay ironstone are found, one of which, at Garscube, was wrought some years since; but the ore was neither in sufficient quantity, nor of the requisite quality, for smelting. There are some quarries of excellent freestone of a fine cream colour in operation at Netherton, affording employment to about seventy persons: the stone, though comparatively soft when first taken from the quarry, becomes hard when exposed to the air; and formerly, large quantities of it were exported to Ireland and the West Indies. The annual value of real property in the parish is £28,038, including £4145 for the Dumbarton portion. Garscube House, the seat of Sir Archibald Campbell, Bart., is a spacious and elegant mansion, erected in 1827, and pleasantly situated on the banks of the Kelvin, in a demesne tastefully laid out, and embellished with stately timber. Clober House; Killermont House, partly ancient and partly modern; Garscadden; and Kilmardinny, are also handsome mansions finely situated; and the seat of Dugalston, which has been some time deserted, is beautifully seated in extensive and well-ornamented grounds.

Various branches of manufacture are carried on in different parts of the parish, the principal of which are the printing of calico, the spinning of cotton, the bleaching of cotton and linen, for which there are extensive works at Clober, and the manufacture of paper, snuff,

and other articles, which are minutely detailed in the separate notices of the several villages where they are carried on. The village of East Kilpatrick, in which the church is situated, contains thirty-five inhabitants, and consists of a few neat cottages: a fair, chiefly for milch-cows, is held on the 1st of May, O. S., and is still tolerably attended. There are post-offices in the villages of East Kilpatrick and Milngavie; and facility of communication is maintained by the turnpike-roads from Glasgow to Dumbarton, &c., by the Forth and Clyde canal, and by good bridges over the Kelvin and the Allander. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Dumbarton, synod of Glasgow and Ayr. The minister's stipend is £270, with a manse, and a glebe valued at £11. 13. 4. per annum; patron, the Duke of Montrose. The church, erected in 1808, is a neat plain structure centrally situated, and containing 704 sittings. There is a place of worship in the village of Milngavie for members of the United Presbyterian Church. The parochial school is well conducted; the master has a salary of £34, with an allowance of £10 in lieu of a house and garden, and the fees average about £10 per annum. There are still considerable vestiges of the wall of Antoninus, which intersected the parish from east to west, and some remains of two ancient forts, from the ruins of which were dug two votive tablets, now preserved in the Hunterian museum of the university of Glasgow. On the lands of Dalsholm, near Garscube House, in a tumulus lately opened, was discovered a flight of steps, leading to a slab on which were ashes and cinders; and underneath it, was found a chamber inclosed with flag-stones, in which were fragments of ancient armour, military weapons, and various utensils. At Drumry, near Garseadden, are the remains of a chapel, whose tower, overhanging a steep acclivity, bears much resemblance to a fortress. There was also a chapel at Lurg, of which little more than the site can now be traced; the tombstones in the cemetery have for many years been removed, and the land is under tillage.

KILPATRICK, OLD, or WEST, a parish, in the county of DUMBARTON; containing, with the former quoad sacra parish of Duntocher, and the villages of Dalmuir, Dalmuir-Shore, Bowling-Bay, Little-Mill, and Milton, 7020 inhabitants, of whom 957 are in the village of Old Kilpatrick, 5 miles (E. by S.) from Dumbarton, and 10 miles (N. W. by W.) from Glasgow. The name is derived from the dedication of the ancient church to St. Patrick, the tutelar saint of Ireland, by whom it is conjectured to have been originally founded, and who, though various places dispute the honour of his birth, is generally said to have been a native of this parish. That the place had attained some degree of importance at a very early period, appears evident from the numerous vestiges of Roman occupation that may still be traced. The wall of Antoninus between the Forth and the Clyde terminated at Chapel-Hill, in the parish; and though all remains of that structure have long been obliterated by the plough, the fosse by which it was defended is yet discernible. At Duntocher was a Roman fort, whose site is obscurely pointed out; and an ancient bridge at the same place, which was repaired in 1772 by Lord Blantyre, is said to have been built in the time of the Emperor Adrian, though some antiquaries regard its sole claim to Roman origin as arising from its having

been constructed with materials supplied from the ruins of the fort. Votive altars also, and various stones with Roman inscriptions, have been found at Chapel-Hill and at Duntocher. Near the former place, a subterranean recess, containing Roman vases and coins, was discovered in 1790 by the workmen employed in digging the canal; and at the latter, the remains of a Roman sudatorium were found in 1775.

The PARISH is bounded on the south by the river Clyde, along which it extends for nearly eight miles, and is four miles and a half in extreme breadth, comprising 11,500 acres, whereof 6000 are arable, 600 woodland and plantations, and the remainder meadow and pasture. Its surface rises by a gentle acclivity from the river towards the north, and is diversified with hills, the most conspicuous of which are those of Dalnotter, Chapel-Hill, and Dumbuck, commanding from their summits extensive views of the Clyde, the county of Renfrew, and part of Lanarkshire. The Kilpatrick hills terminate in Dumbuck hill, near the western extremity of the parish; they are a prominent and lofty range, and some of them attain an elevation of upwards of 1200 feet above the level of the sea. As seen from the Clyde, the parish constitutes one of the richest features in the picturesque and beautiful scenery for which that river is so celebrated. A nameless stream is supplied from two small lakes behind the range of the Kilpatrick hills, and, flowing southward, by Fairley and Duntocher, falls into the Clyde at Dalmuir. Along the banks of the Clyde the SOIL is a fine deep loam, resting on a bed of clay; and in the higher grounds, light and gravelly. The crops are oats, wheat, barley, potatoes, and turnips; the system of husbandry is improved, and the arable lands are in a high state of cultivation. Great attention is paid to the management of the dairy-farms, and large quantities of butter are sent to the Glasgow market, where they find a ready sale. The cattle are generally of the Highland breed, and on the dairy-farms the cows are of the Ayrshire breed: both kinds are chiefly purchased at the neighbouring fairs, few being reared in the parish. The sheep, of which considerable numbers are reared in the moorland pastures, are all of the black-faced breed. The annual value of real property in the parish is £23,524.

The plantations, which are well managed and in a thriving state, consist of oak, ash, elm, beech, plane, lime, and the various kinds of fir, for all of which the soil appears to be well adapted; and both in the lowlands and the higher grounds are many fine specimens, of stately growth. The substrata of the parish are principally of the coal formation; and the rocks comprise greenstone, amygdaloid, trap, greywacke, and basalt. Limestone and ironstone are also found. The coal, which is wrought in the lands near Duntocher, occurs at depths varying from 120 to 200 feet, in seams about five feet in thickness, and of good quality. The limestone, which is also of good quality, is wrought for burning into lime for the use of the farmers; and there are some quarries of freestone and whinstone in operation. In this parish the principal seats are Cochno, Edinbarnet, Milton House, Auchintoshan, Mount-Blow, Glenarbuck, Auchintorlie, Barnhill, and Dumbuck, most of which are handsome mansions, finely situated in richly-planted demesnes. Kilpatrick was formerly a burgh of barony, and, by charter under the great seal,

dated 1679, was made head of the barony, and invested with power to create burgesses, and appoint bailies for its government. These privileges have long been extinct, though it is not recorded by what means they became obsolete; and the old gaol, with the iron bars on the windows, is now a private house. A post-office is established under the office at Glasgow; and facility of communication is afforded by the turnpike-road from Dumbarton to Glasgow, which intersects the parish for nearly eight miles; by other good roads; by the Forth and Clyde and the Monkland canals; by the Erskine ferry near Kilpatrick; and by numerous steamers that frequent the Clyde.

Various branches of MANUFACTURE are carried on, to a very great extent, in the several villages within the limits of the parish. The principal works are the cotton-mills at Duntocher, Milton, Hardgate, and Faifley, in which 74,045 spindles and 530 power-looms are employed, producing as many as 875,000lb. of yarn and 2,000,000 yards of cloth annually, and affording occupation to nearly 1500 persons. At Dalmuir are paper-mills, producing paper of all kinds to the amount of £30,000 a year, and giving employment to 176 persons, of whom one-half are women and children. There are soda-works at Dalmuir-Shore, in which thirty tons of sulphuric acid are produced weekly, and used in the making of bleaching-powder, chloride of lime, and soda: about 100 persons are engaged here. At Milton are an extensive bleachfield and some calico-printing works, in which from 400 to 500 people are employed. At Bowling-Bay is a ship-building yard, where about twenty persons are employed in building sloops of 170 tons' burthen, and vessels for canal navigation; and there is an iron-forge at Faifley, for the manufacture of spades and shovels, in which thirty persons are employed. At Little-Mill and Auchintoshan are distilleries, in the former of which about 50,000, and in the latter about 16,000, gallons of whisky are annually made. Several handloom-weavers throughout the parish are employed by Glasgow and Paisley houses; and a considerable number of females are engaged in embroidering muslin.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dumbarton, synod of Glasgow and Ayr. The minister's stipend is about £225, with a manse, and a glebe valued at £40 per annum; patron, Lord Blantyre. Kilpatrick parish church, erected in 1812, is an elegant structure in the later English style of architecture, with a square embattled tower, and contains 750 sittings. A church has been erected at Duntocher, in connexion with the Establishment; and there are places of worship at Old Kilpatrick for members of the Free Church and the United Presbyterian Church; at Duntocher, for the United Presbyterian Church, Roman Catholics, and the Free Church; and at Faifley, for the United Presbyterian Church. The parochial schoolmaster has a salary of £34, with a house and garden, and the fees average £15 per annum. There are other schools in several of the villages. On a promontory near the margin of the Clyde are the ruins of the ancient castle of Dunglass, the baronial seat of the Colquhouns, who were lords of the whole lands between it and Dumbarton, which lands constituted the barony of Colquhoun. A little to the west of it, is the lofty basaltic rock called Dumbuck, resembling the rock of Dumbarton. In the churchyard is an erect stone,

sculptured with the effigy of an armed knight; and in the gardens at Mount-Blow is a monumental cross, the figures on which, from its having been formerly used as a bridge, are much obliterated. There are also numerous vestiges of hill fortresses on the heights, and several tumuli of artificial formation. At Dunglass is a monument erected to perpetuate the memory of Mr. Henry Bell, who launched on the Clyde the first steam-vessel ever brought into actual use: he resided at Helensburgh, on the Clyde, and his decease occurred in 1830.

KILRENNY, a royal burgh and a parish, in the district of ST. ANDREW'S, county of FIFE, 3 miles (S. W. by W.) from Crail, and 10 miles (S. S. E.) from St. Andrew's; including the village of Nether Kilrenny, or Cellardykes, and that of Upper Kilrenny; and containing 2039 inhabitants, of whom 1652 are in the burgh. This parish, which is situated on

Burgh Seal.

the north of the Firth of Forth, at the south-eastern extremity of the county, is supposed to have derived its name from the dedication of its church to St. Ireneus. Nether Kilrenny, which is on the coast, is separated from Anstruther Easter only by a small rivulet: it obtained the name of Cellardykes from the numerous store-houses ranged along the shore for the use of the fisheries, which were formerly carried on to a very great extent, and are still steadily increasing. About forty large boats, with crews of seven or eight men each, go regularly to the deep-sea fishery, during the whole course of the year, except the time occupied in autumn and January by the herring-fishings. A pretty large number of yawls also, with crews of three or four each, principally boys and old men, go to sea, but not to so great a distance. The hardy and enterprising fishermen of this place are often in imminent danger from the exposed situation of the coast, the heavy sea that beats upon it, and the great distance to the fishing-ground; but their boats, which are all open, being in first-rate order, and well managed, accidents seldom occur. Within the last few years, a salmon-fishery has been established on the coast of the burgh, and a number of fine fish have been taken. The fish principally caught here are cod, ling, haddocks, halibut, and turbot, of which large quantities are sent to London, Liverpool, Edinburgh, and other markets. Not less than seventy boats, with crews of six men each, belonging to the place, are employed in the herring-fishery. Cellardykes has a population of 1486, and consists chiefly of one main street irregularly built, and extending along the shore; a pier was erected in 1831, for the accommodation of vessels engaged in the fishery, and there is a favourable site for the construction of a commodious harbour. Upper Kilrenny contains 233 persons, and is about a mile to the north-east of Cellardykes, with which it is connected by the road from Anstruther to Crail; it consists only of the church and manse, the houses of Innergelly and Renny-Hill, an inn, and some rural cottages. The past-town is Anstruther; and facility of communication is afforded with St. Andrew's and other towns by good roads that pass through the parish.

The **BURGH** of Kilrenny, which includes both the villages already described, though said to have been erected into a royal burgh by James VI., does not appear to have received any regular charter of incorporation. Its magistrates, appointed by Bethune of Balfour, the superior of the burgh, returned a member to the Scottish parliament without any legitimate authority; and at the time of the Union, though it had been expunged from the list of royal burghs at the request of the magistrates, it was inadvertently classed with the royal burghs of the district. Until 1829 the government was vested in a provost, two bailies, and twelve councillors, duly chosen; but in that year, the burgh was disfranchised owing to an irregularity in the annual election of the officers, and its affairs were placed under the direction of managers by the court of session. Even before this, there were no incorporated guilds possessing exclusive privileges, nor was any fee exacted for admission as a burghess. The town-house is a small inferior building. Kilrenny is associated with St. Andrew's, Anstruther Easter, Anstruther Wester, Crail, Cupar, and Pittenweem, in returning a member to the imperial parliament: the number of qualified voters is about fifty. The **PARISH** is of triangular form, its base extending along the sea-shore for nearly three miles. The surface rises gradually from the coast towards the north, and is diversified with a few hills of inconsiderable height: there are no rivers in the parish, except the small burn that divides it from Anstruther, and another rivulet that falls into the sea at the eastern boundary of the burgh. The coast is bold and rocky, and indented with some small bays; on the east of Cellardykes are some rocks called the Cardinal's Steps, and others are perforated with caves, one of which is of considerable extent. The soil is generally very fertile; and the lands, chiefly arable, produce favourable crops of grain of every kind: the system of husbandry is improved, and sea-weed, of which abundance is thrown upon the coast, is used as manure. About £3 an acre is the average rent of land. Ecclesiastically the parish is within the bounds of the presbytery of St. Andrew's and synod of Fife. The minister's stipend is £251. 17. 11., with a manse, and a glebe valued at £27. 10. per annum; patron, Sir W. C. Anstruther, Bart. Kilrenny church is a neat plain structure in good repair. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average from £30 to £40 per annum.

KILSPINDIE, a parish, in the county of PERTH; containing, with the villages of Pitrodie and Rait, 709 inhabitants, of whom 56 are in the village of Kilspindie, 2 miles (N. W.) from Errol. This place includes the ancient parish of Rait, which, after the dilapidation of its church, was united to the parish of Kilspindie, prior to the year 1634. The parish is situated partly in the Carse of Gowrie, and partly among the Stormont hills, and is about five miles in length and three and a half in breadth, comprising 6500 acres, of which 3500 are arable, 200 woodland and plantations, 200 undivided common, and the remainder permanent pasture and heath. The surface, towards the south, is flat for nearly a quarter of a mile, and thence rises gradually towards the north for almost two miles, till it attains an elevation of more than 600 feet above the level of the sea. It is diversified with several hills, of which that of Evelick, the highest of the

range, and nearly in the centre of the parish, has an elevation of 832 feet. This hill, which is of a conical form, and covered with verdure, commands one of the most interesting prospects in this part of the country, embracing a portion of Strathmore, with the Grampians immediately behind, and the lofty mountains of Benglo, Schihallion, and Benviorlich in the distance; the Carse of Gowrie on the south-east and south-west; and, beyond the Tay, the coasts of Fife, with the Lomond hills, and the hills near Stirling. Between the hills, which are generally of barren aspect, are several narrow glens of great fertility and pleasing appearance; the slopes of the hills towards the carse are well cultivated, and the scenery is enriched with wood, and enlivened with the windings of the burns of Kilspindie, Rait, and Pitrodie.

The **SOIL** of the lower grounds is extremely rich, producing fine crops of grain of all kinds; the slopes of the hills are of lighter quality, yielding a great abundance of turnips and potatoes. The system of agriculture is in a highly-improved state; the lands are well drained and inclosed; the buildings are substantial, and on most of the farms are threshing-mills. In the hilly districts is good pasture for sheep and cattle. The plantations, which are well managed, and in a thriving condition, consist chiefly of Scotch fir and ash. The substrata are mostly amygdaloid, trap, and whinstone, of which the hills are mainly composed; and beautiful specimens of agate are frequently found, which are made into brooches and other ornaments. Sandstone of coarse grain, and of a grey colour, is also met with; and whinstone is quarried at Pitrodie. The annual value of real property in the parish is £5822. Fingask Castle, the seat of Sir Patrick Murray Threipland, Bart., is beautifully situated on the braes of the carse, and commands a fine view of the vale below, through which the river Tay pursues the latter part of its course till it falls into the German Ocean, a few miles below Dundee. The castle, which is built on the brow of a deep glen thickly wooded, is a very ancient structure, bearing in one part the date 1194, but has been greatly enlarged and modernised by the addition of recent buildings, though still retaining its castellated form. The old castle was besieged by Cromwell in 1642; and in 1716, the Chevalier de St. George slept here on his route from Glammis to Scone, on the 7th of January. In 1746, the castle was completely dismantled, and a great part of the building levelled with the ground, by the English troops, in consequence of the attachment of the Threipland family to the house of Stuart. There are three villages. A few families are employed in the weaving of linen for the manufacturers of Dundee, but the population of the parish is principally agricultural.

For **ECCLESIASTICAL** purposes the parish is within the limits of the presbytery of Perth, synod of Perth and Stirling; patrons, the family of Robertson. The minister's stipend is about £200, with a manse, and a glebe valued at £20 per annum. Kilspindie church, a plain structure erected in 1796, is pleasantly situated on an eminence in the village, near the confluence of two small rivulets; it contains 350 sittings, and is in good repair. The parochial school is attended by about sixty children; the master has a salary of £34, with a house and garden, and the fees average £10 per annum. Attached to the school is a small library. A private school in the village of Rait, which is attended by about the same number, is supported partly by the fees, and partly by subscription.

On the summit of Evelick hill are the remains of a circular encampment, inclosing an area twenty yards in diameter, of which the vallum and fosse are still plainly discernible. Upon the high grounds at no great distance, are the ruins of Evelick Castle, the ancient seat of the Lindsays, and the birthplace of Helen Lindsay, wife of John Campbell, Esq., of Glenlyon, whose daughter, Helen, according to the session records, was married on the 22nd of September, 1663, to the far-famed Rob Roy. There are still some portions of Rait church remaining.

KILSYTH, a burgh of barony and a parish, in the county of STIRLING; containing, with the former quoad sacra parish of Banton, and the village of Auchinmully, 5613 inhabitants, of whom 4106 are in the burgh, 12½ miles (N. E.) from Glasgow. The parish was anciently called "Monaeburgh", from the name of the barony which now forms the eastern portion of the parish, and of which alone it for many years consisted till the annexation of the barony of Kilsyth in 1649. Since that period, the whole parish has assumed the appellation of Kilsyth, from the name of that barony, which previously was a portion of the parish of Campsie, and of which the etymology, like that of Monaeburgh, is involved in doubt and obscurity. A large extent of property here belonged to the Livingstone family, of whom Sir James Livingstone, in acknowledgment of his services in defending the castle of Kilsyth against Cromwell, was elevated to the peerage by Charles II., in 1661, by the titles of Lord Campsie and Viscount Kilsyth. The estates continued with his descendants till the year 1715, when they became forfeited to the crown on the attainder of William, third Viscount Kilsyth, for his participation in the rebellion; and the lands were purchased in 1784 by Sir Archibald Edmonstone of Duntreath, Bart., whose grandson, Sir Archibald Edmonstone, is now the chief proprietor of the parish. The principal event of historical importance connected with the place is the memorable battle of Kilsyth, in 1645, between the army of the Covenanters, consisting of 6000 infantry and 1000 cavalry, commanded by General Baillie, and the forces of the Marquess of Montrose, consisting of 4400 infantry and 500 cavalry. This sanguinary battle, which occurred near the site now occupied by the reservoir of the Forth and Clyde canal, terminated in the entire defeat of the Covenanters, with the slaughter of nearly the whole of their infantry; while of the forces of the marquess, a very inconsiderable number were slain.

The town is situated on the north road from Glasgow to Edinburgh, and consists of several streets irregularly formed. It is lighted with gas, and the inhabitants are amply supplied with water, conveyed from a spring in the neighbourhood into public cisterns by earthen pipes. The principal trade is the weaving of cotton by hand-looms, in which more than 1300 persons are engaged for the Glasgow merchants; and there are two factories lately established, in which lappets, cloth for umbrellas, and checked ginghams are made, affording occupation to about 130 persons. The manufacture of white and brown paper is also carried on, to a moderate extent, employing from forty to fifty persons; and many of the inhabitants are engaged in mines of ironstone and coal, and in the quarries in the parish. There is no regular market-day, but the town is amply supplied with provisions of every kind: fairs are held on the second Friday in April and the third Friday in November, but

they are not much frequented. Facility of communication is afforded by the road from Glasgow to Edinburgh, and by the great canal within a mile to the south of the town. Kilsyth was erected into a burgh of barony by charter of George IV., in 1826; and the government is vested in a bailie, dean of guild, and four councillors, elected under the provisions of the act of the 3rd of William IV. There are no incorporated trades possessing exclusive privileges; and the occupation of a tenement of the annual value of £5, on lease, is sufficient to qualify as a burgher, upon paying a fine of five shillings on admission. The magistrates exercise jurisdiction in petty offences, but no regular courts appear to be held by them.

The PARISH, which is bounded on the north by the river Carron, and on the south by the river Kelvin, is about seven miles in length and three and a half in average breadth, and comprises 15,000 acres, of which nearly 4000 are arable, 7000 meadow and pasture, and the remainder, with the exception of a few acres of plantations, moorland and waste. Its surface is boldly diversified with hill and dale, and is generally of bleak and barren aspect. The Kilsyth hills, which intersect the parish from east to west, and a portion of the Campsie fells, which skirt it on the north-west, are among the most lofty elevations; and some of them attain a height of more than 1200 feet above the level of the sea. From the summit of these hills is an unbounded view, extending from the Atlantic to the German Ocean, and commanding nearly the whole country at a glance. The Meikleben, which unites the Kilsyth range with the Campsie fells, has an elevation of 1500 feet; and the Garrel and Laird's hills, also in the parish, rise to a height of 1300 feet. The chief river is the Carron, which has its source in the adjacent parish of Fintry, flowing eastward into the Forth at Grangemouth; it abounds with trout, and forms in its sinuous progress numerous romantic cataracts. The Kelvin has its source within the parish, and, though for some distance from its rise but a small rivulet, has been diverted by Sir Archibald Edmonstone into a wider and deeper channel, and, after flowing under the aqueduct of the Forth and Clyde canal, increases in importance as it advances towards Glasgow. Of the smaller streams that intersect the parish, the principal is the Garrel, which descends from the Garrel hill, and, in its course, within a mile and a half, has a total fall of 1000 feet. Its waters, as it approaches the ancient village of Kilsyth, have been partly diverted into the reservoir at Townhead, for the supply of the Forth and Clyde canal; but after receiving some small tributaries, it flows southward into the Kelvin. The reservoir is of oval form, about seventy-five acres in extent, and occupies a natural hollow of considerable depth, by filling up the entrance to which, to the height of twenty-five feet, the inclosure was formed at a very inconsiderable expense.

In the lower parts of the parish the soil is a rich and deep loam; in the higher parts light and sandy, but of great fertility; in other parts gravel alternated with clay, and there are also some large tracts of peat-moss. The crops are oats, barley, wheat, potatoes, and turnips. The cultivation of potatoes in the open fields in this country is said to have been first practised in Kilsyth parish by Mr. Graham, of Tamraver, who in a certain year, from one peck planted in April, obtained a produce

of 264 pecks in the October following. In this part of the county, the system of husbandry has been greatly improved under the encouragement held out by the Farmers' Association for Kilsyth and other parishes adjacent, which meets at the principal inn annually, in June, when a cattle-show takes place, and prizes are awarded to the successful competitors. The farm-buildings in the parish have been rendered commodious, and the lands inclosed with fences of thorn, kept in excellent order; tile-draining has been extensively practised, and all the more recent improvements in the construction of agricultural implements have been adopted. The hill-pastures are well adapted for the feeding of sheep, and the meadows in the vale of Kilsyth are among the most luxuriant in the country. Great attention is paid to the dairy-farms, on which all the cows are of the Ayrshire breed; the chief produce is butter and milk, and large quantities of those articles are sold for the supply of the neighbourhood. Formerly the plantations were on a very limited scale, chiefly confined to the demesnes of the principal landholders; but they have lately been extended. They consist of ash, birch, mountain-ash, elm, alder, oak, and sycamore, for which the soil seems well adapted. The substratum is mostly of the coal formation, and ironstone and limestone are found in abundance: the coal, which is of good quality, is wrought for the supply of the adjacent district, and the ironstone by the Carron Company. There are also quarries of limestone, and of freestone of a fine colour, and of good quality for building. The annual value of real property in the parish is £9288.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Glasgow, synod of Glasgow and Ayr. The minister's stipend is £271. 6. 7., with a manse, and a glebe valued at £20 per annum; patron, the Crown. Kilsyth parish church, erected in 1816, at the western extremity of the town, is an elegant structure in the later English style of architecture, containing 860 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, and Wesleyans. Parochial schools are maintained in the burgh, at Chapel-Green, and at Banton; the master of the first has a salary of £30, with a house and garden, and the fees, averaging £60. The master of the Banton school has a salary of £12. 6., with fees amounting to £23; and the master of Chapel-Green, a salary of £9, to which are added £22 the proceeds of a bequest by Mr. John Patrick, and fees averaging £30 per annum. At Conney Park and Balcastle are remains of Pictish forts, the latter of which is the most entire of all the works of the kind in the kingdom. There are also some ruins of Colzium Castle, and of a smaller mansion of the Livingstone family which was burnt by Oliver Cromwell on his route to Stirling. Small remains still exist of the ancient castle of Kilsyth, on an eminence overlooking the town; and in the town is the old mansion of Kilsyth, now inhabited by poor families, but in which are yet preserved the apartments where Prince Charles Edward spent a night. Under the old church was the burying-place of the Livingstone family, of whom William, the third viscount, after his attainder retired to Holland, where Lady Kilsyth and her infant son were killed by the accidental falling in of the roof of the house in which they lived. Their bodies were embalmed, and being inclosed in a leaden coffin, were

sent to Scotland, and interred in the family vault, now in the open churchyard. On examining the coffin in 1796, the remains of both were found in so perfect a state, and even the complexion so fresh, as to present every appearance of natural sleep.

KILTARLITY, a parish, in the county of INVERNESS, 4 miles (S. W. by W.) from Beaully; containing 2869 inhabitants. This place, the origin of the name of which is altogether uncertain, comprehends the old parish of Convinth, and is situated in one of the most beautiful and romantic districts in the Highlands. The parish is separated from part of that of Kilmorack by the Beaully river, which, a few miles to the north-east, forms the loch of the same name, the latter communicating with the Moray Firth. It is one of the largest parishes in the country, measuring in length, from the north-eastern to the south-western extremity, about forty-five miles: the average breadth, however, does not exceed six miles. The surface is characterized by hills and mountains, and thickly-wooded glens and ravines; it is interspersed with numerous lochs, some verdant pastures, and well-cultivated tracts, and is rendered more strikingly picturesque in many parts by the course of rapid streams with various cascades. Among the lochs, which are very numerous and of great diversity of appearance, and which abound in pike, trout, char, and other fish, the largest, and those most famed for their scenery, are Loch Affarie, Loch Naluire, and Loch Beinnemhian. Each of these is about a mile broad, and they vary in length from three to seven miles; they are very deep, and are embosomed in hills and mountains, shrouded with birch, mountain-ash, and stately firs, the remains of the old Caledonian forest. The three lakes are united by the river Glass, which, rising in Loch Affarie, and proceeding north-eastward through the other two lakes, is skirted on each side by lofty hills, and joined at Fasnacoil by the rapid stream of the Deaothack. The Deaothack is celebrated for its waterfalls, especially that of Plodda, and for the splendid firs on its banks, intermixed with birch and oak. At Invercannich, about four miles from Fasnacoil, the Glass is joined by the river Cannich, a large stream; and again, at the distance of a few miles, by the Farrer, after which it takes the name of Beaully. The distance from the last junction to the Beaully Firth or Loch is about nine miles; and though the river is only *navigable* for a mile and a half from the firth, up to the village of Beaully, it is found of great service for transporting timber for exportation. In its romantic progress it forms some fine cascades. The fishery of the Beaully belongs to Lord Lovat, producing a rent of nearly £2000 per annum.

On the north-eastern side of the parish is a tract of about nine square miles, which is flat and low; but with this exception, the surface is hilly and rocky throughout, and intersected with glens and valleys, the principal of which are Glen-Convinth and Strath-Glass. The latter of these was formerly covered with wood, which supplied Cromwell with a large portion of the timber used in the fortifications at Inverness, but of which none now remains, except the forest of Cugie, where firs of immense bulk and stature are to be seen. In the south-western part of the parish the rocks are so lofty, rugged, and inaccessible, that they are not only the resort of eagles, falcons, and numerous birds of prey, but furnish lurking-places for large herds of goats, so wild as to bid defiance

to capture otherwise than by shooting them. The highest hill is supposed to be that of Aonach-Sassan, "English Hill," estimated at about 2000 feet above the level of the sea. In general the soil is thin and light, of a reddish hue, and very hard. It is found intractable for successful husbandry, except on the lower grounds in the north-eastern district, which are much more fertile than the higher portion, where, on account of the mossy character of the soil, the crops are stunted and sickly, especially in seasons of drought. Agriculture has, however, made considerable progress within the last twenty or thirty years. The most approved rotation of cropping has been introduced; and where trenching, liming, and draining have been adopted to a sufficient extent to counteract the natural impediments of the land, the produce is of good quality. Sheep-farming is largely and successfully carried on in Strath-Glass. The rocks in the parish consist chiefly of gneiss, intersected with veins of granite; and sandstone, with asbestos, rock-crystal, and other varieties, is found in the hills. There are several interesting caves, one of which, called Corriedow, is said to have been a retreat for some days of Prince Charles Edward Stuart. Wood was once the only article exported from this locality; and independently of the old Scotch firs, and other noble trees, the memorials of former ages, there are extensive plantations that have been recently augmented. These comprise ash, elm, beech, plane, and especially larch, which attain a fine growth, and prove a source of considerable emolument to the proprietors. The annual value of real property in the parish is £6160.

The gentlemen's seats are in general so well situated as to command views of the most interesting combinations of scenery. *Beaufort Castle*, the property and constant residence of Lord Lovat, is a spacious but plain building, standing on the site of the old fortress of Beaufort or Downie, which in the time of Alexander I. was besieged by the royal troops. Cromwell, also, seized a castle here, and demolished the citadel; and immediately after the battle of Culloden, the then fortress was burnt to the ground by the Duke of Cumberland's army. Indeed, the present is said to be the twelfth edifice erected on the same site: it is thought to have been built as a residence for the government factor while the estate lay under forfeiture. The mansion commands extensive and beautiful views, comprehending the Beaully Firth; the large parks attached are ornamented with fine specimens of ancient trees, and there are well laid out pleasure-grounds and gardens. The present proprietor, a Roman Catholic, and the principal heritor in the parish, was raised to the peerage in 1837, the forfeited title of Baron Lovat being then restored. *Erechless Castle*, the seat of The Chisholm, situated near the confluence of the Farrer and Glass rivers, is a lofty turreted building, erected in the fifteenth century, and still in very good preservation. Attached to it is a noble park, studded with venerable trees, among which are some remains of the old Caledonian forest; there are extensive plantations in the neighbourhood of Erechless, and The Chisholm's property in the parish also includes about 750 acres of arable land kept in regular cultivation: the hill-ground of the property has never been measured. *Belladrum* is a modern mansion, splendidly fitted up, and almost shrouded with the foliage of plantations. Connected with it is a very superior farm-

stead. This estate, comprising 2600 acres of hill pasture, a large number of acres in wood, and 700 acres under tillage, formerly belonged to James Fraser, Esq., but has passed by purchase to John Stewart, Esq., of Carnousie, for the sum of £80,000. *Struy*, the seat of a branch of the clan Fraser, is situated on the border of the Farrer, a mile from its junction with the Glass, each of which streams, at about the same distance from their confluence, is crossed by an excellent bridge. On the bank of the Beaully is the beautiful mansion of *Eskadale*; and not far off, the house of *Aigas*, the property of The Chisholm. At a short distance north of Aigas, the river divides and again unites, forming the romantic island of Aigas, beautifully wooded with oaks and weeping-birches, and on which Lord Lovat has built a mansion of elegant design, the residence of Messrs. Hay Allan Stuart, who are said to be the only descendants of the unfortunate Prince Charles Edward. Other mansions are those of *Ballindown* and *Guisachan*. The parliamentary road to Inverness traverses the parish, from north-east to south-west; and the produce is sent for sale to that town, twelve miles distant: the nearest post-office is at the village of Beaully, two miles from the boundary. The only "manufacture" is that of timber, large quantities of which are cut down every year, and prepared for sale at three saw-mills, as well as by numerous handsaws.

Ecclesiastically the parish is in the presbytery of Inverness, synod of Moray, and in the patronage of Professor Scott, of King's College, Aberdeen, to whom Lord Lovat has transferred his right of presentation. The minister's stipend is £239, with a manse, and a glebe of nearly fifty acres, of the annual value of £20. Kiltarlity church, built in 1829, is finely situated in the midst of a cluster of lofty trees, and contains about 800 sittings. A church, also, in connexion with the Establishment, was erected by the late Chisholm, at Erechless, containing 400 sittings: the salary of the minister is paid by The Chisholm. There is a mission at Strath-Glass, comprehending the upper part of this parish and of that of Kilmorack: the salary is £80 per annum, £60 of which are from the Royal Bounty, and the remainder raised by subscription. The members of the Free Church have a place of worship. A chapel was erected a few years since, by Lord Lovat, on an eminence near the small rural hamlet of Wester Eskadale, about four miles from Erechless, for the accommodation of the Roman Catholic population, which is considerable. There are three parochial schools, which afford instruction in the usual elementary branches: the master of the principal one has a salary of £25. 16., with a house, and about £20 fees; and the salary in each of the other schools, which are of recent establishment, is £12. 18., increased by The Chisholm to £25. The mistress of a female school has £15 per annum from the Lovat family, with a neat school-house and accommodations.

KILTEARN, a parish, in the county of Ross and Cromarty, $5\frac{3}{4}$ miles (N. E. by N.) from the town of Dingwall (reckoning to Kiltearn church); containing, with the villages of Drummond and Evanton, 1486 inhabitants. This place derives its name from two Gaelic words, *Kiell Tighearn*, signifying "the burying-place of the laird"; but the particular circumstance which gave rise to the appellation is unknown. There is a tradition, however, among the people, that the churchyard at one time contained the burying-ground of the Lords of the Isles;

and if this tradition be true, the origin of the name is easily accounted for. In the neighbourhood of the church is the residence of one of the heritors, called Balcony, a name compounded of two Gaelic words, *bal*, "a town," and *cony*, or *comhnuidh*, "residence," which when united mean "the town of residence". It is said that the spot received this name from its being the occasional abode of the Lord of the Isles. The family of Munro of Fowlis, which, even from ancient times, has been the most conspicuous in the parish, is said to have been founded by Donald Munro, who, with many others, received gifts of land from Malcolm II., for important services rendered in assisting the king in the expulsion of the Danes. When this desirable end was accomplished, Malcolm feued out the country to his friends; and that part between the burgh of Dingwall and the water of Alness was assigned to Donald Munro, from which circumstance it received the name of *Ferindonuil*, or "Donald's land". A portion of the lands was afterwards erected into a barony, called Fowlis; and the present Sir Charles Munro, Bart., who is proprietor of about two-thirds of the parish, and lineally descended from the above Donald Munro, is the thirtieth baron. Fowlis Castle is a fine building.

The PARISH is situated in about the middle of the county, and extends six miles along the north shore of the Firth of Cromarty, whence it stretches inward twenty-two miles. It is bounded on the north by Contin and Lochbroom parishes, on the east by Alness, and on the west by Dingwall and Fodderty. The whole, except a small tract on the shore, consists of one mass of hills, overspread with heath, or, in some places, planted with firs. The hill of Wyvis rises 3720 feet above the level of the sea, and is never without snow, even in the hottest summer: the forest of Wyvis is held of the king, on the singular condition of paying a snow-ball any day in the year, if required. The valleys between the hills are covered, to a great extent, with coarse grass: in some of them, small lakes have been formed by the mountain streams, diversifying the scenery, and affording good sport to the angler. The principal lake is *Loch Glass*, near the south end of which is a small island, where the lairds of Fowlis had at one time a summer-house. Its waters are discharged into the sea by the *Aultgraad*, a stream which flows along a remarkably deep and narrow channel, formed in the solid rock by the action of the waters. The channel of this river, named from its appearance the "*Black Rock*", is unquestionably the most remarkable natural object in this district of country, and of late years has very much attracted the attention of all strangers and tourists. Its peculiarities are, its great depth, its extreme narrowness, and its terror-striking and appalling effect on the greater part of those who visit it. Continuously, for three miles or upwards, the water has scooped for itself out of the solid rock a strange passage, so uniform, or nearly uniform, in its appearance and character, that to see it at one point is almost to see it at all. Its depth is at least a hundred feet, probably much more; whilst its width, which varies little from the top to the bottom, is only three or four feet. On first looking down into the chasm, nothing but a pitchy darkness presents itself; by and by the black rocks on either side begin to appear, and as the gaze is prolonged, the eye at length catches, as from afar, the reflection, from the dark stream, of a few straggling sunbeams. The sides of the channel are so

precipitous, its breadth so small, and the approach to it so dangerous, that it would not be possible to obtain a view of it, were it not for a wooden bridge that has been lately thrown over it. The centre of this bridge is the point where spectators take up their position. So uncomfortable, however, is the impression which it makes on their minds, that they are seldom found to repeat their visit. The natives of the country regard this wild gorge with feelings of instinctive horror, and it is considered by the neighbouring farmers as a most dangerous enemy to their flocks and herds; it is nearly overgrown in many places with heather, and black-cattle and sheep, not seeing it, frequently fall into the channel, whence recovery is hopeless. The only river is the *Skiack*, which is supplied by mountain streams, and falls into the sea near the church. Several varieties of trout are found in the lochs and streams; and shell-fish, of the smaller kinds, are obtained on the shore.

The SOIL on the high grounds is moss, and near the Firth chiefly alluvial; it varies in other parts, exhibiting many of the ordinary combinations. About nine square miles are cultivated, or occasionally in tillage; the rest is natural pasture. There are a considerable number of plantations, comprising all the trees suited to the climate: many tracts were planted about the middle of the last century. All the usual white and green crops are raised; and as the improved system of agriculture has been for some time followed, and much attention is paid to the cultivation of the soil, the produce is equal in quality to any in the country. The sheep are chiefly the native black-faced, but on the low grounds are a number of Cheviots: the cattle are of the Ross-shire and the Argyllshire breeds, the latter of which is much preferred. The principal rock in the parish is sandstone: coal has been discovered, but not in sufficient quantity to defray the expense of working; and a small amount of lead-ore has also been met with. The annual value of real property in Kiltearn is £5106.

The village of Evanton, built within the present century, upon a piece of waste land, is remarkable for the regular and neat appearance of the houses: a fair is held here on the first Tuesday in June, and another on the first Tuesday in December. The hamlet of Drummond is seated on the *Skiack*. There are several extensive tracts of moss in the heights of the parish, where the inhabitants cut peat in summer to serve for winter fuel. The great parliamentary road runs along the shore, and communicates with the northern parts by means of excellent county roads; it passes over two good bridges, one at the east, and the other at the west, end of the village of Evanton. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dingwall, synod of Ross; patron, the Crown. The stipend of the minister is £249, with a commodious manse, and a glebe of nine arable acres, valued at £12 per annum. The church, situated on the coast, was built in 1791, and is a neat edifice, accommodating nearly 700 persons. There is a place of worship in the village of Evanton connected with the United Presbyterian Church. A parochial school is maintained, in which Latin and Greek, with the usual branches, are taught; the master has a salary of £30, a house and garden, and about £20 in fees. The family of Munro is distinguished for the eminent individuals who have belonged to it. Sir Robert Munro, grandfather of the late baronet, when a very young man,

served for several years in Flanders, under the Duke of Marlborough, and there formed an intimacy with the celebrated Col. Gardiner, whose history and character have become so well known through the memoir written by Dr. Doddrige.

KILTERSAN, a hamlet, in the parish of **KIRKOWEN**, county of **WIGTOWN**, 3 miles (W. N. W.) from the village of Kirkowen; containing 31 inhabitants.

KILVICKEON, in the county of **ARGYLL**.—See **KILFINICHEN**.

KILWINNING, a manufacturing town and parish, in the district of **CUNNINGHAME**, county of **AYR**; containing, with the villages of Dalgarnvan, Doura, and Fergushill, 5251 inhabitants, of whom 2971 are in the town, 3 miles (N. N. W.) from Irvine, and 3 (N. E. by E.) from Saltcoats. This place, which is of great antiquity, derives its name from the dedication of its original church to St. Winnin, who came from Ireland in 715, to convert the inhabitants of this part of the country to Christianity. In 1140, a **MONASTERY** was founded in honour of this saint by Hugh de Moreville, lord high constable of Scotland, for monks of the Tyronensian order, whom he introduced into it from the abbey of Kelso. This monastery, which was amply endowed by the founder, and enriched with large grants of land from several of the Scottish monarchs, continued to flourish till the Dissolution, when its revenues, notwithstanding previous alienations, amounted to £880. 3. 4., exclusive of numerous payments in kind. In 1296, the abbot of Kilwinning swore fealty to Edward I. of England; in 1513, the abbot of the monastery accompanied James IV. to the battle of Flodden Field, where he was killed fighting by the side of his sovereign. Of the other abbots none are distinguished in history, with the exception of Gavin Hamilton, the last, a zealous adherent of Mary, Queen of Scots, whom he attended at the battle of Langside, and for whom he afterwards appeared at York, as one of her commissioners to treat with Elizabeth of England. The site of the monastery, and the lands appertaining to it, were, after the Reformation, granted by the crown to Alexander Cunningham, son of the Earl of Glencairn, who was appointed commendator, and, during his tenure, alienated a portion of the lands. In 1592, the remainder of the lands belonging to the monastery were erected into a temporal lordship, in favour of William Melville, who subsequently transferred the lordship to Hugh, fifth Earl of Eglinton, whose descendants are the present proprietors. Of the once stately and venerable structure, which was almost demolished at the Reformation, the gable of the south transept, portions of the walls, with a few of the finely-pointed arches, and an early-Gothic gateway, are the only remains. A part of the abbey church, a spacious cruciform structure, was repaired, and appropriated as the parochial church till the year 1775, when it was taken down, and the present church erected on its site. The tower of the abbey church, a square massive structure 103 feet high, and which was repaired by the Earl of Eglinton in 1789, remained till the year 1814, when it fell from natural decay; and in the year following, a similar tower, of nearly equal dimensions, was erected in its place.

The introduction of **FREEMASONRY** into Scotland appears to have originated in the building of the monastery of Kilwinning, for which purpose several of those masons and artificers of Rome whom the pope had incorporated

for the promotion of ecclesiastical architecture, and invested with peculiar privileges, were brought over from the continent. The architect who superintended the erection of the monastery, the masons who accompanied him, and such of the workmen of the neighbourhood as were qualified to assist them, were formed into a society, of which the architect was elected master-mason. Similar societies were gradually instituted in various parts of the country, subordinate to that of Kilwinning, which, as the oldest of the kind, retained an acknowledged pre-eminence, and of which the master-mason was chosen as grand master over all the others. After his return from England, James I. of Scotland patronized the lodge of Kilwinning, and presided as grand master of the order for some time; subsequently delegating the election of a grand master, generally a man of high rank, to the brethren of the various lodges. James II., however, conferred the office of grand master on William Sinclair, Earl of Orkney and Baron of Roslin, and made the office hereditary in his family; and his successors, Barons of Roslin, held their courts or grand lodges at this place. In 1736, Lord Roslin assembled thirty-two of these lodges at Edinburgh, to whom he resigned all his hereditary rights as grand master; and the grand lodge of Scotland, consisting of representatives from all the other lodges of the kingdom, has since that period been established there.

The **TOWN** is pleasantly situated on an acclivity, rising gently from the west bank of the river Garnock. It consists of one narrow street, nearly a mile in length, from which diverge some lanes; and of some ranges of detached houses. The houses are indifferently built, and of antique appearance, with the exception of a few of modern erection; but the environs abound with a variety of beautiful scenery, in which the pleasure-grounds of Eglinton Castle form a conspicuous and interesting feature. A society for the practice of archery, that has existed in the town since the year 1488, holds annual meetings in July, which are numerous attended by persons from all parts of the country: the chief prize is a silver arrow, which is awarded by the society to the successful competitor, who becomes captain for the following year, and presides as master of the ceremonies at a ball given on the occasion. Among the branches of **TRADE** is the weaving of silk, woollen, and cotton goods, in which about 400 looms are employed: there are three factories for carding and spinning cotton-wool; and an extensive tannery has been established for more than half a century. Many of the inhabitants, also, are engaged in the mines and collieries in the immediate vicinity; and in the town are several shops well supplied with various articles of merchandise. A sub-branch of the Commercial Bank of Scotland has been opened; and fairs for horses and cattle are held in the town on the 1st of February and the first Wednesday in November. Facility of communication is maintained by excellent roads, which intersect the parish in different directions, and of which eleven miles are turnpike. The Glasgow and Ayr railway passes the western extremity of the town, where it has a station, and where it meets the line from Ardrossan. The Kilmarnock branch of the Glasgow and Ayr railway also passes through the parish, and a railroad from the collieries of Doura and Fergushill was some time since laid down, which joins the Ardrossan railway about two miles from Ardrossan harbour.

The PARISH is of very irregular form, about seven miles in length and five in extreme breadth, and comprises nearly 12,000 acres, of which from 3000 to 4000 are arable, and the remainder woodland, pasture, and moor, whose proportions cannot be well ascertained. Its surface rises in graceful undulations from the south-east to the north-west, without attaining any great degree of elevation; and is intersected by the beautiful valleys of the Garnock and the Lugton, the former of which is richly cultivated, and the latter thickly wooded. The high lands command an extensive and beautifully-diversified prospect, embracing the vale of Garnock, the woods of Mountgreenan and Eglinton, the towns of Saltcoats, Stevenston, and Irvine, with the bay of Ayr, the rock of Ailsa, the Mull of Cantyre, and the mountains of Arran. Of the streams, the river Garnock, which has its source among the hills of Kilbirnie, flows in a copious current southward through the parish, and after passing the town, pursues a remarkably sinuous course, and falls into the sea near the mouth of the Irvine. The Lugton issues from Loch Libo, in Renfrewshire, and taking a south-western course, runs through the demesne of Mountgreenan and the pleasure-grounds of Eglinton into the river Garnock, about two miles from its influx into the sea. The Caaf, a small tributary of the Garnock, after forming for a short distance a boundary between this parish and that of Dalry, flows along a narrow wooded dell at Craigh-Head mill, where it forms a beautifully-picturesque cascade. Ashgrove, the only lake, is about a mile and a half north-west of the town, and partly in the parish of Stevenston; it contains pike and perch, but is neither of great extent nor distinguished by any peculiar features. Salmon and salmon-trout are still found in the Garnock, and the fisheries on this stream were formerly lucrative, yielding a considerable rent; but from stake-fishing at the mouth of the river, and other causes, they have been for many years comparatively unproductive.

On the higher grounds, and in the central parts of the parish, the SOIL is generally a clay of no great depth; on the lands sloping towards the rivers, a richer loam; and in other parts, light and sandy, but of great fertility. The chief crops are oats and potatoes, with a moderate proportion of wheat, and the usual grasses; the system of husbandry has been gradually improving, and a due rotation of crops is invariably observed. Much progress has been made in surface-draining; the lands have been inclosed with hedges of thorn, which are kept in good order; and the farm-buildings, though of inferior erection, are generally adapted to the size of the farms, which vary from fifty to eighty acres. Great attention is paid to the improvement of live stock: the sheep are mostly of the black-faced breed, with some few of the Leicestershire and South-Down kinds; the cattle are usually the Ayrshire, and the horses of the Clydesdale breed. There are very considerable remains of ancient wood, particularly in Eglinton Park, where many fine specimens of stately timber are to be found: among these are numerous beeches of venerable growth, of which kind of tree the planting has some years been discontinued. The plantations, which are very extensive, and in a thriving state, consist of ash, elm, oak, larch, and Scotch fir, and contribute greatly to enrich the scenery. In this parish the substrata are principally of the coal formation, with bands of ironstone, limestone, and sandstone; and clay for making bricks and draining-tiles is also found. The

coal, which occurs in several varieties, and of good quality, is wrought at Doura, Fergushill, Redstone, and Eglinton. The mines afford employment to about 250 men; and of the produce, exclusively of what is sold for the supply of the neighbourhood, 50,000 tons are annually sent by the railroad to the harbour of Ardrossan, whence they are shipped for Ireland and the Mediterranean. There are also in constant operation two quarries of limestone, and a quarry of excellent freestone, which together employ a considerable number of men. Extensive iron-works, called the Eglinton Iron-works, were erected in the year 1845, by Messrs. Baird, of Gartsherrie; they give employment to many persons, and have added to the wealth of the surrounding district. The annual value of real property in the parish is £15,261.

EGLINTON CASTLE, the seat of the Earls of Eglinton, descendants of Roger de Montgomerie, a near relative of William the Conqueror, whom he accompanied to England, is a splendid castellated mansion, erected about the year 1798 by Hugh, the twelfth earl, and beautifully situated in an extensive park, about a mile south-eastward of the town. The castle occupies a spacious quadrangular area, defended at the angles with circular turrets, and comprehending the ancient keep, a round tower of great strength and lofty dimensions. It contains numerous stately apartments superbly embellished, to which an entrance is afforded from a magnificent circular saloon, thirty-six feet in diameter, rising to the roof, and lighted from an elegant dome. The park, which comprises above 1200 acres, and is well stocked with deer, is tastefully laid out in lawns, parterres, and pleasure-grounds, through which the river Lugton takes its winding course to the Garnock, adding greatly to the beauty of the scenery of the demesne, which is also embellished with more than 400 acres of thriving plantations, diversified with ancient timber of majestic growth. A tournament was celebrated within the grounds, on a truly magnificent scale, by the present earl, in August 1839, and attracted a large concourse of nobility and gentry from all parts of the United Kingdom and from the continent. The lists were formed in the gently-sloping grounds near the castle, and inclosed an area 650 feet in length and 250 feet in breadth; and a splendid pavilion was erected immediately behind the mansion, 375 feet long and forty-five feet wide, for the accommodation of 2000 persons, who were courteously entertained on the occasion. The Earl of Eglinton presided as lord of the tournament; Lord Saltoun officiated as judge of the lists; the Marquess of Londonderry as king of the tournament; and Lady Seymour, attended by a numerous train of ladies of high rank, and followed by the Irvine archers, appeared as the Queen of Beauty. Among the knights that entered the lists were the Marquess of Waterford, the Earl of Craven, Viscount Alford, Lord Glenlyon, Lord Cranstoun, the Earl of Cassilis, and Prince Louis Napoleon Buonaparte. The tournament continued for two days; and though more than 80,000 spectators were assembled within the park, which was thrown open indiscriminately to the public, not the slightest damage of any kind occurred. Mountgreenan House is an elegant modern mansion situated in a well-planted demesne watered by the Lugton. Monkcastle is a fine modern mansion in another part of the parish, and Ashgrove is also a handsome residence.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Irvine, synod of Glasgow and Ayr. The minister's stipend is £266. 12., with a manse, and a glebe valued at £14. 10. per annum; patron, the Earl of Eglinton. Kilwinning church, situated in the centre of the town, is a neat plain structure erected in 1771, and contains 1030 sittings. There are places of worship for the United Presbyterian Church, the Free Church, and Original Seceders. The parochial school is well attended; the master has a salary of £34. 4. 4., with a house and garden, and the fees average about £20 per annum. Near the village of Doura, a large schoolroom, with a play-ground, and a dwelling-house for a master, has been erected at the sole expense of the Earl of Eglinton; and there are schools in connexion with the collieries. The parish also has some friendly societies and a savings' bank.

KINBETTOCK, county ABERDEEN.—See TOWIE.

KINBUCK, a village, in the parish of DUNBLANE, county of PERTH, $2\frac{1}{2}$ miles (N. by E.) from Dunblane; containing 131 inhabitants. It is seated in the centre of the parish, on the road from Dunblane to Auchterarder; and has a station of the Scottish Central railway. The place is formed of East and West Kinbuck, and the population are partly employed in the woollen manufacture, for which there is a mill in the village.

KINCAIRNIE, a village, in the parish of CAPUTH, county of PERTH, 2 miles (N.) from Caputh; containing 83 inhabitants. It lies in the eastern part of the parish, and south of the road from Cluny to Dunkeld. Kincairn House, in the vicinity of the village, is the seat of the Murray family.

KINCAPLE, a village, in the parish and district of ST. ANDREW'S, county of FIFE, $2\frac{1}{2}$ miles (W. N. W.) from St. Andrew's; containing 186 inhabitants. It is situated upon the eastern coast, near the mouth of the Eden, in St. Andrew's bay; and on the road from St. Andrew's to Leuchars. The population is chiefly agricultural. In 1834 a minister was appointed to perform divine service, once a month, in each of four villages in the parish, of which this is one.

KINCARDINE, in the county of INVERNESS.—See ABERNETHY.

KINCARDINE, a sea-port town and a burgh of barony, in the parish of TULLIALLAN, county of PERTH, 5 miles (S. E.) from Alloa, and 12 miles (E. S. E.) from Stirling; containing 2875 inhabitants. The name of this now considerable place was formerly West Pans, from its salt-pans, which in 1780 were fifteen in number, though none exist at present. It is pleasantly seated on the north-east bank of the river Forth; and though irregularly built, and having some narrow streets, it contains several streets of good breadth, with a number of substantial houses and neat villas, surrounded by gardens. The harbour, which is one of the best for trade on the Forth, is capable of admitting vessels of between three and four hundred tons' burthen; and as many as a hundred of this size may have safe anchorage within it. Ship-building, principally of the class of vessels adapted to coasting traffic, was largely carried on here, but it is greatly on the decline: rope-making, and the manufacture of sail-cloth, also employ part of the population. There are about forty ship-owners in the town, who form a local marine insurance association, and have a considerable capital; and ships belonging

to the port, whose aggregate burthen exceeds 9000 tons, visit America, the West Indies, the shores of the Baltic, and St. Petersburg. Kincardine is a creek subordinate to the port of Alloa. It has two good inns, a post-office, a library consisting of more than 1000 volumes, and two branch banks, these last affording great encouragement to enterprise, and accommodation to the surrounding district. The coast-road from Stirling passes through it; the river is crossed by a ferry, upon which two steam-boats are constantly plying, and the steamers that ply between Stirling and Edinburgh take in passengers at the pier. The trustees of Lord Keith are the superiors of the town, and they appoint baron-bailies, who act as magistrates. A sheriff small-debt court is held four times a year. There is an elegant new church; also a place of worship for the United Presbyterian Church, and schools in which the ordinary branches of education are taught. It was from this barony that the ancient and illustrious family of Bruce took the title of Earl, now conjoined with the earldom of Elgin, the present, and sixth, Earl of Elgin being also eleventh Earl of Kincardine.

KINCARDINE, a parish, in the county of Ross and CROMARTY, 14 miles (W. N. W.) from Tain; containing 2108 inhabitants, of whom 316 are in that part of the parish which formed the quoad sacra parish of Croich. This place is said to derive its name, of Celtic origin, and which may signify "the termination of the heights", from its position at the extremity of some ranges of lofty hills. With greater probability, however, its name may be interpreted to signify in the Celtic "the seat of the chiefs or friends". It appears to have been at a very early period the baronial residence of the chiefs of the clan Ross, and to have been the scene of various hostilities between them and rival clans, of which the most sanguinary instance was the battle of Tuiteam-Tarbhach, about the year 1397. In 1650, the MARQUESS of MONTROSE arrived at Orkney with a force of 1500 men, and crossing the Pentland Firth, landed at the northern extremity of Caithness, and took possession of the castle of Dunbeath, whence he advanced to Ross-shire. The Earl of Sutherland, his opponent, at first retired before him, but afterwards passed over into Sutherland, to intercept his retreat to the north; and Colonel Strachan advancing to meet Montrose with a force of 230 cavalry and 170 infantry, a battle ensued near the pass of Invercharron, on the borders of this parish, which terminated in the defeat of the marquess, and the slaughter of nearly the whole of his men. The spot where the battle was fought has been since called "Craigachaoineadh", or the Rock of Lamentation. Montrose, after the engagement, throwing off his embroidered cloak, and changing clothes with a Highland soldier, swam across the Kyle, a sheet of water dividing part of this parish from Sutherland, and effected his escape from the field of slaughter. But after wandering for several days in Strath-Oikell, and concealing himself in the woods of Assynt, he was at length discovered by Neil Macleod, the proprietor of Assynt, who had formerly been one of his followers, and to whom, in the hope of finding protection, he made himself known. Macleod, however, being either afraid to conceal him, or tempted by the large reward offered for his apprehension, betrayed Montrose to his pursuers, who sent him by order of General Leslie to Skibo Castle, whence he was removed

to Braan Castle, and afterwards to Edinburgh, where, after suffering the most barbarous indignities, he was publicly executed, and his head placed on the Tolbooth. At a short distance from the parish church towards the shore, are still some vestiges of the ancient residence of the family of Ross, whose territories were in the eleventh century erected by Malcolm Canmore into an earldom, which remained in that family till the death of William, the last earl, without issue male, in 1371, after which the dignity continued to be held by various claimants till the year 1478, when it was finally annexed to the crown. The present representative of the title, and of the chieftainship of the clan, is George Ross, Esq., of Pitcalnie, a descendant from the brother of the Earl William, who died in 1371. The chief proprietor of the lands in the parish is Sir Charles W. A. Ross, of Balnagown, Bart.

The PARISH, which is bounded on the north-east mainly by the Firth of Tain, is about thirty-five miles in length, and varies from three to sixteen miles in breadth, comprising an area of nearly 230 square miles, of which but a very small portion is arable. Its surface is strikingly diversified with hills of various elevation, and with open valleys and narrow glens; and near the western extremity is the ancient and extensive forest of Balnagown, in which are deer of unusually large size. The most lofty of the hills are, Cairnehuinaig, on the lands of Dibbisdale, in which are found cairngorms of great beauty; and Sithain-a-Charra, in Balnagown forest, in which, though it is at a very considerable distance from the sea, have been discovered shells of different kinds. The principal river is the Oikell, which has its source in the adjoining parish of Assynt, and after a course of thirty miles, in part of which it forms the northern boundary of the parish, falls into the Kyle Firth: it is navigable for nearly twelve miles. The river Carron intersects the parish from west to east, and joins the Kyle at Bonar-Bridge. There are also numerous lakes, some of them containing trout of excellent quality, especially Loch-a-Chorry, in which are trout weighing six pounds; but none of these lakes are of great extent, or distinguished by any interesting features. Both the rivers Oikell and Carron abound with salmon; there is likewise a salmon-fishery at Bonar-Bridge, and flounders are taken at cbb-tide. The fisheries are all in the possession of the Duke of Sutherland.

The SOIL is exceedingly various. On the arable lands, which are under good cultivation, producing favourable crops, it is tolerably fertile; but the hills and other parts are heathy and barren. The hills afford, however, good pasture for sheep and cattle, of the former of which great numbers are reared, and sent mainly to the Falkirk trysts and to Edinburgh; the cattle, which are generally of the Highland breed, are also grazed in large herds, and forwarded chiefly to Leith and to London, by the northern steamers. There are considerable remains of ancient wood; and extensive plantations have been formed on some of the lands, consisting chiefly of oak, birch, and firs, all of which are in a very thriving state. The prevailing rocks are of granite, and conglomerate, alternated with gneiss and whinstone. In a few instances, outcrops of mica-slate, greywacke, and old red sandstone are to be seen; and at Knoekierny, on the confines of the parish of Assynt, white and variegated marbles of the purest quality are found. The annual value of real property in the parish is £5172. Invercarron House,

on the north bank of the river Carron; Gladfield House, the property of the Duke of Sutherland; Braelangwell Lodge, belonging to Sir Charles W. A. Ross, beautifully situated on the Carron, which forms a picturesque cascade near the house; and Amat Cottage, the occasional residence of George Ross, Esq., of Pitcalnie, near the confluence of some small rivulets with the Carron, are all handsome residences. The parish is connected with the coast of Sutherland by a substantial and elegant bridge across the Firth of Tain at Bonar, erected in 1812, to supersede the dangerous ferry, previously the only means of communication. This important structure, which cost £14,000, consists of three arches: one, on the Sutherland side, of cast iron, is 150 feet in span; and the others, which are of stone, are of fifty and sixty feet respectively. There are no manufactures; but some trade is carried on here in the exportation of grain, wool, oak-bark, and salmon, and in the importation of coal, lime, salt, meal, and other articles for the supply of the district. Many fishing-boats, also, visit the Firth during the season. A good pier of stone was constructed at Bonar some years since, by Mr. Ross, of the Balnagown Arms inn, now of Lower Gladfield, at his own expense; and the harbour affords safe shelter and accommodation to vessels not exceeding sixty tons' burthen, which can come up to the bridge. A post-office at Bonar has a daily delivery; the mail is conveyed from Tain by a post gig, which carries also four passengers. An annual fair is held, generally in the last week of November, but sometimes in the first week of December. It continues three days, and is numerously attended by dealers from all parts of the adjacent districts. On the first day there is a fine show of Highland cattle; and on the two others, large quantities of dairy and agricultural produce, and various kinds of merchandise, with home-spun webs in considerable abundance, are exposed for sale, and general business to a great extent is transacted.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Tain, synod of Ross. The minister's stipend is £278, with a manse, and a glebe valued at £15 per annum; patron, the Marchioness of Stafford. Kineardine church is a neat substantial structure, erected in 1799, and containing 650 sittings: in the steeple is a fine-toned bell which was found in a French ship-of-war of seventy-four guns, captured in 1775 by Admiral Sir John Lockhart Ross of Balnagown. A church was erected by parliamentary grant, in 1827, at Croich, a remote pastoral district; and another portion of this extensive parish, from the boundary of Croich westward, is under the care of a missionary connected with the Established Church, whose charge also extends over part of the parish of Creich, in the county of Sutherland, where his station is, at Rosehall. The chapel for the mission, erected by Dunning, Lord Ashburton, and repaired in 1832, contains 300 sittings; and the missionary, who is appointed by the Royal Bounty committee, receives a stipend of £60, to which £5 are added by the Duke of Sutherland. The members of the Free Church have a place of worship in the parish. The parochial school, situated near the church, is attended by about 100 children; the master has a salary of £34, with a house, and an allowance of £2. 2. in lieu of garden, the fees averaging £20 per annum. A parochial library, consisting chiefly of religious books, is supported by subscription. There are numerous circular forts and

vitrifications in the parish, supposed to be of Pictish or Danish origin; but most of them are in a very imperfect state, from the removal of the stones as materials for building. In the churchyard is a stone five feet in length, and about two feet in breadth and thickness; it has been hollowed into two unequal cells, and is elaborately sculptured with various figures, among which are a man on horseback in the act of darting a javelin, an imperial crown, and what appears to be a camel. This relic is supposed to be part of a sarcophagus in which, according to tradition, the remains of a warrior who died here of the wounds he received in battle, were deposited. There are also some remains of Druidical circles in different parts of the parish.

KINCARDINE IN MONTEITH, a parish, in the county of PERTH, 2 miles (S. by W.) from Doune; containing, with the villages of Thornhill and Norriestown, 2232 inhabitants. This parish, the name of which is of very uncertain etymology, is pleasantly situated in the vale of Monteith, and in the southern part of the county. It is of triangular form, having the east angle washed by the confluence of the rivers Forth and Teith, of which the former bounds the parish on the south, and the latter on the north-east. The parish extends from the east point for nearly ten miles to the south-west, and for about twelve miles to the north-west; but is intersected by a portion of the parish of Kilmadock, three miles in breadth, which reaches from the Teith to the Forth. It comprises by computation 7500 acres; and of this number, 5000, on the shores of the Forth, are mostly rich carse land, and the remainder, on the banks of the Teith, dry-field. The surface towards the Forth is generally level, but rises in gentle undulations, westward of Blair-Drummond, into a ridge, which has an elevation of 300 feet above the level of the sea, and commands a fine view of the Grampian mountains to the north and west; of the Ochils to the east, with the castle of Stirling, the field of Bannockburn, and the hill of Craighforth; and to the south, of the hills of Lennox, extending from the castle of Stirling to Dumbarton. The river Goodie, which has its source in the loch of Monteith, in the parish of Port, intersects this parish in its course towards the Forth; and there are numerous springs, and several small burns in various parts. The carse land includes the moss of Kincardine, which to a considerable extent has been cleared, and also part of Moss Flanders.

The SOIL, where the moss has been removed, is generally a rich blue clay of great depth and fertility, producing grain of all kinds and good green crops; the dry-field is chiefly a light loam, yielding excellent crops of oats, barley, potatoes, turnips, and the various grasses. The farms are of moderate extent, and the system of agriculture is in an improved state; the farm-buildings are substantial and commodious, and the lands partly inclosed. Considerable attention is paid to live stock; the cattle were formerly all of the Highland breed, but on the dairy-farms cows of the Ayrshire breed have been lately introduced. Few sheep are pastured. The horses used for agriculture on the dry-field lands are of a moderate size; but on the carse, which requires a stronger kind, a breed between the hardier of the Perthshire, and the Clydesdale, is preferred. The substratum of the parish is chiefly of the old red sandstone formation; in some parts, of good quality for building, for which pur-

pose it is quarried; but in other parts, of too soft a texture for that use. Veins of calcareous spar, and occasionally barytes, are found in the quarries; but no organic remains, except a few vegetable impressions, have been discovered. In this parish the woods and plantations are of oak, ash, beech, elm, birch, and firs, for which the soil appears well adapted; and the plantations, which have been recently much extended, are well managed and in a thriving condition. The annual value of real property in the parish is £12,500. Blair-Drummond, the seat of Henry Home Drummond, Esq., M. P., the principal landowner, is a spacious and handsome mansion, erected about the year 1715, by his ancestor, George Drummond, Esq., and to which a wing has been added by the present proprietor. It is situated in a richly-wooded park planted by Lord Kames, who, by marriage with the grand-daughter of George Drummond, succeeded to the estate, which at that time included 1500 acres of Kincardine Moss. Of this moss a considerable portion was recovered by his exertions; and under those of his son and grandson, nearly the whole of the remainder has been reclaimed. In the house is a collection of portraits by Sir Godfrey Kneller, among which are portraits of the Lord Chancellor Perth and his brother, the Earl of Melfort, and, in the drawing-room, a portrait of the late Lord Kames in his robes of office as a judge. Ochertyre, the seat of Sir David Dundas, Her Majesty's judge advocate general, is beautifully situated on the banks of the Teith. On the lands of Blair-Drummond, and also on those of Ochertyre, comfortable cottages have been built by the proprietors, for the accommodation of the families employed on their estates; and in the district which formed part of the quoad sacra parish of Norriestown are the villages of Thornhill and Norriestown. These will be found described under their own heads.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunblane, synod of Perth and Stirling. The minister's stipend is £255. 8., with a manse, and a glebe valued at £14 per annum; patroness, Lady Willoughby de Eresby. Kincardine church, which was greatly dilapidated, was rebuilt in 1814, chiefly through the exertions of Mr. Drummond, who, in addition to the payment of more than two-thirds of the expense of a plainer building, contributed the whole additional charge of the present elegant structure after a design by the late Mr. Crichton, of Edinburgh. It is a cruciform edifice in the later English style, with an embattled tower crowned by minarets, and contains 770 sittings. The parochial school is well conducted, and is attended by about seventy children; the master has a salary of £34, with a good house and garden, and the fees average £14 per annum. There are several other schools. Within the gardens of Blair-Drummond is a tumulus, ninety-two yards in circumference and fifteen feet in height; and in the pleasure-grounds is one of larger dimensions. Near the east lodge is another, in which were found fragments of urns and human bones; it is surrounded with a circular fosse, called Wallace's Trench. In clearing the moss, several remains of antiquity were discovered, among which were a large brass camp kettle, some spear heads, and part of a Roman road, of which seventy yards were clearly defined, crossing the moss of Kincardine from the Forth to the Teith.

KINCARDINE O'NEIL, a parish and village, in the district of KINCARDINE O'NEIL, county of ABERDEEN, 11 miles (S. by E.) from Alford; containing 1857 inhabitants, of whom 288 are in the village. This place, which is of some antiquity, derives its name from its position near the termination of a range of hills; and its distinguishing adjunct, O'Neil, from the name of a rivulet that flows round the village. A small hospital for the support of eight aged men was built at an early period, by one of the bishops of Aberdeen, and subsisted till the time of the Reformation, when it was suppressed: no vestiges of the building now remain. The PARISH is bounded on the south by the river Dee, and is about seven miles in extreme length and nearly five miles in breadth, comprising 15,000 acres, of which almost 6000 are arable, 3500 woodland and plantations, and the remainder (including 1500 acres capable of improvement) moorland pasture and waste. Its surface is divided into three wide valleys by ranges of hills of great extent and various degrees of elevation; and at the eastern boundary is the hill of Fare, rising to a height of 1800 feet above the level of the sea, and forming a well-known landmark to vessels navigating the eastern coast. The hill of Learney, which is a continuation of Fare, abounds with peat, furnishing a plentiful supply of fuel for the inhabitants; and most of the other hills in the parish are either cultivated, or clothed with wood, to their very summits. The river Dee is here seventy yards in width, and, about two miles below the village, is crossed by an elegant bridge of granite, erected in 1812, at a cost of £3500, of which one-half was paid by government, and the other raised by subscription. Salmon are found in the Dee, frequently in great abundance; they are generally taken with the rod, and afford excellent sport to the angler: there are very few trout in the stream, and even the numbers of salmon have much diminished within the last few years. The only other stream of any importance in the parish is the burn of Belty, which rises among the hills at its north-western boundary, and flowing in a south-eastern direction through the central valley, which it divides into two nearly equal portions, falls into the Dee in the parish of Banchory-Ternan. Though a very inconsiderable stream, it frequently, after rain, swells into an impetuous torrent, and inundates the level valley through which it passes, doing much injury to the crops: in 1829 it carried away two bridges, and greatly damaged three others. Some trout of very small size are found in this river.

Along the banks of the Dee the SOIL is light; in the valley of the Belty, much deeper, and of richer quality, resting on a subsoil of clay; and in the higher parts of the parish, heathy moorland, with large tracts of peat-moss. The crops are oats, bear, barley, potatoes, and turnips, with the usual grasses; the system of husbandry has for many years been steadily advancing, and is at present in a highly improved state. Large portions of the waste grounds have been reclaimed, and brought under profitable cultivation, both by the proprietors and the tenants. The lands have been inclosed with stone fences; substantial and commodious farm-buildings have been erected, many of which are roofed with slate; and on almost every farm, threshing-mills of good construction are found. Great attention is paid to the improvement of the breed of horses, black-cattle, and sheep, and to the management of the dairy-farms; and large quan-

ties of butter of excellent quality, with a moderate proportion of cheese, and eggs and poultry, are forwarded to Aberdeen; whither, also, considerable numbers of fat-cattle are sent, to be shipped for London by steamer. The plantations, which are of great extent, consist chiefly of larch and Scotch firs, for both of which, especially for the former, the soil is well adapted; oak and ash have recently been tried with success, and birch seems to be indigenous along the banks of the river Dee. In this parish the principal substrata are whinstone and sandstone; and there is also abundance of granite of very excellent quality, in large masses, from some of which have been cut blocks seventeen feet in length. There is neither slate nor limestone, nor are there quarries of any kind in regular operation. The annual value of real property in Kincardine O'Neil is £7018.

Craigmile, the seat of the principal heritor, is well situated in a richly-planted demesne: the house of Learney, which was destroyed by an accidental fire some few years since, has been rebuilt in an elegant modern style; and Campfield, Kincardine Lodge, and Stranduff are also pleasant residences. The village, which is on the turnpike-road from Ballater to Aberdeen, is neatly built; it has a rural aspect, and is frequented during the summer months by invalids for the benefit of their health. An excellent inn has been erected; and a circulating library, containing a well-assorted collection, has been established. There are no manufactures carried on here, but many of the women are employed in knitting stockings for the Aberdeen houses. The post-office has a daily delivery, and the mail passes regularly through the village. Fairs for black-cattle, sheep, and horses are held in May and September, in the village; and during the winter months, markets for agricultural produce of every kind are held monthly at Tomavern, in the northern district of the parish. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kincardine O'Neil, synod of Aberdeen. The minister's stipend is about £230, with a manse, and a glebe valued at about £12 per annum; patron, Sir John Forbes, Bart. Kincardine church is an ancient structure, of which the date is unknown. Its roof was destroyed by fire in 1733, and only the walls, which are built of small stones embedded in lime, left standing: the edifice was, however, restored immediately, has since been more than once repaired, and is now in good condition, affording accommodation for a congregation of 640 persons. The members of the Free Church have a place of worship. There are three parochial schools, in the three divisions of the parish: the masters have salaries of £25 each, with a house, and the original master has also a garden; they all partake of the Dick bequest, and the fees average to each about £20 per annum.

KINCARDINESHIRE, or THE MEARNS, a maritime county, in the east of Scotland, bounded on the north-west by the river Dee and part of Aberdeenshire, on the east and south-east by the German Ocean, and on the south-west by the county of Forfar. It lies between 56° 46' and 57° 7' (N. Lat.), and 2° 1' and 2° 45' (W. Lon.), and is about thirty-two miles in length, and twenty-four in extreme breadth; comprising an area of 380 square miles, or 243,444 acres; 7620 houses, of which 7304 are inhabited; and containing a population of 33,075, of whom 15,829 are males and 17,246 females. The county is supposed by some to

have derived the name Mearns (which is proper only to a particular portion of it) from Mernia, brother of Kenneth II.; but, with greater probability, others deduce it from the *Fernicones*, by whom the district was inhabited in the time of Ptolemy. Few events of historical importance are recorded: it is conjectured that the battle between the Caledonians under Galgacus and the Romans under Agricola took place here. Prior to the abolition of episcopacy, the county was included partly within the archdiocese of St. Andrew's, and partly within the dioceses of Aberdeen and Brechin; it is at the present time chiefly in the synod of Angus and Mearns, and comprises the presbytery of Fordoun, in that synod, and part of the presbyteries of Kincardine O'Neil and Aberdeen, in the synod of Aberdeen. With the counties of Aberdeen and Banff, it constitutes the Eastern or Aberdeen circuit for judiciary and civil purposes, and the courts are held in the former county twice a year, in spring and autumn. It contains Stonehaven, which is the county town; Bervie, or Inverbervie, which is a royal burgh; and the villages of Gourdon, Laurencekirk, Johnshaven, Auchinblae, and Fettercairn. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament; and the Kincardineshire burgh of Bervie is associated with Montrose, Forfar, and Brechin, in the county of Forfar, these four burghs forming the Montrose district, represented in parliament by one member. The number of parishes in Kincardineshire is nineteen.

The SURFACE near the coast is tolerably level, though varying in elevation. The Grampians occupy the central, western, and northern parts of the county; and from their base the land subsides towards the south-east, into what is called the Howe of the Mearns, forming a continuation of the vale of Strathmore, and between which and the sea there is a tract of swelling ground. The Howe is a beautiful tract of champaign country, about fifty square miles in extent, richly cultivated, embellished with plantations, and sheltered on the north by the Grampians, and on the east by the hills of Arbuthnott and Garvock, which are from 500 to upwards of 800 feet high. In this county the principal mountains are, the Strath Fenella, detached from the Grampian range by a narrow vale from which it takes its name, and about 1500 feet in height; Cairn-a-Mount, which is 2500 feet; the hill of Fare, 1800 feet; Clachnabanc, which attains an elevation of 2370 feet, and is crowned with a mass of rock resembling an ancient fortress, rising abruptly from eighty to 100 feet above the surface; and Mount Battoch, the highest point of the Grampian range in the county, and which has an elevation of 3465 feet. The principal river is the Dee, which has its source in Aberdeenshire, and after intersecting this county for about eight miles in a course from west to east, forms its northern boundary for fourteen miles, and falls into the sea at Aberdeen. The other rivers are, the North Esk, which is formed at the top of the sequestered valley of Glenesk by the junction of several mountain streams from Forfarshire, and, after forming the boundary between the Mearns and that county for about twelve miles, falls into the sea three miles to the north of Montrose; the Bervie; the Cowie; and several smaller streams. The Loch of Drum and Loch Leys, the former partly in Aberdeenshire, are the only lakes worthy of notice, being each about three miles in circumference.

About one-third of the land is arable, and in good cultivation; one-eighth capable of being cultivated with advantage, and the remainder rough fell and mountain pasture. Much of the cultivated land is highly fertile; the districts comprehending the Howe of the Mearns and the southern portion of the coast are very productive, and the system of agriculture in an advanced state of improvement. Great attention has been directed of late years to the mechanical improvement of the soil by draining and subsoiling, to the experimental application of manures, and to the rearing, and improvement by crossing, of live stock; for the promotion of which important objects, and for the extension of the knowledge of chemistry as applied to agriculture, two societies exist in Kincardineshire. The cattle are generally of the Angussshire breed, which, however, is in many parts of the county giving place to the cross or to the pure Teeswater breed: the number of cattle is on an average 25,000, of which 5000 are milch-cows. The number of sheep is about 24,000, of various breeds, but chiefly the black-faced. There are no minerals of importance: limestone is found, but it is very rarely quarried for any purpose; granite is the prevailing rock in the northern, and red sandstone in the southern section of the county. Various gems are found in the mountains and in the rocks, the principal of which are the topaz or Cairngorm. The seats are Arbuthnott House, Dunnottar, Fetteresso, Fettercairn, Inglismaldie, Crathes, Blackhall, Kirkton Hill, Tilquihilly, Lauriston, Mount Cyrus, Inch Marlo, Thornton, Drumtochty Castle, Fasque, Durris, Ury, Johnston, Glenbervie, Muchalls, and others. The manufactures are neither important nor extensive; they are chiefly of coarse linens and canvass, and some branches of the cotton manufacture. At Laurencekirk, the highly-esteemed snuff-boxes of wood are made. Facility of communication is afforded by the Aberdeen railway: there are good roads in various directions, some of which are turnpike; and a road over the Grampian hills has been made, and is kept in good repair. The annual value of the real property in the county is £134,341, including £3858 for fisheries. There are vestiges of Druidical monuments, Roman encampments, and royal residences; the most venerable ruin in the county is that of Dunnottar Castle, the ancient seat of the Keiths, earl-marischal of Scotland, romantically situated on the summit of a lofty rock boldly projecting into the sea.

KINCLAVEN, a parish, in the county of PERTH, 5 miles (S. by W.) from Blairgowrie; containing 880 inhabitants. This place, the name of which, of Celtic origin, is descriptive of the situation of its church, is bounded on the north by the river Tay, which separates it from Caputh; and on the east and south by the same river, which divides it from the parish of Cargill. It is bounded on the west by the parishes of Auchtergaven and Little Dunkeld, and is about five miles in length and two miles in average breadth, comprising an area of ten square miles. The ancient castle, now in ruins, is said to have been built by Malcolm Canmore, and to have been for many centuries an occasional residence of the kings of Scotland, from which several of their charters are dated. During the wars that arose, from the contested succession to the throne, between Bruce and Baliol, the castle was occupied by an English garrison, which, being at an unguarded moment surprised by Sir William Wallace, was taken and dismantled

so far as to render it no longer tenable as a place of strength. It is situated on a rising ground opposite to the junction of the Tay and Isla, and is the property of Baroness Keith, who pays annually a small sum to the Duke of Atholl, its hereditary constable. The parish comprises about 6400 acres, of which 3900 are arable, 1500 woodland and plantations, 800 moorland pasture, and the remainder moss, water, and waste. Its surface is broken by an elevated ridge, extending across the centre of the parish from north-east to south-west, and from which the lands slope in a gentle declivity to the Tay on the north and south. The scenery, enlivened by the windings of the Tay, and enriched with woods and plantations, has a very pleasing appearance. The river Isla, descending from the lower Grampian range, flows through the vale of Strathmore, and falls into the Tay at the eastern extremity of the parish; and there are several lakes, in which pike, perch, and eels are found.

Though various, the soil is generally fertile, producing good crops of wheat, barley, oats, turnips, and potatoes, of which last great quantities are raised for the London market. The state of agriculture is much improved; the rotation plan of husbandry is in use, and carefully adapted to the different soils. The lands have been well drained; several tracts of moorland have been brought into profitable cultivation, and the various farm-buildings are substantial and commodious, and some of them highly ornamental. Ayrshire cows, and bulls of the Teeswater breed, have been introduced; and the horses, previously of small size, are now improved by the introduction of the Clydesdale breed. The plantations are chiefly larch and common fir, the former not in a very thriving state; and there are numerous coppices of oak, which are generally felled when they have attained twenty-five years' growth. The annual value of real property in the parish is £4537. There were formerly several small villages, the sites of which are only to be distinguished by some of the ancient trees yet standing: Arntully (*which see*), though much reduced in extent and population, is still remaining. The roads from the ferries at Caputh, Kinclaven, and others over the Tay, afford facilities of communication, and the railway from Perth to Forfar crosses the river about a mile below the manse: the post-town is Perth, to which, and also to Dunkeld, a sub-office has been established at the neighbouring village of Stanley. For ecclesiastical purposes the parish is within the limits of the presbytery of Dunkeld, synod of Perth and Stirling. The minister's stipend is £276. 11. 5., with a manse, and a glebe valued at £18 per annum; patrons, the family of Richardson. Kinclaven church, inconveniently situated at the eastern extremity of the parish, contains 320 sittings: at the east end is a large monument to the memory of Alexander Campbell, Bishop of Brechin, who is styled "Laird of Kerec, in this parish," and who died in 1608. The church is in a very indifferent state of repair; and it is expected that another will be soon built on a more convenient site. There is a place of worship for members of the United Presbyterian Church. The parochial school is attended by about sixty children; the master has a salary of £34, and a good house and garden, and the school fees, with the other emoluments usually attached to his office, average £24 per annum. There is also a school in connexion with the dissenting congregation, supported by subscription.

KINFAUNS, a parish, in the county of PERTH, $1\frac{1}{2}$ mile (E. by S.) from the city of Perth; containing 720 inhabitants. This place, the name of which, in the Celtic language, is descriptive of its situation at the head of a narrow valley inclosed with hills, and opening into the Carse of Gowrie, was anciently the seat of the Charteris family, of whom Thomas Charteris de Longueville, a native of France, having killed a nobleman of the court of Philip le Bel in a duel, was compelled to make his escape, and for some time subsisted by piracy on the open seas. Charteris, called the Red Reaver from the colour of his flag, was encountered and taken prisoner by Sir William Wallace, on that hero's route to France, where, making intercession with the French monarch, Sir William obtained for his captive a full pardon and the honour of knighthood. Sir Thomas Charteris now became the zealous friend and adherent of the brave Wallace, whom he accompanied to Scotland; and on Wallace being betrayed into the hands of Edward, King of England, he retired to Lochmaben till Bruce asserted his claim to the crown. He was a companion of Bruce at the taking of Perth in 1313, and, in reward of his services, obtained a grant of the lands of Kinfauns, which remained for many years in the possession of his descendants. The lands passed afterwards to the Carnegies, of the Northesk family, and subsequently to the family of Blair, whose sole heiress conveyed them by marriage to John, Lord Gray, grandfather of the present Lord Gray, of Kinfauns Castle.

The PARISH, which forms the western portion of the Carse of Gowrie, is bounded on the south by the river Tay. It is about five miles in length and one mile and a half in average breadth, comprising an area of 4800 acres, of which 2380 are arable, 240 meadow and pasture, and the remainder woodland and plantations. The surface, towards the river, is level, and thence rises, by a gradual and easy ascent, to the base of a ridge of hills that traverse the parish in a line from east to west. Of these hills the highest is the hill of Kinnoull, which is but partly in this parish, and has an elevation of 632 feet above the level of the Tay, presenting to the south an abruptly precipitous mass of rock, covered for nearly three-fourths of its height with trees, and thence bare to its summit. On the east of this hill the ground has a gentle declivity; and upon a level spot here, at a considerable height above the Tay, stands the castle of Kinfauns. Still further east, the ground again rises abruptly, forming the western acclivity of the hill of Binn, or the Tower Hill, so called from a tower on its summit, built within the last forty or fifty years by the late Lord Gray, for an observatory. Eastward of this hill the land slopes gradually till it subsides into a deep ravine, on the opposite side of which is another hill, and, yet further east, a fourth, the latter commanding from its summit a varied and extensive view of the whole Carse, the tower of Dundee, Broughty Castle, and of the course of the Tay from a mile below Perth to its influx into the German Ocean: to the south is a fine view over the vale of Stratbearn. Beyond these hills, which are mostly wooded to their summit, rise various others towards the north, in gentle undulations, and gradually subsiding in the vale of Strathmore, of which they form the southern boundary. The Tay, which bounds Kinclaven for more than three miles, is the only river of importance; but three small streamlets, rising among the hills, intersect

the parish from north to south. The river abounds with salmon and different kinds of trout; pike are numerous, and sturgeon are found occasionally.

In this parish the soil is various; near the Tay, a rich loamy clay producing excellent crops of wheat, barley, oats, beans, peas, potatoes, and turnips, with the usual grasses; and for a considerable height on the acclivities of the hills, a light, but deep and fertile, black mould. The system of agriculture is improved; the farms vary from 125 to 300 acres in extent; the farm-buildings are substantial and well arranged, and most of them of modern erection. The lands have been well drained, chiefly with tiles, for the making of which good clay is found; and on the estate of Kinfauns an embankment has been formed, connecting an island in the river with the main land. The cattle are of a mixed breed, with the exception of the cows for the dairy, which are generally the Ayrshire. Sheep are kept upon one farm; they are of the pure Leicestershire breed, and about 300 in number. The plantations in the parish are oak, ash, elm, beech, Scotch fir, larch, and spruce fir; birch and mountain-ash are scarce. In the grounds of the mansions, sycamore, lime, poplar, Spanish and horse chesnut, and silver fir have attained a luxuriant growth. The substratum is principally whinstone, of which the hills are all composed; and there are several quarries in operation, producing excellent materials for the roads. The annual value of real property in the parish is £8882.

Kinfauns Castle, seated on an eminence overlooking the Tay, is a modern edifice, begun in 1819 and finished in 1826, after a design by Smirke. It contains a fine library, a great variety of philosophical instruments, and a large collection of statuary and ancient and modern pictures: here, also, among other relics, is still preserved the ponderous two-handed sword of Sir Thomas Charteris, said to have been presented to him on a certain memorable occasion by Wallace. Not a vestige of the ancient castle now remains. Seggieden House is finely situated near the margin of the river. Glendoick House is a good mansion, built by Robert Craigie, lord president of the court of session, and grandfather of the present proprietor; and Glencarse House is also a handsome modern mansion. There are no villages, and the largest hamlet contains only twelve families: the railway and the turnpike-road from Perth to Dundee pass through the parish. The Tay is navigable to Perth for vessels of 200 tons. The salmon-fisheries in the parish produce a rental of £3366, of which about £2200 belong to Lord Gray, £766 to the city of Perth, and £400 to Mr. Hay of Seggieden; the number of men employed is about 100. There is a branch post-office in the parish. Steam-boats ply daily in the river Tay between Perth and Dundee; and there are piers at this place for the landing of passengers and goods, at which, also, potatoes and grain are shipped, chiefly for London. Ecclesiastically the parish is in the presbytery of Perth, synod of Perth and Stirling. The minister's stipend is £242. 11. 6., with a manse, and a glebe valued at £20 per annum; patron, the Crown. Kinfauns church, which is well situated, has been built at various times; the nave is very ancient, and the aisles of comparatively modern date. It is in substantial repair, and contains 416 sittings. A parochial library was established in 1826, by donations of books from the heritors, and is supported by small quarterly subscriptions. The parochial school

is attended by about seventy children; the master has a salary of £34, with a house and garden, and the fees average £13 per annum. There is another school in the parish, attended principally by children from Kinnoull and Kilspondie, supported chiefly by the fees. On the side of the hill of Kinnoull is a cave called the Dragon Hole, the hiding-place of Sir William Wallace; and on the lands of Glendoick is an old house which was the residence of Lord George Murray, general of the Highland army, and in which Prince Charles Edward passed a night after his defeat at Culloden.

KINGARTH, a parish, in the county of Bute, 8 miles (S. by E.) from Rothesay; containing, with the villages of Kilchattan-Bay, Kerryeroy, and Piperhall, 931 inhabitants. This parish takes its name from the promontory of Garroch Head, forming its extreme point to the south, and called in Gaelic *Ceann Garbh*, which signifies "stormy head". Very little is known concerning the ancient history of the place; but there are traditions of its having been of considerable importance. Christianity was early introduced here. The name of Saint Catan, or Cathanus, has been transmitted in the appellation of a bay called Kilchattan, "the cell or burial-place of Catan". St. Blaue, also, is said to have been born here, and to have been the founder of the original church of Kingarth, the ruins of which, still remaining, are designated by his name, as is likewise a hill ascending from Garroch Head. The parish was anciently the scene of some military conflicts. On the south-west shore is the fort of Dunagoil, "the fortified hill of the Lowlanders," commanding nearly the best landing-place on the whole coast, and having a complete view of the passage from the western seas by Kilbrandon sound, and of the entrance into the Firth of Clyde from the south. Its origin is not known; but it has frequently been attributed to the Danes. The lands of the district were formerly held by several proprietors called Barons, who are at present represented by only four owners of small portions of ground, the larger part of the parish being the property of the Stuart family, Marquesses of Bute.

KINGARTH is six miles and a half in length from north to south, and two and a half in mean breadth, containing 8325 acres. It is situated in the isle of Bute, and is bounded on the north-west by the loch of Ascog, a part of Loch Fad, and Quien loch, which separate it from the parish of Rothesay; and on the east, south, and south-west by the Firth of Clyde. Its figure is irregular, and the shore is indented by several small bays. There is a gradual narrowing of the parish from its north-western boundary till it becomes an isthmus a mile and a half in breadth, beyond which is a peninsula two miles in length, terminating in the promontory of Garroch Head. On the east and south the coast is rocky and precipitous; on the south-west it rises more gently. It is marked by the bays of Ascog, Scoulag, and Kilchattan, to the east; and of Sealpsic, Stravanan, and Dunagoil, to the south-west. The firth is eight miles wide between Scoulag bay and the nearest point of Ayrshire at Largs, and nine miles wide between Dunagoil bay and the nearest part of the island of Arran; it is ninety fathoms deep between Garroch Head and Little Cumbray, where its depth is greatest. In general the land is considerably elevated above the level of the sea: the principal hills are Suidhe-Chatain, "the seat of Catan",

520 feet high, and Saint Blane's hill, 486 feet high. The loch of Ascog, Quien loch, and Loch Fad cover respectively seventy-five, sixty-nine, and 170 acres. Though moist, the climate is mild and salubrious.

For the most part the soil is light and gravelly, but in some places loam and clay are to be found. About 3936 acres are occasionally under tillage; 3071 are moor and pasture; and 940 acres are occupied by wood, natural and planted, the latter consisting of spruce, larch, and Scotch firs, oak, and other hard-woods. All kinds of grain, and the usual green crops, are grown. The cattle are chiefly of the Ayrshire breed, to the rearing of which great attention has been lately paid: the sheep, also, are tolerably numerous. The modern system of husbandry is followed, and improvements in every department have been rapidly advancing for the last fifteen years: most of the farm-houses have been rebuilt, and the grounds inclosed chiefly with thorn-hedges. In this parish the prevailing rock is the old red sandstone, with conglomerate, and numerous veins and beds of trap: coal exists, but it is not wrought, and some lime-works are in operation. The annual value of real property in the parish is £3954. The mansion-house of Mountstuart, built by James, second Earl of Bute, in 1718, is surrounded by beautiful and extensive plantations, and is particularly famed for its choice flower-garden. On the east coast stands Ascog House, with several ornamental villas lately erected. In the year 1703, the first Earl of Bute obtained a charter from the crown for the erection of a burgh of regality, to be named Mountstuart, with the privilege of holding a weekly market, exercising handicraft trades, and having three annual fairs. This charter, however, was never carried into effect, the thriving burgh of Rothesay, with which the parish chiefly communicates, superseding the necessity. The roads are in good order, and the bridges sufficient for general convenience. There is a wharf at Kilchattan-Bay, and another at Scoulag bay, adapted for small craft. The shipping belonging to the parish does not exceed fifty tons; but craft of considerable burthen from other parts frequent the ports for the purposes of importation and exportation. The fisheries are productive.

For ECCLESIASTICAL matters the parish is within the limits of the presbytery of Dunoon and synod of Argyll; patrons, the Stuart family, Marquesses of Bute. The stipend is £197, with a good manse and offices, and a glebe of nearly eleven acres, worth about £12 per annum. Kingarth church was built in 1826, and contains 600 sittings. The members of the Free Church have a place of worship at Ascog. The parochial school affords instruction in Latin and Greek, with the usual branches; the master has the minimum salary, the legal accommodations, and £24 fees. In this parish the antiquities consist of two barrows or tumuli, a Druidical circle, the fort of Dunagoil, and the ruin of the church of St. Blane, who flourished about the close of the tenth century. The last stands on an artificial elevation, which is inclosed by a wall of massive stones piled one over another, 500 feet in circumference, the whole of the space having mason-work underneath at a distance of two feet from the surface. A considerable portion of the walls of the church still remains, and displays architecture of great antiquity. The parish confers the titles of Viscount Kingarth and Baron Mountstuart upon the Marquess of Bute.

KING-EDWARD, a parish, in the district of TURRIFF, county of ABERDEEN, 5 miles (S. S. E.) from Banff; containing, with the village of Newbyth, 2492 inhabitants. This place, originally called *Kin-Edart*, of which the present name is an obvious corruption, is of some antiquity, and appears to have formed part of the possessions of the Cumyn family, Earls of Buchan. There are still some remains of their baronial residence, now called King-Edward Castle, situated on a rocky eminence to the south-east of the church; and also of Eden Castle, and others; but nothing which can throw any light upon the early history of these fortresses has been recorded. The PARISH is bounded on the west by the river Doveron, is about eleven miles in length, and varies from two to five miles in breadth, comprising 17,500 acres, of which nearly 9500 are arable, 1800 woodland and plantations, and the remainder pasture and meadow, with large portions of moss and waste. Its surface is boldly undulated, rising in some parts into considerable elevation, and in others subsiding into low valleys; but there are no hills, properly so called, that attain any remarkable height. The principal river is the Doveron, which for some miles forms the boundary of the parish, and which falls into the sea at Banff; it abounds with salmon of excellent quality, and the fisheries produce a good rental to their proprietor. A copious stream, whose chief source is in the parish of Gamrie, intersects this parish from east to west, and joins the Doveron about a mile westward of the church.

The soil is very various. The higher grounds are in general mossy, resting on a bed of clay or gravel. In the low grounds, and especially along the banks of the Doveron, the soil is principally alluvial, and very fertile. In other parts is a black loam, resting on beds of rock or gravel. The chief crops are oats, barley, potatoes, and turnips, with the usual grasses; very little wheat is raised. The system of husbandry has been greatly improved; and a due rotation of crops is observed, according to the nature of the soil. Trench-ploughing and surface-draining have been some years in practice, by which the lands have been rendered much more productive; the fields have been inclosed; and the fences, partly of stone and partly of thorn, are kept in good order. The farm-buildings, also, have been made more comfortable and commodious; and all the recent improvements in the construction of agricultural implements have been generally adopted. The cattle are of the Aberdeenshire or Buchan breed, with a few of the Teeswater, and some of the short-horned breed from Yorkshire, recently introduced; the sheep are of the Highland and Leicestershire breeds, and great attention is paid to them. The plantations for the most part consist of Scotch fir, spruce fir, larch, ash, beech, oak, plane, and chesnut; they are of considerable extent, and in a thriving state. In this parish the principal substrata are red sandstone, greywacke, and clayslate; and iron-ore is supposed to exist. The greywacke and the red sandstone are both quarried; and the latter, which is found in the eastern parts, is in extensive operation. The annual value of real property in King-Edward is £6103. The mansions are, Montcoffer House, the property of the Earl of Fife, a handsome modern building, beautifully situated near his lordship's park of Duff House, Banff, which demesne is partly in this parish; Eden House and Byth House, also modern mansions, finely situated; and

Craigston Castle, a venerable ancient structure, seated in grounds tastefully embellished. The village of Newbyth, which is separately described, is at the south-eastern extremity of the parish. Facility of communication is maintained by excellent roads, of which the turnpike-road from Aberdeen to Banff intersects the western portion of the parish; and by bridges over the various streams, kept in good repair.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Turriff, synod of Aberdeen. The minister's stipend is about £215, with a manse, and a glebe valued at £15 per annum; patron, the Crown. King-Edward church, a plain structure built in 1621, contains 550 sittings. A chapel of ease in connexion with the Established Church has been erected in the village of Newbyth; it is a neat structure containing sittings for 400 persons. There is a place of worship in the parish for Independents. The parochial school is well attended: the master has a salary of £34, with a house and garden, and the fees average about £10 per annum; he has also a portion of the Dick bequest. With the exception of the ruins of King-Edward Castle, there are no relics of antiquity of any historical importance. In a semicircular arch on the north wall of the church, is a monument inscribed to the memory of his mother by John Urquhart, tutor of Cromarty in 1599; and in the Craigston aisle of the church are monuments to the same John Urquhart and others of the Urquhart family. The distinguished characters connected with King-Edward have been, Dr. William Guild, minister of the parish, and afterwards principal of King's College, Aberdeen, and the founder of an hospital in that city for the incorporated trades; Sir Thomas Urquhart, author of the *Jewel*, who, with Dr. Guild and another, presented a service of communion plate to the church; and Sir White-law Ainslie, M.D., author of *Materia Indica* and other works, who lies buried here.

Burgh Seal.

was one of the residences of the Scottish kings; and until of late years, there were to be traced the remains of an ancient castle, situated on rising ground near the town, and commanding a view of the whole of the Firth of Forth. This castle, of which the portion lately existing was called Glammis Tower, was probably selected as a temporary residence for the diversion of hunting in the extensive forest that lay adjacent, called the West wood and the Woodfield; and the town is fancifully said to have derived its name from the frequent soundings of the horn during the royal sports of the chase; the true derivation being supposed to be from the Gaelic terms *Kean* or *Kin*, a "chief, or headland," and *Gorn*, "green". The date of the foundation of the town cannot be precisely ascertained, though, if not at an earlier period the

abode of fishermen and ferrymen, whom its advantageous situation might have attracted to settle on the coast, it would naturally have arisen from the proximity of the castle. Whatever its origin, it appears to have attained such a degree of importance in the reign of Alexander III. as induced that monarch on 26th June, 1284, to grant additional privileges to the burgh; and the charter then bestowed was afterwards, on 2nd July, 1364, confirmed by David II. The former king, on returning to his castle of Kinghorn late in the evening, by a road winding along some precipitous cliffs, was thrown with his horse, about half a mile westward of the town, and killed on the spot, on the 16th of March, 1285. A cross was erected at the place where the king fell, and remained till the reign of James II.; but no vestiges of it can now be traced. The castle of Glammis, with the lordship of Kinghorn, was granted by Robert II., as a marriage portion with his daughter Janet, to Sir John Lyon, whose successors were invested by James VI. with the title of Earls of Kinghorn, which in the reign of Charles II. was merged in that of the Earls of Strathmore.

The town is situated on the shore of the Firth of Forth, directly opposite to the port of Leith; on the great road from Edinburgh to Dundee, and on the Edinburgh, Perth, and Dundee railway. It is built upon the slope of some gently rising ground which, towards the north-west, attains a considerable elevation. The principal street has lately been much improved, and many of the houses have been rebuilt in better style; but the inferior streets have a very indifferent appearance. There are two public libraries, supported by subscription. The chief trade carried on here is the spinning of flax, for which there are three extensive mills; the machinery is partly impelled by steam, and partly by water-power, the latter derived from the loch of Kinghorn, about half a mile from the town. In these mills 470 persons are employed, of whom more than 300 are females. There is also a bleachfield, in which about seventy persons are generally engaged; and a considerable number of the inhabitants are occupied in hand-loom weaving. The revenue of the town is £600 a year. A harbour which, from its situation near the church, was called the Kirk harbour, is now in a ruinous condition; but it is in contemplation to restore it, for which an estimate of the expense has been made, amounting to from £20,000 to £30,000. At present, it gives accommodation only to a few fishing-boats; but a considerable traffic is maintained at another harbour, at Pettycur, half a mile west of the town. The quay at Pettycur affords convenient opportunities of landing passengers, goods, and cattle, when the state of the tide will permit vessels to approach. The harbour and anchorage dues produce to the town a revenue of about £180 per annum. From Pettycur and the Kirk harbour a ferry to Leith was maintained even in the earliest period of Scottish history, and this ferry has been a constant subject of legislation in the Scottish and British parliaments. The last act passed for its regulation expired in the year 1845, and was not renewed, as the new ferry between the low-water piers of Burntisland and Granton supplies all the accommodation necessary for the traffic formerly carried on at this great ferry. The Edinburgh, Perth, and Dundee railway, which passes along the coast of the parish, and has a station in the town, was commenced under an act obtained in 1845; and in 1846 the company were authorized to make a

branch of about 600 yards to the harbour of Pettycur. The Kinghorn station is two miles and a half distant from that of Burntisland on the west, and three miles and a half from that of Kirkcaldy on the north.

Second Seal of the Burgh.

The BURGH was formerly governed by a provost, two bailies, a treasurer, and a council comprising thirteen merchants, sailors, and brewers, and five deacons of the trades. The magistrates held their various courts, and exercised, both in civil and criminal cases, all the jurisdiction of a royal burgh. The incorporated trades consisted of the hammermen, weavers, shoemakers, tailors, and bakers, all possessing exclusive privileges. This state of things continued, with little alteration, till the year 1830, when most of the incorporated trades voluntarily abandoned their monopoly of the respective occupations and other exclusive privileges, so that tradesmen of all descriptions might thereafter settle in the place without becoming free of any corporation. In 1841 also, on the day fixed for the election of the corporation officers, a quorum of the council could not be mustered, and the burgh was consequently disfranchised. Application, under these circumstances, was made to the court of session for the appointment of three resident managers to take charge of the patrimonial interests of the burgh; and three such officers were accordingly appointed, without judicial authority. The peace of the town is now under the superintendence of the county police. The town-hall, to which a gaol is attached, is a handsome building in the Elizabethan style, in the centre of the town, erected in 1826, at an expense of about £2400, under the direction of Mr. Hamilton of Edinburgh, who designed the new High School and other edifices in that city. Kinghorn is associated with Kirkcaldy, Dysart, and Burntisland, in returning a member to the imperial parliament.

The PARISH is about four miles in length and three and a half in extreme breadth, comprising an area of 5440 acres, of which 4800 are arable, 250 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is beautifully varied, rising in some places gradually, and in others more abruptly, from the firth. There is a number of narrow straths, watered by small rivulets, and stretching from the shore to the hill of Glassmount, which has an elevation of 601 feet above the level of the sea. To the north-west of this hill, the surface undulates gently, and with occasional tracts of table-land. The coast is bold, and in some parts precipitous. Near Burntisland, to the west, is the projecting cliff memorable for the death of Alexander III., whence, towards the harbour of Pettycur, the shore is a level sand, terminating in a rock of columnar basalt, forming the headland of Kinghorn ness. From this verdant headland the burgh is supposed to derive its name. Thence the bay of Kinghorn curves towards the north, terminating in the Kirkeraig, a mass of rock near the church, projecting for a considerable way into the sea, and constituting a natural breakwater to the Kirk harbour. The low lands are watered by numerous copious springs, issuing from the declivities of the higher grounds;

and to the west is the loch of Kinghorn, covering about twenty acres, and affording an abundant supply of water for the town, to which it is conveyed by pipes.

Along the shore, for a considerable distance, the SOIL is a deep black loam of great fertility; towards the hills, of lighter quality; and still further in the direction of the north-west, more variable, and inclining to clay. The crops are oats, barley, wheat, turnips, and potatoes. The system of agriculture is in an advanced state; the lands have been well drained and inclosed; the farm-buildings are generally substantial and well arranged, and the various recent improvements in agricultural implements have been adopted. The cattle, few of which are reared in the parish, are of the Fifeshire and short-horned breeds; great numbers are annually bought, and fattened for the markets, where they sell at from £20 to £30 per head. A considerable number of sheep are also pastured, chiefly of the half Cheviot breed. The annual value of real property in the parish is £7410. The whole parish lies within the coal basin of the Forth; but the coalfields are so disturbed by the trap rocks bursting through them, and overlaying them, that, with the exception of a few acres on which the town stands, and about a hundred acres near Auchtertool village, the substratum appears to be formed of trap. Indeed, the soil, which is remarkable for fertility, seems as if entirely composed of the decayed portions of this species of rock. The bearing of the stratified rocks, where they are least disarranged, is northward; and the coal-bed is the lowermost one of the coal-field which stretches from this parish eastward to Largo. Carboniferous or mountain limestone is obtained at Invertiel; it lies immediately under the coal strata, and has been extensively quarried for many years, both for building and agricultural purposes. Coal was formerly wrought; but the works have been discontinued. There are two annual fairs, and a weekly market is held on Thursdays, under King Alexander's charter, &c.: the former are for cattle, horses, &c., and the latter for butter, cheese, and other country produce; but both are very ill attended, and for the last thirty or forty years have been falling into disuse. *Abden*, the property of Robert Stocks, Esq., is an ancient mansion originally belonging to the Bishops of St. Andrew's; and in the charters granting the lands to the predecessors of the present proprietor, is a distinct reservation that the king, as coming in place of the bishop, should, in crossing the ferry to Kinghorn, have lodging and hospitality at his own charges and expenses in the "mansion-house of Abden". The building is a plain structure on the north of the town, commanding a fine view over the Firth. *Balmuto*, the seat of John Boswell, Esq., in whose family it has been for more than four centuries, is an ancient mansion consisting of a square tower to which repeated modern additions have been made; it is finely situated in a demesne richly planted, and the gardens and pleasure-grounds are laid out with exquisite taste. *Grangehill* is also one of the chief mansions in the parish of Kinghorn.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kirkcaldy, synod of Fife. The minister's stipend averages about £250, with a manse, and a glebe valued at £19 per annum; patron, the Earl of Strathmore. Kinghorn parish church, which is near the old harbour, was rebuilt in 1774; it is a very plain structure, and contains 700 sittings. A

church has been built on the eastern boundary of the parish, bordering upon Abbotshall, to which a quoad sacra district was for a time annexed, including portions of each of the two parishes. There are places of worship for members of the Free Church and the United Presbyterian Church. Until 1830 there was no parochial school. In that year, Mr. Barclay, the town-clerk, applied to the burgh and the heritors to found a parish school; and he built the houses and erections for it, on an acre of waste ground, at his own risk, and at the expense of £800. They have since repaid him, by subscriptions and donations, above £500 of this expenditure; and they give the minimum salary to the master, who also receives £50 a year from the fund of the late Mr. Philp, for teaching fifty children, and £10 annually for teaching a Sunday school. A wide range of instruction is provided, in the usual branches, together with French, Latin, and Greek; and an infant school and a drawing school are maintained, by subscription, within the building. There is also an apartment appropriated to an extensive geological collection, and a small collection of other objects in natural history, and to a library consisting of about 800 volumes on historical and scientific subjects. In the grounds around the school-house is a shrubbery, where are arranged and named in regular order more than 250 plants; and the portion allotted to play-ground contains gymnastic apparatus. In the village of Inveriel is a good school, where the elementary branches are taught, the master of which has a house, and the fees. The late Robert Philp, Esq., of Edenshead, left his property for the endowment of schools in various places. One-eighth of the fund it produces is apportioned for the instruction and clothing of fifty children, now educated at the parochial school; and the residue of the eighth is given to the children, on leaving school, in such portions as the managers of the fund deem proper. The Rev. Henry James, late minister of the parish, left £300 to aid in supporting a scholar for four years in his philosophical studies at the United College of St. Salvador and St. Leonard, in the university of St. Andrew's; it yields £15 per annum, and the appointment is in the Kirk Session of Kinghorn, the presbytery of Kirkcaldy, and the managers of the burgh of Kinghorn. An old chapel called St. Leonard's, built on the rising ground under the castle, and of exquisite Saxon architecture, in which the courts were once held, having been struck by lightning, and being likely to fall, was removed by order of the Supreme Court, to make way for the present town-hall. On the 2nd of December, 1478, King James III. confirmed a charter establishing the hospital of St. James' chapel at Kingorne, in which prayers were to be said daily for the souls of the departed. At the time of the Reformation these offices ceased to be performed, and since then almost all traces of the hospital have disappeared.

William Kirkaldy of Grange, who flourished in the reign of Mary; and Patie Birnie, a famous comic character, musician, and song-writer, immortalized by Allan Ramsay in his poems, were natives of this parish. The former was born in the baronial castle of Kirkaldy Grange, which stood on a considerable eminence in the eastern part of the parish, and of which little now remains to show what it was in former times, except a strong flanking tower or staircase, and a massive fragment of wall, whereon a modern house is engrafted.

KINGLASSIE, a parish, in the district of KIRKCALDY, county of FIFE; containing 1155 inhabitants, of whom 421 are in the village of Kinglassie, 7 miles (N. W.) from Kirkcaldy. The name of this place is supposed to have been derived from a Gaelic term signifying marshy or grey land, from the ancient appearance of the surface; and near the village there is still some portion of land which retains that character. The parish is about five miles in length, and varies from one mile to three miles and a half in breadth, comprising a very irregular area of 7260 acres, of which 6250 are arable and in good cultivation, 450 woodland and plantations, and 300 pasture and waste. Its surface is uneven, rising into several steep ridges, and in some places forming gentle declivities interspersed with hills. The river Leven, which issues from the loch of that name, waters the northern part of the parish; and the river Lochty flows through the village, and receives the streamlet called the Sauchie in its immediate vicinity. The Orr, which rises in the parish of Ballingry, touches the southern portion of this parish, and, mingling with the Lochty, falls into the Leven at a short distance from its eastern extremity.

The SOIL is various, consisting of loam, clay, and gravel, which in parts are found in combination; the greater portion is a stiff clay, and in some places are tracts of moss and sand. In this parish the crops are oats, barley, and wheat, potatoes, turnips, and the usual green crops: flax, the cultivation of which was for some years discontinued, is also raised in considerable quantities. The system of husbandry is very much advanced; iron ploughs are in general use, and the most recent improvements in agricultural implements have been adopted. Draining has been extensively practised; and much waste land has been reclaimed, and brought into cultivation, under the auspices of an agricultural association consisting of practical farmers and the principal landed proprietors, who hold an annual meeting in the village in August. Attached to most of the farms are threshing-mills; three are put in motion by water, and one by a steam-engine of seven-horse power. Great attention is paid to the rearing of cattle, of the pure Fife-shire breed; the number of calves annually reared is about 300. The plantations consist chiefly of larch, ash, spruce, and Scotch fir; and in one of them are some fine specimens of oak and beech: they are generally well managed. The substratum is mostly whinstone; and limestone, coal, and ironstone are found in several places. Coal was formerly wrought, but for some years the working of it has been discontinued; limestone has also been worked, and some quarries of freestone have been opened, and are at present in operation. The annual value of real property in the parish is £7457. Inchdairnie is an ancient mansion to which a handsome addition has been made of late years.

The village is inhabited chiefly by weavers, and persons employed in the different trades requisite for the supply of the parish; the number of looms is twenty-four. There is a public ale and porter brewery, which is carried on extensively; and fairs, chiefly for cattle, horses, and shoes, are held on the third Wednesday in May, O. S., and the Thursday before Michaelmas-day, O. S. Facility of communication with Kirkcaldy and the neighbouring towns is afforded by good roads, one of which, from Kirkcaldy to Cupar, traverses the eastern portion of the

parish. Ecclesiastically this place is in the presbytery of Kirkcaldy, synod of Fife, and in the patronage of Lord Rothes: the minister's stipend is £223. 4. 4., with a manse, and a glebe valued at £18 per annum. Kinglassie church, an ancient edifice, was, with the exception of the eastern gable and part of the side walls, rebuilt in 1773, and within the last five-and-twenty years has been repaired, and adapted for a congregation of 346 persons. The parochial school affords education to about 100 pupils: the master has a salary of £34, with £30 fees, and a good house and garden; also six bolls of oats annually, the gift of an old proprietor. There is a female school, in which knitting and sewing are taught on very moderate terms; and on the southern boundary of the parish is a school erected by the Ferguson family of Raith, who give the master a salary, with a house and garden rent-free. A Sabbath-school is maintained in the village; and a parochial subscription library has been established. The poor possess land situated in the parish of Abernethy, in the county of Perth, and producing a rental of £100 per annum, but subject to a considerable drawback for the payment of improvements previously made on the estate.

On the farm of Dogtown is a pillar of hewn stone, sculptured with some allegorical devices, which are much mutilated. It is by some supposed to have been erected by the Danes, to commemorate the fall of some of their chieftains in their hostile irruption into the county in the reign of Constantine II., and by others to have been raised by the Scots as a memorial of their having defeated and repulsed the Danes, who had encamped on the shores of the river Leven. The height in this parish called Goats Milk Hill is thought to have been one of the chain of Danish forts which were thrown up between Fifeness and Stirling, and during the occupation of which, a mill was built on the bank of the river Leven, which is still called Mill-Danes. Some workmen lately employed in deepening the bed of that river discovered a Roman sword and battle-axe, and several heads of spears; and on re-opening a well on a farm in the parish, which had been closed for centuries, an antique dagger, with a handle of wood inlaid with brass, was found.

KINGOLDRUM, a parish, in the county of FORFAR, 4 miles (W. by N.) from Kirriemuir; containing 440 inhabitants. The name of this place is compounded of three Gaelic words signifying "the head of the burn of the drums, or low hills". The lands were bestowed upon the abbey of Aberbrothock by a charter of William the Lion, which grant was confirmed by Alexander III., and afterwards by Robert Bruce; and Alexander also issued a proclamation prohibiting every one from cutting wood, destroying game, or hunting, without consent of the abbots, in the forest of Kingoldrum. Of this description of land, however, no traces now remain. The PARISH, which is of very irregular figure, stretches along the base of the Grampian mountains, and is situated in the district called the Braes of Angus. It is about seven miles in length, and between two and three in breadth, comprising 12,800 acres, of which nearly 4000 are under tillage, 1500 in natural wood and in plantations, and the remainder waste, consisting of moor, moss, bog, and pasture. The surface is every where undulated, and marked principally by three ranges of low hills, the intervening spaces being occupied by considerable tracts of level ground. Much of the scenery is interesting; and

from the summit of Catlaw, the highest hill, elevated 2264 feet above the level of the sea, extensive and beautiful prospects may be obtained. These embrace the German Ocean from Montrose round to the Firth of Forth, part of the coast of Fife, the Bell-rock lighthouse, Berwick Law, some of the highest mountains in the Western Highlands, and, on the north, the loftiest eminences of the Grampians. The streams of Prosen, Carrity, and Melgum, all abounding in trout, enliven the lands in different directions; and the last, in its course through a deep, narrow, and winding channel, forms a series of beautiful waterfalls, called the Loups of Kenny. The burn of Crombie, after passing the village, falls into the Melgum; and in several places are copious springs, some of them supplying abundance of excellent water.

The SOIL is to a great extent alluvial, rich and deep, but in some parts very thin. It rests frequently on a subsoil much intermixed with the debris of the red sandstone rocks. In some places it is sandy, and in others moorish, loamy, or clayey. Husbandry has much improved within these few years; the farms are generally cultivated under the six-shift course; considerable portions of waste land have been reclaimed, and furrow-draining has been practised with great advantage. From 1200 to 1500 sheep are kept, chiefly the black-faced; and the cattle, which are excellent, are the Angusshire. The geological features of the parish are highly interesting, and afford a large field of observation to the scientific inquirer. The rocks lie chiefly in parallel ridges, each containing a distinct formation, and comprise conglomerate, sandstone, trap, and a dyke of serpentine, the last being especially worthy the attention of the geologist. A variety of other beds, and boulders of rocks, are to be met with, embracing almost every species; and quarries of sandstone are in operation. Peat-mosses are common; and marl, procured from the loch of Kinnordy, partly in this parish, has been used by the farmers with great benefit. The plantations are principally larch and Scotch fir, and are in a thriving condition, with the exception of some of the larches, which, after a growth of twenty or thirty years, rapidly decay. The mansion-house of Baldovie, pleasantly situated in the midst of fertile lands, derives considerable interest from its ornamental wood. That of Pearsie, also, from some points breaking suddenly on the view, has around it fine clusters of natural birch, oak, and alder. The annual value of real property in Kingoldrum is £3695.

The population of the parish, which is almost entirely agricultural, has been gradually diminishing during the present century, mainly through the abolition of small farms and of the croft system. About fifty cottages, besides several small hamlets, have wholly disappeared, the only collection of houses now entitled to the appellation of village being in the neighbourhood of the church. Peat and wood at present constitute the chief fuel; but Scotch and English coal, obtained from the railway depôts, about six miles distant, are coming much into use. The public road from Kirriemuir to Glenisla and Glenshee passes through the parish. The inhabitants dispose of their produce partly at Kirriemuir, the nearest market-town, and partly at Forfar, Dundee, and some of the places in the vicinity: many cattle fattened here are sent to London, Edinburgh, and Glasgow. Ecclesiastically the parish is in the presbytery of Meigle, synod of Angus and Mearns, and in the patronage of

the Crown. The minister's stipend is about £165, with a manse, a glebe of four acres of excellent land valued at £9 per annum, and a grass glebe of twelve acres and a half. Kingoldrum church is a small neat edifice, erected in 1840, and accommodating 240 persons with sittings. The living was originally a parsonage belonging to the abbey of Arbroath; but after the erection of the abbacy into a temporal lordship, the payment of the minister devolved on the titular of the tithes; and by the "decret of provisions" dated in the year 1635, a considerable part of the stipend was charged upon abbey lands in the neighbourhood of Arbroath, from which it continues to be payable. The parochial school affords instruction in the usual branches; the master has a salary of £28, including the value of six bolls and a half of oats, and receives £16 fees. There is a circulating library of religious books. Upon the top of the Catlaw hill is a large cairn of stones; but the chief relic of antiquity in the parish is the ruin of the castle of Balfour, built by Cardinal Beaton, and which has long been dismantled. On taking down the old church, among numerous stones with curious devices, two were found wrought into the building, marked with finely-carved crosses and hieroglyphics.

KINGOODIE, a village, in the parish of **LONGFORGAN**, county of **PERTH**, $1\frac{1}{2}$ mile (E. by S.) from Longforgan; containing 263 inhabitants. This village, which is on the banks of the river Tay, is chiefly inhabited by persons employed in the extensive quarries of freestone situated here, and which have been in operation for five or six centuries. The stone of these quarries is of a bluish colour, and exceedingly compact and durable, though consequently difficult to work; it is also susceptible of a very high polish. The tower of Dundee, which was built towards the close of the twelfth century, and at present exhibits no symptoms of decay, and Castle-Huntly, built in the fifteenth century, were both erected with stone from these quarries. Considerable quantities of it are raised for various buildings in the vicinity, and for exportation to Aberdeen, Perth, and Dundee, where it has been used in the construction of docks, piers, and other works. The rock in some parts is more than seventy feet in depth; and immensely large blocks are obtained entire, some of them more than ten tons in weight. The lessees of the quarries have constructed a small harbour here for the boats employed, two of which are of thirty and one of fifty tons' burthen, the former almost confined to the navigation of the river, and the latter occupied in the conveyance of the stone to more distant ports. At this small port, lime and coal are landed from Sunderland for the supply of the neighbourhood, and grain and potatoes are shipped for the London market. Facility of intercourse is maintained with the other parts of the parish by good roads, kept in repair by statute labour; and from the high road by the coast to Aberdeen, a line branches off at Longforgan to the quarries of this place.

KINGSBARNES, a parish and village, in the district of **ST. ANDREW'S**, county of **FIFE**; containing 968 inhabitants, of whom 529 are in the village, 3 miles (N. N. W.) from Crail, and 6 (S. E. by E.) from St. Andrew's. This place derived its name from its having been appropriated as a granary by the kings of Scotland, to whom it belonged as part of their private estate, during their residence at Falkland; and near the village are vestiges of

an ancient building, said to have been a castle, though in all probability its strength and fortifications were intended only for the protection and security of the grain deposited there for the use of the royal household. The remains of this building, situated on the beach, and consisting only of the foundations, were removed by the tenant a few years since, and from their small extent, showed no indications of the edifice having ever been occupied either as a royal or baronial residence. The parish is situated on the coast, between the Firths of Forth and Tay, and is nearly equal in length and breadth, comprising about 3860 acres, of which 3650 are arable, 199 woodland and plantations, and the remainder rocky land along the shore. Its surface, sloping gradually to the sea, is tolerably even, attaining no considerable degree of elevation; the shore is low, and interspersed with rocks, that form somewhat of a barrier against the encroachment of the waves, which make considerable inroads. In the lower portion of the parish, towards the sea, the soil is rather light and sandy, and farther inland a deep black loam, in some parts inclining to clay: both, under proper management, are fertile and productive. A good system of husbandry is prevalent, and the crops are, wheat, barley, oats, potatoes, beans, turnips, &c. The prevailing breed of cattle is the Fifeshire: the Tees-water breed was introduced by the late Earl of Kellie, but it has not been found so well adapted to the land, or so profitable to the farmer. About 150 head of cattle are on the average annually fattened for the market. Sheep are kept only for home use. The woods are chiefly forest-trees; but the plantations, mostly around the houses of the resident gentry, consist only of shrubberies and evergreens. The farm houses and offices are substantially built, and conveniently arranged; and considerable improvements have been made in draining and fencing the lands. The annual value of real property in the parish is £7849.

The substratum is generally limestone and freestone, interspersed in parts with boulders of granite. Coal appears to have been worked formerly in some places; and at present, where it occasionally crops up, it is quarried by the poorer classes; but from the quantity of water to be drained off, it would require a considerable effort and an extensive capital to render the coal-beds available to the supply of the parish. Lime is burnt on the lands of Cambo, for the use of the tenants; but no regular quarries of limestone have been opened, though both the quantity and quality of the stone would amply remunerate the expense of working it on a larger scale. Ironstone is found near the shore, and a few persons are employed in procuring it by digging; what is thus obtained is usually shipped to Newcastle, and exchanged for coal. The gentlemen's seats are Cambo and Pitmilley, both of them ancient mansions of handsome appearance. The village has been greatly improved within the last few years; the streets have been levelled, and many of its old houses have been taken down, and replaced by others of larger dimensions, with neat flower-gardens in the front. Its appearance is lively and cheerful, and the village has become a pleasant place of residence. Some of the inhabitants are engaged in weaving with hand-looms at their own dwellings: the general articles manufactured are, linens for domestic use, dowlas, and Osnaburgs; about twenty looms are employed, and on an average 50,000 yards of the fabrics are produced an-

nually. A subscription library has been for some time established in the village; and a savings' bank has also been opened. There are fairs in July and October, but little business is transacted except the sale of pedlery. Ecclesiastically the parish is in the presbytery of St. Andrew's, synod of Fife, and in the patronage of the Earl of Glasgow: the minister's stipend is £251. 18., with a manse, and a glebe valued at £30 per annum. Kingsbarns church is a neat structure in the later English style, thoroughly repaired in 1811. The parochial school affords a liberal course of instruction; the master has a salary of £34, with £30 fees, and a dwelling-house and garden. There is also a Sabbath evening school. In levelling the coast, several stone coffins containing human bones were found; and in one instance, some of the bones had the appearance of having been burnt.

KINGSTON, for a time a quoad sacra parish, partly in the parish of GOVAN, Upper ward of the county of RENFREW, but chiefly in that part of the parish of Govan which is ecclesiastically annexed to the parish of GORBALS, in the suburbs of the city of GLASGOW, county of LANARK; the whole containing 2882 inhabitants. This place stands on the south bank of the river Clyde, and to the west of Tradeston, to which it is an appendage. It consists of several well-formed streets; the houses are handsomely built, generally three or four stories in height, and attached to them are spacious courts and garden-grounds. The town is pleasantly situated, commanding a fine view of the Clyde, and of the port of Broomielaw on the opposite bank of the river. Its population are chiefly employed in the various manufactures connected with the city of Glasgow and vicinity; and there are several shops for the supply of the inhabitants with various articles of merchandise. The Glasgow and Paisley canal, and the Glasgow, Greenock, and Ayr railway, skirt the district on the north for nearly a mile. The former quoad sacra parish was separated in 1839, under act of the General Assembly. Kingston church was erected at an expense of £3000, raised by subscription, chiefly by the friends of the Rev. James Gibson, the first minister, as a public testimony of their esteem; it is a handsome structure in the later English style, with a light and well-proportioned spire 120 feet in height, and contains more than 1000 sittings. The incumbency is in the gift of the Subscribers. There is also a place of worship for members of the Free Church.

KINGSTON-PORT, a village, in the parish of SPEY-MOUTH, county of ELGIN, $4\frac{1}{2}$ miles (N. by W.) from Fochabers; containing 396 inhabitants. This village is seated at the mouth of the Spey, and, with the exception of a few houses, has been built within the last forty or fifty years. The original dwellings were mostly of wood, and were erected for the accommodation of the workmen of Messrs. Dodsworth and Osbourne, timber-merchants and ship-builders, by whom the place was named Kingston-Port, after Kingston-upon-Hull in the county of York. These gentlemen, having purchased the forest of Glenmore from the Duke of Gordon, about the year 1784, commenced building numerous vessels here, several of them of the burthen of 500, 600, and 700 tons; and various other builders, following their example, have since launched as many as 150 vessels at this place, of from thirty to 200 tons' burthen each. The trade in timber has latterly very much declined, the forest having been exhausted about five-and-thirty years ago; but the

commerce of the port is still considerable. In a recent year 200 vessels sailed hence, of which one-fourth were loaded with grain, chiefly wheat and oats, for the southern parts of Scotland and for England; and in the same year were imported forty cargoes of Scotch coal, and twenty of English coal from Sunderland. The harbour suffered very severely from the memorable flood on the 4th of August, 1829; and as the channel is shifted by the occasional heavy action of the sea, and the gravelly nature of the soil renders it impracticable to obtain a secure foundation for a pier, the improvement of the port is difficult. The village of Garmouth closely adjoins Kingston.

KINGUSSIE, a parish, in the county of INVERNESS, $\frac{1}{2}$ a mile (E. by N.) from Pitmain; containing, with part of the former quoad sacra parish of Insh, the villages of Kingussie and Newtonmore, and the hamlet of Ralia, 2047 inhabitants, of whom 460 are in the village of Kingussie. This place is of remote antiquity, and derives its name, in the Celtic language *Ceanngiubhsaiche*, from the situation of its ancient church at the head of a wood of firs, of which that term is significant. The whole of the lordship of BADENOCH, in the centre of which this parish lies, originally belonged to the Cumyns, Earls of Badenoch and Buchan, of whom John, the first lord of Badenoch, laid claim to the throne of Scotland on the death of Alexander III. in 1285. As superior baron of the kingdom, he was summoned by Edward I. of England to attend him in his wars in Gascony. Upon his death, he was succeeded by his son, John, who, after a continued struggle to maintain the independence of his country, in which he obtained a victory over the English at Stirling, was compelled, subsequently to the battle of Stirling, to yield to the superior power of Edward. At the succession of Bruce to the crown of Scotland in 1306, the lord of Badenoch became a victim to the resentment of that king; and the lordship was included among the lands which Bruce erected into the earldom of Moray in 1314, and bestowed upon his nephew, Randolph. The earldom continued in the possession of that family till the year 1371, about which time it became the property of the Stuarts, of whom Robert, the first Stuart who ascended the throne of Scotland, conferred it on his son, Alexander, in whose favour he revived the title of lord of Badenoch. Alexander, who, from the ferocity of his character, was styled the Wolf of Badenoch, resided chiefly in the castle of Ruthven, in this parish, the ancient seat of the Cumyns, a strong fortress situated on the banks of the river Spey. Here, in perfect security, and presuming upon his connexion with the crown, he exercised despotic tyranny over his vassals, and spread terror and dismay throughout the adjacent districts. Upon his death, about the year 1394, the lordship descended to his son, who was the last of the Stuarts connected with the earldom of Moray, which subsequently passed to the first Earl of Huntly, upon whom the lordship of Badenoch was conferred by James II., in reward of his services at the battle of Brechin in 1452. The site of Ruthven Castle, the seat of the lords of Badenoch, was occupied by barracks erected soon after the rebellion in 1715, to keep the inhabitants in check; and in 1745, the garrison stationed here, with the exception of a serjeant and twelve privates who were left for the protection of the buildings, accompanied Sir John Cope on his march to the battle of Prestonpans.

During their absence the barracks were defended by this small party against a body of 200 insurgents; and in the following year, they sustained a violent assault for three days from 300 of the rebels, under Gordon of Glenbucket, to whom the force surrendered on terms of honourable capitulation. The barracks were soon afterwards burnt by the insurgents, and are now a heap of ruins.

The PARISH, which is bounded on the south by the Grampian hills, is about twenty-one miles in length from east to west, and nearly eighteen miles in breadth; but, from the extreme irregularity of its form, and the great inequality of the surface, it has been found impossible to ascertain its superficial extent with any degree of accuracy. Its surface is strikingly varied, and even the lowest grounds have an elevation of 850 feet above the level of the sea. In the northern portion, the mountains of Monadhliadh stretch for a considerable distance along the boundary; and from their base the lands gradually subside into an extensive vale, beyond which they gradually ascend towards the Grampians on the south. The principal river is the *Spey*, which has its source in a small lake of that name in the parish of Laggan, and, winding in an eastern course through the open and fertile valley previously noticed, for more than seven miles, flows into Loch Insh at the eastern extremity of the parish, whence taking a more northern direction, it falls into the Moray Firth at Garmouth. The river *Truim* forms part of the western boundary of the parish; it has its source in the forest of Drumuachter, near the Grampians, and flowing northward, joins the *Spey*. The *Tromie*, which separates this parish from the district of Insh on the east, rises to the south of the parish, and running northward through the glen to which it gives name, falls into the *Spey* near Old Milton. The *Culder*, which has its source in the mountains to the north, and the *Gynag*, which issues from a small lake of that name, both take a southern course, and flow into the *Spey*. There are also numerous lakes, but few of them exceed a mile and a half in length and three-quarters of a mile in width. In Loch Gynag is a small island, on which may still be traced the vestiges of what is supposed to have been a castle: nothing, however, of its history is recorded. About six miles of Loch Erich are likewise within the boundaries of the parish; but the shores are altogether destitute of beauty or variety, with the exception of a small portion near the southern extremity of the parish, where the banks are rather steep, and in some parts fringed with trees. Salmon, and char for some weeks in October, are found in the *Spey*; and trout and pike in the smaller rivers and lakes. The forest of Gaick, though almost destitute of wood, contains numerous herds of deer, and is much frequented by sportsmen.

In the meadows, and along the banks of the *Spey* and its tributaries, the SOIL is deep and fertile. The valley through which the *Spey* flows is especially rich, and in good cultivation, constituting almost the only arable land in the parish, the hills and uplands being generally heathy, adapted merely for pasture, and portioned out in sheep-walks. The crops are oats and barley, with other kinds of produce; but not more grain is raised than is sufficient for supplying the parish. In general the system of husbandry is improved, and a due rotation of crops is regularly observed; considerable portions of waste

land have been reclaimed by draining and embanking, and the farm-buildings of the larger holders are substantial and commodious. The sheep reared are of the black-faced breed, with a few of the Cheviot on the lower lands; the cattle are all of the common Highland breed, with some of the Ayrshire kind for the dairy, and the greatest attention is paid to their improvement. Though formerly the face of the country was covered with wood, and a very large forest of fir reached almost to the village, there are but small remains of ancient timber. The plantations, chiefly of recent growth, consist of fir and larch, interspersed with mountain-ash and oak, for which the soil is well adapted. Alder, hazel, and birch appear to be indigenous, especially the last, with which the rising grounds on the south bank of the *Spey* are extensively covered. The prevailing rocks throughout the parish are quartz, felspar, and mica-slate: there are neither mines nor quarries in operation. Specimens of silver and lead ore have been found in the river Gynag, but in very small quantity; and some years since, silver ore was discovered and for a time worked at no great distance from the village. The annual value of real property in the parish is £4626.

The village of Kingussie stands on the north bank of the river *Spey*; the inhabitants are chiefly employed in the handicraft trades requisite for the supply of the neighbourhood, and there are several shops amply stored with various kinds of merchandise. A public library is supported by subscription, forming a collection of about 300 volumes on history and general literature. The post-office has a daily delivery, both from the north and south parts of the kingdom; and facility of communication is maintained by good roads, of which the great Highland road from Perth to Inverness passes for sixteen miles through the parish; and by bridges over the different rivers, kept in excellent repair. Fairs, chiefly for cattle and for hiring servants, are held in the village on the last Tuesday in May, the Friday in the week after the Falkirk tryst in September, and the Friday before the Falkirk tryst in October; and markets for cattle and for general business are held monthly, on Tuesday, from April to November. A building was erected in the village in 1806, which contains a neat court-room for the meetings of the magistrates for the district, and a small prison for the temporary confinement of offenders till their commitment to the county gaol. Ecclesiastically the parish is within the limits of the presbytery of Abernethy, synod of Moray. The minister's stipend is £269. 18., with an allowance of £50 in lieu of a manse; and the glebe, which has been greatly improved by the incumbent, is valued at £50 per annum: patron, the Duke of Richmond. Kingussie church, which is situated on a wooded eminence in the village, was fully repaired a few years ago, and contains 900 sittings. The members of the Free Church have a place of worship. The parochial school is well attended; the master has a salary of £34, with a good house, an allowance in lieu of garden, and fees averaging about £20. There are some slight remains of Druidical circles, and vestiges of a Roman camp: in clearing the ground near the latter, a Roman urn containing ashes, and a tripod, were found a few years since, and both are carefully preserved. There are also vestiges of an ancient building said to have been a priory, and a monastery once existed in the parish; but little of the history of either is known.

KINKELL, in the county of **ABERDEEN**.—See **KEITH-HALL**.

KINLOCH, a village, in the parish of **COLLESSIE**, district of **CUPAR**, county of **FIFE**, 5 miles (W.) from **Cupar**; containing 58 inhabitants. It is situated a little to the south of the road from **Cupar** to **Auchtermuchty**, and a short distance from the village of **Collessie**. Not many years since, it was the largest village in the parish, having nearly four times its present amount of population; a number of families, however, who resided here, removed to **Monkton**. The houses form a line, with an interval of twelve feet between every four. The lands around the village have latterly been much improved by draining.

KINLOCH, county of **PERTH**.—See **LETHENDY**.

KINLOCHBERVIE, in the county of **SUTHERLAND**.—See **KEANLOCHBERVIE**.

KINLOCH-LUICHART, a large quoad sacra parish, in the county of **ROSS** and **CROMARTY**; consisting of parts of the parishes of **Contin**, **Fodderty**, and **Urray**; and containing, in 1841, 681 inhabitants. This district, which was disjoined for ecclesiastical purposes from the above-mentioned parishes, is wholly rural. Its greatest length is twenty-two, and greatest breadth seventeen miles. The population is all of the poor and working classes, and is thinly dispersed over this large extent, the land being chiefly let out as sheep-walks to tenants who do not themselves reside in the district. Ecclesiastically **Kinloch-Luichart** is in the presbytery of **Dingwall**, synod of **ROSS**, and the patronage is vested in the **Crown**: the stipend of the minister is £120, paid from the exchequer; and he has a manse, and a glebe of the annual value of £3. The church was built in 1825-6, under the act for erecting additional churches in the **Highlands**; it is situated exactly nineteen miles west from **Dingwall**, and contains 310 sittings. There is a school in connexion with the **Free Church**, in which **English** and **Gaelic** reading, and writing and arithmetic, are taught.

KINLOCH-RANNOCH.—See **RANNOCH**.

KINLOCHSPELVE, for a time a quoad sacra district, in the parish of **TOROSAY**, district of **MULL**, county of **ARGYLL**; containing 453 inhabitants. This district is in the eastern part of the island of **Mull**, and comprises between 30,000 and 40,000 acres, of which not more than one-fortieth part is under tillage; between forty and fifty acres are under plantation; a considerable extent is natural wood, and the rest mostly sheep-walks. Two arms of the sea, called **Loch Buy** and **Loch Spelve**, may be said to divide the district into two nearly equal parts; and, with very moderate exceptions, the whole surface of the land is mountainous. In the northern division the mountains attain an elevation of about 2000 feet, and in the southern part they are 1200 feet in height: the prevailing rocks are trap and mica-slate, but there is also sandstone. During the spring months, cod and salmon, particularly the former, are taken in considerable quantity; **Loch Buy** abounds in fish of various kinds, and oysters are very abundant in **Loch Spelve**: the produce of the season is partly forwarded to **Glasgow**, and much of it to **Oban**. The sheep and black-cattle reared here are sent to the great markets of the south, principally the **Dumbarton** and **Falkirk** trysts. **Lochbuy**, the residence of the **Maclaine** family, is a splendid structure at the head of the loch, with two

wings, and a handsome porch; the central portion has three stories. The mansion stands in a level plain of several hundred acres, from which the mountains rise to an immense height all around, except in front, where the sea approaches. At a small distance is the ancient tower of **Lochbuy**. The laird of **Lochbuy** has made extensive agricultural improvements; a considerable portion of land has been lately drained and ploughed, and other changes effected for the better. Ecclesiastically **Kinlochspelve** is in the presbytery of **Mull**, synod of **Argyll**, and the patronage is vested in the **Crown**: the stipend of the minister is £120, with a manse and glebe. The church and manse are neat plain buildings, erected in 1828, and beautifully situated at the end of **Loch Uisge**, a romantic fresh-water lake between the two arms of the sea above-mentioned. The sacred edifice is seated for 360 persons. There is a parochial school, the master of which has a salary of £15, with about £8 fees.—See **TOROSAY**.

KINLOSS, a parish, in the county of **ELGIN**; containing, with the village or town of **Findhorn**, 1202 inhabitants, of whom 24 are in the hamlet of **Kinloss**, 2 miles (N. E.) from **Forres**. This place derives its name from the Celtic words *Ceann-loch*, signifying "the head of the bay," and descriptive of its situation on the border of **Burgh-Head** bay in the **Moray Firth**, by which it is washed on the north. A magnificent abbey was founded here by **David I.**, in the year 1150, and its establishment was confirmed in 1174 by a papal bull; the abbots were mitred, and sat in parliament. It was richly endowed, and became the scene of many splendid banquets: **King Edward I.** resided here for the space of six weeks in the year 1303, and a part of his army remained in the neighbourhood for a still longer period. At the **Reformation**, **Edward Bruce** of **Clackmannan** was commendator; he was created **Baron Kinloss** in 1601, and his son **Thomas** became **Earl of Elgin** and **Baron Bruce** of **Kinloss** in 1633. By the latter the lands and feuduties were sold to **Brodie** of **Lethen**.

The PARISH was disjoined from **Alves**, **Rafford**, and **Forres**, and erected into a separate parish in the year 1657. It is nearly four miles long, of about the same breadth, and comprises 5065 acres, of which 2850 are cultivated, 1765 undivided common, 250 under plantations, and the remainder waste. The coast extends about four miles, and is flat, except in parts where sand-banks have been formed by repeated drifts. On the west is **Findhorn loch**, a capacious and secure natural harbour, formed by the expansion of the river of the same name, and communicating by a narrow strait with the **Firth**: at the mouth is a bar, a sandy ridge which shifts with heavy floods and strong easterly winds, but the nature and soundings of which are so well known to the pilots that an accident is of very rare occurrence. In general the site of the parish is low, being not more than ten or twelve feet above the sea at high water. Near the southern boundary, however, the surface rises considerably, and affords an extensive view, embracing the plantations of **Grangehall**, the ruins of the ancient abbey, the church, and several fertile and well-cultivated tracts interspersed with farm-houses, and in the distance, on the north, the town of **Findhorn** with its shipping. The sea is supposed to have made great encroachments on this coast, the bar at the entrance of the harbour being partly formed of land once in tillage,

and the present town being the third of the same name, owing to inundations. The burn of Kinloss, which, flowing from east to west, falls into the bay of Findhorn a little below the church, divides the parish into two nearly equal parts.

The SOIL exhibits several varieties; but they are all sandy, clayey, or gravelly modifications of the rich loamy earth that generally prevails: the proportion of moss is inconsiderable. The ordinary subsoil of the whole is sand or gravel. All kinds of white and green crops are raised, of good quality, amounting in annual value to nearly £12,000; and the produce in dairy-cows and fat-cattle, sheep, swine, and horses is also considerable. The six-shift course of husbandry, with every improved usage, is followed; and much attention is paid to the breed of the various kinds of stock. Among the most conspicuous advances are the reclaiming of large tracts of waste ground; draining and inclosing; and the erection of neat and commodious farm houses and offices. The annual value of real property in the parish is £3925. Grangehall is a spacious and handsome modern residence of quadrangular form; it is ornamented with thriving plantations of Scotch fir, larch, birch, and oak. The mansion of Scapark is also a modern building; it has been of late greatly improved, and the grounds beautified with many young trees. A considerable part of the population are engaged in fisheries, and reside at the burgh and sea-port town of Findhorn, in the northern portion of the parish. There is a daily post; and a turnpike-road runs between Findhorn and Forres, which at the bridge of Kinloss has a branch eastward to Burgh-Head and Elgin. Grain, sheep, cattle, and swine are sent for sale to Aberdeen, Glasgow, and London, and salmon also to the last place; herrings are exported to Ireland, the continent, and the West Indies. Fairs for sheep, cattle, and horses are held at Findhorn on the second Wednesday, O. S., in the months of March, July, and October.

Ecclesiastically the parish is in the presbytery of Forres, synod of Moray, and in the patronage of the Earl of Moray, and Mr. Brodie of Lethen, alternately: the minister's stipend is £240, with a manse, and a glebe of between four and five acres, valued at £5 per annum. Kinloss church was built in 1765, and thoroughly repaired in 1830. The members of the Free Church have a place of worship and a school in the parish. The parochial school affords instruction in the usual branches: the master has a salary of £34, with a small house, and £10 fees; also an allowance from the Dick bequest. There is a flourishing friendly society; and a savings' bank, in connexion with that in Forres, has been lately established. The chief relic of antiquity is the ruin of the abbey, which, till it became dilapidated, was used as the parish church. In the year 1652, the walls were broken down, and the stones sold to Cromwell's soldiers, for the erection of the citadel of Inverness. Since that period, depredations have been made upon the materials at different times; and all that now remains of this once imposing structure is the east gable, for the preservation of which a buttress of mason-work has been raised by the liberality of a resident gentleman.—See FINDHORN.

KINNAIRD, a parish, in the county of PERTH; containing, with the hamlets of Craigdallie, Flaweraig, Nethermain, and Pitmiddie, 458 inhabitants, of whom

90 are in the hamlet of Kinnaird, 4 miles (N. by W.) from Errol. The name is derived from a compound word of Celtic origin, signifying "high end or head", and is descriptive either of the elevated site of the village, or of the high ground at the end of the estate of Kinnaird, on which stands an ancient castle. Very little is known concerning the early history of the place; but it is recorded that it belonged originally to the noble family of Kinnaird, whose present seat is Rossie, in the neighbouring parish of Inchtute. In the reign of King William, in 1170, Randolph Rufus obtained from that prince the lands of Kinnaird, from which he took his surname, and which continued in his family till the time of Charles I. The PARISH is nearly three miles long and two broad, and contains above 3000 acres. It is situated half way between Perth and Dundee, and has a fine south-eastern exposure, looking down on the Carse of Gowrie, part of which is contained within its bounds. Kinnaird has the parish of Collace on the north-west, the parishes of Errol and Inchtute on the south-east, Abernyte on the north-east, and Kilspindie on the south-west. Some of the higher grounds command extensive views, especially of the Highland mountains.

The land which is included in the Carse, though small in extent, is the richest part of the parish, the soil being a fertile black clayey earth. On the south side of the braes skirting the Carse, the land, though good, is inferior to the former, and chiefly a stringent binding earth; on the north side the soil is light and shallow, and covered for the most part with bent and heath, intermixed occasionally with natural pasture. About 1550 acres are under tillage; and 1500 are uncultivated, consisting principally of moor ground, pastured with Highland sheep in the winter, and at other times with oxen. Green crops are cultivated; but grain is the chief produce of the arable land, most of which is capable of yielding wheat, in general of very good quality. Live stock are but little attended to. The husbandry is excellent; and improvements, commenced here at an early period, have been ever since gradually advancing. The parish is entirely agricultural. Its annual value of real property amounts to £3195. The chief communication of the people is with Perth and Dundee, the great road between which places passes within half a mile; and there is a port on the Tay, about four miles off, from which much grain is shipped, and at which coal and lime are imported. The higher and lower parts of the parish have been connected by a new road, that forms a kind of thoroughfare between Strathmore and the Carse of Gowrie. Ecclesiastically the parish is within the bounds of the presbytery of Dundee, synod of Angus and Mearns; patron, the Crown. The stipend of the minister is £184, with a commodious and substantial manse, lately built, and a good glebe of ten acres. Kinnaird church is large, built only a few years ago, and fitted up in a comfortable manner. There is a parochial school, the master of which has the maximum salary, with about £24 fees. The only relic of antiquity is the ruin of the ancient castle, erected in feudal times, with massive walls, and strong stone arches under the floors, and evidently intended as a place of defence as well as residence.

KINNAIRD, a village, in the parish of MOULIN, county of PERTH, 1 mile (E. N. E.) from the village of Moulin; containing 70 inhabitants. This small village, which is

beautifully situated on the banks of a tributary to the river Garry, has a pleasingly rural aspect, and is inhabited chiefly by persons engaged in agricultural pursuits. The surrounding scenery is richly diversified, and abounds with features of interest; and from the hills in the immediate vicinity is obtained a fine view of the valley of Glenbrierachan.

KINNAIRD, a village, in the parish of LARNERT, county of STIRLING, $3\frac{1}{2}$ miles (N. by W.) from Falkirk; containing 304 inhabitants. This village, which is situated in the south of the parish, has arisen on the lands of Sir Michael Bruce, Bart., whose seat is in the vicinity, from the quantity of coal underneath that estate; and is chiefly inhabited by persons engaged in the collieries, and in the works of the Carron Iron Company. The making of nails affords employment to a few of the inhabitants; and many of the females are engaged in tambering muslin for the Glasgow manufacturers, at their own dwellings.

KINNEFF, a parish, in the county of KINCARDINE, 2 miles (N. E. by N.) from Bervie; containing, with the village of Catterline, 1029 inhabitants. This place is supposed to have derived its name from its castle, founded, according to tradition, by Kenneth, one of the kings of Scotland, and of which there are still some vestiges near the church. In 1341, King David Bruce, returning from France with his queen and retinue, in order to avoid the English fleet, by which he was closely pursued, effected a landing on the shore of this parish. In gratitude for his escape, he afterwards built a chapel on the spot, of which, till within the last thirty or forty years, there were considerable remains; and in commemoration of the event, the cliff under which he landed is still called Craig-David. During the siege of Duntottar Castle by the forces of Cromwell under General Lambert, the regalia, which had been for security deposited in that fortress, were, on the prospect of its inability to hold out much longer against its assailants, dexterously removed from it by Mrs. Grainger, wife of the minister of this parish, in conjunction with the lady of the lieutenant-governor, and concealed under the pulpit of the church here till the Restoration. In 1709 the parish of Catterline, which had previously formed part of this parish, was reannexed to Kinneff. The parish is of nearly triangular form, and extends more than five miles along the coast of the German Ocean. It comprises an area of 6408 acres; 4798 are arable, about fifty in woods and plantations, and the remainder meadow, pasture, and waste. The surface is intersected by several ridges of elevated ground, and diversified with hills, of which the hill of Bruxie, towards the north-western boundary, has an elevation of 650 feet above the level of the sea. The coast is precipitously rocky along its entire extent, presenting a rampart of cliffs rising abruptly to the height of 180 feet, and in some parts indented with small bays, whose shores are covered with verdure almost to the margin of the sea, the whole forming a bold line of beautifully romantic scenery.

Near the coast the soil is a rich deep loam, celebrated for its abundant produce of grain; in the interior it is of inferior quality, and in some parts, but for the improvement it has received from persevering efforts, it would be absolutely sterile. The crops are wheat, oats, barley, potatoes, and turnips. The system of agriculture

is in an advanced state; the lands have been partially drained, and inclosed chiefly with fences of stone; the farm-houses are substantially built and well arranged. Considerable portions of waste have been brought into profitable cultivation. The moorlands afford good pasture for the cattle, which are chiefly of the polled Angus breed; and on many of the farms much attention is paid to the improvement of the stock. There are some quarries of freestone, from which stone of good quality is raised in quantities sufficient for the buildings within the parish; and along the coast, the rocks furnish excellent material for millstones. The annual value of real property in the parish is £6192. Fawside is a handsome modern cottage, pleasantly situated: there are also several ancient mansions, formerly the residences of proprietors, but now occupied merely as farm-houses. The village of Catterline is situated on the coast, and chiefly inhabited by fishermen, who employ two boats; the smaller village of Shieldhill employs only one boat. The fish taken consist of cod, ling, skate, haddock, and various kinds of shell-fish. A small harbour has been constructed at Catterline, *which see*. There are also some salmon-fisheries in the parish, of which, however, the aggregate rents do not exceed £15 per annum; and several of the inhabitants are employed in hand-loom weaving for the linen manufacturers in the neighbourhood. Facility of communication is afforded by good roads: the coast road from Edinburgh to Aberdeen, and the great Strathmore road, pass here.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is £232.3.6., with a manse; and the glebes of Catterline and Kinneff are valued together at £28 per annum: patron, the Crown. Kinneff church, situated on the sea-shore, was built in 1738, and repaired in 1831; it is a neat structure, containing 424 sittings. There are some remains of the ancient church in which the regalia were preserved during the interregnum. The members of the Free Church have a place of worship; and there is a temporary place of worship at Catterline for Episcopalians. The parochial school is well attended; the master has a salary of £34, with a good house and garden, and the fees average about £25 per annum. A parochial library was established in 1838, under the direction of the Kirk Session. In 1841, Sir Joseph Straton bequeathed £100 for promoting education, and £100 for encouraging industry among the poor. There are remains of a house called the Temple, and at the base of St. John's Hill is a farm named the Chapel of Barras; from which is inferred the probability of there having been an establishment of the Knights Templars here. Of the castle of Kinneff, little more than the foundations are left. On the summit of a peninsular rock, not far from it, are the remains of an ancient work called the Castle of Cadden; on another rock are the remains of some buildings styled the Castle of Whistleberry; and at a small distance are other remains, designated Adam's Castle. In digging a grave in the church for Lady Ogilvie of Barras, an earthen pot was found, containing a great number of small coins of silver, bearing inscriptions of Edward of England and Alexander of Scotland, and supposed to have been buried during the possession of Kinneff Castle by an English garrison. Within a tumulus on St. John's Hill, which was opened about

five-and-thirty years since, was found a tomb of flat stones, containing rich black earth, with a mixture of half-burnt bones and charcoal, but no sepulchral urn. In 1831, near the site of the castle, some workmen employed by the late Rev. A. Stewart found a vase containing a number of brass rings of various dimensions, two of which were entire, and a spear-head of bronze; the vase was filled with strongly compacted black earth, in which the rings were embedded. Dr. John Arbuthnott, the intimate friend of Pope and Swift, and physician to Queen Anne, lived for some time in this parish, at Kingorny, the property of his father, who, on being deprived of the living of Arbuthnott, of which he was minister at the time of the Revolution, retired to this his paternal estate.

KINNELL, a parish, in the county of FORFAR, $5\frac{1}{2}$ miles (E. by N.) from Letham; containing 853 inhabitants. This place, whose name, in the Gaelic language, is descriptive of the situation of its church upon a gentle eminence, is of unknown antiquity: the church appears in the list of churches in the bishopric of St. Andrew's in 1242. The barony of Kinnell was granted by King Robert Bruce to his steady adherent, Sir Simon Fraser, in acknowledgment of his gallant conduct at the battle of Bannockburn; and Fraser, during the lifetime of his uncle, was styled the Knight of Kinnell. The lands are now divided into four portions, of which Bolshan is the property of Sir James Carnegie, Bart., Wester Braky of Lord Panmure, Easter Braky of the heirs of Colin Alison, Esq., and Rinnmure of the representatives of the late John Laing, Esq. The PARISH comprises an area of 5000 acres, exclusive of a large portion of the ancient forest of Monthrewmont, and part of Rossy moor, an undivided common; 4400 acres are arable, about sixty woodland and plantations, and the remainder moorland pasture and waste. Its surface is gently undulated, and towards the east rises to a considerable elevation, forming the hill of Bolshan, and beyond it, the Wuddy-law, the highest point in the parish. The lower grounds are enlivened with the windings of the river Lunan, which flows for nearly two miles through the southern part of the parish, dividing it into two very unequal portions. The Gighty burn forms its eastern boundary, separating it from the parish of Inverkeillor; and afterwards runs into the Lunan.

The SOIL, though various, is not unfertile, and has been improved by judicious management; the crops are wheat, barley, oats, peas, turnips, and potatoes. The rotation system of husbandry is prevalent, and all the different improvements in agriculture have been adopted; considerable portions of moor have been brought under cultivation, and the lands have been drained and partially inclosed. The farm houses and offices, most of which have been rebuilt, are substantial and well arranged; and on the several farms are thirteen threshing-mills, one of which is driven by a steam-engine of eight-horse power. In this parish the timber is chiefly oak, ash, elm, plane, and birch; the plantations are Scotch firs, which seem to thrive best in the soil, with some larch and spruce firs. The cattle are of a good breed, to the improvement of which much attention is paid; and considerable numbers of sheep and swine are reared. The annual value of real property in the parish is £3878. There are no villages properly so called; but about eighty houses, scattered over a considerable piece of

ground, are called the Muirside of Kinnell. The population is chiefly agricultural; but many persons are employed in the weaving of linen-sheeting and Osnaburghs, for which 125 looms are in operation. There are also several mills for the spinning of flax, which are usually driven by water, but have steam-engines for use when the supply of water is deficient. Communication with the neighbouring towns is afforded by the Aberdeen railway, which intersects the parish from north or north-east to south-west; and also by good roads, of which that from Montrose to Forfar passes for nearly four miles through the northern part of the parish. Markets are held at Glesterlaw, on the lands of Bolshan, on the last Wednesday in April, the fourth Wednesday in June, the third Wednesday in August, and the first Wednesday after the 12th of October; they are chiefly for the sale of cattle, and are well attended. The Eastern Forfarshire Agricultural Association hold their meetings at the same place, at Lammas, when there is a show of cattle and horses, as well as an exhibition of improvements in the construction of implements.

Ecclesiastically the parish is within the bounds of the presbytery of Arbroath, synod of Angus and Mearns. The minister's stipend is £229. 10. 10., with a manse, and a glebe valued at £14 per annum; patron, the Crown. Kinnell church, almost entirely rebuilt in 1766, and repaired in 1836, is a plain and sombre structure, containing about 400 sittings. The parochial school is well attended; the master has a salary of £31, with a house and garden, and the fees average £15 per annum. There is also a school erected in the Muirside of Kinnell, by Sir James Carnegie, for the instruction of girls in reading, sewing, and knitting. A little to the south-west of the hill of Bolshan was the well-known castle of that name, long the residence of the Ogilvys, progenitors of the Earls of Airlie; and on the summit of the Wuddy-law was a large cairn or tumulus, forty-five yards in diameter, and four or five in height, in which, when the stones were removed for the filling of drains, small urns were found, containing a fat, blackish earth. Besides this great cairn, others have been discovered in the parish; and frequently, also, earthen vessels containing bones and other memorials of the dead, where no cairns have been formed over them. In 1842, a large earthen vessel was exposed to view by the plough, on the top of a small hillock, in the North Muirside. Its depth was about sixteen inches, and its diameter at the mouth about twelve; it was inverted, and the mouth rested upon a slate, or flat stone. The contents of the vessels were bones of a whitish colour, some of them five inches long; but they speedily crumbled into dust. A considerable number of silver pennies was found some time ago on the bank of the Lunan, between Hatton and Hatton-mill, together with a halfpenny of John Baliol; several of the coins were of the time of Edward I. of England.

KINNELLAR, a parish, in the district and county of ABERDEEN, 2 miles (S. E. by E.) from Kintore; containing 483 inhabitants. The remains of antiquity still visible show the Druids and the Danes to have been each connected with this parish. In the churchyard are several immense stones, some of them sunk in the earth, and others remaining above ground, pointing out the site of a Druidical temple; and in the western direction, on an extensive common covered with heath, are the

remains of numerous tumuli, the depositories of urns, skulls, ashes, and bones calcined on beds of hot clay. The common is supposed to have been the scene of some sanguinary conflict between the Scots and Danes, probably on occasion of the latter, in one of their frequent incursions, landing at the mouth of the river Don and encountering the former. A stone coffin was found a few years ago in *Cairn-a-Veil*, measuring about six feet long, constructed of six flags, and containing some black dust. On the hill of Achronie is *Cairn-Semblings*, seen to a considerable distance on the west and north, and near which is a large stone whereon Irvine, Laird of Drum, sat in order to make his will, when on his route to the battle of Harlaw, in which he fell.

The PARISH is rather more than four miles in length, but its breadth no where much exceeds two. It contains between 3000 and 4000 acres, and is bounded on the north by the parish of Fintray, from which it is separated by the river Don; on the south by the parish of Skene; on the east by the parishes of Dyce and New-hills; and on the west by Skene and Kintore. The surface throughout is a series of undulations, and the climate is bleak, the parish being almost without shelter from winds and storms. The soil is light and thin, and frequently rests upon a rough stony subsoil, requiring great labour and expense to reduce it to agricultural use: where, however, proper methods have been adopted, good crops are obtained. Almost the whole of the parish is arable, there being but a few acres occupied by wood, and only a small district of rocky moor. Oats, barley, and turnips are the crops chiefly raised, the last of which are much promoted in growth by the prevailing use of bone-dust manure. The rotation is usually the six-years' shift; and every farmer has a threshing-mill on his premises. There are but few sheep; the cattle are of the usual breed. Considerable improvements have taken place in husbandry within the last few years. Much land which was poor, and covered with heath and stones, has been with considerable expense brought into a state of profitable cultivation, well inclosed, and made to produce good crops of grain and turnips. The farm-houses, also, have been rendered comfortable and commodious. A spirit of emulation, leading to important practical results, has been excited by the institution about the year 1808 of prize-matches for ploughing, by a farmers' club in the neighbourhood; and much skill has been acquired in this branch of husbandry. The annual value of real property in Kinnellar is £2840.

A superior turnpike-road, from Aberdeen to Inverury, intersects the parish, and is traversed by the mail and three coaches every day to and from Aberdeen. The parish roads, however, are in bad repair, with the exception of one connected with a farm; and part of the road most used, leading to the church, is said to have been neglected for the last thirty years. The canal between Aberdeen and Inverury, constructed in 1797, passes through the parish at its northern extremity; but though of great advantage to those who reside in the upper districts, it is productive of little benefit to the larger portion of the inhabitants, who, being at some distance from the nearest station on the canal, find it more advantageous to convey their produce to Aberdeen by land-carriage. A passage-boat plies regularly; and several boats bring coal, lime, and manure from Aberdeen, and take back grain, wood, slate, and other com-

modities. Among the few mansions in the parish is that of Glasgoego, not now in very good repair, its former proprietor having built a new residence in its vicinity. On the bank of the Don is a commodious house belonging to William Tower, Esq., of Kinaldie; and on the property of Tartowie is a small but elegant house with improved grounds around it. In the hamlet of Blackburn are a post-office, an inn, and some houses inhabited by tradesmen and others. Ecclesiastically the parish is within the bounds of the presbytery and synod of Aberdeen; patron, the Earl of Kintore. The stipend of the minister is £160, of which £62 are received from the exchequer; there is a manse, built in 1778, and the glebe consists of five acres of land, valued at £13. 15. per annum: the minister also has an allowance of £20 as grass-money, and a like sum as moss-money. Kinnellar church, a small building of plain style, erected in 1801, is in good repair, and contains 250 sittings: it stands on the north side of the Don, about a mile from the river. In the seventeenth century, Archbishop Sharp gave the patronage to the dean of the university of St. Andrew's, reserving to himself and his successors a veto upon any appointment; and the university held this privilege till 1761. There is a parochial school, where the usual branches of education are taught, with Latin and geometry if required. The master has a salary of £26, with a house and garden, and about £11 fees; also an allowance from Dick's bequest to the school-masters of Aberdeen, Banff, and Moray.

KINNESSWOOD, a village, in the parish of PORTMOAK, county of KINROSS, 4 miles (E.) from Kinross; containing 479 inhabitants. It is situated in the western part of the parish, and on the east side of Loch Leven: the road from Kinross to Leslie passes through. A parchment manufactory, in which vellum is now made, has been carried on here for a considerable period; at present it employs but a few hands. The population chiefly consists of weavers. There is an annual fair in May, latterly very ill attended. Michael Bruce, the poet, remarkable for the beautiful effusions of his muse, collected after his death, which was caused by consumption, in his twenty-first year, was born in the village in 1746.

KINNETHMONT, a parish, in the district of ALFORD, county of ABERDEEN, 2 miles (N.) from Clatt; containing 1107 inhabitants. This place is thought by some to have taken its name, formerly Kennethmont, from the supposed circumstance of one of the *Kenneths*, kings of Scotland, having been interred in the church-yard, which is an eminence similar to a *mount*. Others, regarding the present orthography of Kinnethmont as more correct, derive the name from two Gaelic words signifying "head" and "moss", which express the proximity of the high ground of the church site to a mossy tract in the vicinity. The parish consists of Kinnethmont properly so called, and of the old parish of Christ's-Kirk, which has been annexed to it from time immemorial. It is situated at the western extremity of the fertile district of the Garioch. It is nearly oblong in figure; is six miles in length from east to west, and about three in breadth; and, with the exception of several hundreds of acres in plantations, and a few other tracts, is under tillage. The surface is pleasingly diversified with hills and vales, and enlivened by the Bogie, a good trout-stream, which runs along the western boundary, and

separates this parish from that of Rhynie. In some parts the ground is mossy, supplying the inhabitants with peat for fuel; but the prevailing soil is a light loamy earth, producing, when well cultivated, excellent crops. All kinds of crops are raised, under the operation of the rotation system: the farms in general vary from eighty to 100 acres, but there are many of much smaller extent. Houses built of stone and lime, and roofed with slate, are gradually displacing the old turf tenements; the scythe has entirely superseded the sickle in the cutting of corn, and on the larger estates threshing operations are performed by machinery. Much land has been trenched; several hundred acres of marshy ground have been drained, and moorland to a considerable extent has been also brought under tillage: large tracts formerly marshy now produce most luxuriant crops. The annual value of real property in the parish is £4578.

The mansion of Leith Hall is the seat of Sir Andrew Leith Hay, who served in the Peninsular war, a narrative of which he has published, with some smaller works. There is also the residence of Ward House, situated upon an estate greatly improved and beautified, during a period of twenty years, by the late proprietor, Mr. Gordon. A turnpike-road, finished a few years ago, runs through the parish from east to west, affording facilities of communication with Aberdeen, Huntly, Inverness, and other parts. The agricultural produce is sent to Inverury, eighteen miles distant, whence it is conveyed by canal to Aberdeen for sale; and on their return from Inverury the carts bring lime and coal. An annual cattle-fair is held in April, another in July, and a third in October. Ecclesiastically the parish is in the presbytery of Alford, synod of Aberdeen, and in the patronage of Sir Andrew Leith Hay: the minister's stipend is £195, with a manse, and a glebe of twelve acres, valued at £15 per annum. Kinnethmont church, a neat and commodious structure, was built in 1812, and is capable of accommodating 600 persons. The members of the Free Church have a place of worship. The parochial school affords instruction in the ordinary branches; the master receives a salary of £25. 13., with a house, about £10 fees, and an allowance from the Dick bequest. The remains of two Druidical temples are still visible; and a bag of silver coins has been found, with "Alexander I." engraved on one side of them. On the hill of Melshach is a chalybeate spring which has long been in much repute.

KINNETTLES, a parish, in the county of FORFAR, 3 miles (S. W.) from Forfar; containing, with the village of Douglaston, and hamlet of Kirkton of Kinnettles, 437 inhabitants. This place appears to have derived its name, signifying in the Gaelic "the head of the bog", from the situation of its church near the extremity of a tract of marshy land, once the bed of a river. It is unconnected with any event of historical importance, though, from various relics which have at different times been discovered, it appears to have been inhabited at a remote period. The parish is about two miles in length and the same in breadth, and comprises 3708 acres, of which 2840 are arable and in good cultivation, about 120 woodland and plantations, and the remainder waste. Its surface is bisected by a hilly ridge of elliptical shape, which, by a very easy ascent, attains an elevation of about 350 feet above the level of the sea, dividing the parish

into two valleys of nearly equal extent. This ridge forms a branch of the Sidlaw hills, and one portion is called the Brighton and the other the Kinnettles hill, from its being in the two estates into which the lands are principally divided. It is mostly in a high state of cultivation, and clothed near the top with rich plantations, forming a very interesting feature in the scenery; and from its summit, which is flat, are extensive and varied prospects over the surrounding country. The lands are watered by a beautiful rivulet called the Kerbit, which has its source in the parish of Carmylie, and winds through the parish with a tranquil current, giving motion to several mills, and falling into the river Dean; it abounds with trout of excellent quality, and is much frequented by anglers. There are also numerous copious springs, affording an abundant supply of water.

In this parish the SOIL is extremely various, consisting of rich dry loam in some parts, in others being of a more damp clayey character, in others sandy and gravelly, and in some places a rich improvable moss. The crops are oats, barley, wheat, a few acres of rye and peas, with turnips and potatoes. The system of agriculture is advanced: the rotation plan of husbandry is in general practice; the lands have been drained, and partially inclosed with stone dykes, &c.; and the farm houses and offices are substantially built and well arranged. On most of the farms threshing-mills have been erected; and all the more recent improvements in the construction of implements have been adopted. Dairy-farming is well managed, and all due attention is paid to the rearing of live stock. The milch-cows, about 100 in number, are the Ayrshire and the Angus: the cattle, generally of the Angus breed, average 500; and the sheep, which are of the Leicestershire and Cheviot breeds, with a few of the Linton, South-Down, and Merino, number 350. There are plantations of silver, spruce, Scotch, and larch firs, intermixed with oak, ash, plane, elm, beech, lime, birch, and other varieties. The substrata are chiefly whinstone, sandstone, and slate. Of these, the whinstone is of compact texture, varying in colour from a dark blue to a pale grey, and is extensively quarried both in the northern and southern districts of the parish; it is, however, very difficult to work, and is obtained only in blocks of small size, of very irregular form, and used chiefly for drains, and for repairing the roads. The sandstone is partly of a grey colour, and partly tinged with a reddish hue; it is quarried for building, and is raised in blocks of massive size. The slate, which is of a fine grey colour, is found chiefly on the banks of the Kerbit rivulet, but not to any great extent; it produces good slates for roofing, and flagstones of large dimensions and of excellent quality. Copper-ore, and also veins of lead, are embedded in the sandstone; manganese is found in the whinstone strata; and garnets, mica, quartz, and calc and lime-spar in the free-stone rocks. The annual value of real property in the parish is £4342.

The mausion-house of Kinnettles was built about half a century ago. Brighton is a spacious mansion, partly ancient, but principally of modern erection, having been greatly improved and enlarged by the late proprietor; and there are some other good houses in the parish, of which those erected within the last fifty years are built of stone, and roofed with slate. The village of Kirkton is small, but neatly built, and is mostly inhabited by

persons employed in the several handicraft trades requisite for supplying the wants of the inhabitants of the parish. The weaving of various kinds of cloth, chiefly Osnaburghs and brown sheetings, is pursued in different parts. Facility of communication with the neighbouring towns is afforded by the railway from Forfar to Perth, which intersects the northern part of the parish; the Strathmore turnpike-road passes for more than two miles through nearly the centre of the parish, and the road from Forfar to Dundee runs through the eastern portion of it. There are bridges over the Kerbit, one of which, at the village of Kirkton, is a suspension-bridge. Ecclesiastically the parish is in the presbytery of Forfar, synod of Angus and Mearns, and in the patronage of the Crown: the minister's stipend is £158. 6. 8., with a manse, and a glebe valued at about £12. 15. per annum. Kinnettles church, erected in 1812 at the expense of the heritors, is a neat edifice, adapted for a congregation of 400 persons. The parochial school is well attended; the master has a salary of £34, with £40 fees, a house, and two bolls of meal annually in lieu of a garden. There is also a female school, the mistress of which has a house and garden, in addition to the fees. The poor receive the interest of a bequest of £50 by Mr. James Maxwell. The upper stone of a hand-mill for grinding corn was discovered by the plough, in a field, in the year 1833; it was rather more than two feet in diameter, was an inch and a half in thickness, and composed of mica schist, intermixed with portions of siliceous spar, and studded with small garnets. A small conical hill near the banks of the Kerbit, and which is still called the Kirk Hill, is supposed to have been the site of some religious foundation; but nothing certain of its history is known. There are several springs of chalybeate properties, and two springs strongly impregnated with copper. Colonel William Patterson, F.R.S., many years lieutenant-governor of New South Wales, was born in this parish in 1755.

KINNOULL, a parish, in the county of PERTH; adjoining the town of Perth, from which it is separated by the river Tay; and containing, with the villages of Bridgend, Balbeggie, and Inchyra, 2879 inhabitants, of whom 920 are in the rural districts. This place, which is supposed to have derived its name, of Gaelic origin, from the extent and beauty of the prospects obtained from the high grounds, was at an early period the property of the family of Hay. Sir George Hay, lord chancellor of Scotland, was created Earl of Kinnoull by Charles I. in 1633; and his descendant, the present earl, is still the chief proprietor in the parish. Of the ancient castle of Kinnoull, the baronial residence of the Hays, some slight vestiges were remaining till within the last fifty years; but the site is now occupied as a garden belonging to one of the villas on the banks of the river Tay. The PARISH, which is bounded on the west by the Tay, is about twelve miles in extreme length, and nearly four miles in breadth, comprising in the rural districts an area of 3700 acres, of which 580 are woodland and plantations, and the remainder, with the exception of about twenty acres of undivided common, are arable, meadow, and pasture. Its surface is diversified with wooded hills of pleasing aspect, of which the hill of Kinnoull, rising from the bank of the Tay to the height of 632 feet, is justly celebrated for the romantic beauty of its scenery. The ascent on the south is pre-

cipitously steep and rocky; but on the north, a spiral road of gradual ascent has been formed to the summit, which is clothed with thriving plantations, and commands a most varied prospect embracing the city of Perth and the adjacent country. Not far from the top, which is divided into two points, is a hollow called the Windy Gowle, near which is a remarkable echo of nine distinct reverberations; and in a steep part of the acclivity is a cave, where Sir William Wallace is said to have concealed himself from his pursuers. About two miles distant from the hill of Kinnoull, and forming part of the same range, is the hill of Murray's Hall, nearly of equal elevation, and commanding also an extensive prospect abounding with interesting features. Near the church the Tay divides into two branches inclosing the island of Moncrieff, of which one-half is within this parish, and the other in the parish of Perth. The river abounds with salmon of excellent quality, and the fisheries belonging to the parish produce a rental of £1200 per annum.

The SOIL, comprehending every variety, is luxuriantly rich; and the lands are in the highest state of cultivation, under a system of husbandry combining all the most recent improvements. A very extensive nursery was formed on the east bank of the river Tay, by Mr. Dickson, in 1767, and affords employment to nearly eighty persons: from this establishment most of the plantations in the parish, which are in a highly flourishing condition, have been supplied. There is a smaller nursery at the extremity of Bridgend. The principal substrata are of the trap formation, with some veins of sandstone of a reddish-grey colour and of good quality for building, for which purpose it is extensively quarried. Agates of great beauty are found in the hill of Kinnoull, and many specimens of them are preserved in different museums. The annual value of real property in the parish is £8667. The mansion-houses are, Balthayock, an ancient castle of the Blair family, of which the more modern portion was built in 1578; Inchyra, of recent date, in the Grecian style of architecture; Murray's Hall, a handsome building; Barnhill, or Woodend, pleasantly seated on the Kinnoull branch of the Tay; and Bellwood, beautifully situated on the hill of Kinnoull, fronting the city of Perth. The village of Inchyra stands on the east bank of the Tay, in a detached portion of the parish, about six miles from the church; it has a convenient harbour, accessible to vessels of 100 tons, with a yard for building and repairing ships, from which two vessels of sixty tons have been launched within the last few years. Bridgend and Balbeggie are noticed under their respective heads. Facility of communication is afforded by the river; by the railway from Perth to Dundee; and by good roads, one of which is the turnpike-road from Perth to Dundee.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Perth, synod of Perth and Stirling. The minister's stipend averages £250, with a manse, and a glebe valued at £20 per annum; patron, the Earl of Kinnoull. The present church, erected in 1826, after a design by Mr. Burn, at an expense of £4000, is a handsome structure in the later English style of architecture, containing more than 1000 sittings. In the aisle of the old church, which still remains as the burial-place of the Hay family, is preserved a monument to George, first Earl of Kinnoull, lord chancellor, who died in 1634,

and whose statue has the left hand resting on a table, on which are placed the great seal of Scotland and a human skull, but without any inscription. There is a place of worship at Balbeggie for members of the United Presbyterian Church. The parochial school is attended by about 140 children; the master has a salary of £34, with a house and garden, and the fees average £40 per annum. Murray's royal asylum for lunatics was founded by Mr. James Murray, with funds which he inherited from his mother, to whom they had been bequeathed by Mr. Hope, her son by a previous marriage. Mr. Hope, with his whole family, was lost in the wreck of the *Duchess of Gordon* East Indiaman, on his return from Madras in 1809. The buildings were erected on the acclivity of Kinnoull Hill, after a design by Mr. Burn, at a cost of £40,000; and the institution was incorporated by royal charter, and opened for the reception of patients, in 1827, being placed under the superintendence of twenty-five directors, of whom nine are *ex officio*, four are chosen for life, and twelve elected annually. The house is situated in the centre of a park of twelve acres, laid out in gardens, shrubberies, and walks, affording ample opportunities of recreation and amusement; and, under an excellent system of management, affords reception and relief to 140 patients. At Balthayock are the remains of an ancient castle, supposed to have belonged to the Knights Templars: the walls, which are about fifty feet in height, and inclose an area fifty-two feet in length and thirty-seven feet wide, are of massive thickness, and still entire. It is situated on the brink of a deep ravine of very romantic appearance.

KINROSS, a post-town and parish, in the county of KINROSS, of which it is the capital, 15 miles (S.) from Perth, and 25 (N. N. W.) from Edinburgh; containing 2822 inhabitants, of whom 2062 are in the town, and 760 in the rural districts of the parish. This place, which derives its name, of Gaelic origin, from its situation at the head of a promontory extending into Loch Leven, is of very great antiquity. It was selected as a stronghold by the Pictish kings, of whom Congal, son of Dongart, founded a castle on an island in the lake, which subsequently became the occasional residence of several of the kings of Scotland. In 1257, Alexander III., after his return from Wark Castle, whither he had gone to have an interview with his father-in-law, Henry III. of England, resided at the Castle of Lochleven, where he was surprised, and, together with his queen, forcibly conveyed to Stirling. In the year 1301, and also in 1335, the castle was besieged by the English; but on both occasions the assailants were compelled to raise the siege, and to retire with considerable loss. In 1429, Archibald, Earl of Douglas, was confined here by James I., for some expression of disloyalty towards his sovereign; and in 1477, Patrick Graham, Archbishop of St. Andrew's, after having been for some time under restraint in a cell at Incheolm, in pursuance of a sentence of deprivation pronounced by Pope Sextus and a college of cardinals, was imprisoned in Lochleven Castle till his death.

But this ancient fortress derives its chief celebrity from the imprisonment in it of the unfortunate Mary, Queen of Scots, who was placed within its dreary walls in 1567. A captive in the hands of the confederate nobles, she was sent from Edinburgh to the Castle of Lochleven, then belonging to William Douglas, one who

had taken an active part against her; and in her journey thither she was treated with studied indignity, exposed to the gaze of the mob, miserably clad and mounted, and under the escort of men of the rudest bearing. The queen was now completely a prisoner, and her confinement was accompanied with circumstances of the greatest rigour; she was put under the charge of Lindsay and Ruthven, two noblemen familiar with blood, and of coarse and fierce manners. The lady of the castle, Margaret Erskine, daughter of Lord Erskine, had been mistress to the queen's father, James V., and was mother to the Earl of Murray. She had been afterwards married to Sir Robert Douglas; and their son, William, was, as already stated, proprietor of the Castle of Lochleven at this period. It was here that Mary made her celebrated resignation of the government in favour of her son, the infant James, and of the Earl of Murray. Feeling assured that her refusal to sign the necessary papers would endanger her life; listening to the insinuation of Robert Melvil, that any deed executed in captivity, and under fear of life, was invalid; and terrified by the stern demeanour of Lord Lindsay, she submitted to what she had at first passionately resisted. Without reading their contents, she, with a trembling hand, affixed her name to three instruments prepared by the confederates. By the first of these she was made to resign the government of the realm in favour of her son, and to give orders for his immediate coronation. By the second, the queen, in consequence of James' tender infancy, constituted Murray regent of the kingdom; and by the third she appointed the Earls of Lennox, Argyll, Atholl, and Morton, with others, regents until the return of Murray from France, with power to continue in that high office if he refused it. From the galling restraint thus imposed upon her in the castle, however, Mary at length, on the evening of the 2nd of May, 1568, found means to escape. George Douglas, younger brother of the proprietor of Lochleven, had enthusiastically devoted himself to her interest; and though dismissed from the castle on that account, he had contrived to secure the services of a page who waited on his mother, Lady Douglas, and by his assistance effectually achieved his purpose of releasing the queen. On the evening in question, the page, in placing a plate before the castellan, dropped his napkin over the keys of the castle, and carried them off unperceived: he hastened to Mary, and hurrying down to the outer gate, they threw themselves into a boat, first turning the locks they had found it necessary to open, and casting the keys into the lake, where, after the lapse of nearly two centuries and a half, they were discovered in the year 1806. Some friends of the rescued queen were lying in wait in the immediate vicinity, and with their aid she fled in the direction of Lanarkshire. In 1569, the Earl of Northumberland, who had incurred the displeasure of Elizabeth of England by the interest which he took in the fate of Mary, was imprisoned for three years in the castle, whence he was removed to England, and publicly executed for treason.

The town, though the chief town of Kinross-shire, and the place where the sessions are held, and the business of the county transacted, is not distinguished by any features of importance. It is not even a royal burgh; and the market which was held here has been gradually discontinued, and is now entirely transferred to Milnathort, in the adjoining parish of Orwell. The streets

are lighted with gas; works for that purpose having been erected on a site nearly equidistant from Kinross and Milnathort, by a company of shareholders established for the accommodation of both places. A public library is supported by subscription, under the direction of a committee; and there is a reading and news room established in an appropriate building in a central part of the town; also a library maintained by the tradesmen and artisans, and three juvenile libraries in connexion with Sabbath schools. The manufacture of cutlery, formerly carried on here to a very considerable extent, has been altogether discontinued. The chief manufactures at present are those of gingham, checks, and pullicates, for the houses of Glasgow; and also, and of still more recent introduction, tartan shawls, plaids, and other articles of similar character, by some companies settled in the town. There is likewise a manufactory for damasks. The post-office has a daily delivery; and a branch of the British Linen Company has been established. Facility of intercourse with the neighbouring places is afforded by excellent roads, of which the great north road passes through the town; and there are not less than thirteen bridges of stone over the various streams that intersect the parish. Fairs are held on the last Wednesday in March, the 1st of June, the last Wednesday in July, and the 18th of October, all O. S.; they are for cattle, agricultural produce, and various articles of merchandise. The government is vested in a president, treasurer, and clerk, assisted by a committee of eight or ten persons; they are annually chosen by the inhabitants, at a general meeting held for that purpose, and the police and all other regulations are conducted by them, the expenses being defrayed by subscription. The county-hall is a handsome edifice, erected in 1826, at a cost of £2000, of which £750 were granted by government, and the remainder raised by voluntary contribution, and assessment of the heritors of the county. It contains a spacious hall for the courts, and the apartments requisite for conducting the public business. Attached to it is the gaol, comprising three wards for debtors, two cells for criminals, and a guard-room.

The PARISH is about four miles in length from east to west, is bounded on the east by Loch Leven, and comprises 7062 acres, of which 6608 are arable, 271 woodland and plantations, and the remainder rough pasture and waste. Its surface, though generally elevated, is flat, in no part rising into hills. The chief river is the Leven, which issues from the lake of that name, and has been rendered more copious and powerful in its stream by a contraction of the expanse of the lake. There are numerous springs of excellent water; and the scenery, in many parts romantic, is enriched by thriving plantations. Loch Leven, the principal object of attraction, as well from its natural beauty as from the historical events with which it is associated, was, previously to the contraction of its surface by draining, fifteen miles in circumference, and in its present state may be estimated at about twelve miles. It is studded with islands, the chief of which are, the island of St. Serf in the parish of Portmoak, and the Castle island in this parish, the latter so called from the erection of the ancient castle. The Castle isle, situated near the north-western extremity of the lake, is five acres in extent. Lochleven Castle, which is defended by an outer rampart of stone, inclosing a spacious quadrangular area, consists chiefly of a lofty square

tower at the north-west angle of the inclosure, and a round tower of smaller dimensions at the south-east. The building is without a roof, and at present is a mere ruin; some portions of what is supposed to have been the chapel are still remaining, and under the square tower is a dungeon. The whole area within the rampart is about 600 feet in circumference. The island is planted with trees, some of which are of great age; and the surface affords good pasturage. Loch Leven abounds with trout and various kinds of fish, but not in such variety as before its contraction; the season commences in January, and ends in September, and the fish chiefly taken are trout, pike, perch, and eels, two boats and four men being employed. The fishery is let at a rent of £204; and the produce is sent to the markets of Edinburgh, Glasgow, and Manchester, at which last place it is in great demand.

In general the SOIL is fertile and productive; the crops are oats, barley, wheat, potatoes, and turnips. The system of agriculture is improved; the lands have been well drained and inclosed; the farm houses and offices are substantial and commodious; and on most of the farms threshing-machines have been erected, one of which is impelled by steam. Considerable attention is paid to the rearing of live stock, and much improvement has been made under the auspices of the various agricultural societies established in the vicinity, several of which hold their cattle-shows in the town. There are about 350 cows, and a nearly equal number of calves, with 650 head of young cattle; the number of sheep is 400, and of horses 300. The annual value of real property in the parish is £11,102. The plantations are larch, Scotch and spruce firs, intermixed in some parts with different kinds of forest-trees; they are judiciously managed, and in a thriving condition. In this parish the substrata are, sandstone, which is found in two varieties, the old red formation and the carboniferous; whinstone; and limestone. The whinstone, which is very compact, is quarried for the roads, being well adapted for that purpose. Coal is supposed to exist, and it has been in contemplation to explore it; but an abundant supply of that mineral is procured from works not more than five miles distant, and at a very moderate cost. There are three extensive mills in the parish, all of them formerly for grain; but two have been converted into mills for spinning and carding, connected with the manufactories of tartan plaids. Kinross House, the seat of Sir Graham Montgomery, Bart., a spacious mansion erected by Sir William Bruce, architect to Charles II., was originally intended as a residence for James, Duke of York; it is finely situated, and was once surrounded by some very ancient and stately timber.

Ecclesiastically the parish is in the presbytery of Dunfermline, synod of Fife, and in the patronage of Sir Graham Montgomery: the minister's stipend is £184. 16. 8., with a manse, and a glebe valued at £35 per annum. The present church, a handsome edifice in the later style of English architecture, was erected in 1832, at an expense of £1537, towards which the Rev. Geo. D. C. Buchanan contributed about £300: it is situated on an eminence nearly in the centre of the parish. The tower of the old church is still standing, by itself, in the town. There are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school affords a liberal education, and is well

attended ; the master has a salary of £34, with £55 fees, and a house and garden. A savings' bank, established in 1837, contributes to diminish the number of applicants for parochial relief ; and there are four friendly societies, and a ladies' society for the distribution of oatmeal to necessitous females. The sum of £8. 6. 8. is annually given to twelve poor persons, in lieu of the foundation of an almshouse which was projected by Sir William Bruce ; and the poor have also the interest of a bequest of £100 by George Graham, Esq., of Kinross. About a mile from the town is a small cairn ; and there were formerly others, in one of which, when removed, was found a coffin, rudely formed of upright stones with a slab resting on them, and inclosing several human bones, and some ashes apparently of burnt wood. On the lands of Coldon have been discovered about 400 silver coins, chiefly of Edward I. and Edward II. of England, and a few of the reigns of Alexander III. and John Baliol. At West Green, in 1829, there was found, deeply embedded in the earth, an ancient seal of pure gold, of singular workmanship ; it has the arms of Scotland on the dexter side of the shield, impaled with those of England on the sinister, and is supposed to have been the private signet of James IV. On the lands of Lathro several graves have been discovered by the plough, containing some human bodies and a skull : near the spot is an eminence called the Gallows Know, which renders it probable that these may have been the skeletons of malefactors, executed here prior to the abolition of heritable jurisdictions. Dr. John Thomson, professor of general pathology in the university of Edinburgh, was a native of this parish.

KINROSSIE, a village, in the parish of COLLACE, county of PERTH, $1\frac{1}{4}$ mile (W.) from Collace ; containing 157 inhabitants. It stands in the western part of the parish, on the road from Collace to Cargill, and is built on an eminence not far distant from the church. Formerly two considerable annual fairs were held here, of which the ancient cross is now the only memorial, the business in cattle and small wares having been transferred to Burrelton and other places in the neighbourhood. A part of the population is engaged in loom manufactures, which have latterly much increased in the parish.

KINROSS-SHIRE, an inland county, in the south-east of Scotland, bounded on the north-west by the Ochils, which separate it from Strathearn, in the county of Perth ; and on the east by the Lomond hills, on the south-east and south by the Benarty range, and on the south by the Cleish hills, which divide it from the county of Fife. It lies between $56^{\circ} 9'$ and $56^{\circ} 18'$ (N. Lat.), and $3^{\circ} 14'$ and $3^{\circ} 35'$ (W. Long.), and is about eleven miles in length and nine miles in extreme breadth ; comprising an area of seventy square miles, or 44,800 acres ; 1928 houses, of which 1812 are inhabited ; and containing a population of 8763, of whom 4195 are males and 4568 females. Prior to the year 1426, the greater portion of the county was part of that of Fife ; and for a considerable time after its separation, it contained only the parishes of Kinross, Orwell, and Portnoak ; but in 1685 were added the parishes of Cleish and Tulliebole, and some small portions of the county of Perth. It remained, however, notwithstanding this accession of territory, under the jurisdiction of the sheriff of Fifeshire till the year 1807, when, conjointly with Clackmannan,

it was erected into a sheriffdom. Before the abolition of episcopacy the county was included within the archdiocese of St. Andrew's ; it is at present in the synod of Fife, and presbyteries of Dunfermline, Kirkealdy, &c. For civil purposes it is under the superintendance of a sheriff-substitute, who resides at Kinross, the county-town, where all the courts are held ; it contains the populous village of Milnathort, and a few hamlets. The shires of Kinross and Clackmannan unite in sending a member to parliament.

The SURFACE, though hilly towards the boundaries, is generally level in the interior, and is divided into several extensive plains. Of these the chief are, Blair-Adam, between the Benarty and Cleish hills, through which the great north road passes ; a wide level opening towards the Crook of Devon, on the road to Stirling ; and another between the Ochil and Lomond hills, to the north-east, leading towards Cupar of Fife. The principal river is the Leven, which issues from Loch Leven, and flows through a narrow valley into the Firth of Forth at the Fifeshire town of Leven. Several rivulets rise in various parts, and flow into Loch Leven, the only lake in the county. This noble sheet of water, which has an elevation of nearly 360 feet above the level of the sea, is of oval form, and twelve miles in circumference, covering about 4000 acres, and abounding in trout, pike, perch, and eels. There are some small islands in it, one of which, near the shore at Kinross, is five acres in extent, and contains the remains of the castle in which Mary, Queen of Scots, was detained a prisoner, and which is supposed to have been originally founded by Congal, King of the Picts, in the fifth century, and subsequently enlarged. Another island, called St. Serf's, from the foundation of a priory dedicated to St. Serf, or Servanus, at a very ancient period, is 100 acres in extent, and affords pasturage to a number of cattle and sheep. An act of parliament was obtained within the last few years, for partly draining this lake, which has been carried into effect, at an expense of £40,000 ; and about 1000 acres have been recovered from it ; but the soil, contrary to expectation, is poor and sterile, and not likely to afford any equivalent remuneration. Before this diminution of its size, the lake was fifteen miles in circumference.

About four-fifths of the land are in profitable cultivation, and divided into farms varying from 50 to 300 acres in extent ; the soil is partly light and dry, partly a rich loamy clay, and partly moor. The system of agriculture is greatly improved ; the lands have been well drained and inclosed ; and excellent crops of oats and barley are produced, and, in the best soils, fine crops of wheat. The pastures on the low lands are principally for cattle ; and considerable numbers of sheep are fed upon the Cleish and Ochil hills. Above 3000 acres are in woodland and plantations, of which latter the most important are those on the lands of Blair-Adam, 1300 acres in extent, consisting of oak, ash, larch, elm, spruce, and silver and Scotch firs ; all, except the Scotch firs, in a thriving condition. The minerals are not extensive. Coal is found in the south, but it is not wrought ; free-stone of excellent quality is quarried in the parish of Cleish, and whinstone is every where abundant. Red sandstone prevails in the district to the north of Kinross, and limestone may be obtained in abundance on the Lomond hills. The manufacture of cutlery, which was

formerly carried on to a great extent, has been discontinued; and the only branches now pursued are, the weaving of cotton for the manufacturers of Glasgow, and the manufacture of tartan shawls and plaids, for which there are some large establishments at Kinross and Milnathort. Facility of communication is afforded by excellent roads in every direction. The annual value of the real property in the county is £44,010, of which £38,892 are for lands, £4375 for houses, £210 for fisheries, £93 for mines, £29 for quarries, and the remainder for other descriptions of real property not comprised in the foregoing items.

KINTAIL, a parish, in the county of Ross and CROMARTY, 10 miles (E. S. E.) from Lochalsh; containing, with the village of Dornie and Bundaloch, 1168 inhabitants. This parish derives its name from a Gaelic term, signifying "the head of two seas", and descriptive of its situation on a point of land where two seas meet. Nothing is known concerning its history earlier than the period of Alexander III., who presented to Colin Fitzgerald, the founder of the noble family of Mackenzie, the castle of Donan in the village of Dornie, now a ruin, for his eminent services in the royal cause, both by sea and land, at the battle of Largs. The family derive their crest of a burning mount from the lofty and famous mountain here, called Tulloch-ard, upon the top of which, in ancient times, a barrel of burning tar was exhibited as a signal for the rendezvous of the vassals of the Mackenzies, on the commencement of hostilities. The PARISH, which is situated on the west coast of Ross-shire, is about eighteen or twenty miles long, and five or six broad; it is surrounded by hills in almost every direction, and is altogether one of the most mountainous and wild districts in the country. The northern division, called *Glenelchaig*, is separated from the southern and western parts by a lofty and almost inaccessible ridge; and a length of about ten miles only of the extent of ground in the parish is inhabited: this portion is contained between the north-east end of *Loch Loing* and the south-east end of *Loch Duich*, two maritime lochs. On all sides the approaches are majestic and commanding. The mountains of *Ben-Ulay*, *Glasbhein*, *Soccach*, and *Maam-an-Tuirc*, in the parish, abound with romantic scenery; and their vicinity is plentifully enriched with every variety of valley, wood, and water. *Tulloch-ard*, however, situated on the north side of Loch Duich, and embracing an extensive view of the Western Isles, is the most celebrated mountainous elevation, both for its towering appearance and for its history in legendary song. The pass of *Bealach*, a few feet only in breadth, and enclosed by lofty and precipitous rocks, the whole encompassed with lonely glens and wild mountain woods, is a spot which has always interested the admirer of wild and lonely scenery. There are many good springs, and a few inland lakes, the chief of which are *Loch-a-Bhealich* and *Loch Glassletter*, abounding with fine trout, and famous for angling. The waterfall of *Glomach*, situated in a sequestered valley about seven miles from Shealhouse, is highly celebrated. At this place a stream is precipitated from an elevation of 350 feet, and, obstructed in its descent by the projection of a rugged crag, throws forth a volume of beautiful spray, of unusual dimensions: the fall is surrounded on all sides with mountainous and barren scenery. The chief rivers are the *Loing*, which separates Kintail from Lochalsh;

the *Croe*, which divides it from Glensheil; and the *Elchaig*: the *Croe* runs into Loch Duich, and the two others into Loch Loing.

This parish is almost entirely pastoral. The larger farms are held by the proprietors of the parish, two or three in number; and the most improved system of husbandry is adopted on these lands. Great attention is paid to the breeding of sheep; and by crossing the old stock with the Cheviots, it has of late years been much improved, the sheep now fetching excellent prices at the markets in the south, particularly that of Falkirk, to which they are chiefly sent. There are several small but thriving plantations, consisting of Scotch firs, spruce, larch, oak, ash, birch, and elm. The rocky strata are composed chiefly of gneiss, distinguished frequently by a variety of veins; there are also considerable beds of granite and sienite. The annual value of real property in the parish is £3017. Dornie and Bundaloch form one village, situated on the north-east shore of Loch Loing; it is inhabited principally by fishermen, and is very thickly peopled. The bays worth notice are those of Dornie, Corfhouse, and Inverinate. A parliamentary road from the western coast to Inverness runs through the parish, and is in very excellent condition; while more distant communication is afforded with this neighbourhood by the Glasgow and Skye steam-boats, by which all necessaries are obtained. There are fisheries for salmon established on Loch Duich and the river *Croe*; they are let to strangers, who send the fish to the London market. Ecclesiastically the parish is within the bounds of the presbytery of Lochcarron, synod of Glenelg, and the patronage is in the Crown: the stipend of the minister is £177, with a good manse, built in 1831, and a glebe of the annual value of £40. Kintail church, which is inconveniently situated at a great distance from the body of the parishioners, is capable of accommodating about 300 persons: it was repaired about 1820, when two small galleries were erected; but is at present in a dilapidated state, and too small for the population. The Roman Catholics have a place of worship. There are two catechists in the parish; and a parochial school is maintained, where the usual branches of education are taught, the master having a salary of £27, with a house, and an allowance in lieu of garden. Two other schools are supported by the Gaelic Society. The chief relic of antiquity is the ruin of Ellandonan Castle, near the village of Dornie, surrounded by beautiful scenery; it is supposed to have been built about the time of Alexander III.

KINTESSACK, a village, in the parish of DYKE, county of ELGIN, 3 miles (W. by N.) from Forres; containing 122 inhabitants. It is a small village, lying a short distance from the shore of the Moray Firth. Until within these few years there was a good school here, but it was given up for want of sufficient support; there is, however, a small female school.

KINTORE, a royal burgh and a parish, in the district of GARIOCH, and county of ABERDEEN, 4 miles (S. S. E.) from Inverury, and 12 (N. W. by W.) from Aberdeen; containing, with the village of Port-Elphinstone, 1299 inhabitants. The name of Kintore signifies in Gaelic "the head of the forest". The place was formerly remarkable for its castle, said to have been built by Robert Bruce for a hunting-seat, and which was the occasional residence of several of the Scottish kings,

who enjoyed the pleasures of the chase in the royal forest adjacent. This castle, called the Castle of Hall Forest, was granted, with surrounding lands which are supposed to have extended from the west part of the parish to Dyce church, a distance of five or six miles, to Robert de Keith, great marischal of Scotland, by Bruce, after the battle of Inverury, or, as is more generally supposed, after that of Bannockburn, for eminent services rendered to the king. Upon this, it became the seat of the family; the son of Robert de Keith was created Earl of Kintore, and it continued to be inhabited so late as the seventeenth century by the same family, who hold the property at the present time. The castle appears to have been of considerable strength, and its vicinity was the scene of various conflicts: here Bruce is said to have completed the destruction of the army of Edward I., after the defeat of Cumyn, Earl of Buchan, near Inverury.

The town of KINTORE, situated on the bank of the river Don, was once of some consequence, being the place of meeting of the great northern road by Aberdeen, and the roads leading to some of the principal passes of the Grampian mountains. It is, however, at present of small dimensions, and the houses and buildings are not of sufficient importance to merit particular notice; the village of Port-Elphinstone having become the main point of interest and traffic, chiefly on account of its situation at the head of the Aberdeenshire canal. The burgh contains several good shops for necessary commodities; but through the facilities of intercourse with Aberdeen, many articles are procured from that place. There are a subscription library and a savings' bank; and the post-office established in the town is the oldest in the district of Garioch. A branch of the northern road from Aberdeen to Inverness extends westward, and at last joins the Alford turnpike-road; and the royal mail and several other coaches pass and repass daily: there is likewise a depôt at the town, on the Aberdeenshire canal. In 1846 an act of parliament was passed authorizing the construction of a railway, nearly sixteen miles in length, from Kintore to Alford. The northern part of the parish, as well as Port-Elphinstone, has Inverury as its post-town. Monthly markets are held, chiefly for the sale of cattle.

Kintore was erected into a ROYAL BURGH by a charter of King James IV., dated February 4th, 1506, and is governed by a provost, two bailies, a dean of guild, a treasurer, and nine councillors. The old council, with the magistrates, choose the new magistrates; then the old council, with the new magistrates, choose the new council: there is no restriction with respect to re-election, and the present resident chief magistrate has consequently been in office some time. The burgh has neither property nor debt; its only revenue consists of feu-duty paid by the Earl of Kintore, amounting to £9. 6. Scots, and of £1. 13. 4. sterling, paid annually by the family of Craigievar to the poor of Kintore, as a fine for the murder within the burgh of one of the family of Gordon of Craigmile. The magistrates have no power of taxing the inhabitants; the cess and burgh charges, amounting to £5. 2. per annum, are paid by Lord Kintore. Nor have they for many years been in the practice of exercising jurisdiction, either civil or criminal, except in confining a disorderly person for the night. Peace is maintained by a town-serjeant and one or two special

constables, and Lord Kintore provides a gaol and town-house. This burgh is classed with the Elgin district of burghs in returning a member to parliament.

The PARISH, including the lands of Creechly and Thainston, which were detached from the parish of Kinkell, and annexed to it in 1760, is about six miles and a half in length from the southern to the northern extremity, and at its greatest breadth measures a little more than three miles. It comprises 8430 acres, of which 3408 are under cultivation, 2478 waste or permanent pasture, 652 waste, but capable of cultivation, and 1892 occupied by wood. The surface is uneven, and in many places rugged; but there is no high land except the hill of Thainston, which rises about 250 feet above the level of the sea, and by its beautifully-wooded scenery, in connexion with the smoothly-gliding stream of the Don, invests the locality with a lively and interesting appearance. The lands rising from the town, which is situated in the vale of the Don, are alluvial and rich, occasionally interspersed with hollows of mossy soil. The level and cultivated parts not immediately on the river side consist of a light sandy earth, or drained moss. On the higher grounds the soil is so thin in many places that the substratum is scarcely covered. Considerable portions of peat-moss have been reclaimed, and the remainder supplies fuel. Grain of all kinds, potatoes, and turnips are raised; and their aggregate annual value, with the revenue from pasturage, hay, and the cuttings of woods and plantations, amounts to above £10,000. The cattle are chiefly of the Aberdeenshire breed, and much care is taken in selecting those of good shape, and without horns. Formerly large flocks of sheep, numbering upwards of 2000, were pastured on the moors; but very few are now kept, extensive plantations having been since formed. The most improved system of husbandry is followed; large tracts of waste land have been reclaimed and cultivated, and embankments have been raised against the inundations of the river Don. Furrow-draining has been successfully practised; and during the last thirty years more than 300 acres have been trenched, drained, and inclosed by the tenants, under the encouragement of the proprietor. The annual value of real property in Kintore is £4525.

The rock in the parish, as in most of the neighbouring parts, consists of granite, which exists in large masses forming the substratum, and is also found in blocks upon the surface, thus rendering the improvement of some of the waste grounds a work of great labour. Part of the wood is ancient; but a large proportion is plantation, chiefly of larch, Scotch, and spruce firs, about 250 acres of which, for some years past, have been annually planted by Lord Kintore. The mansion of Thainston is an elegant modern structure, beautifully situated in a well-wooded tract, and commanding fine and extensive views. Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of the Earl of Kintore: the minister's stipend is £184, with a manse, and a glebe of eight acres, valued at £23 per annum. Kintore church, situated in the town, was built in 1819, and contains accommodation for 700 persons. The members of the Free Church have a place of worship. The parochial school affords instruction in Latin, Greek, geography, and the usual branches of education; the master has a salary of £30, with about £30 fees. A legacy was lately left by Mr. John Buchan, of Aberdeen,

a native of Kintore, for the promotion of education, the will directing £200 to be put to interest, to form an endowment for a school to be founded in the western extremity of the parish. A charitable bequest of £9 per annum, called Davidson's, is confined to the poor of the burgh. The only relic of antiquity worthy of notice is the ruin of the castle, situated about a mile westward of the Aberdeen road; it is a rectangular structure, containing two lofty arched apartments, one over the other, and forms an impressive object from several points of observation. Arthur Johnston, the poet, celebrated for his elegant Latinity, was a pupil in the parochial school of Kintore; and Sir Andrew Mitchell, ambassador to Prussia in the reign of Frederick the Great, possessed the estate of Thainston, where he often resided.

KINTULLOCH, a village, in the parish of **DUNBARNY**, county of **PERTH**, 3 miles (S. by E.) from Perth; containing 119 inhabitants. This place takes its name from a Gaelic term signifying "the top of a gentle rising ground or green eminence," on account of its contiguity to a slope near a brook. The lands were granted, under William the Lion, to Hugh Say, an Englishman, whose estate, having descended to Arabella his sister, passed in part from her by gift, after the death of her husband Reginald de Warrene, to the monks of Scone in 1249; and finally, after frequently changing proprietors, came into the possession of Mr. Grant of Kilgraston. The village is situated half a mile south-west of the church, and is chiefly inhabited by cottars, whose tenements are remarkable for the cleanliness of the interior, and for the tasteful manner in which the fronts are ornamented with roses and evergreens. At one extremity of this pleasing spot, is a splendid gateway leading to Kilgraston. There is a school, the master of which has a free house and garden, allowed by the Grant family.

KIPPEN, a parish, partly in the county of **PERTH**, but chiefly in the county of **STIRLING**; containing, with the greater portion of the former quoad sacra parish of Buckleyvie, the village of Kippen, and the hamlets of Arnprior, Cauldhame, Kepp, and Shirgarton, 1922 inhabitants, of whom 397 are in the village of Kippen, 10 miles (W.) from Stirling. This place derives its name, in the Gaelic language signifying "a promontory", from the situation of the village at the extremity of an eminence which terminates near Boquhan, in the eastern portion of the parish. Few events of historical importance are recorded in connexion with the place, though, from the names of several localities, indicating ancient fortresses, of which there are now scarcely any vestiges remaining, it appears to have been the scene of frequent hostilities between the different clans in the vicinity. In the reign of James V., a dispute arose between the inhabitants of the baronies of Arnprior and Glentirran, respecting the course of the stream issuing from Loch Leggan, which dispute terminated in a sanguinary battle near the loch, when many persons on each side were killed. Upon this occasion, the king, who at that time resided in the castle of Stirling, ordered the stream to be diverted into the channel it at present occupies, and, depriving both parties of their claim, erected on its banks a mill, which still retains the appellation of the Royal Mill.

The **PARISH** is bounded on the north by the river Forth, and is about eight miles in extreme length, varying from two to four miles in breadth, and comprising

rather more than 10,000 acres, of which 5300 are arable, 600 woodland and plantations, and the remainder meadow, pasture, and waste. The surface of the parish, which contains two portions of the county of Perth, stretching from north to south, and detaching nearly one-third of Kippen from the county of Stirling, is pleasingly diversified with rising grounds of moderate elevation. Along the shore of the Forth extends a level tract of carse land in a state of the richest cultivation, from which the ground rises towards the south by a partly abrupt, but generally gradual, ascent for more than a mile, beyond which it again subsides by a gentle declivity. From the higher grounds is obtained an extensive and varied prospect over the surrounding country, embracing the whole of the carse, Stirling Castle, the rocks of Craigforth and the Abbey Craig, the braes of Monteith, and the range of the Grampians from the Ochil hills to Ben-Lomond. The river Forth is here of inconsiderable width, and the stream greatly discoloured by the floating moss, which has also injured the fishery, previously very lucrative. Several rivulets flow through the glens that intersect the parish, and most of them abound with trout of good quality. The burn of Broich, issuing from Loch Leggan, runs along the beautiful glen of Broich, and afterwards, in its course to the Forth, serves chiefly to float off the moss in the plain below. The burn of Boquhan, which is the boundary line between this parish and Gargunnock, has its rise in the rock of Ballochleam, and in its descent has made for itself a channel through the substratum of red sandstone, which it has excavated into caverns of singular form: flowing along the richly-wooded glen of Boquhan, it falls into the Forth at the bridge of Frew. Some smaller rivulets, in their way through their respective glens, exhibit picturesque cascades; and on the moor of Kippen is Loch Leggan, a fine sheet of water about a mile in circumference, whose shores are well wooded, and which is the only lake in the parish.

For some breadth from the shore of the Forth the soil is light and fertile, and in the carse between it and the higher grounds a deep rich clay; on the acclivities, a loam alternated with sand and gravel; and towards the summit, of lighter and less productive quality. There are also considerable tracts of moss, with which, indeed, the whole carse appears to have been formerly overspread. The crops are wheat, oats, barley, beans, potatoes, and turnips; the system of husbandry is in a highly-improved state. The lands have been drained, and are generally well inclosed; and much moss has been reclaimed and brought into cultivation: the farm-houses are substantial and commodious, and on most of the farms are threshing-mills. Dairy-farming is well managed; the cows are usually of the Ayrshire breed. Considerable attention is paid to live stock, and all the more recent improvements in the construction of agricultural implements have been adopted. There are about sixty or seventy acres of ancient woods remaining. The plantations, which are extensive, are chiefly larch and Scotch fir on the higher lands, and on the lower comprise oak, ash, and elm, which are all in a thriving state. In the glens are also large tracts of coppice-wood, and a great part of the moor has recently been planted. The principal substrata are red sandstone, and limestone; and coal is supposed to exist, though some attempts to explore it have not been attended with success. The

sandstone is extensively quarried on the moor; it is soft when taken from the quarry, but hardens on exposure to the air, and is of excellent quality for building, for which purpose large quantities are sent to a considerable distance. The limestone is found chiefly in the southern district of the parish, and is also of good quality; but from the want of coal, which is to be obtained only from a great distance, it is but little wrought for burning into lime. The annual value of real property in the parish is £8775. The seats are, Garden, a handsome modern mansion, to which additions have been made; and Broich House, also a modern residence, beautifully situated. In the grounds of the latter is an extraordinary yew-tree; it is of great age and size, and does not appear to have been ever lopped or pollarded. An engraving of this fine tree is given in the Gentleman's Magazine for April 1850.

The village of Kippen has a pleasingly-rural appearance. A public library is supported by subscription, and there is a library of religious books for gratuitous circulation; a post-office is established under that of Stirling, and has a daily delivery. Fairs for cattle are held on the first Wednesday in January, the second Wednesday in April, the 26th of May, the 23rd of October, and the first, second, and third Wednesdays in December. Facility of communication is maintained by the road from Stirling to Dumbarton, which passes for seven miles through the parish; by a turnpike-road from the village to Glasgow, which intersects the parish for three miles in a south-west direction; and by bridges over the Forth, in excellent repair. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Dunblane, synod of Perth and Stirling. The minister's stipend averages £260, with a manse, and a glebe valued at £12 per annum; patrons, the family of Galbraith of Blackhouse. Kippen church, erected in 1825, is a handsome structure in the later English style of architecture, with a square embattled tower, and contains about 800 sittings. The members of the Free Church have a place of worship. A church in connexion with the Establishment was built in 1835 at Bucklyvie, where is also a place of worship for the United Presbyterian Church. There are two parochial schools, one at Kippen, the master of which has a salary of £27. 15. 6., with a house and garden, and fees amounting on the average to £20; and the other at Claymires, in Bucklyvie, the master of which, in addition to the fees, has a salary of £5. 11., with a house and garden. The late Rev. James Miller of Edinburgh, who was a native of this parish, bequeathed, in trust to the Kirk Session of Kippen, property for the foundation of a bursary of £24 in each of the universities of Edinburgh and Glasgow, for young men prosecuting their studies with a view to the ministry in the Established Church of Scotland. The Kirk Session of Kippen are the patrons, and the election is directed to be made on Mr. Miller's father's gravestone in Kippen churchyard. There are no remains of the ancient castle of Arnfinlay, or of the Tower of Garden, formerly in the parish; and of several small heights called Keirs, supposed to have been originally Pietish or Celtic fortresses, and on which are still vestiges of military works, nothing of the history is distinctly known.

KIRK, a hamlet, in the parish of LUNDIE and FOWELIS, county of FORFAR, 7 miles (W. N. W.) from Dundee;

containing 75 inhabitants. The population of this small place is entirely agricultural.

KIRKCALDY, county of FIFE.—See KIRKCALDY.

KIRKANDREWS, a small village, in the parish of BORGUE, stewartry of KIRKCUDBRIGHT, 2 miles (W.) from Borgue; containing 47 inhabitants. It is seated on the south-east shore of Wigtown bay, into which opens a bay of its own name, about a mile north-west of Boreness Point. This village was formerly of greater extent and importance than it is at present, and was noted for the periodical celebration of horse and foot races, to which numbers were attracted from all quarters. The ruins of its ancient church have a beautifully-picturesque and romantic appearance.

KIRKBEAN, a parish, in the stewartry of KIRKCUDBRIGHT, 12 miles (S.) from Dumfries; containing, with the villages of Carsethorn, Preston-Mill, and Saturness, 891 inhabitants, of whom 91 are in the village of Kirkbean. This parish, the name of which, in the Gaelic language, is descriptive of the situation of its church at the foot of a mountain, is bounded on the east and south by the Solway Firth, and is about six miles in length and three in average breadth, comprising nearly 11,000 acres, of which 5000 are arable, and the remainder hill pasture, plantation, moorland, and waste. Its surface is mountainous and rugged, especially towards the west, where are lofty ridges of hills terminating to the north in the height of Criffel, which has an elevation of 1900 feet above the sea. From Criffel the land slopes gradually towards the shore, is tolerably level, and in a high state of cultivation. The hill commands from its summit very extensive and varied prospects, embracing views of Annan, Carlisle, Dumfries, Castle-Douglas, and the Isle of Man; and in favourable weather the mountains of North Wales, and the north coast of Ireland, may be dimly seen. In general the coast is low and sandy, but interspersed with rocky precipices of considerable elevation, in one of which, near Arbigland House, is a naturally-formed arch of romantic appearance; the principal bay is that of Carse, and the most prominent headlands are Borron Point and Saturness.

The SOIL in some parts is light and sandy, in others of greater depth and fertility; and a considerable tract of land, recovered from the sea by an embankment constructed by the Oswald family, has been brought into profitable cultivation. The crops are oats, barley, wheat, potatoes, and turnips; the rotation system of husbandry is practised, and bone-dust and guano have been introduced as manure. Much improvement has been, and continues to be, made by draining the lands, which are also well inclosed; many of the farms are extensive, and the farm houses and offices are substantial, and kept in good repair. The hill pastures support a number of sheep of the Cheviot breed, and attention is paid to the rearing of live stock generally; the cattle are of the native breed, with the exception of the cows on the two dairy-farms, which are Ayrshire. There is little ancient wood, and the plantations are far from being extensive. The substrata are chiefly white granite, of which most of the rocks are composed, limestone, and sandstone of a very coarse kind: the limestone, though of inferior quality, is well adapted for building. Indications of coal have been observed, but not holding out sufficient inducement to operations. The annual value of real property in the parish is £5758. Arbigland House, the

seat of Mr. Hamilton Craik, is a handsome mansion, situated near the coast, in a tastefully-embellished demesne : Cavens is also a handsome residence, belonging to Mr. Oswald. The village of Kirkbean stands on the estuary of the Nith, in a beautifully-rural valley, and consists of pleasing cottages kept in the neatest order, and surrounded by thriving plantations. At Saturness, on the coast, are several small cottages, which, during the season, are inhabited by respectable families for the purpose of sea-bathing ; and at Preston Farm there was formerly a burgh of regality, of which the ancient cross is still remaining. At Carsethorn, also a bathing-village, steam-packets touch twice a week, in their passage from Dumfries to Whitehaven and Liverpool ; and vessels anchor safely in its bay when they cannot proceed to Dumfries. Preston-Mill contains a population of 76. There is a mail-coach daily, except Sunday, to and from Dumfries ; and facility of communication generally is afforded by the turnpike-road that passes through the parish to that town.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery and synod of Dumfries. The minister's stipend averages about £190, with a manse, and a glebe valued at £18 per annum ; patron, the Duke of Buccleuch and Queensberry. Kirkbean church is a commodious and handsome structure, erected in the year 1776, with a tower crowned by a dome, erected by subscription in 1835 ; it is beautifully situated in the vale, and is adorned with clumps of plantation on little knolls surrounding it. The members of the Free Church have a place of worship on the south-western verge of the parish. The parochial school affords instruction to about seventy children ; and the master has a salary of two chalders of meal, with a house and garden, and the interest of a bequest of £608. 4., producing £24. 6. 6., for which sum he teaches thirty poor children gratuitously : the fees average £28 per annum. There is also a school about three miles distant from the former ; the master receives the interest of a bequest of £400 by Messrs. Marshall, of Glasgow, to which £100 have been added by the present minister, the Rev. Thomas Grierson. The poor have the interest of various bequests amounting in the aggregate to £350. At Wreaths, and also at Cavens, are some remains of castellated buildings, of which the latter was the property, and occasionally the residence, of the Regent Morton ; and at Borron Point are vestiges of an ancient moat and ditch called Mc Culloch's Castle, the history of which is unknown. Among the natives of the parish of Kirkbean have been, Admiral John Campbell, who accompanied Commodore Anson in his voyage of circumnavigation, born here in 1719, while his father was minister of the parish ; and the late Dr. Edward Milligan, distinguished as a lecturer on medical science in Edinburgh, who died in 1833, at the age of 47. Dr. Milligan was a striking example of what can be achieved by a decided determination to literary and scientific pursuits, in the face of much discouragement and difficulty. For a considerable time he followed the humble occupation of shoemaking ; but proceeding to college, his abilities soon appeared, and as a lecturer he guided the studies of others with the most complete success, continuing his labours even during the blindness that preceded his last illness. John Paul, better known as the notorious Paul Jones, and whose father was gardener at Arbigland, was also a native.

KIRKCALDY, a royal burgh, a sea-port, and a parish, in the district of KIRKCALDY, county of FIFE, 14 miles (E. by N.) from Dunfermline, and 14 (N. by E.) from Edinburgh ; the parish containing 5275 inhabitants, of whom 4785 are in the burgh. This place derives its name from an ancient church founded here by the Culdees, and annexed in the reign of David I. to the monastery of Dunfermline, into which that monarch had introduced an establishment of Benedictine monks from Canterbury. The origin of the town is very obscure, neither is there any authentic history of its early progress. It is supposed, however, that its proximity to the sea, and the abundance of fuel in the vicinity, induced numbers to settle here at a remote period, for the cultivation of commerce and manufactures. The first notice of the town occurs in a charter of David II., erecting it into a burgh of regality in favour of the abbot of Dunfermline and his successors, in whose possession it remained for more than a century. In 1450, it was granted by the commendator and convent to the bailies and community of the burgh, together with the harbour, the burgage acres, and common pastures, with the tolls, customs, and other privileges pertaining to it, to be held by them for ever. This tenure, however, was subsequently altered ; and instead of being a burgh of the lordship of Dunfermline, the town was constituted a royal burgh, and invested with all the immunities enjoyed by royal burghs in their fullest extent : the original charter being lost, the date of this change cannot be precisely ascertained. Under these rights the town continued to flourish, and in 1622 it contributed 1030 merks towards the relief of the French Protestants. It had, about this time, not less than 100 vessels belonging to the port, and had attained a degree of importance which placed it next in rank in the county after St. Andrew's. The privileges of the burgh were confirmed and extended by charter of Charles I., who created it *de novo* a royal burgh and free port ; and the government, which had been previously exercised by two bailies and a treasurer, was vested in a provost, who was also admiral of the port, two bailies, a dean of guild, treasurer, and council.

During the commotions in this reign the inhabitants embraced the cause of the parliament, and zealously subscribed the Covenant. Many of them joined the army of the Covenanters ; and at the battle of Kilsyth, in which that army was defeated with great slaughter by the Marquess of Montrose, a very large number of the men of Kirkcaldy are said to have been killed. In the progress of events the town suffered repeated injuries, and during the interregnum continued to languish and decline. According to the burgh records, from the commencement of the civil war to the restoration of Charles II., as many as ninety-four vessels belonging to the port were captured by the enemy or lost at sea ; and in 1682 the town was reduced to such distress, that an application was made to the convention of royal burghs to take its poverty into consideration, and administer to its relief. At the time of the Revolution, the inhabitants,

Burgh Seal.

in the zeal of their attachment to the cause of William III., apprehended the chancellor of Scotland, the Earl of Perth, and, after detaining him for some time in custody under a guard of 300 men, delivered him to the Earl of Mar at Alloa. William, in return for their loyalty, granted the inhabitants a diminution of their annual assessment; and the town, with the trade of the port, now began to revive, and continued to prosper till the Union, when, in common with all the other sea-ports on the coast of Fife, it fell into decay. It then and afterwards suffered so much that its shipping, in 1760, was reduced to one coasting-sloop of sixty tons' burthen, and two ferry-boats of thirty tons each. From this time, however, the trade began to increase; and though it was much impeded by the disputes with America, it continued to advance, and at the conclusion of the war there were twelve vessels belonging to the place, which is now one of the most flourishing sea-ports in Fifeshire.

The town is situated on the north side of the Firth of Forth, upon a narrow strip of level land at the base of a ridge of rising ground, and extends for a mile and a half along the shore, consisting principally of one street formerly composed of old ill-built houses with outside stairs. A number of the old houses still remain, but there are now hardly any outside stairs to be seen. Towards the centre of the line, the street expands for some distance into greater width, containing numerous modern well-built houses of handsome appearance, and a few good inns. Considerable improvements have been for some time in progress; and the town has been enlarged by the formation of several streets diverging from the main line towards the sands on the south, and others built on the acclivities of the hills towards the north. The streets are well paved, and lighted with gas by a company who have erected works for that purpose; the inhabitants are also amply supplied with water. Many of the ancient houses have been taken down, and rebuilt in a better style; and the town generally is in a state of progressive improvement. A subscription library is well supported, and contains a collection of more than 4000 volumes; a mechanics' library has also been established, consisting of 1500 volumes; and there are two circulating libraries, comprising together nearly 3000. An institution has been formed within the last few years, in which lectures on literary and scientific subjects are regularly delivered during the winter months. Two public reading and news rooms are supported by subscription, which are well supplied with newspapers and periodical publications; and a weekly journal is published in the town. An agricultural association has also been founded; it holds meetings twice in the year, and awards premiums for samples of seed, the finest specimens of live stock, and the best crops of every description raised in the district.

The chief MANUFACTURES carried on are those of the various kinds of coarse linen, consisting of checks, striped holland, dowlas, ticking, sail cloths, and other articles, in which great improvements were some time since made by Mr. James Fergus, who adapted the manufacture of ticking, which had previously been made here for the manufacturers of Glasgow only, to the use of the English markets, and introduced the making of checks of cotton and linen mixed, drills, and ducks. The gross value of the linens manufactured in Kirkcaldy is now estimated at £80,000 per annum, and,

including the linen goods made in the several suburban places in adjoining parishes, £200,000 per annum; affording occupation to a large number of weavers, exclusively of hand-loom in private dwellings. Connected with the factories are extensive bleaching-grounds and dye-houses. There are several mills for the spinning of flax, in which about 6000 spindles of yarn are produced daily, and from which quantities are exported to France and other parts of the continent to the value of £60,000 annually; these mills are driven by steam-engines of twenty-horse power, and give employment to considerable numbers of females. The manufacture of steam-engines and the various kinds of machinery for the use of the mills, for which there are three establishments in the town, engages about 200 men. The manufacture of salt, formerly very extensive, is still carried on, upon a limited scale; there are also two tanneries, two breweries, a distillery, and several collieries in the parish.

The trade of the port consists chiefly in the exportation of yarn and various manufactured goods, coal, and agricultural produce; and in the importation of flax, timber, and other merchandise. The foreign trade is with North and South America, the Mediterranean, France, the Baltic, Norway, Denmark, Prussia, the Hanse Towns, and Germany; about ninety vessels from foreign parts annually visiting the port. The coasting-trade is also considerable. The number of vessels registered in 1842 as belonging to the port was ninety-one, of the aggregate burthen of 8911 tons, and employing about 800 seamen. Two vessels are engaged in the whale-fishery, which was formerly much more extensive. Smacks sail regularly from Kirkcaldy to London, and trading-vessels to Leith and Glasgow. The jurisdiction of the port extends over fifty-two miles of coast, from Aberdour, in the Firth of Forth, to the upper part of the bay of St. Andrew's; including the sub-port of Anstruther and various other creeks. Kirkcaldy harbour, which is under the direction of trustees appointed under act of parliament in 1829, is situated at the eastern extremity of the town, and is inclosed by two stone piers at the east and west ends. Though capacious, it is very inadequate for the trade of the port, being accessible to vessels of any considerable burthen only at spring tides. An act was passed in 1849, for enlarging and improving the harbour, for regulating the petty customs of the burgh, and for other purposes. Attempts are consequently now in progress for its improvement, by the extension of the eastern pier under the superintendence of Mr. Leslie, civil engineer, of Dundee; the cost is estimated at £10,000, and further improvements are in contemplation, which, when carried into effect, will render it safe and convenient, at an expense of £40,000. The shore dues, from which the corporation derive their chief revenue, amounted in 1842 to £1715. The custom-house establishment consists of a collector, comptroller, land-surveyor, three land-waiters, and fourteen tides-men; the amount of duties paid in 1842 was £4766.

There are branches of the Bank of Scotland, the Commercial Bank, the National Bank of Scotland, and the Union Bank of Scotland, the buildings for which add much to the appearance of the town. The post-office has two deliveries daily; and in addition to the facilities of communication by roads, Kirkcaldy has a station on the Edinburgh, Perth, and Dundee railway.

The market, which is on Saturday, is amply supplied with corn, and is attended by dealers from all parts; the average quantity of grain sold is about 35,000 quarters, of which 10,000 only are disposed of by sample, and the remainder in the stock market. Fairs for horses and cattle are held on the third Friday in February, the third Friday in July, and the first Friday in October. The government of the BURG, since the passing of the Municipal Reform act in the reign of William IV., has been vested in a provost, two bailies, a dean of guild, a treasurer, and a council of twenty-one members, including the five magistrates. The council of twenty-one are elected by the constituency at large, seven being chosen every year; and the provost, who is *ex officio* a justice of the peace for the county, and the other magistrates, are elected by the councillors from among themselves. There are seven incorporated trades, the smiths, wrights and masons, weavers, shoemakers, tailors, bakers, and fleshers, all of which, except the weavers, possess exclusive privileges of trading. Courts are held for the adjudication of civil causes to any amount; in criminal cases the magistrates' jurisdiction is limited to misdemeanors. The town-hall and gaol form one building in the High-street, surmounted with a spire: the hall, in which the courts are held and the public business transacted, is spacious and handsomely fitted up, and contains a portrait of Walter Fergus, Esq., of Strathore. The gaol is under excellent regulations: proper attention is paid to the health and comfort of the prisoners, who are profitably employed, and the management is well adapted for their reformation. The whole buildings, which are in the Norman style of architecture, were erected at a cost of £5000. Kirkcaldy is associated with Dysart, Kinghorn, and Burntisland, in returning a member to the house of commons: its parliamentary boundary is much more extensive than the municipal, and embraces a population of not less than 15,000.

The PARISH formerly included the chief part of that of Abbotshall, which was separated from it in the year 1650; but it is now of very inconsiderable extent. It is only two miles and a half in length, and scarcely one mile in breadth; and comprises little more, besides the town site, than the burgh acres, and the common lands once belonging to the town, not exceeding in the whole 1050 acres, of which 160 are woodland and plantations, and the remainder arable. Near the town the soil is rich and fertile, from the abundance of manure; in other parts, less productive. The surface rises from the shore of the Firth (a level sandy beach) towards the north into a bold ridge, which has an elevation of 300 feet above the sea: the only stream is the Eastburn, which, after receiving some tributaries in a course of less than three miles, flows into the Firth at the extremity of the parish, bordering upon that of Dysart. The substrata are principally sandstone, slate, and coal, which last occurs in several seams varying from nine inches to three and a half feet in thickness; one mine is in operation, and the coal is raised from a depth of forty-six fathoms. Iron-ore is found in the coal district, in globular masses; but the price obtained does not remunerate the trouble of working it. The annual value of real property in the parish is £18,239. Dunnikier House, the seat of James Townsend Oswald, Esq., a handsome mansion erected about 1790, is beautifully situated in a richly-wooded demesne.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kirkcaldy, synod of Fife. The minister's stipend averages about £200, with a manse and glebe valued together at about £50 per annum; patron, the Crown. The parish church, situated upon rising ground in the High-street, is a handsome structure in the later English style, erected in 1807, on the site of the ancient building, which had fallen into a state of dilapidation. A portion of the old tower is attached to the west end, and detracts greatly from the appearance of the church; but its removal, and the erection of a tower or spire of corresponding style, are in contemplation. The interior is well arranged, and contains 1480 sittings. A church to which a quoad sacra district was for a time annexed containing a population of 1977 persons, was erected near the east end of the town, at an expense of £2000; it is called East Port Church, and has 840 sittings. There are places of worship for members of the Free Church, members of the United Presbyterian Church, Episcopalians, Independents, Bereans, the Synod of United Original Seceders, and Scottish Baptists. A Burgh school is supported by the corporation and by the fees, and is under the superintendence of a rector, to whom they pay £50, and an assistant, who has a salary of £40; it is attended by 170 children, who are instructed in the classics and in the various branches of a commercial education. The fees produce about £50 per annum to each master; but neither has a dwelling-house. Schools have been erected in Kirkcaldy proper, Pathhead, Abbotshall, and Kinghorn, and teachers appointed, under an endowment by Robert Philp, Esq., who, in 1828, bequeathed £74,000 for the education and clothing of 400 of the most needy children of the district. To each of the children, on leaving school, are allowed from £7 to £10, according to merit, to enable them to acquire a trade, or to introduce them into creditable employment. The master of the Kirkcaldy school, under this trust, has £100 per annum; and a mistress to teach the girls to sew has a salary of £15. There are numerous other schools, partly endowed, and partly supported by the fees; and the number of children attending them is about 700. Mr. John Thomson, in 1810, bequeathed £780, of which he appropriated one-half of the proceeds to the payment of school fees for poor children, and one-half to the relief of the aged. An institution for the benefit of old and disabled mariners belonging to the port, and for their widows and orphans, was established about the year 1590, to the support of which the masters and crews of the various vessels long contributed a percentage of their pay. This institution is called the "Prime Gilt-Box of Kirkcaldy," and has funds amounting to about £2500. There are also a ladies' benevolent society, a clothing society, and a fund for supplying the poor with coal. In 1828, the gallery on the north side of the church, which was densely crowded to hear the Rev. Edward Irving of London, fell down; and many lives were lost. Dr. Adam Smith, author of *The Wealth of Nations*, and one of the most illustrious men, as a writer, to whom Scotland has given birth, was born at Kirkcaldy in 1723. After an absence of many years, which were occupied in literary pursuits, and, for some time, in discharging his professional duties in the chair of moral philosophy in the University of Glasgow, he returned to Kirkcaldy, where he composed his celebrated

work. He died in 1789; and it is not a little remarkable that, to this day, no monument to his memory has been erected in his native town.

KIRKCOLM, a parish, in the county of WIGTOWN, 6 miles (N. by W.) from Stranraer; containing 1793 inhabitants, of whom 391 are in the village of Stewartown. The word Kirkecolm is evidently corrupted by usage from *Kirk-Columba*, a name at first applied to the church (which was dedicated to St. Columba), and afterwards used as a proper name for the parish. The place is of great antiquity, the original church having been built at, or shortly after, the time when the saint flourished to whom it is dedicated. It is doubtful whether St. Columba was of Irish or Scottish origin; but he was in high repute in Scotland in the sixth century. He fixed his residence in the isle of Icolmkill, or "the chapel of Columba," and spent his whole life in endeavouring to convert the natives to Christianity, and in sending out missionaries into the western parts of Scotland for the same purpose. The remains of Corswall Castle, said by Sympson, who wrote in 1684, to be then a heap of ruins; an ancient church dedicated to St. Bride; and the chapel of the Virgin, called Kilmore, also testify to the great antiquity of the parish.

KIRKCOLM is about five miles and a half in length and four miles in breadth. It forms a small peninsula, being bounded on the north and west by the sea, on the east by the bay of Loch Ryan, and on the south by the parish of Leswalt. The surface, in its general appearance, is irregular, sloping gently towards the west. From Portmore bay northward, then westward round Corswall point, and southward along the Irish Channel, the scenery is varied by the bold rocky elevations of the coast. There is a considerable stream, turning the mill of Corswall; and near the middle of the parish is Loch Connel, about a mile in circumference. Springs of good fresh water are found in every direction. In the interior the soil is a productive loam; but near the coast, which encompasses the larger extent of the parish, it is poor, and so thin as scarcely in many parts to cover the rock. The number of acres under cultivation is between 10,000 and 11,000; there are upwards of 1200 acres in waste and pasture, and between 100 and 200 planted. The present crops of wheat, oats, and barley on lands covered fifty years back with whins and heath, show the great progress of the parish in an agricultural point of view; but the climate is bleak and rainy, and not favourable to the highest improvement of the soil. With few exceptions, the farm-houses are substantial and comfortable dwellings. Galloway cattle, an excellent native breed, are kept; but the Ayrshire cow is preferred on the dairy-farms, on the management of which much care is bestowed. In this parish the subsoil is gravelly and rocky. The rocks are of the greywacke transition class, and there are considerable quantities of red sandstone, as well as greywacke-slate, clay-slate, and pure clay. Quartz and granite are also sometimes found. The annual value of real property in the parish is £6267. Corswall House, occupying an elevated position on the margin of Loch Ryan, in the midst of spreading plantations, is seen from a distance as a pleasing object. The only village is Stewartown, where the young women, as in most other parts of the parish, are chiefly employed in embroidering muslin webs. Little traffic is carried on; but the basin called the Wig, on

the coast of Loch Ryan, is a convenient and safe retreat, and two or three vessels, of less than forty tons' burthen, belong to Kirkecolm. Corswall lighthouse, finished in 1816, and occupying a rocky projection on the western side of the parish, is a noble and commanding structure; it is built of whinstone, and has a revolving light on the top of the tower, which is eighty-six feet high, and embraces a very extensive view, comprehending a large part of the Irish coast.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Stranraer, synod of Galloway; patrons, the Earl of Stair, and James Carrick Moore, Esq., of Corswall. The stipend of the minister is £216, with a good manse, and a glebe of ten acres valued at £15 per annum. Kirkecolm church is a commodious and substantial edifice, accommodating 650 persons; it was built in 1824, and is in good repair. There is a parochial school, in which reading and writing, English grammar, arithmetic, and book-keeping, with mensuration, navigation, and Latin, are taught; the master has a house and garden, a salary of £27, and about £18 in fees. Among the relics of antiquity are the ruins of Corswall Castle, distant about a mile from the sea, in the northern part of the parish: a cannon seven feet long, a gold ring, some coins, and a silver plate with an inscription, were found here some years since. About a mile from this castle are the foundations of the ancient church dedicated to St. Bride; and on the southern part of the coast of Loch Ryan are the ruins of a wall belonging to the chapel of Kilmorie. A stone from this chapel was placed over the west door of the old church of Kirkecolm when it was repaired in 1719, and left in the churchyard when the church was taken down in 1821. It is a rude specimen of ancient sculpture, so much worn by time that the figures can scarcely be traced with any accuracy. One side appears to bear a shield, with an animal sculptured on it, and, on the top of the shield, a large cross; the other side is distinguished by a figure having the arms extended on a cross, with another figure beneath. The stone is of grey whinstone.

KIRKCONNEL, a parish and village, in the county of DUMFRIES, 4 miles (N. W. by W.) from Sanquhar; containing 1130 inhabitants, of whom 500 are in the village. St. Connel, to whom the church was dedicated, appears to have given the name to this parish. The church at one time belonged to the monks of Holywood, who received the tithes, establishing a vicarage for the due performance of divine service. At the Reformation the revenues were held by Lord Crichton of Sanquhar, on the payment of £20 Scots yearly to the monks; but after that event, the patronage and tithes, with other property of the abbey, were vested in the crown, and granted by it to John Murray of Lochmaben. In the reign of Charles II. the patronage was transferred to the Duke of Queensberry; and upon the death of the last duke, William, it came, with the title, into the noble family of Scott, to whom nearly the whole of this parish, with very extensive property in the neighbouring districts, now belongs. The parish is about fifteen miles in length and eight in breadth, and contains upwards of 26,000 acres. It is bounded on the north and north-east by the parish of Crawfordjohn, in the county of Lanark; on the north-west and west by New Cumnock and Auchinleck, in the county of Ayr; and on the south-east and south-west by the parish of Sanquhar. The

surface throughout is irregular and hilly. The ground gradually rises for some distance on each side of the river Nith, which intersects the parish from west to east; after which it forms a continued range of hills, of considerable elevation, distant from the river on each side about two or three miles, and affording good sheep pasture. Beyond these hills, to the north and south, the land consists of peat-moss covered with heath and grass, or cold and swampy land, intersected with narrow valleys and deep ravines.

The soil under cultivation is in some parts a light gravelly mould; in other places it is a loam or clay, and sometimes a mixture of moss and clay. Occasionally there is a deep rich earth, especially upon the holm lands near the river. About 6300 acres are arable; about 19,100 are hill pasture, 542 low pasture, and 178 occupied by wood: both grain and green crops of all kinds are raised, but barley and wheat are sown in but small quantities, on account of the great distance of a regular market. The sheep, of which 11,000 or 12,000 are kept, are chiefly of the native black-faced breed, as being the most hardy, and the best suited to the bleak exposure of hill pasturage: about 7000 lambs are annually reared, 5000 of which are sent to market. The cows, which are principally kept for the dairy, are of the Ayrshire or Cunninghame breed. Improvements in every branch of agriculture have been extensively carried on, chiefly by the noble proprietor of the parish; and the annual value of real property in Kirkconnel now amounts to £5647. Limestone and ironstone are found in this district; but it is chiefly celebrated for its coal, which is of the best quality, and was extensively wrought until the mining operations were transferred to the neighbouring parish of Sanquhar, for more general convenience. There is an iron-plating forge upon a small scale, employing eight or ten men. A great public road runs through the upper district, upon which the Glasgow and Carlisle coach used to pass and re-pass daily: the parish roads are in good repair, but bridges are much wanted on the great road. The village is principally inhabited by labourers. For ecclesiastical purposes the parish is within the limits of the presbytery of Penpont, synod of Dumfries; patron, the Duke of Buccleuch and Queensberry. The stipend averages hardly £200, with a good manse and convenient offices, and a glebe valued at £18 per annum. Kirkconnel church, a plain structure bearing the date 1729, has been enlarged and repaired within the present century, and is in very good condition. There is a parochial school, in which English, writing, and arithmetic are taught; the master has the minimum salary, with a house, and about £34 fees. On the farm of Rigg are two mineral springs, useful in stomachic complaints; but owing to the want of accommodation they are not much frequented: the waters, however, are often sent to distant parts of the country. There are some small remains of antiquity. John Hyslop, author of the *Cameronian's Dream*, was a native of the parish; and the late venerable and highly-esteemed George Jardine, Esq., professor of logic in the university of Glasgow, was in early life, for a short time, parochial schoolmaster of Kirkconnel: he bequeathed the sum of £50 for the benefit of the schoolmaster, directing the capital to be laid out on the most advantageous terms, and the interest to be paid to the master for ever.

KIRKCUDBRIGHT, a royal burgh and a parish, in the stewardry of KIRKCUDBRIGHT, of which it is the capital, 28 miles (S. W. by W.) from Dumfries, and 100 (S. W.) from Edinburgh; containing 3526 inhabitants, of whom 2692 are in the burgh. This place is supposed to have derived its name, originally *Kirk-Cuthbert*, from the dedication of its ancient

Burgh Seal.

church to the Northumbrian saint of that name; and a cemetery about a quarter of a mile eastward of the town still retains the appellation of St. Cuthbert's churchyard. Prior to the time of the Romans, this part of the country contained a chain of forts belonging to the *Selgovae*, of which *Caerbantorigum*, the principal border garrison of that people, and situated here, was taken by Agricola about the year 82. His successors retained possession of the district for nearly three centuries, and here formed the Roman station *Benutum*. During the minority of MALCOLM IV., son of David I., Fergus, lord of Galloway, whose baronial castle was situated on an island in Loch Fergus, near the town, threw off his allegiance to the Scottish crown, and exercised a kind of sovereignty as an independent prince. Malcolm twice invaded Galloway with a view to reduce him to obedience, without success; but having greatly increased his army, he again attacked him in his dominions, and obtained a triumphant victory. Fergus resigned the lordship of Galloway in 1160, and retiring into the abbey of Holyrood, upon which he had bestowed the churches and lands of Dunrod and Galtway, within the present parish of Kirkcudbright, died in the following year. He had married Elizabeth, daughter of Henry I. of England, and was ancestor of the families of Bruce and Baliol. Fergus was succeeded in the lordship by his two sons, Uchtred and Gilbert, between whom, according to the Celtic law, his dominions were equally divided: the former, who gave the church of Kirk-Cuthbert to the monks of Holyrood, resided in the castle of Loch Fergus; but in 1174 he was attacked there, and inhumanly murdered, by his brother Gilbert. The last of the male line of the ancient lords was Allan, who died in his castle of Kirkcudbright, and was interred in the abbey of Dundrennan, founded by Fergus, his great-grandfather.

During the competition for the crown of Scotland between Bruce and Baliol, the castle of Kirkcudbright was delivered, by mandate of Edward I. of England, who had been appointed umpire, to Baliol, to whom he awarded the crown. The next event of importance relates to Wallace, who, subsequently to his defeat at the battle of Falkirk, sailed from this town for France, accompanied by Maclellan of Bombie, and fifty of his adherents; and soon after, Edward, with his queen and court, remained for ten days in the castle of Kirkcudbright, whence he shipped large quantities of grain to England and Ireland, to be ground for the supply of his army. Some time afterwards, Edward Bruce, having subdued Galloway for his brother, received the lordship in acknowledgment of his services, together with the castle of Kirkcudbright and the whole of Baliol's for-

feited possessions: the lordship passed subsequently by intermarriage to the family of Douglas. In the reign of JAMES II., a sanguinary battle took place near the town, which ended in the total defeat of the retainers of Sir John Herries, who, assisted by Maclellan of Bombie, had invaded the territories of Douglas to recover compensation for robberies committed by the dependents of that powerful chieftain. Sir John was made prisoner, and executed; and the conquerors, having obtained admittance into the castle of Raeberry, the residence of the Bombie family, seized the chieftain, whom they carried off to Threave Castle, and beheaded. The king, about three years after this event, visited Kirkcudbright, while making preparations for the siege of Threave Castle, the last stronghold of the Douglasses. In this siege he was assisted by the inhabitants; and for the service so rendered he conferred upon the town, which had been previously a burgh of regality, all the privileges of a royal burgh, by charter dated at Perth the 26th of October, 1455. After the battle of Towton in 1461, the town afforded an asylum to Henry VI. of England and his queen, who resided here till their departure for Edinburgh; and on the 16th April, 1462, the queen, with a convoy of four Scottish ships, sailed from this port to Bretagne, leaving Henry with a small retinue, who returned to England in 1463.

JAMES IV., in one of his pilgrimages to the shrine of St. Ninian at Whithorn, visited the town, in 1501. In 1507, it was nearly destroyed by the Earl of Derby, who, at the head of a large body of Manxmen, made a descent on the shores of Galloway. James again visited the town in 1508, and was hospitably received by the burgesses, to whom he granted the castle of Kirkcudbright, and the lands appertaining to it, which had reverted to the crown on the forfeiture of the Douglasses. In 1513, many of the inhabitants, under the command of Sir William Maclellan of Bombie, attended James to the battle of Flodden, and fell with their leader on the field. In the year 1523, the Duke of Albany, Regent of Scotland, landed here from Brest, and was joyfully received. During the minority of Mary, Queen of Scots, the town was summoned by the English forces who had gained possession of Dumfries to acknowledge the authority of Edward VI. This summons, however, the inhabitants refused to obey; and having barred their gates, and carefully secured their dykes, Maclellan of Bombie, at the head of a party of his retainers, attacked the assailants, who, having made some unavailing efforts, retired to Dumfries. After the battle of Langside, Mary, accompanied by Lord Herries and his followers, retreated into Galloway, and remained for three days there, previously to proceeding to England: she does not appear, however, to have visited the town of Kirkcudbright. James VI. visited the town while in pursuit of Lord Maxwell, who had arrived here from Spain to arm his followers in aid of the Spanish descent; and the king presented to the corporation a miniature silver musket, to be given as a prize to the most successful competitor in shooting at the target, in order to induce improvement in the use of fire-arms. Charles I., on his visit to Scotland, conferred upon Sir Robert Maclellan of Bombie the title of Lord Kirkcudbright, and granted to the burgh a new charter, vesting the government in a provost, two bailies, a treasurer, and thirteen councillors; which charter is still partially in force.

The town anciently consisted only of one irregular street leading down to the harbour, and was encompassed by a wall and fosse, of which there are still some vestiges remaining. It has been greatly extended and improved, and, being surrounded by a tract of richly-wooded country, has a pleasing aspect. The place now consists of several well-formed streets, intersecting each other at right angles; the principal are High-street, Castle-street, and St. Cuthbert's and Union streets, the two former leading to the river Dee, which bounds the town on the west side. The houses, most of which are modern, are neatly built; and among them are many handsome residences of opulent families, contributing greatly to the appearance of the town. The streets are lighted with gas, from works established by a company in 1838; and the inhabitants are amply supplied with excellent water from springs about half a mile distant, conveyed by pipes laid down in 1763. A public library, founded in 1777, is still supported by subscription, containing a small collection of volumes; and there are two circulating libraries still remaining, but nearly superseded by the publication of cheap periodicals. A public reading and news room, also, is supplied with Scottish and English newspapers. Although formerly celebrated for its extensive manufactures of gloves, boots and shoes, soap, candles, and leather, the town has at present very little trade; and the only manufactures now carried on are, that of hosiery, and the weaving of cotton, upon a limited scale.

AS A SEA-PORT, the town derives a moderate traffic from the importation of coal and other commodities for the supply of the district. There are two harbours, both commodious and safe. The one at the town, formed by the river Dee, which is here about 500 feet wide, has a depth of thirty feet at spring, and of from twenty to twenty-five feet at neap tides; and below it is a ford across the river, which at some particular times has only a depth of a foot and a half of water. Vessels frequently deliver their cargoes on the beach, and take in their lading in a dock which is partly of wood and partly of stone. The other harbour is at Torr's or Manxman's lake, about two miles and a half from the mouth of the river, where almost any number of vessels may ride in safety: in front of the entrance, however, is a bar, over which ordinary vessels cannot pass till half-flood, when there is a depth of ten or twelve feet water on it. A lighthouse on the island of Little Ross, the lantern of which exhibits a revolving light visible at a great distance, forms a guide to the entrance; and by keeping this and two towers in a right line, strange vessels may safely enter the haven. The number of vessels registered as belonging to the port is twenty-six, of the aggregate burthen of 922 tons; and according to the custom-house returns, fifty-four vessels, of 2069 tons in the aggregate, entered the harbour, and the creeks of Kirkcudbright, in a recent year. The chief imports are coal and lime from Cumberland, and groceries, haberdashery, iron, lead, slates and freestone, bone-dust, guano, and various wares, from Liverpool and other ports; there is no foreign trade, and seldom more than one cargo of wood is annually imported. The exports are corn, meal, potatoes, turnips, beans, black-cattle, sheep, wool, salmon, and grass-seeds; the amount of wool shipped in 1842 was 7480 stone, and in the same year were exported 721 head of black-cattle and 12,000

sheep. A little above the harbour is a ferry across the river for horses and carriages, for which a convenient flat-bottomed boat has been constructed.

The river Dee abounds with excellent salmon, of which there are three fisheries. One of these, belonging to Alexander Murray, Esq., produced some short time since a rental of £700 per annum; another, the property of the Earl of Selkirk, £150 a year; and the third, belonging to the burgh, a rental of £80. Considerable quantities, also, of cod and other fish are taken off the coasts. A market is held weekly, on Friday, but it is not much frequented; and a market for provisions every Tuesday. Fairs, chiefly for hiring servants, are held on the last Friday in March and in September; and for general business on the 12th of August, if on Friday, otherwise on the Friday following. There are branches of the Bank of Scotland and the Western Bank established in the town; also a branch of the National-Security Savings' Bank. The post-office here has two deliveries daily. Facility of communication is afforded by roads kept in excellent order, and there are two bridges over the Dee between Kirkcudbright and Tongland, one of them, which is still in good repair, erected about the year 1730 at an expense of about £400, and the other, of one arch 110 feet in span, erected in 1808 at an expense of £7350. In 1847 an act was passed authorizing the construction of a branch of about twenty-seven miles, to Kirkcudbright, of the Glasgow, Dumfries, and Carlisle railway. Two steamers sail weekly to Liverpool in summer, and every fortnight during the winter.

Ancient Seal.

The BURGH is governed by a provost, two bailies, a treasurer, and a council of thirteen members, chosen under the provisions of the Municipal Reform act; and the municipal and parliamentary boundaries, which are nearly identical, comprise the whole of the royalty. There are six incorporated trades, the squaremen, tailors, clothiers, hammermen

and glovers, shoemakers, and weavers; the fees of admission as members vary from £1 to £1. 10. for sons and apprentices of freemen, and from £3 to £6 for strangers. In 1848-9 the revenues of the corporation, arising from lands, the fishery, ferry, and harbour dues, were £1249. The magistrates exercise both civil and criminal jurisdiction; but as the seat of the sheriff's court is within the burgh, very few cases of the former kind are brought under their consideration, and the latter kind of jurisdiction is almost confined to petty cases of misdemeanor. Kirkcudbright is associated with Dumfries, Annan, Lochmaben, and Sanquhar, in returning a member to the imperial parliament. The county-hall and gaol, erected in 1816, at an expense of £5000, form a handsome range of building in the castellated style, with a lofty tower; the hall and court-room are elegantly decorated, and the gaol is under excellent regulation. On the opposite side of the High-street are the old gaol and court-house, a curious building, near which is the ancient market-cross, with a pair of jugs for the punishment of delinquents, and the date 1054. The number of the burgh constituency is about ninety.

The PARISH includes the ancient parishes of Galtway and Dunrod, which were annexed to the ancient parish of Kirkcudbright about the latter half of the seventeenth century. It is bounded on the south by the Solway Firth, and is about eight miles in length and three and a half in breadth, comprising an area of 15,000 acres, of which 3000 are arable, 500 meadow and pasture, 500 woodland and plantations, and the remainder hilly moor, affording tolerable pasturage for sheep and cattle. The surface is diversified; on the shores of the Dee it is tolerably level, but in some other parts rises by continued undulations to a height of 400 feet above the level of the sea. The river, after having united with the streams of the Deugh and the Ken, forms a boundary of the parish, and joins the Firth at Kirkcudbright bay; it flows through a romantic tract of country, between banks of rugged and precipitous rocks clothed with wood, and makes some picturesque cascades. The Dee is navigable for ships of any burthen to Kirkcudbright, and to the lower bridge of Tongland for vessels of 200 tons. There are several burns in the parish, in which are found abundance of yellow trout, and, towards the end of autumn, sea-trout and herling; and near the farms of Culdoch and Jordieland is a lake abounding with trout equal to those of Loch Leven.

In this parish the SOIL is principally a clay loam, alternated with moss; in some parts of a dry and gravelly quality, and in others of unrivalled fertility. The crops are oats, barley, wheat, potatoes, and turnips. The system of agriculture is improved; the lands have been well drained and inclosed, and the farm-buildings are in general substantially built. The cattle are mostly of the Galloway breed, and are reared in considerable numbers, as are also the sheep, which are generally of the Leicestershire breed. The substrata of the parish are chiefly greywacke, porphyry, and trap; and near the shore are found boulders of granite and greenstone. There is but little indigenous wood: the plantations are usually oak, ash, elm, beech, plane, Spanish chesnut, and larch, spruce, Scotch and silver fir; they are well managed and in a thriving state, and on some of the lands are various other varieties, including walnut, birch, alder, maple, laburnum, poplar, and willow. The annual value of real property in the parish is £11,541. St. Mary's Isle, the seat of the Earl of Selkirk, is beautifully situated a mile southward of the town, on what was formerly an island, but is now a peninsula projecting into the bay of Kirkcudbright. It was the site of a priory founded by Fergus, lord of Galloway, for Augustine monks, and dedicated to St. Mary. There are still remaining some portions of the ancient priory, incorporated in the present noble mansion, which is embosomed in a demesne enriched with stately timber, and commanding some highly-interesting and diversified prospects. The houses of Balmae, Janefield, St. Cuthbert's Cottage, and Fludha, are handsome residences finely situated.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kirkcudbright, synod of Galloway. The minister's stipend is £281. 10., with an allowance of £50 in lieu of manse, and a glebe valued at £18 per annum; patron, the Crown. Kirkcudbright church, which is one of the most elegant ecclesiastical structures in the country, was erected in 1838, at an expense of £7000, towards which the Earl of Selkirk

contributed more than £4000; the interior is well arranged, and contains 1500 sittings. There are places of worship for members of the Free Church and the United Presbyterian Church. An academy here is under three masters, all appointed by the corporation, who pay to one master a salary of £60, and to each of the others £50, in addition to the fees. The course of instruction includes the classics, mathematics, and the whole routine of a commercial education; and the average number of scholars is 200. The buildings, which were erected in 1815, on a site given by the Earl of Selkirk, were completed at an expense of £1129, and contain three large class-rooms, a library, and other apartments: in front is a piazza, for the use of the pupils in unfavourable weather. Two parochial schools are maintained, the masters of which have a salary of £25. 13. each, with a house and garden. There are also a school for females, the mistress of which receives £20 per annum from the funds of the burgh; and a school, the master of which has £10 per annum paid jointly by the burgh and by the Countess of Selkirk; with various other schools partly endowed; and a Sabbath school under the superintendence of the minister, in which are about 300 children. Loch Fergus has been drained, and nothing is now left of the original castle of the lords of Galloway; but there are some remains of that of Kirkcudbright, also a fortress of the lords. The castle at Bombie, from which the Maclellans took their title, is now a heap of ruins: the Maclellans had a second castle at Raeberry, situated on a precipitous rock overhanging the Solway Firth, but the site and fosse alone remain. There are numerous vestiges of British forts. A Roman vase was lately discovered at Castledykes; and near Drummore Castle was found, about the commencement of the last century, a plate of pure gold, valued at £20.

KIRKCUDBRIGHT, STEWARTRY of, a county, in the south of Scotland, bounded on the north and north-east by the county of Dumfries; on the north and north-west by the county of Ayr; on the south and south-east by the Solway Firth; and on the south-west by the county and bay of Wigtown. It lies between 54° 43' and 55° 19' (N. Lat.), and 3° 33' and 4° 34' (W. Long.), and is forty-eight miles in length, from east to west, and thirty miles in extreme breadth; comprising an area of about 882 square miles, or 564,480 acres; 8485 houses, of which 8162 are inhabited; and containing a population of 41,119, of whom 18,856 are males and 22,263 females. This district, which, from its ancient tenure, is called a stewartry, though for all purposes a county, occupies the eastern portion of the ancient province of Galloway. Prior to the Roman invasion of Britain, it was principally inhabited by the British tribe of the *Novantes*. The Romans, on their invasion of the island, crected several stations in the district of Galloway, and constructed various roads; but though they maintained something like a settlement in this part of the country, which they included in their province of *Valentia*, they were not able completely to reduce the original inhabitants under their dominion. After the departure of the Romans from Britain, the county, owing to its proximity to the Isle of Man and the Irish coast, became the resort of numerous settlers from those parts, who, intermingling with the natives, formed a distinct people, subject to the government of a chieftain

that exercised a kind of subordinate sovereignty under the kings of Northumbria, or kings of Scotland, to whom they paid a nominal allegiance. Upon the death of Allan, Lord of Galloway, in the thirteenth century, the country was distracted by the continual struggles of the various competitors for its government, and fell under the power of Alexander II., King of Scotland. On the subsequent marriage of Devorgilla, one of Allan's daughters, with the ancestor of Baliol, King of Scotland, it became the patrimonial property of that family. During the contest between Baliol and Bruce for the crown, the province was the frequent scene of hostilities; and from the attachment of the inhabitants to the cause of Baliol, it suffered severely. Ultimately it became the property of the Douglas family, on whose attainder it escheated to the crown, and was divided by James II. among several proprietors.

The stewartry of Kirkcudbright was for some time included in the county of Dumfries, and was under the jurisdiction of the same sheriff; but every vestige of that connexion was lost prior to the time of Charles I., since which period it has to all intents formed a distinct and independent county, though still retaining its ancient appellation. Previously to the abolition of episcopacy, the district was part of the diocese of Galloway; it is now mostly included in the synod of Galloway, and comprises the presbytery of Kirkcudbright and parts of others, and twenty-eight parishes. For civil purposes it is under the jurisdiction of a sheriff, or steward, by whom a steward-substitute is appointed. Kirkcudbright, which is the chief town, and New Galloway, are royal burghs in the stewartry; it also contains the towns of New-Galloway, Maxwelltown, Castle-Douglas, Creetown, and Gatehouse of Fleet, and some inconsiderable hamlets. By the act of the 2nd and 3rd of William IV., the stewartry returns one member to the imperial parliament; the number of qualified voters is 1260. Of the lands, about one-third are arable, and the remainder principally mountain pasture, moorland, and waste. The surface is strikingly varied, and towards the coast is diversified with numerous hills of moderate height, generally of bleak and rugged aspect, and interspersed with masses of projecting rock. In other parts are mountains of lofty elevation, the principal of which are, the Criffel, rising 1900 feet above the level of the sea, and the Cairnsmore and Cairnharrow, nearly of equal height. The mountainous district is intersected with valleys of great fertility, and in a high state of cultivation. Many of the hills are easy of ascent, and afford rich pasturage for cattle and sheep; and some, which are of more moderate elevation, are cultivated to their summit. The rivers are the Dee, the Ken, the Cree, and the Urr. Of these, the river *Dee* has its source in the western part of the stewartry, on the confines of Ayrshire, and flowing south-eastward, pursues an irregular course for about forty miles; it forms in its progress some picturesque cascades, becomes navigable at Tongland for vessels of 200 tons' burthen, and falls into the bay of Kirkcudbright. The *Ken* rises in the north-west part of the stewartry, and after a south-eastern course of several miles, expands into the loch to which it gives name, and shortly forms a confluence with the Dee. The river *Cree* has its source on the confines of Ayrshire, and flowing south-eastward, forms a boundary between the stewartry and Wigtownshire; it runs past Newton-Stewart, on the east, and falls into the

creek at the head of Wigtown bay. This river abounds with smelts; and, for several miles in the latter part of its course through a district abounding with romantic scenery, is navigable for small vessels. The *Urr* has its source in the lake of that name, on the northern boundary of the stewartry, and after a course of nearly thirty miles through a pleasant and richly-wooded strath, falls into the Solway Firth nearly opposite to the island of Hestan. There are various less important streams, some of which are navigable for small craft; the chief are the Fleet, the Tarf, the Deugh, and the Cluden. Numerous lakes also adorn the county, but few of them are of sufficient extent to require particular notice; the principal is Loch Ken, measuring nearly five miles in length and about half a mile in breadth.

The whole of the district appears to have been at a very early period in a forward state of cultivation; and during the war of the Scots with Edward I. of England, it furnished the chief supplies of grain for the subsistence of the English army after the conquest of Galloway. In the subsequent periods of intestine strife, however, it fell into a state of neglect, in which it remained till the commencement of the eighteenth century, since which time it has been gradually improving. The soil is generally a brown loam of small depth, alternated with sand, and resting usually on a bed of gravel or rock. In some parts a clayey loam is prevalent; in others are large quantities of flow-moss of considerable depth, which are supposed to be convertible into a rich soil, a very wide tract of such land having been rendered productive within the last thirty or forty years. The crops raised in the stewartry are oats, barley, wheat, potatoes, turnips, and other crops; the farms on the arable lands vary from 150 to 500 acres in extent, and those on the moors from 4000 to 5000 acres. The rotation plan of husbandry is adopted; the lands have been drained, and inclosed principally with stone fences, called Galloway dykes. The farm-buildings are not inferior to those in most other parts of Scotland. In this county the cattle, of which more than 60,000 head are pastured, are of the Galloway breed; and great attention is paid to their improvement. The sheep, of which upwards of 200,000 are fed on the moorland and other farms, are of the black-faced breed, with many of English breeds. Great numbers of swine are also reared, and they form a valuable stock; the horses are more than 6000 in number, and, though not pure Galloways, are much esteemed.

There are no remains of the ancient forests with which the district formerly abounded, except a few trees on the banks of some of the streams; but considerable plantations have been formed on the demesnes of the various proprietors and in other parts, adding greatly to the appearance of the country. The minerals, on account of the scarcity of coal, have not been rendered available to any profitable extent; copper is wrought near Gatehouse of Fleet by an English company, and lead-mines were at one time in operation in the parish of Minnigaff. Iron-ore is found in abundance, but, from the want of coal, is of little value; the limestone and coal used here are brought from Cumberland. Indications of coal, and also of limestone, have been perceived on the lands of Arbignland, in the parish of Kirkbean; but no mines have as yet been opened. The manufacture of linen, cotton, and woollen goods is carried on to a considerable extent in the towns and villages: the principal trade, however, of

this district, which is almost entirely pastoral or agricultural, is the large export of cattle, sheep, and grain, for which the facility of steam navigation affords ample opportunity. The salmon-fisheries at the mouths of the various rivers are highly productive, and the Solway Firth abounds with fish of every kind; but little benefit is derived from this source, and comparatively few fishermen's cottages are to be found upon the shores. In general the coast is precipitous, with intervals of low shelving sands; and the navigation is for the most part dangerous, though some of the bays afford safe anchorage. Kirkcudbright harbour is easy of access, and affords secure shelter from all winds; it has a considerable depth at high water. About two miles from the small island of Little Ross, at the mouth of Kirkcudbright harbour, and on which a lighthouse has been erected, is a fine bay called Manxman's lake, where 100 vessels of large burthen can ride in safety. Communication with Liverpool is maintained by steamers, which sail regularly from the port. The annual value of the real property in the county is £193,801, of which £182,926 are for lands, £9444 for houses, £1204 for fisheries, and £227 for quarries.

KIRKDEN, a parish, in the county of FORFAR, 5 miles (E. by S.) from the town of Forfar; containing, with the village of Friockheim, 1483 inhabitants. This place, which was anciently called Idvie from the glebe lands being in the barony of Idvies, derives its present name from the position of its church in a deep and narrow valley. It appears to have been the scene of a sanguinary conflict with the Danes in the reign of Malcolm II.; and near the spot are the remains of an obelisk erected by that monarch in commemoration of their defeat, not far from which, in a tumulus raised over the slain, have been found several urns containing ashes. In the adjoining plain, also, numerous stone coffins ranged side by side, and each containing an entire skeleton, were discovered towards the close of the last century. The PARISH is about seven miles in length from east to west, and of very irregular form, varying from less than a quarter of a mile to two miles in breadth, and comprising an area of 4514 acres, of which 3000 are arable, 1300 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is boldly undulated, and towards the south rises to a considerable acclivity, forming part of the termination of the Sidlaw hills, and commanding an extensive and richly varied prospect over the surrounding country, with the vale of Strathmore and the passes of the Grampian hills. The small river Vinny flows for more than four miles along the northern border of the parish, and entering the parish is joined by the Lunan, the streams together forming the Lunan Water: in rainy weather the Vinny frequently inundates the lower lands. Both these streams abound with excellent trout, and in the latter pike are also sometimes found, and occasionally a few salmon.

The SOIL is mostly a friable clay, but has been greatly improved by a mixture of marl found in the lakes in the vicinity, and by good cultivation has been rendered generally fertile. The crops are, grain of all kinds, with potatoes and turnips; and considerable attention is paid to the management of the dairy-farms, and to the improvement of live stock: the breed of cattle is principally the polled or Angusshire kind. The lands are inclosed chiefly with stone fences. Within the last few

years, a very large portion of ground has been reclaimed from absolute sterility, and brought into profitable cultivation, by draining. The farm-buildings are in good condition, and on most of the farms threshing-mills have been erected. In this parish the plantations consist of oak, ash, elm, plane, and beech, with larch, spruce, and occasionally silver firs to nurse: they are carefully thinned. The substratum is partly sandstone, of durable texture and of a greyish colour; and in the southern part, trap rock, which is a continuation of the Sidlaw hills, is prevalent. Freestone of good quality is found; and there are two excellent quarries, which, when in operation, employ a considerable number of men. The annual value of real property in the parish is £4012. Gardyne Castle is a spacious baronial structure of venerable aspect, beautifully situated on the steep acclivity of a deep and picturesque dell watered by a streamlet; the demesne attached to it is richly planted, and laid out with great taste. Middleton is a handsome modern mansion, seated in a wooded plain, near the banks of the Vinny. Pitmuics is also a modern mansion, situated in grounds tastefully embellished.

There are two villages; one called Cot-town of Gardyne, consisting of a few scattered cottages inhabited by about eighty persons; and the other called Friockheim, which has arisen in consequence of the increase of the linen manufacture, and contains about 900 inhabitants. The people of both are chiefly employed in the weaving of Osnaburghs by hand-loom, and in mills for spinning flax, of which there are three within the parish. Facility of intercourse with the neighbouring districts is afforded by numerous roads; the Arbroath and Forfar road passes for nearly three miles through the parish, and the Arbroath and Forfar railway likewise intersects it. For ECCLESIASTICAL purposes Kirkden is within the limits of the presbytery of Arbroath, synod of Angus and Mearns. The minister's stipend is £150, of which sum nearly one-half is paid from the exchequer; with a manse, and a glebe valued at £13 per annum: patron, the Crown. The parish church, erected in 1825, on the site of the former, is a neat and commodious structure, containing 525 sittings; and a church has been built in the village of Friockheim. The members of the Free Church have also a place of worship. Kirkden parochial school is well attended; the master has a salary of £25. 13. 10., with a house and garden, and the fees average about £12 per annum. A school at Friockheim is supported by subscription. A parochial library was established in 1827, by James Douglas, Esq., of Cavers, who presented a collection of seventy-two volumes, chiefly on religious subjects; and the number has been greatly augmented by James Mudie, Esq., of Pitmuics. There is a weak chalybeate spring at the extremity of the parish, in considerable repute; also a pretty strong chalybeate spring on the glebe, beside the manse. On the lands of Idvies and the estate of Gardyne are conical mounds called respectively Bractullo and Gallows Hill, supposed to have been anciently places for the trial and execution of criminals; they are both planted with trees. Upon the farm of Bractullo were found some stone coffins containing human bones, with strings of beads apparently of charred wood.

KIRKFIELD, for a time an ecclesiastical district, attached to the parish of GORBALS, within the jurisdiction of GLASGOW, county of LANARK; containing 2335

inhabitants. This place, which is situated on the south bank of the river Clyde, is inhabited principally by persons employed in factories connected with the city of Glasgow. The district or parish, which was of moderate extent, was separated for quoad sacra purposes, under act of the General Assembly passed in 1834: it was in the presbytery of Glasgow and synod of Glasgow and Ayr. The minister's stipend was £150, without either glebe or manse, and was paid from the seat rents by the proprietors of the church, who were patrons. Kirkfield church, originally the parish church of Gorbals, and subsequently a chapel of ease, was purchased by the proprietors in 1813, at a cost of £1200, and contains 1023 sittings. There are places of worship for members of the Free Church and of the United Presbyterian Church. In a civil point of view, Kirkfield is in the parish of Govan; but ecclesiastically, in the parish of Gorbals.

KIRKFIELD-BANK, a village, in the parish of LESMAHAGOW, Upper ward of the county of LANARK, 1 mile (W. by S.) from Lanark; containing 1023 inhabitants. This place is situated in the eastern extremity of the parish, and on the west side of the river Clyde, which flows at a short distance from it, and is crossed by a bridge of three arches. The population is chiefly employed in hand-loom weaving for the manufacturers of the district; and in the neighbourhood is a distillery. In the village is a school, to the master of which the heritors make a small annual allowance.

KIRKGUNZEON, a parish, in the stewartry of KIRKCUDBRIGHT, 9 miles (S. W.) from Dumfries; containing, with the village of Gateside, 638 inhabitants, of whom 40 are in the village of Kirkgunzeon. This place is supposed to have derived its name, anciently *Kirkwynon*, from the dedication of its church to St. Wynnin; and this opinion is corroborated by the name of a spring near it, which still retains the appellation of St. Wynnin's well. In the reign of David Bruce, the church and lands belonged to the abbey of Holm-Cultram, in Cumberland; but in 1369, the abbot, having sided with the English against that monarch, was dispossessed of his property in Scotland. The abbey lands were then conferred by the king upon Sir John Herries of Terregles, from whose family they passed to the Maxwells of Nithsdale, whose descendant, Marmaduke Constable Maxwell, of Terregles, Esq., is now the principal proprietor in Kirkgunzeon. The PARISH is about five miles in length, and nearly three in average breadth, comprising an area of 7600 acres, of which 5000 are arable, meadow, and pasture, 400 woodland and plantations, and the remainder moor and waste. Its surface is irregularly broken into hills of moderate elevation, abounding with grouse and black game. The lower grounds are intersected by a nameless river, which has its source in two lakes in the parish of Newabbey, and, flowing through the centre of this parish, after a course of nine miles, falls into the Urr, about a mile below the village of Dalbeattie. The river abounds with trout, and, in the deeper parts, with perch and pike; and during the spawning season some very large trout, of excellent quality, and weighing from four to six pounds, are taken at the outlets of the lakes in which the stream has its source. Partridges and hares are to be seen in abundance, and there are also pheasants, but in much smaller numbers.

Along the banks of the river the ground is level, and in various other places also flat, and well adapted for the plough; the soil on these lands is rich and fertile, but of lighter quality in the upland districts. The crops are barley, oats, and a small quantity of wheat, with potatoes and turnips. The system of agriculture is improved: the farm-houses are substantial and well built, chiefly of granite, and roofed with slate; the lands are well inclosed, and the fences kept in good repair; and all the more recent improvements in husbandry are generally practised. The cattle, of which considerable numbers are pastured on the hills, are mostly of the Galloway breed; and Highland bullocks are bought in at Falkirk, at the end of harvest, and during the winter fattened for the markets. Comparatively few sheep are reared; and on two farms only are shepherds kept to tend the flocks. The plantations have been greatly extended within the last few years, and are in a thriving state. Granite, of which the rocks are principally composed, and whinstone, are quarried. The annual value of real property in the parish is £4084. The village is very inconsiderable, consisting only of a few houses around the church. There is a post-office at Dalbeattie, about four miles from the village, which has a daily delivery; and facility of communication is afforded by the turnpike-road from Dumfries to Kirkcudbright.

Ecclesiastically the parish is within the limits of the presbytery and synod of Dumfries. The minister's stipend is £158. 6. 6., of which nearly one-half is paid from the exchequer; with a manse, and a glebe valued at £30 per annum: patron, Mr. Maxwell of Terregles. Kirkgunzeon church, situated in the centre of the parish, was erected in 1790, and is a plain neat structure containing 224 sittings. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £15 per annum. A small school is held at the lower end of the parish, for which a building was erected by the farmers, at their own expense; and in addition to the fees, £4 are allowed out of the parochial salary, to the master, who lives by turns with the parents of his pupils. There are still the remains of two ancient houses, formerly seats of the Herries family, and both of which appear to have been places of strength; parts are left also of the tower of Drumcoltran. On the farm of Glaisters was a large cairn, the stones of which have been removed for building dykes, and in which were found many urns containing human ashes that crumbled into dust on exposure to the air. A beautiful gold coin of James V., in good preservation, was found some years since on the lands of Lochend; and within the last few years there was discovered in the glebe a silver medal, supposed to have been struck on the dispersion of the Spanish Armada.

KIRKHILL, a village, in the parish of PENICUICK, county of EDINBURGH, $\frac{1}{2}$ a mile (N. E. by E.) from Penicuick; containing 315 inhabitants. It is situated on the west bank of the North Esk river, on which are considerable mills for the manufacture of paper. The population is chiefly engaged in these mills, and in weaving.

KIRKHILL, a parish, in the county of INVERNESS, 6 miles (W.) from Inverness; containing 1829 inhabitants. This place, which consists of the two united parishes of Wardlaw and Farnua, derives its name from

the situation of its church on a hill; its Gaelic name refers to the dedication of its church to the Virgin Mary. The parish is bounded on the north by the Beaully loch and the Firth of Moray, and on the north-west by the river Beaully. It is about eight miles in length, varying from one mile to three miles in breadth, and diversified with hills, of which those in the south-eastern portion of the parish rise to a considerable elevation, and are mostly covered with heath, affording scanty pasture for sheep and cattle. The river, which skirts the parish for nearly three miles, is navigable for vessels of sixty tons to the village of Beaully, in the parish of Kilmorack, and abounds with salmon, and trout of various kinds. Herrings are taken in moderate quantities during the season in the Beaully loch; and on the shore, at Fopachy and Wester Lovat, are landing-places where vessels deliver cargoes of lime and coal for the supply of the parish.

In the valleys, and along the Firth, the soil is a strong clay, and on the rising grounds a rich loam. The crops are wheat, barley, and oats, with potatoes and turnips; the system of husbandry is improved, and the lands are generally in a state of profitable cultivation. Considerable portions of moor have been rendered fertile by draining; the farms in the parish are partly inclosed, and the buildings are mostly substantial and commodious. There are some natural woods, chiefly of alder and birch, the former of which is predominant; and extensive plantations have been formed, consisting of the various kinds of forest and ornamental trees, all of them in a thriving state. The annual value of real property in the parish is £6807. The mansions are Moniack Castle, Newton, Lentrane, Auchnagairn, Fingask, Reelick, and Bunchrew, the last distinguished as the birthplace of President Forbes of Culloden. The village, or Kirk-town, is pleasantly situated on the bank of the Beaully river; and facility of communication is afforded by the road to Inverness, which passes through the whole length of the parish. Ecclesiastically Kirkhill is within the limits of the presbytery of Inverness and synod of Moray. The minister's stipend averages £260, with a manse, and a glebe valued at £20 per annum; patron, Hercules Scott, Esq. The church, originally erected in 1220, on Wardlaw or St. Mary's Hill, was taken down, and rebuilt near the former site, in 1791, and is in good repair. The members of the Free Church have a place of worship. Kirkhill parochial school is well attended; the master has a salary of £30, with a house and garden, and the fees average from £15 to £20 per annum. There is also a school supported by the Society for Propagating Christian Knowledge. On the summit of Wardlaw Hill, and on the site of the old church, is a chapel, the burial-place of the Fraser family, and which contains elegant monuments to Thomas and Simon Fraser, Lords Lovat.

KIRKHILL, a village, in the parish of CAMBUSLANG, Middle ward of the county of LANARK; containing 216 inhabitants. This is one of thirteen villages in the parish, and is among the largest. It has about forty-three families, of whom thirty-two are engaged in the manufactures of the district, chiefly hand-loom weaving for Glasgow houses.

KIRKIBBOST, an isle, in the parish of NORTH UIST, county of INVERNESS; containing 25 inhabitants. This isle lies on the south of Uist, and west of the island of Balishear; and is about a mile in length, but of no great

breadth, and insulated only at high water. It is composed of fine sand; and being exposed to the westerly gales, a large tract has been blown away, and the sea now covers fields which produced good crops of barley and other grain. The suppression of sand-drift has, however, been effectually secured here, as in other parts of the parish, by sloping the sand-banks, and covering them with sward from neighbouring places; and bent is also employed for this purpose.

KIRKIBOLL, a village, in the parish of TONGUE, county of SUTHERLAND, $\frac{1}{2}$ a mile (W.) from Tongue; containing 92 inhabitants. This is a pretty village, situated on a bay of its own name, which opens into the Kyle of Tongue: it contains the manse, and a commodious inn; and at a short distance is Tongue House.

KIRKINNER, a parish, in the county of WIGTOWN; containing, with the hamlets of Marchfarm and Slohabert, 1769 inhabitants, of whom 229 are in the village of Kirkinner, 3 miles (S. by W.) from Wigtown. This place, which is of remote antiquity, derives its name from the virgin saint Kinneir, by whom its ancient church is said to have been consecrated, and who suffered martyrdom at Cologne in the year 450. The church of Kirkinner was granted by Edward Bruce, Lord of Galloway, to the priory of Whithorn; and on its resignation by the brethren of that establishment to James V., in 1503, in exchange for the church of Kirkandrews, it was attached to the chapel royal of Stirling. Subsequently it formed the benefice of the sub-dean of the chapel. The original parish included also the district now forming the parish of Kirkowan, after the separation of which, the ancient parish of Longcastle was united to Kirkinner on the decay of its church, which fell into ruins in 1630. The early history of the place is not distinguished by any other events of importance. Baldoon Castle, for nearly two centuries the seat of the Dunbar family, and which furnished Sir Walter Scott with incidents for his tale of the *Bride of Lammermoor*, passed, by marriage with the heiress, to the Hamiltons, and then to the Douglasses, with whom it remained till 1793, when the estate was purchased from the Earl of Selkirk by the Earl of Galloway.

The PARISH is bounded on the east by the bay of Wigtown, along which it extends for about three miles; and on the north by the river Bladenoch. It comprises 15,000 acres, of which 13,500 are arable, 300 woodland and plantations, and the remainder hill pasture, moor, and moss. Along the shore of the bay the surface is perfectly level, but in most other parts is diversified with gentle undulations, and hills of moderate height, sometimes covered with verdure, or crowned with plantations, which add much to the beauty of the scenery. The bay is here from seven to eight miles in width at high water, but retires, at the ebb of the tide, to a considerable distance from the shore, leaving a level tract of sand more than a mile in breadth. The river Bladenoch has its source near the borders of Ayrshire, and flows in a winding course into Wigtown bay; it abounds with salmon, trout, and sperlings, and is navigable for nearly two miles from its mouth. The other streams in the parish are the Malzie and the Mildriggen; the former joins the Bladenoch soon after that river enters the parish, on the west, and the latter flows north-eastward through the grounds of Barnbarroch and Baldoon park, into the Bladenoch near its influx into the bay. At the

south-western extremity of the parish is the lake of Dowalton, or Longcastle, a sheet of water about two miles in length and a mile and a half in breadth, the larger portion of which is in the parish of Sorby. Pike and perch are found in this lake; and on the Kirkinner side, at a small distance from the shore, are two small islands, one of them thirty acres in extent. There are numerous springs of excellent water in various parts of the parish, and also some springs strongly impregnated with iron; the principal of these latter is a spring on the lands of Barnbarroch, formerly much resorted to by invalids.

The prevailing SOIL is of a gravelly nature; on the low lands of Baldoon are some large alluvial tracts. In other parts are patches of moss; but the lands generally have been greatly enriched by the use of shell-marl for manure, of which abundant supplies are obtained from the shores of the bay. The crops are oats, wheat, barley, potatoes, and turnips, with the various grasses; the system of husbandry is in an improved state, and a due rotation of crops is carefully observed. The lands have been drained, and inclosed partly with fences of thorn and partly with stone dykes; the farm houses and offices are substantial and well arranged, and many of them of superior order. The cattle reared are usually of the Galloway breed, and great attention is paid to their improvement; large numbers are fattened for the Liverpool market, and shipped at Wigtown. Few sheep are bred; but many of the Highland kind, purchased at the Falkirk tryst, are fed on turnips during the winter and spring, and afterwards sent by sea to Whitehaven and Liverpool, where they find a ready sale. The plantations in the district consist of firs, with various other sorts of trees for which the soil is adapted; they are under careful management, and in a thriving state, especially the beech, ash, plane, and Huntingdon willow, many of which have attained a luxuriant growth. In this parish the prevailing rocks are of the transition kind, and boulders of granite are found in some places; but stone of good quality for building is very scarce, and there are not any mines or quarries. The annual value of real property in Kirkinner is £10,997. Barnbarroch House, the seat of R. Vans Agnew, Esq., is a stately modern mansion, situated nearly in the centre of the parish, in an extensive and richly-planted demesne. The village stands on the road to Wigtown; a few of the inhabitants are employed in weaving linen by hand-looms at their own dwellings. A post-office is established here, with a daily delivery; and facility of communication is maintained by good roads that intersect the parish, and by bridges over the various streams, of which that across the river Bladenoch is a substantial structure. At Baldoon is a small harbour, for the accommodation of vessels bringing supplies of coal and other articles required in the district, and for the shipment of grain, cattle, and other agricultural produce.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Wigtown, synod of Galloway. The minister's stipend is £230, with a manse, and a glebe valued at £20 per annum; patrons, the Agnew family of Sheuchan and Barnbarroch. Kirkinner church, erected in 1828, and since enlarged by the erection of two side galleries, is a handsome and substantial structure containing 800 sittings, and is situated at a small distance eastward of the village. The parochial school

is well conducted, and attended by about 100 children ; the master has a salary of £34, with a house and garden, and the fees average £30 per annum. The school-house is a spacious building near the church, and contains a small library for the use of the scholars. At Cairnfield was a Druidical circle, the stones of which have long been removed ; and in a cairn near the site, which has also been taken down and the stones used for building fences, were found, inclosed in a coffin of rudely-formed slabs, some human bones partly consumed by fire. There are vestiges of two circular camps, whose history is unknown ; and not far from Loch Dowalton are some remains of the ancient church of Longcastle. Numerous ancient coins have been found at different times on the farm of Barness. Of the family of Vaux, formerly proprietors of Barnbarroch, Alexander was consecrated Bishop of Galloway in 1426, and in 1429 was appointed by James I. one of the conservators of peace on the Scottish borders ; his cousin, George Vaux, was Bishop of Galloway in the reign of James III. Sir Patrick Vaux, the last distinguished member of the family, was made a lord of session by James VI., and was subsequently sent by that monarch as ambassador to the court of Denmark.

KIRKINTILLOCH, a burgh of barony and a parish, in the county of DUMBARTON, 7 miles (N. E. by N.) from Glasgow, and 40 (W.) from Edinburgh ; containing 8880 inhabitants, of whom 6698 are in the burgh. This place, during the time of the Romans, formed part of the province of *Valentia* ; and vestiges of three forts on the line of the Roman wall, which passed through the whole length of the parish, may be still distinctly traced. The barony was granted by charter of William the Lion to William Cumyn, lord of Lenzie and Cumbernauld ; and the town, under the appellation of Wester Lenzie, was, by charter of the same monarch, erected into a burgh of barony in 1184. The ancient castle of the Cumyns, of which no vestiges are now remaining, appears to have been of great strength in the beginning of the fourteenth century, when, on the forfeiture of John Cumyn, it was bestowed together with the barony, by Robert Bruce, upon Sir Robert de Fleming, in reward of his eminent services during the struggles in which Bruce had been engaged with England, in asserting his right of succession to the Scottish throne. The present name of the town, Kirkintilloch, supposed to be a corruption of *Caer-pen-tulach*, signifying in the Gaelic language "the termination of a promontory," is minutely descriptive of the situation of the place at the extremity of a ridge extending from the south of the parish into a plain on the banks of the river Kelvin. In 1745, the Highland army of the Pretender passed through the town, upon which occasion a shot from a barn killed one of their men, and the inhabitants, being unable to deliver the offender into their custody, were subjected to a heavy fine. The people suffered severely from the Asiatic cholera, in 1832, when thirty-six fatal cases occurred ; this was the first place visited by that epidemic in the west of Scotland, and the alarm which it occasioned was great. Since that time no event of importance has taken place.

The town is situated on the banks of the river Luggie, near its influx into the Kelvin, and consists of numerous irregularly-formed streets, diverging from each other in various directions ; the houses are of indifferent appear-

ance, and built without any regard to uniformity. The streets are lighted with gas from works established by a company of shareholders, and the inhabitants are amply supplied with water. A public library is supported by subscription, forming a collection of useful volumes ; and there are other libraries in the parish. The environs abound with pleasing scenery, enlivened by gentlemen's seats, the grounds of which are enriched with thriving plantations. From the abundance of coal and ironstone in the immediate vicinity, and the facilities of water carriage, the place has become a seat of manufacture, and has greatly increased in population. The cotton-manufacture is pursued to a very considerable extent, chiefly for exportation to India ; the articles are flowered-muslins, gauzes, and similar fabrics, the production of which affords occupation to about 2000 hand-loom weavers, most of them resident in the town. The printing of calico is also carried on, giving employment to 120 persons ; about twenty persons are engaged in the manufacture of silk hats, and there are an iron-foundry and a distillery. The market is on Saturday, but is not numerously attended : fairs, chiefly for cattle, are held on the second Tuesday in May, the last Thursday in July, and the 21st of October. Facility of communication is afforded by the turnpike-road from Glasgow to Edinburgh, which passes through the town, and by numerous good roads that intersect the parish in various directions ; by the Forth and Clyde canal, which runs for several miles along the northern border of the parish ; by the Edinburgh and Glasgow railway, which passes through the southern part of the parish, and has a branch through the town to Campsie ; and also by the Monkland and Kirkintilloch railway, which has its northern terminus in the town, and connects the rich coal districts in the parishes of Old and New Monkland with the Forth and Clyde canal. The charter of William the Lion was confirmed by Malcolm Fleming, who in 1525 granted to the burgesses the lands of the burgh ; a gift ratified by his successors the Earls of Wigtown. The government is vested in two bailies, a treasurer, and twelve councillors, assisted by a town-clerk. These officers are annually elected by the burgesses, twenty-two in number, who derive their qualification from the feudal tenure of one of the twenty-two portions, called Newland Mailings, into which the rural district of the burgh is divided : the tenure of the lands whereon the town is built affords no right to vote in the election of the officers. The magistrates are invested with all the jurisdiction of royal burghs, which in civil cases they exercise to an unlimited amount, but in criminal cases only as to petty offences ; the town-clerk acts as assessor, and courts are held as occasion may require. The courthouse, to which a prison is attached, is a substantial building with a spire ; it is situated at the market-cross, and was erected in 1814.

This parish and that of Cumbernauld were originally one, under the appellation of Lenzie, and continued as such till 1659, when, a church being built for the accommodation of the eastern portion at Cumbernauld, the ancient chapel of the Virgin Mary became the church of the western portion, which constitutes the present parish of Kirkintilloch. The parish is bounded on the north by the river Kelvin, and is nearly six miles in length, and about three miles and a half in extreme breadth, comprising an area of 10,670 acres, of which

4000 are arable, 300 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface, though undulated, is no where broken into hills of precipitous elevation. The principal river is the Kelvin: its tributary, the Luggie, intersects the southern portion of the lands, and afterwards flows into the Kelvin on the north-west of the town: both these streams abound with trout. At Gartshore is a lake called the Bord loch, about four acres in extent. Around the town the soil is a light black loam of considerable depth; in the southern portion of the parish, a strong clay: other parts are peat-moss. The crops consist of wheat, barley, oats, peas, beans, potatoes, and turnips, and there is much land cultivated as gardens and orchards: the system of husbandry is improved; the lands have been partly drained and inclosed, and some large tracts of moss and waste have been reclaimed. Considerable numbers of cattle are reared in the pastures, of various breeds; on the dairy-farms the cows are all of the Ayrshire. The plantations, which are principally on the Gartshore estate, are for the most part larch, spruce and Scotch firs. In this parish the substrata are chiefly coal, limestone, and ironstone. Coal is wrought extensively on the Barr hill, the property of Mr. Gartshore, at Stron, and at Shirva; and limestone at Orchardstown: whinstone and greenstone, also, are quarried for the roads. The annual value of real property in the parish is £18,071. The mansion-houses are, Gartshore, for many centuries the seat of the ancient family of Gartshore; Oxgang, Shirva, Unthank, Garngaber, Broomhill, Bellefield, Woodhead, Luggiebank, Duntiblae, Merkland, and Meiklehill.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Glasgow, synod of Glasgow and Ayr. The minister's stipend is about £250, with a manse, and a glebe valued at £20 per annum; patron, J. Fleming, Esq. The parish church, formerly the chapel of St. Mary, was erected in 1644, and, though repaired within the last few years, is still inconvenient; it contains sittings for 800 persons. St. David's church, to which a district containing a population of 3414 was for a time annexed as a quoad sacra parish, was erected in 1837, at an expense of £2300, raised by subscription; it is a neat substantial structure with about 1000 sittings. The minister, who was appointed by the managers and subscribers, derived his stipend chiefly from the seat-rents. There are places of worship for members of the Free Church, the United Presbyterian Church, the Synod of United Original Seceders, and Wesleyans. The parochial school is attended by about 120 children; the master has a salary of £34, with an allowance of £8 in lieu of house and garden, and the fees average £30 per annum. There are also a subscription school, and another for which a handsome building was erected by a lady of the Gartshore family; the masters receive salaries of £12 and £4 respectively, in addition to the fees. The wall of Antonine may be traced for nearly six miles through the parish. The three Roman forts already noticed were at Barr hill, Auchendavie, and near the west end of the town, respectively. On clearing the ground near them were found stones with various inscriptions, on one of which was inscribed *Legio Secunda Augusta fecit*; and a wedge of lead was discovered, weighing eleven stone, on which is stamped, in Roman characters, the date "C.C.LXX".

KIRKLAND, a hamlet, in the parish of GLENCAIRN, county of DUMFRIES; containing 71 inhabitants, who are chiefly employed in agriculture.

KIRKLAND, a village, in that part of the parish of WEMYSS which was included in the quoad sacra parish of METHILL, county of FIFE, $1\frac{1}{2}$ mile (W. by S.) from Leven; containing 534 inhabitants. This village, which is pleasantly situated, and neatly built, is chiefly inhabited by persons engaged in the weaving of linen, a very extensive factory having been established here by Messrs. Neilson and Company. The articles manufactured are canvass, sheeting, dowlas, ducks, &c., in the production of which, and in the spinning of yarn, the dressing of flax, and other branches, nearly 500 persons of the village and neighbourhood are constantly employed. In these extensive works, about 1000 tons of flax and hemp are annually consumed; nearly 300,000 spindles are at work, and the average yearly amount of wages paid exceeds £12,000. The buildings are spacious, substantial, and handsome: the interior is wholly lighted with gas, and the most approved machinery has been introduced. An act was passed in 1846 for the construction of a railway to be called the East of Fife railway, with a branch of a quarter of a mile to the Kirkland works. There is a school in the village, to the master of which the proprietors of the factory give a salary of £30 per annum, for the instruction of the children of their establishment.

KIRKLAND OF TINWALD, a village, in the parish of TINWALD, county of DUMFRIES, 4 miles (N. E. by N.) from Dumfries; containing 116 inhabitants. It lies in the southern part of the parish, and a short distance east of the road from Dumfries to Moffat. The village consists for the most part of thatched dwellings, several of them at present in a state of decay.

KIRKLANE, a village, in the parish of KINCARDINE IN MONTEITH, county of PERTH; containing 310 inhabitants.

KIRKLISTON, a parish, partly in the county of EDINBURGH, but chiefly in that of LINLITHGOW; containing, with the villages of Newbridge, Niddry, and Winchburgh, about 2450 inhabitants, of whom about 450 are in the village of Kirkliston, $2\frac{1}{2}$ miles (S.) from South Queensferry. This parish, of which about one-fourth lies in the county of Edinburgh, and three-fourths in that of Linlithgow, was formerly called Temple-Liston, an appellation partly acquired from the Knights Templars, who obtained the chief lands in the twelfth century. The ancient name of Liston is supposed to have been derived from some considerable family that resided here, or from the Celtic term *lioston*, signifying "an inclosure on the side of a river", and exactly answering to the locality. Authentic information relating to the history of Kirkliston reaches back to the year 995, when a battle was fought between Kenneth, natural brother, and commander of the army, of Malcolm II., King of Scotland, and Constantine, the usurper of the crown. The monument here, called the *Cat-stane*, is said to have been erected in memory of this battle, in which both the generals were slain. In 1298, Edward I. of England, when marching to engage the Scots at Falkirk, rested for some time with his army close to the village of Kirkliston; and the field in which the king's tent was pitched is still shown, immediately to the south-west of the village, on the property of Newliston. Upon the

dissolution of the fraternity of Knights Templars, the Knights of St. John of Jerusalem became owners of their large estates in this district, which they held till the Reformation, when the whole were converted into a temporal lordship in favour of Sir James Sandilands, the chief of the order of St. John. At an early period, a bishop of St. Andrew's obtained possession of the church, with the village, mill, and some contiguous lands called the *Mains*, or demesne, and kirk-lands of Kirkliston. Afterwards the bishops acquired a regal jurisdiction over their estates on the southern side of the Forth, and made Liston the seat of authority, where the hall in which their bailie held his courts was standing so late as the year 1700. On the abolition of hereditary jurisdictions in 1748, the Earl of Hopetoun claimed £1500 for the regality of St. Andrew's south of the Forth. The estate of Newliston, in 1543, fell to the family of Dundas of Craigton, who enjoyed it till the Revolution, when it came to the Dalrymples, by the marriage of Elizabeth, daughter of Sir John Dundas, with the second Viscount of Stair, who in 1703 was created Earl of Stair and Lord Newliston.

The PARISH is five miles and a half in length from east to west, and four miles and a half in breadth from north to south, containing an area of 7722 acres. It is bounded on the north and north-east by the parish of Dalmeny; on the north and north-west by that of Abercorn; on the west and south-west by the several parishes of Uphall, Mid-Calder, Ecclesmachan, and a detached portion of Dalmeny, named Auldcathie; on the south by Kirknewton and Ratho; and on the east by Corstorphine and Cramond. A detached part of the parish, called Liston-Sbiels, lying on the slope of the Pentland hills, is included for ecclesiastical purposes in the parish of Kirknewton. The river Almond, rising in Lanarkshire, and entering Kirkliston parish at the south-western point, winds for about four miles and a half to the village of Kirkliston, and afterwards runs towards the north-east for a mile and a half; it then passes into the parish of Cramond, and at length falls into the Firth of Forth at the village of that name. The SOIL varies throughout from a strong clay to a rich dark mould, in different admixtures and proportions. On the banks of the river, and on the neighbouring haughs, it consists of alluvial deposits, forming in some places a fertile loam, capable, with good husbandry, of producing the best crops. By far the larger part of the ground is under tillage; the wood, plantations, and permanent pasture bearing but a small proportion to the arable tracts. On the estates of Newliston, Clifton Hall, Carlowrie, and Foxhall, and the lands of Niddry and Humbie, a considerable quantity of ancient timber may be seen; and in different parts are young clumps of beech, ash, elm, and fir: with these exceptions, and exclusive of the lawns belonging to the mansions of the gentry, the whole of the lands are cultivated. All kinds of grain, with potatoes, turnips, and the several grasses, are produced. Few parishes have made such rapid improvements in agriculture within the last half century as this, the face of the district having been completely changed by the consolidation of small farms, by the introduction of extended leases, by inclosures, superior drainage, and manuring, with the rotation system modified to suit every peculiarity of soil. The cattle are generally a cross between the Teeswater and Ayrshire breeds, but

Ayrshire cows are preferred for the dairy; the sheep are the black-faced, Cheviots, and Leicesters. Few sheep and cattle, however, are kept here, as the ground is turned to better account. The rocks in the parish are chiefly sandstone, limestone, and trap, and ironstone and shale are found in large quantities: coal is supposed to exist, but none has yet been discovered. On the farm of Humbie is a quarry which produces a beautiful and durable stone, suited to a superior class of buildings. The annual value of real property in the parish is returned at £3966. Newliston, the residence of the Hog family, is a large and elegant house, built at the close of the last century: it stands in the midst of extensive pleasure-grounds and plantations, disposed in a somewhat original style. Clifton Hall, a very ancient mansion, is the seat of Sir Alexander Maitland Gibson, Bart., a family of considerable antiquity; and Carlowrie also an ancient mansion, is the residence of the Falconers.

The principal villages are Kirkliston and Winchburgh in the county of Linlithgow, and Newbridge in the county of Edinburgh. At the western extremity of the village of Kirkliston is a distillery, established about thirty years ago; but with the exception of the hands here employed, and those engaged in domestic trades, the whole population are occupied in agriculture. A fair is held at Kirkliston on the last Tuesday in July, and one at the village of Winchburgh on the first Friday in the month of June, at neither of which, however, is any business transacted. There is a post-office that receives and despatches letters once a day. Three turnpike-roads run through the parish, viz., the road from Edinburgh to Stirling, and to Glasgow by Falkirk, which passes through the village; the road from Edinburgh to Glasgow by Bathgate; and the road from Queensferry to the last-mentioned road. The Union canal also intersects the parish, and is conveyed over the river Almond by an aqueduct. There are two good bridges, likewise, over the Almond, one of which is on the line of the Stirling road, and the other on the middle or Bathgate road to Glasgow. The railroad between Edinburgh and Glasgow crosses the Almond, near the village of Kirkliston, by a splendid stone viaduct, forming one of the most extensive works of the kind: this viaduct is 720 yards in length, twenty-eight feet in width, and fifty feet above the level of the water, resting upon thirty-six segmental arches, each of seventy-five feet span, with piers seven feet in thickness; the whole presenting a very noble appearance. At Winchburgh the railway passes through a tunnel 330 yards in length, twenty-six feet in breadth, and twenty-two in height, the second in extent of the five on the line. The Bathgate railway crosses the river Almond between the aqueduct of the Union canal and the viaduct of the Edinburgh and Glasgow railway.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Linlithgow, synod of Lothian and Tweeddale, and the patronage is vested in the Crown. The stipend of the minister averages about £300, and he has also £5. 11. 7., feu-duties of Hallyards, an annual gift from the crown; with a manse, built in 1692, and repaired and enlarged in 1808, and again in 1838, and a glebe of seven acres of land valued at £30 per annum. Kirkliston church was thoroughly repaired in 1822; it will accommodate 700 persons, and has a fine-toned bell, which is rung every morning at five in summer and six in winter, and every evening at eight o'clock. This an-

cient structure is supposed to have been built in the twelfth century. The members of the Free Church of Scotland have a place of worship. There is a parochial school, at which the usual branches of education are taught; the master has the maximum salary, with the fees, and a house and garden. In 1798 a friendly society was established, the benefit of which to the sick members and the widows of members has been very considerable. Among the antiquities of Kirkliston, one of the chief is the monument erected to perpetuate the battle between Kenneth and Constantine, already noticed. At Clifton, under an old cot-house, there was found, some time since, an earthen money-box containing between 300 and 400 silver coins of England and Scotland; and near this spot was discovered a gold coin, about fifteen feet under the ground, with the inscription *Robertus II., Rex Scotorum*. In the south-western part of the parish, on the Hoptown estate, is an ancient baronial residence named Il-Liston, supposed to have been a hunting-seat of James II., James IV., and other kings. About two miles west of the village of Kirkliston stands Niddry Castle, a fine ruin, formerly possessed by the Earls of Wintoun, and where Queen Mary is said to have slept when on her flight from Lochleven Castle to join her supporters at Hamilton, in the year 1568. Andrew Dalzel, professor of Greek in the university of Edinburgh, was a native of this parish; and the celebrated John, second Earl of Stair, who succeeded to the estate of Newliston in 1725, has left behind him lasting memorials of his skill, spirit, and perseverance, in the agricultural improvements introduced here under his immediate auspices. Indeed, the superior state of husbandry attained in this district may be fairly traced to the efforts of this distinguished nobleman. There are several springs in the parish impregnated with lime, iron, and magnesia.

KIRKMABRECK, a parish, in the stewartry of KIRKCUDBRIGHT, $3\frac{1}{2}$ miles (E. by N.) from Wigtown; containing, with the burgh of Creetown, 1854 inhabitants, of whom 870 are in the rural districts of the parish. This place derived its name from the situation of its ancient church in a brake, at that time overgrown with thorns and brambles. The lands were part of the possessions of the abbey of Dundrennan and the priory of Whithorn, but, after the Reformation, were granted by the crown to different families, and at present are divided among fourteen proprietors. The PARISH, which includes the greater portion of the ancient parish of Kirkdale, is bounded on the west by the river Cree, and on the south-west by Wigtown bay, and is about nine miles in length and five miles and a half in breadth. The number of acres is not accurately known; about 5000 may be arable, 900 meadow, 1000 woodland and plantations, and the remainder moorland pasture and waste. In some parts the surface is mountainous, and in others diversified with hills of only moderate elevation, and fertile valleys. The principal mountains are the Clints of Drumore, Craig, Pibble, Cairnharrow, and Larg, varying from 800 to 1000 feet in height. A portion of Cairnsmore, which has an elevation of 2222 feet above the level of the sea, is also within the parish. The coast, which is about six miles in length, is in general flat and sandy; but the shores of Kirkdale are bold and precipitous, and the rocks perforated with numerous caverns and fissures, some of which are identified with scenes described by Sir Walter Scott in the novel of *Guy Mannering*. The river Cree has

its source in Loch Moan, near the spot where the counties of Ayr and Wigtown unite with Kirkcudbrightshire, and flows into Wigtown bay, from which it is navigable for small vessels up to Carty.

Along the banks of the river, and in the valleys, the SOIL is rich; but on the hills, and in other parts, it is of lighter quality, interspersed with tracts of moss. The crops are wheat, barley, oats, and potatoes; the system of agriculture is in a state of progressive improvement, and the lands in many parts have been rendered fertile by the use of bone-dust and guano as manure. In Kirkdale the farm-buildings are generally substantial and well arranged, but in other parts of the parish many of them are of very inferior order: the lands are inclosed with stone dykes. Much attention is paid to the improvement of live stock: the cattle, of which large numbers are pastured, are of the pure Galloway breed, with some cows of the Ayrshire breed for the dairy. The sheep are mostly the black-faced, and of small size, with some of the Cheviot and Leicestershire breeds; of the first description about 7000, and of the others 800, are reared in the pastures. There are considerable remains of ancient wood: the plantations are of oak, ash, hazel, alder, beech, sycamore, chesnut, elm, and firs, for all of which the soil is well adapted. In this parish the substrata are clay-slate, greywacke, and granite, of which last the rocks are principally composed. Lead-ore has been discovered in several parts, and pure specimens of galena have been found; a copper-mine was formerly wrought, but it has been abandoned. There are some extensive quarries of granite, opened by the trustees of the Liverpool Docks about 1830, and in which, in 1834, not less than 450 men were engaged; they are still in operation, but on a smaller scale, employing about 160 persons. The stone, which is raised in large blocks, and split into any required form or dimensions, is of excellent quality and in high repute. The annual value of real property in the parish is £5889. Kirkdale House, a splendid mansion of polished granite, in the Grecian style of architecture, after a plan by Mr. Adam, is finely situated in a demesne tastefully embellished, and abounding with picturesque and romantic scenery. Barholm House is a handsome residence of chaste design, pleasantly situated in grounds the approaches to which are well laid out. Cassencarrie is an ancient mansion, with a tower of interesting character; and Hill House is a substantial building, fronted with polished granite, and commanding some good views of the adjacent country. The burgh and port of Creetown is noticed under its own head.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Wigtown and synod of Galloway. The minister's stipend is about £240, with a manse, and a glebe valued at £20 per annum; patrons, the Crown and John McCulloch, Esq., of Barholm. The church, erected in 1834, at an expense of £2000, is a very handsome structure in the later English style; it is near the burgh of Creetown, and contains 800 sittings. The ruins of the ancient churches of Kirkmabreck and Kirkdale are yet remaining in their respective churchyards, which are still used as places of burial; and in the latter is the vault of the Hannay family, built of granite. There is a place of worship in Creetown for members of the United Presbyterian Church. The parochial school is attended by about 100 children; the

master has a salary of £34, with a house and garden, and the fees average £30. A second school is supported by the fees, and by the heritors, who allow the master a free house and garden, and a salary of £10 per annum; and a school of industry, in which thirty girls are taught free, is under the patronage of Miss Hannay and the Rev. John Muir, the minister. There are several chalybeate springs in the parish; one of them, at Pibble, is strongly impregnated. Remains of Druidical circles are found in different places; and in 1778, while removing some stones from a tumulus, were discovered a coffin containing a skeleton of gigantic size, an urn inclosing ashes, and an earthen vessel for holding water. In 1809 was found a coffin of rude form, containing a skeleton of large size, the arm of which had been nearly separated from the shoulder by a stone axe: the blade was still remaining in the wound. Cairn-Holy is traditionally said to have been raised over the remains of a bishop of Whithorn, who was slain in a battle with the English on Glenquicken Moor in 1150, and buried here. Dr. Thomas Brown, professor of moral philosophy in the university of Edinburgh, was born in this parish, of which his father was minister, in 1778; he died in 1820, and was buried in the churchyard of Kirkmabreck.

KIRKMAHOE, a parish, in the county of DUMFRIES, 2 miles (N.) from Dumfries; containing, with the villages of Dalswinton, Duncow, and Kirkton, 1568 inhabitants. The appellation of this parish is of doubtful origin; but it is supposed to have been derived from the position of its church in a hollow place, or near a river: the church is situated in a fine valley, and there are evident traces of the river Nith having at some time run close by the church. The place is of considerable antiquity. According to ancient records, the monks of Arbroath obtained from David II. a grant of "the church of Kirkmahoe, in the diocese of Glasgow", the patronage of which, however, appears to have been retained by the Stewarts, who had succeeded the Cumin family in the barony of Dalswinton. In 1429 the rectory was constituted a prebend of the bishopric, with the consent of Marion Stewart, the heiress of Dalswinton; of Sir John Forrester, her second husband; and of William Stewart, her son and heir; and the Stewart family long continued to be patrons of this prebend. At the Reformation, the rectory of Kirkmahoe was held by John Stewart, second son of the patron, Sir Alexander Stewart of Garlies. In the seventeenth century, the patronage passed, with the barony of Dalswinton, from the Stewarts, Earls of Galloway, to the Earl of Queensberry, in whose family it remained until the death of the last Duke of Queensberry in the year 1810, when it came to the Duke of Buccleuch.

The lands were portioned in ancient times into the four large estates of Dalswinton, Duncow or Duncol, Milnhead or Millhead, and Carnsalloch, with which most of the historical memorials of the parish are interwoven. The estate of *Dalswinton*, or "the dale of Swinton", was first possessed by the Cumins: in 1250, Sir John Cumin held this manor as well as that of Duncol, and gave the monks the liberty of a free passage through the lands of the two manors to their granges in the west. On the accession of Bruce, Dalswinton was granted to Walter Stewart, third son of Sir John Stewart of Jedworth; and it remained in the family till 1680, when, with some exceptions, the barony was

disposed of to the Earl of Queensberry. The estate afterwards came to the Maxwells, by whom it was sold at the latter end of the last century to the late Patrick Miller, Esq. It contains 5132 acres, and comprehends about one-third part of the parish. The barony of *Duncow* was forfeited by the Cumins, like that of Dalswinton, on the accession of Bruce; and was given to Robert Boyd. In 1550, Robert, Lord Maxwell, was returned as owner of it in right of his father, of the same name and title; and it continued in the family until about sixty or seventy years ago, when it was sold to various persons. It was in this village that James V. spent the night before he paid the angry visit, recorded by historians, to Sir John Charteris of Amisfield: the site of the cottage where the king slept, near the Chapel hill, was pointed out by a large stone which remained there till about half a century ago. The estate of *Millhead* was possessed in 1700 by Bertha, wife of Robert Brown of Bishopton, and heiress of Homer Maxwell of Kilbean, from which family it passed about 1810 to Frederick Maxwell, Esq.: it contains 1061 acres. *Carnsalloch* in 1550 belonged to Robert, Lord Maxwell, whose family held it till 1750, when it was sold to Alexander Johnston, Esq.

THE PARISH is seven miles and a half long, and its extreme breadth is five miles and a half. It contains about 15,000 acres, and is bounded on the north by Closeburn parish, on the north-east and east by Kirkmichael and by Tinwald, on the south and south-east by Dumfries, on the west by Holywood, and on the north-west by Dunscore. The northern and eastern parts are hilly, the land ascending gradually till it terminates in heights, some of which are between 600 and 800 feet above the level of the sea: the hills of Wardlaw and Auchengeith rise to 770 feet, and have a declivity southward. The loftier grounds are covered with heath and coarse grass, affording pasture fit only for sheep. In the vicinity of Tinwald, also, are some undulations interspersed with low-lying tracts of morass, and which, when not kept in tillage, are soon overspread with furze and broom. The river Nith runs along the western boundary of the parish, and intersects it at one corner. There are also several small streams or burns, which abound in trout, and are in many parts distinguished by romantic scenery: the Duncow burn forms three waterfalls, one of which, in rainy seasons, has a striking and imposing appearance.

THE SOIL on the high grounds consists in numerous places of deep moss, beneath which is a gravelly earth, resting upon a red till or slaty rock. On the sloping grounds it is gravelly, with a considerable mixture of sand, and small round stones; and on the low or holm land the soil is alluvial, mixed with clay. In every direction is a profusion of pebbles, of different sizes, rounded and polished by continued attrition, and many of them variegated with beautiful lines and colours. This is altogether an agricultural and pastoral parish, and the capabilities of the soil are for the most part developed. Grain of all kinds is grown, with the usual green crops. The sheep are of the Cheviot breed, crossed with the Leicester; numerous lambs are reared on the hilly grounds, and on most of the farms the calves are disposed of to the Dumfries butchers when about six weeks old. The husbandry in the district is of the most approved kind; the land is subject to good surface

drainage, and is secured, where necessary, by strong embankments; the farm-houses are comfortable dwellings, and suited to the character and circumstances of the highly-respectable tenants who occupy them. Much has been done in the way of reclaiming land; and plantations are to be seen in many places. It was in this parish that an inestimable addition was first made, in 1786-7, to the agricultural products of Britain, by the late Patrick Miller, Esq., of Dalswinton, who, in that year, introduced the Swedish turnip into Scotland. From two ounces of seed, a great part of the now extensive culture of this valuable esculent may be said to have sprung; for, as soon as Mr. Miller had obtained, from the original plants on his own estate, a sufficiency of seed for his neighbours, and his friends in the Lothians and elsewhere, it was sown by them with avidity; and in a short time, extensive breadths of land were laid out in its successful cultivation. Large importations of the seed, it is true, were subsequently made by the British seed-merchants, to supply the increasing demand for it; yet prodigious quantities of the turnip are now raised in both countries, and in Ireland, from the proceeds of the stock sown at Dalswinton. In this parish the rocks consist chiefly of sandstone, frequently impregnated with red iron-ore: white marl has been found in the southern parts; and red soft sand, mixed with gravel and stones, is in some places abundant. The annual value of real property in Kirkmahoe is £9357.

The principal mansions are Dalswinton and Carnsalloch, both of which are modern; and the different estates are ornamented with fine specimens of stately timber, consisting of ash-trees, elm, chesnut, and rows of beech. There are five villages, of which Duncow, the largest, has a manufactory for coarse woollen-cloths, worked by water and steam: the village of Dalswinton is of recent origin. The road from Dumfries to Closeburn runs for nearly six miles through the parish, which is also intersected by the Glasgow, Dumfries, and Carlisle railway. Ecclesiastically the parish is within the bounds of the presbytery and synod of Dumfries; patron, the Duke of Buccleuch. The stipend of the minister is £238, with a manse, built in 1799, and a glebe of eight acres of good land valued at £14 per annum. The church, erected in 1822, is a well-built structure, rendered picturesque by the foliage in the churchyard and its vicinity. At Carnsalloch is a mausoleum or family sepulchral chapel, in the pointed style, recently erected by the Right Hon. Sir Alexander Johnston; it is of very handsome design, the windows filled with stained glass, the floor paved with encaustic tiles, and all the details are of an artistic character. There was a meeting-house at Quarrelwood, belonging to the Cameronians; but it has been converted into a poor-house. Three schools are maintained, each of which is partially supported by a parochial allowance. The master of the school at the village of Duncow receives a salary of £25. 13. 3.; the salary of the master at Dalswinton is £17; and £8 are given for the support of a third school at Lakehead, a remote corner of the parish. At each of the schools all the usual branches of education are taught; and instruction is occasionally afforded in the classics and mathematics. The total amount of fees received by the three masters is £80. About £500 have been bequeathed to the poor; and the sum of £5 per annum was left by Mrs. Allan of Newlands, for the

gratuitous instruction of fatherless children at the parish schools. In digging for the foundation of the church, some inconsiderable relics were met with. It may be stated, in relation to this parish, that the application of steam-power to the navigation of vessels was first successfully illustrated at Dalswinton, in 1788, by Mr. Miller, of whom mention has been already made. It is also deserving of record, that the introduction, in 1790, of the modern threshing-machine into this district, was effected under the auspices of Mr. Miller, who first used it on his own farm of Sandbed, in the presence of a number of the agricultural class, whom he had invited to witness its operation, with a view to manifest its efficiency and encourage its adoption. Bishop Corrie, of Madras, was a native of the parish; as was also the late Allan Cunningham.—See DALSWINTON.

KIRKMAIDEN, a parish, in the county of Wigtown, 16 miles (S. by E.) from Stranraer; containing, with the villages of Drumore and Port-Logan, 2202 inhabitants, of whom 1700 are in the rural districts of the parish. This place, which occupies the southern extremity of Scotland, derives its name from the dedication of its ancient church to St. Medan, to whom some other churches in this part of the country were also dedicated; and the name, originally Kirk-Medan, after undergoing various modifications at different periods, has since the Reformation invariably retained its present form. From the names of some localities in the parish, it would appear that other churches were founded here at an early period; and slight vestiges of the cemeteries may still be traced. The principal churches on record are those of Kirkbride, Kilstay, Kildonnan, Kirkleish, and Kirkdrain; and upon the shore of Maryport bay was an ancient chapel in honour of the Virgin Mary, the ruins of which were standing in 1680. The promontory called the Mull of Galloway, at the southern extremity of the parish, is said to have been the last retreat of the ancient Picts, who, no longer able to withstand the assaults of their victorious enemies, here leaped from the rocks, and perished in the sea.

The PARISH is bounded on the east by the bay of Luce, and on the south and west by the Irish Sea. It is about ten miles in length from north to south, and varies from a mile and a half to nearly four miles in breadth, comprising an area of 13,000 acres, of which 4000 are arable, 6000 meadow and pasture, 300 woodland and plantations, and the remainder moor and waste. The form is very irregular, and the surface greatly diversified. In some parts the ground is low and flat, but interspersed with numerous hills of moderate height, some of which are clothed with plantations; in other parts the lands rise into mountainous elevation, and almost in the centre the parish is intersected by a range of heights extending from the Irish Sea to Luce bay. Among the more conspicuous of the hills that diversify the surface, and some of which are nearly 900 feet above the level of the sea, are Montlokowre, Dunman, Cairnhill, Cairn of Dolt, and Grennan Hill, from all of which are obtained extensive and interesting views. The bold rocky promontory of the Mull of Galloway, a peninsula nearly a mile and a half in length, and a quarter of a mile in breadth, is connected with the main land by a narrow isthmus, little more than a quarter of a mile in width, and on which a lighthouse was erected in 1830, displaying an intermitting light, visible at a distance of twenty-

three nautical miles. From the balcony of the lighthouse is an unbounded prospect, embracing the mountains of Cumberland, the whole of the Isle of Man, the coast of Ireland from the mountains of Morne to Fairhead, the heights of Dumfries, Kirkcudbright, and Ayrshire, and the summits of Mount Jura, in Argyllshire, all of which are distinctly seen in clear weather. On the eastern side of the parish the coast is flat, and the shore gravelly; but on the west, rocky and precipitous, and worn by the waves into romantic caverns. The principal headland on the east is Killiness Point; on the west are Crammag, Gounies, and the Mull of Logan.

Of the numerous bays that indent the coast the most important are Chapelrossan, Balgown, New England, Tirally, Grennan, Curchie, Drumore, Culliness or Killiness, Maryport, and East Tarbet, on the bay of Luce; and West Tarbet, Barncorkrie, Clanyard, Portnessock, and Port Gill, on the shore of the Irish Sea. The harbours are Port-Logan in the bay of Portnessock, and Drumore. At both of these harbours, commodious quays have been erected, where vessels of any burthen may land and take in their cargoes, and find safe anchorage in the bays; but the former cannot be entered at low water by vessels of great size. Several of the other bays, also, are accessible to small vessels in fine weather; but they are not much frequented. Fish of many kinds are found in abundance off the coast; the most general are cod, whiting, mullet, mackerel, skate, turbot, soles, oysters, lobsters, and crabs, of which two last great numbers are taken by fishermen from Ireland, for the supply of the Dublin market. Herrings, after having for years abandoned this part of the coast, are beginning to return, and promise to be abundant, in which case the fisheries, not now conducted upon any regular plan, may become a source of much profit.

The soil, though various, is tolerably fertile, and the lands are in profitable cultivation; the crops are wheat, barley, oats, potatoes, and turnips, with the usual grasses. The system of husbandry is in a great degree advanced, but is still susceptible of improvement. Thorough-draining has been introduced to a moderate extent, with considerable benefit, and due regard is had to the rotation of crops; the lands, also, have been mostly inclosed. In this parish the fences, which are partly of stone and partly of thorn, are but indifferent; and though the buildings on some of the larger farms are substantial, many are still of very inferior order. The cattle reared are of the Galloway breed, with the exception of the cows for the dairy, which are of the Ayrshire; and great attention is paid to their improvement: the sheep reared in the hill pastures are all of the black-faced, while such as are kept on the farms for domestic use are of the Leicestershire breed. The plantations, almost confined to the vicinity of Logan House, consist of ash, mountain-ash, sycamore, elm, beech, birch, and Huntingdon willow, for all of which the soil is well adapted; and in places sheltered from the sea, pineaster, white-spruce, Scotch fir, holly, and yew are in a thriving state. In general the rocks are composed of greywacke and argillaceous schist, alternated with portions of granite and gneiss. Slate of tolerable quality for roofing is found in abundance, and in some places has been wrought to a considerable extent; but there are no quarries at present in operation. The annual value of real property in the parish is £6396. Logan House, the seat of the

principal landed proprietor, is a handsome modern mansion, situated in an extensive demesne richly embellished. No manufactures are carried on; but in the villages of Drumore and Port-Logan, which are separately described, a few of the inhabitants are employed in the requisite handicraft trades. There is a post established under the post-office of Stranraer, from which town the mail is conveyed daily to Port-Logan and Drumore, three days in the week by a gig merely, and on the three other days by a car carrying passengers. A fair is held near the church on the Tuesday after the 21st of November; it was formerly frequented by dealers from various parts of the country, but has degenerated into a mere pleasure-fair. Facility of communication is maintained by statute-labour roads, now much improved, and kept in good repair.

Ecclesiastically the parish is within the limits of the presbytery of Stranraer and synod of Galloway. The minister's stipend is £150. 16. 5., of which £5. 7. 8. are paid from the exchequer; with a manse, and a glebe valued at £8 per annum: patron, the Earl of Stair. Kirkmaiden church, situated nearly in the centre of the parish, was erected in 1638; it is a very plain structure with 275 sittings. The parochial school is attended by about ninety children; the master has a salary of £25. 15., with a house and garden, and the fees average £18. A parochial library, containing a collection of 600 volumes, is supported by subscription. There are slight vestiges of ancient fortresses on the hills, supposed to have been of Pictish origin: on the isthmus connecting the Mull of Galloway with the main land, are some traces of a double line of fortifications extending from sea to sea. Upon the coast, near East Tarbet, is a cave thought to have been the retreat of St. Medan; and near it, in the adjoining rock, is a cylindrical well about four feet in diameter and six feet deep, naturally formed, and supplied with water by the surf breaking over the rock at spring tides. In the parish are the remains of the ancient castles of Logan, Clanyard, and Drumore; and a bell which, according to an inscription, appears to have been originally cast for the grandfather of the first Earl of Dalhousie, in 1534, is now used as the church-bell; it is said to have been at one time the dinner-bell of Castle-Clanyard, and to have been brought to that place from Kenmure. Near Logan is a natural cavity in the rocks, into which the tide enters at every flood, and which is generally stored with various kinds of fish. Andrew Mc Douall, Lord Bankton, author of *Institutes of Scottish Law*; and Robert Mc Douall, admiral both in the Portuguese and the British service, were natives of the parish.

KIRKMICHAEL, a parish, in the district of CARRICK, county of Ayr; containing, with the village of Crosshill, 2933 inhabitants, of whom 499 are in the village of Kirkmichael, 3 miles (E. by S.) from Maybole. This place, which derived its name from the dedication of its church, appears to have been at an early period part of the possessions of the Kennedy family, to whose ancestor a grant of the lands was confirmed by charter of David II., about the year 1360. By the marriage of Sir James Kennedy with the daughter of Robert III., this family obtained a considerable degree of rank and influence. Gilbert Kennedy, the second Earl of Cassilis, was employed in many of the most important offices of state; he was assassinated at Prestwick by Hugh Campbell, sheriff of Ayrshire. His son, Quintin Kennedy,

who became Abbot of Crossraguel, is distinguished for having maintained the tenets of popery in a discussion with the celebrated reformer John Knox, and on his decease was canonized for his zeal and constant devotion to the Roman Catholic faith. Gilbert, the third earl, was the friend and pupil of the historian George Buchanan; and John, the sixth Earl of Cassilis, was one of the ruling elders who attended the assembly of divines at Westminster, in 1643.

The PARISH is about twelve miles in length, and rather more than five miles and a half in extreme breadth. It is bounded on the north and north-east by the parish of Dalrymple, on the east by that of Straiton, on the south by Dailly, and on the west and north-west by the parishes of Kirkoswald and Maybole. The surface generally, with the exception of some level tracts along the banks of the rivers, is undulated and hilly, in some parts attaining considerable elevation. Glenalla hill is 1612 feet above the level of the sea; and there are several other eminences, of which Guiltree hill commands a beautiful prospect, embracing on one side the valley of the Girvan, with the Galloway hills, and on the other the bay of Ayr, the peaks of Arran, and the towns along the coast, with the Highlands and Ben-Lomond in the background. The river Girvan has its source among the hills of Barr and Straiton, and, running below Blairquhan, enters this parish, which it divides into two nearly equal parts, passing by the grounds of Cloncaird, where it assumes a wide expanse, and presents a finely-picturesque appearance: flowing between richly-wooded banks, it pursues its course to the village of Crosshill, and then forms a boundary between the parishes of Kirkoswald and Dailly. The river Doon passes by one extremity of the parish, about two miles below Patna, washing the base of the eminence on which the stately mansion of Cassilis is situated; and the Dyrock, issuing from Shankston loch, and augmented by the streams of the Barnshean and Spalander, flows by the church and village of Kirkmichael into the Girvan. There are numerous lakes in the parish, the principal of which are, Loch Spalander, about forty-five acres in extent, abounding in excellent trout, and sometimes with char; Loch Barnshean, twenty-eight acres in extent; Loch Croot, ten acres; Shankston loch, twelve acres; Drumore, nine acres; and Kirkmichael loch, about five acres in extent.

The SOIL in the low lands is extremely fertile, producing luxuriant herbage; in some parts, and especially near the bases of the lower hills, light and gravelly; and in others, clayey, and intermixed with loam. The whole number of acres in the parish is estimated at 15,250, of which about 1130 are in natural woods and in plantations, 500 waste, and the rest arable, meadow, and pasture land. The system of agriculture has greatly advanced; and the lands have been much improved under the influence of the example given by the Rev. John Ramsay, incumbent of the parish about forty or fifty years since, and founder of the Carrick Farmers' Society; and also under the encouragement afforded to the tenants by the late Earl of Cassilis and the present proprietors. Furrow-draining has been extensively carried on; and in 1832 Henry Ritchie, Esq., of Cloncaird, erected a work for the manufacture of draining-tiles, which at present produces on the average about 336,000 tiles annually. The farm-buildings are substantial and commodious, and generally slated; and all the recent

improvements in husbandry are practised. In this parish the substrata are chiefly sandstone, greenstone, and limestone; clay of excellent quality for making tiles is found in abundance, and there are some veins of galena, which appear to have been wrought, and are said to have yielded a considerable proportion of silver. The surface of the land in several parts is thickly strewn with boulders of granite, some of them of vast magnitude. There are quarries of freestone at Auchalton, Clonclough, Balgreggan, and Glenside, which have been all extensively wrought; and also a quarry of peculiarly fine quality at Trochain, on the lands of Cloncaird. The annual value of real property in the parish is £10,035. Cloncaird Castle, an old castellated mansion, has been entirely new fronted, and is now a very elegant residence: it is beautifully situated in a highly-embellished demesne abounding with stately timber. Kirkmichael House stands near the lake of Kirkmichael, which forms an interesting feature. Cassilis House, the property of the Marquess of Ailsa, who bears the inferior title of Earl of Cassilis, occupies an eminence rising from the bank of the river Doon, and is an ancient mansion, supposed to have been built about the fifteenth century. It was enlarged and much improved in 1830, and is a stately structure, surrounded with trees of noble growth, and with thriving plantations. Under the ancient castle was a subterraneous apartment, which, on being cleared out some years since to form a wine-cellar, was found to be replete with human bones. The village of Kirkmichael is neatly built and pleasantly situated, and has a post-office dependent on that of Maybole. Its inhabitants, in addition to the various trades usually carried on, are employed in weaving for the Glasgow and Paisley manufacturers, and the females in working muslins, which branches of trade are pursued to a still greater extent at Crosshill. Facility of communication is afforded by numerous good parish roads, and there are about twenty-six miles of turnpike-road.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Ayr, and synod of Glasgow and Ayr. The average stipend of the incumbent is £260; the manse is a handsome antique building of modern erection, and a very comfortable residence, and the glebe comprises about sixteen acres of profitable land. Kirkmichael church, which is pleasantly situated on the Dyrock stream, and surrounded by a spacious burying-ground planted with ash-trees of stately growth, was built in 1787; it is in good repair, and adapted for a congregation of about 556 persons. A chapel of ease has been erected for the accommodation of the inhabitants of Crosshill, chiefly by the munificence of Sir Charles Dalrymple Fergusson, of Kilkerran, Bart.; it is a neat edifice, adapted for nearly 460 persons, and may be considerably increased by the addition of galleries. The parochial school affords instruction to about seventy children; the master has a salary of £34, with a house and garden, and the fees average £30. There is also a school at Crosshill, for which a former proprietor erected a spacious schoolroom; the master used to receive an annual payment of £3. 10. from the proprietors of houses in the village, in addition to the school fees. A parochial library is supported by subscription; and two savings' banks have been established. In several parts of the parish are traces of ancient circular forts, about 100 yards in diameter, and surrounded by a ditch fifteen feet

broad : on being removed by the plough, fragments of spears, horns, urns, and ashes were found in profusion. There were also till lately some remains of a chapel, supposed to have been subordinate to the abbey of Crossraguel ; the well is still known by the name of the "Chapel well".

KIRKMICHAEL, a parish, in the county of BANFF, 11 miles (E. S. E.) from Grantown ; containing, with the late quoad sacra district of Tomintoul, 1576 inhabitants. This parish, which is named after Michael the Archangel, to whom the church was dedicated, is situated on the Avon, a tributary of the river Spey ; and is a bleak Highland district, stretching for more than thirty miles, from north to south, along the banks of the stream, and measuring in average breadth from three to four miles. It comprises, as is supposed, about 140,000 acres, of which only 2400 are cultivated ; more than 60,000 are comprehended in the forest of Glenavon, and the remainder are waste and pasture. The general aspect of the parish is mountainous, dreary, and barren, it being situated at the base of the Grampian mountains. The main range of the Grampians bounds it on the south, and branches from this range skirt it on the east and west, the only vista or outlet being a narrow opening on the north, which forms a passage for the waters of the Avon. The north side of Benmacdui, and the eastern side of Cairngorum, rising respectively 4362 feet and 4066 feet above the level of the sea, and exhibiting throughout the year collections of snow in their elevated chasms, are comprised in the southern portion of the parish. The forest of Glenavon has been lately converted by the proprietor, the Duke of Richmond, into a range for deer ; and the mountains and hills in all directions are well stocked with various kinds of game. The inhabited parts of the parish measure only about eighteen miles in length ; they consist of the narrow valley of the Avon, and the glens of the Conglass and Kebat on the east, and of that of Lochy on the west. Of this extent, nine miles, with the whole of the uninhabited portion, belong to the district of Tomintoul. The Avon, a deep, rapid, and pellucid stream, affords trout, and also salmon grilse from June till November : after being increased by numerous tributaries in its course of forty miles, it falls into the Spey at Ballindalloch, in the parish of Inveraven, adjoining Kirkmichael on the north. The pleasant and romantic valley of this river furnishes a beautiful relief to the wild and dreary aspect of the surrounding country. The scenery is also enlivened by several lochs ; the principal one being Loch Avon, at the southern extremity of the parish, distant fifteen or twenty miles from any habitation. Loch Avon is three miles long and one mile broad, and is encompassed by lofty mountains, except at its eastern side, where the Avon finds a narrow outlet : the whole of the adjacent scenery is imposing and magnificent. Trout, of a black colour and slender form, are found in abundance in its deep water ; and at the west end is the celebrated Clachdhian, or Shelter-stone, a ponderous block of granite, resting on two other masses, and thus forming a cave sufficient to contain twelve or fifteen men.

The SOIL most prevalent is a loam, incumbent on limestone ; that bordering on the Avon and its several tributary streams is alluvial. Barley and bear, and the usual grasses and green crops, are raised in considerable quantities, mostly under the five-shift course : the

Duke of Richmond, who and the Earl of Seafield are the sole landowners, confines his principal tenants to that course. The climate is such as to form an impediment to husbandry ; but the soil is in general good, and the lands are well farmed. Draining, inclosing, and the reclaiming of waste ground have for several years been successfully carried on ; and the dwelling-houses and farm-steadings have been improved. The sheep are of the common black-faced breed ; the cattle are mostly the West Highland, and their quality has been lately much advanced by the encouragement of the Highland and Agricultural Society of Scotland, and also by premiums afforded by the Duke of Richmond. Besides the masses of granite constituting the Grampian range, the substrata comprise sandstone and slatestone, the latter supplying a superior grey slate ; and limestone is abundant in every direction. Good plumbago is found in the neighbourhood ; and ironstone, which formed an article of profit more than a century since, is still to be found in great abundance, in the hill of the Leacht, in the south-eastern part of the parish, and is expected shortly to furnish occupation for a considerable number of persons. Oxide of manganese is found in the same locality, and the working of it gives employment to several people. The parish is entirely destitute of plantations ; the only wood to be seen is the natural birch and alder which ornament the banks of the Avon. The annual value of real property in the parish is £3325.

The village of Tomintoul, situated about five miles south of the church, contains a population of 530, and has a post-office with a daily delivery. Cattle and sheep are sent in droves to the south, and grain is forwarded to the sea-ports on the Moray Firth ; the supply of merchandise is chiefly from Aberdeen. Markets are held in the village, for the sale of cattle and sheep, and some of them also for the hiring of servants, on the last Friday in May, the last Friday in July, the third Wednesday in August, the Friday after the second Tuesday in September, and the second Friday in November ; the four last, O. S. Ecclesiastically the parish is in the presbytery of Abernethy, synod of Moray, and in the patronage of the Earl of Seafield : the minister's stipend is about £120, with a manse, and a glebe of nine acres valued at £40 per annum. Kirkmichael church, built in 1807, is a plain structure ; it is about four miles from the northern boundary, and contains accommodation for 350 persons. A church was erected by government in 1826, at a cost of £750, in the village of Tomintoul : the minister's stipend, including communion elements, is £120, and is paid by the government ; the manse was built at a cost of £738, and there is a glebe of about half an acre, with a garden. A Roman Catholic chapel, accommodating 464 persons, was built in the village in 1838 ; and the members of the Free Church have a place of worship. Kirkmichael parochial school affords instruction in Latin, mathematics, and geography, in addition to the usual branches ; the master has the maximum salary, and £10 fees, and also shares in the Dick bequest. There are two schools in the village, the master of one having £30 a year from government, with a house and garden from the Duke of Richmond, and the other endowed by the trustees of the late Mr. Donaldson. The poor enjoy bequests amounting to £1800.

KIRKMICHAEL, a parish, in the county of DUMFRIES, 8½ miles (N. by E.) from Dumfries ; containing

1108 inhabitants. This place derived its name from the dedication of its church to Michael the Archangel; and the ancient parish of Garvald, or Garrel, with the exception of some lands now in the parish of Johnstone, was united to it about the year 1670. Sir William Wallace, previously to his assault of the castle of Lochmaben in 1297, occupied a small fortress in this parish, with a party of his followers, and made frequent sallies to annoy the English under Greystock and Sir Hugh Moreland, in one of which Sir Hugh and several of his men were killed. Greystock, enraged at this defeat, and strengthened by fresh supplies from England, advanced with 300 men to give battle to Wallace, who, overpowered by numbers, retreated to the hills: here, the Scots being joined by Sir John Graham and a party of his retainers, a general engagement took place, in which Greystock fell, and Wallace obtained a complete victory. The parish is of elliptical form, about nine miles in length and nearly five in extreme breadth, and comprises an area of 17,070 acres, whereof 6700 are arable, 300 are woodland and plantations, and the remainder, part of which is convertible into meadow, is sheep pasture, moorland, moss, and waste. Towards the south the surface is level, with the exception of a few hills of inconsiderable height. In the northern part it is intersected by two ranges of mountains extending from north to south. The western range, at the hill of Holehouse, its northern extremity, has an elevation of 1500, and at Woodhill, on the south, of 1250 feet above the level of the sea: the eastern range rises at Knock-Craig, on the north, to a height of 1400, and at Kirkmichael fell, the southern extremity, to a height of 1100 feet. From these ranges the surface gradually slopes towards the south; so that at Cumrue, near the southern boundary of the parish, the lands are comparatively flat, and only 190 feet above the sea. Of the streams, the river Ae has its source in the hills of Queensberry, in the adjoining parish of Closeburn, and after flowing for some distance along the southern borders of Kirkmichael, bends its course to the east, and falls into the river Kinnel at Esby, in the parish of Lochmaben. The Glenkill burn, which rises in the north of the parish, intersects it from north to south, and runs into the Ae near the church. The Garrel burn has its rise in the Garrel Craigs, at the northern extremity of the parish, and taking a southward course, in which, flowing with a rapid current, it makes some small but very picturesque cascades, joins the river Ae on the confines of Lochmaben. There are several smaller burns and numerous springs, of which latter a few are slightly chalybeate, but not resorted to for medicinal use. The parish also contains some lakes, the principal being Loch Crae and Loch Cumrue; the former is one acre in extent, and of very great depth. Loch Cumrue, though now reduced by draining to little more than four acres, originally comprised an area of about twelve; it is fourteen feet deep, and abounds with pike and eels.

Along the banks of the Ae and the river Kinnel, and in the southern and western portions of the parish, the soil is richly fertile, but in the more central parts dry and gravelly; the crops are wheat, oats, barley, potatoes, and turnips, with the usual grasses. The hills afford good pasture for sheep and cattle. The system of husbandry has been greatly improved, especially on the lands of Ross, the property of the Duke of Buccleuch;

and a due rotation of crops is generally observed: the lands have been inclosed partly with stone dykes, but principally with hedges of thorn. Most of the farm houses and offices are substantial and commodiously arranged; and many, of more recent erection, are even of elegant appearance. The cattle, of which about 1700 head are reared, are all of the Galloway breed: the sheep, of which nearly 6000 are fed in the pastures, are chiefly of the Highland and the Cheviot breeds. Much attention is paid to the improvement of the stock, and great numbers are sent to the markets of Dumfries, Lockerbie, and Moffat. The plantations in the parish, mostly of recent date, consist of larch, Scotch, and spruce firs, with oak, ash, and elm, all of them well managed and in a thriving state. There are some considerable remains of natural wood, consisting principally of oak, ash, birch, and alder, stately specimens of which adorn the grounds of Kirkmichael House. The substrata in the lower part are of the red sandstone formation, and the hills are composed of transition rock; veins of ironstone and ochre are found in some places, and an attempt was made to discover coal, but without success. The annual value of real property in the parish is £6894. Kirkmichael House is an elegant mansion in the ancient manorial style, erected after a design by Mr. Burn of Edinburgh, and pleasantly situated in grounds tastefully laid out. There are no villages in the parish, neither are any manufactures carried on. A post-office, under that of Dumfries, has been established at a place called Pleasance; and facility of communication is afforded by the high road from Dumfries to Edinburgh, which passes through the parish, and by statute roads kept in good repair.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Lochmaben and synod of Dumfries. The minister's stipend is £246. 8. 11., with a manse, and a glebe valued at £18 per annum; patron, the Duke of Buccleuch. Kirkmichael church, situated near the south-western boundary of the parish, is a neat cruciform structure, erected in 1815, and containing 500 sittings. The parochial school is well conducted, and attended by about sixty children: the master has a salary of £34, with a house and garden, and an acre and a half of land; and the school fees average £20 per annum. There is also a school at Garrel, to which the heritors voluntarily contribute a salary of £17; the fees average about £18. On the bank of the Garrel burn are the remains of the church of Garvald, which was rebuilt in 1617, but, after the union of the parishes, was suffered to fall into decay; the cemetery is still preserved, surrounded by a stone wall, and embellished with weeping-birch trees, and others appropriate to the character of the place. On the farm of Wood are the ruins of the old tower of Glenae, which, in 1666, gave the title of baronet to a branch of the family of Dalzel, afterwards Earls of Carnwath. Part of the ancient Roman road from Netherby, in Cumberland, to the chain of forts between the Forth and the Clyde, may still be traced to its termination at a fort, some remains of which are distinctly visible in the garden of the manse. Near the line of this road were found, in 1785, two vases of copper, the smaller of which stood upon three feet about an inch and a half high; and in 1833, a similar vase, with a handle and a spout, and supported on three feet measuring two inches and a half in height, was found in a

moss near the Mains of Ross. There are several circular camps, in some of which have been discovered ashes, broken querns, and other relics of antiquity, and in one a broken sword. Silver coins of Alexander III. and James I. of Scotland, and Edward I. of England, have also been found. The lands of Ross give the title of Viscount to the Duke of Buccleuch.

KIRKMICHAEL, a parish and village, in the county of PERTH, 14 miles (N. W. by N.) from Blairgowrie; containing 1412 inhabitants, of whom 104 are in the village. This parish, the site of which is elevated, and the climate cold, is situated on the great military road from Perth to Fort-George, and is in form nearly a parallelogram, measuring about twenty miles in length from north to south, and about ten miles in its greatest breadth. It comprehends the greater part of Strathardle, which is about ten miles long and between one and two miles broad; the whole of Glenshee, measuring about seven miles in length and nearly a mile in breadth; and a district at the lower extremity of the latter, on the west side of the Black Water, nearly semicircular in form, and two miles in diameter. The entire area consists of upwards of 50,000 acres, of which 4400 are supposed to be cultivated, 1460 to be undivided common, 700 wood, and the remainder in a natural state. At the head of Glenshee is a hill called Beinn-Ghulbhuinn, celebrated as the scene of a hunt in which Diarmid, one of the Fingalian heroes, lost his life: his grave is still shown here, with the den of the wild boar that was the object of the chase. The most lofty hill in the parish is Obel-Thullachan, at the head of Glenbeg; and the chief lochs are Sheshernich and Loch-nan-ean, which are situated among the hills, and afford good trout-angling. The Strathardle district is watered by the Ardle; whilst the Glenshee and Black Water districts are watered by the Shee, which assumes the name of Black Water in the district so called.

Near the Ardle the soil is thin and dry, on a sandy bed, and in general yields light crops: upon the higher grounds, as well as in Glenshee and the district of the Black Water, it is wet and spongy, and requires a dry and warm season for the maturity of the crops. In the lower parts the most improved system of husbandry is followed; and lime has been extensively and successfully applied to the land recovered from waste, amounting, within a few years, to 400 acres. The huts on most of the farms have been replaced by neat and comfortable houses, and the interests of agriculture have been much promoted by the construction of good roads. The annual value of real property in Kirkmichael is now £7993. The parish contains the mansion-houses of Ashintully and Woodhill, and the small village of Kirkmichael. The inhabitants are all engaged in husbandry. An important addition has been made to the facilities of communication by the erection of a handsome bridge of two arches over the Ardle, in 1840, at a cost of £500, raised by subscription. A cattle-fair is held on the Thursday before the October Falkirk tryst, and another on the Thursday before the May Amulrie fair: the farmers usually dispose of their ordinary marketable produce at Blairgowrie.

Ecclesiastically the parish is in the presbytery of Dunkeld, synod of Perth and Stirling, and in the patronage of Mr. Farquharson of Invercauld. The minister's stipend is £158, of which two-thirds are received from the

exchequer; with a manse, and a glebe of six acres and a half valued at £10 per annum. Besides the parochial church, the parish contains two places of worship in connexion with the Free Church. There are also two parochial schools, affording instruction in the usual branches: the master of the one situated in the village has a salary of £34, with a house enlarged in 1821, and about £20 fees; the other master, in Glenshee, receives a salary of £15, with £12 fees. The poor in Glenshee enjoy a bequest of about £200; and of two other bequests, one amounts to £17 a year for educating poor children in the parish of the name of Stewart, and the other to £20 per annum for bursaries in any of the Scotch universities, St. Andrew's to be preferred, for natives of the parish, educated at the parish school, or, in case of failure, for those of the neighbouring parish of Moulin. On a large moor is a cairn, at one time ninety yards in circumference and twenty-five feet high, but now much reduced in size; and at the distance of about a mile north-east from this cairn are a Druidical rocking-stone, and numerous concentric circles.

KIRKMICHAEL and CULLICUDDEN, a parish, in the county of Ross and CROMARTY, 7 miles distant (N. N. W.) from Fortrose; containing, with the village of Jemimaville, and the hamlets of Balblair and Gordon-Mills, 1549 inhabitants, of whom 1410 are in the rural districts of the parish. This place, in some public documents called Resolis, a term implying "a sunny inclined plain", derived its name of Kirkmichael from the dedication of its ancient church to Michael the Archangel. It includes the parishes of St. Martin and Cullicudden, which were annexed to the parish of Kirkmichael towards the close of the seventeenth century, the whole forming the present parish of Kirkmichael and Cullicudden. Few particulars of the history of the place are recorded; but on account of the great number of Druidical circles to be found here, it must have been of some importance. On the summit of a precipitous rock near the shore of Cromarty Firth are the ruins of Castle-Craig, said to have been originally built by the Urquharts, barons of Cromarty, one of whose descendants having incurred the censure of the Pope, the castle and the lands attached to it fell to the Church, and were bestowed upon the bishops of Ross. The castle was the chief residence of the bishops, and the property is said afterwards to have come into the possession of the Williamsons, by whom it was probably sold to the Roses of Kilraveck, owners of a considerable portion of the Black Isle. It subsequently passed to the Gordons of Newhall, and now forms part of the estate of J. A. Shaw McKenzie, Esq., the principal proprietor of the parish. Of the castle, five stories in height, nearly one-half is still entire; the walls are of great strength, and the various apartments have vaulted roofs of stone. Its spiral staircase has within the last few years been removed. The roof is in a perfect state; and the eastern gable is defended on each side by a bastion crowned with a turret.

The PARISH extends along the southern shore of Cromarty Firth for about eight miles, from east to west, and varies from three to four miles in breadth; comprising, exclusively of an extensive tract of common, 14,000 acres, of which nearly 4000 are arable, 1500 meadow and pasture, 350 woodland and plantations, and the remainder moor and waste. Its surface rises

gradually from the Firth for almost a mile towards the south, and as gradually subsides into a fertile valley including a great part of the arable land in the parish, beyond which the ground ascends abruptly to a height of 500 feet above the level of the sea, terminating in the summit of Maole-Buidhe, the southern boundary of the parish. The only stream of any importance is the burn of Resolis, which, issuing from a small lake near the western extremity of the parish, flows eastward through its whole extent, driving several mills, and, after receiving in its course a few tributaries, falling into the Firth at the hamlet of Gordon-Mills. There are several copious springs of excellent water in the southern district; but scarcely any are found in the northern parts, the inhabitants of which are supplied from wells dug at their own individual expense. Of a well dug by the incumbent in 1836, the water, both in smell and in taste, resembles the mineral water of Strathpeffer.

In general the soil is a light black loam resting on a subsoil of clay, easy to work, and fertile. The system of husbandry among the smaller tenantry has made comparatively little progress. All the farms, except a few, are occupied by tenants holding but from forty to fifty acres; and with the exception of the lands attached to the houses of the resident proprietors, on which improvements have been made, there is little either in the agricultural or pastoral features of the parish deserving of notice. No natural wood is to be seen, except some patches of birch, ash, and hazel: the plantations are chiefly Scotch and larch firs, with a few hard-wood trees; and the soil appears to be well adapted for both kinds of fir. On the lands of Newhall and Poyntzfield are some fine specimens of ash, beech, and elm, of about a hundred years' growth; and on the Newhall estate, and also on the lands of Braelangwell, very extensive plantations of Scotch fir have been cut down within the last few years. The prevailing substrata are of the old red sandstone formation. Coal is supposed to exist; and in 1786 a vein of lead-ore was found by Mr. Gordon of Newhall, but none has since been noticed. At Cullicudden is a quarry of freestone varying both in quality and in colour, from which materials have been taken for numerous public buildings: the best description is found at a depth of from nine to twelve feet, all lying above that level being more or less friable. The annual value of real property in the parish is £3700. Newhall House, the seat of J. A. S. Mc Kenzie, Esq., is a handsome mansion, erected about the year 1805, and situated in a demesne tastefully laid out. Poyntzfield House, an ancient mansion with a tower surmounted by a cupola, and seated on an eminence commanding a very extensive prospect, is approached by an avenue of fine trees; and the grounds, like those of Newhall, are ornamented with plantations of stately growth. Braelangwell House is also a spacious and elegant mansion, recently erected, and beautifully situated in a highly-picturesque demesne.

The village of Jemimaville is described under its own head. The hamlet of Gordon-Mills was erected towards the close of the last century, by Mr. Gordon of Newhall, from whom it takes its name, and who established a snuff-mill, which has, however, long been discontinued, the premises being now occupied as a mill for carding wool. The small hamlet of Balblair consists of a few rustic cottages. Near Braelangwell is a distillery for whisky. Many of the poorer females in the parish are

employed in the spinning of linen-yarn for the manufacturers of Cromarty; and of the males some few are engaged in the salmon-fishery in the Firth, in which they use stake-nets. Cockles and muscles are found in abundance; and in August, considerable quantities of cuddie fish are taken; and sometimes herrings. Fairs are held annually at the village of Jemimaville; and facility of communication is maintained by the roads from Fort-George to Invergordon, and from Cromarty to Dingwall, both which pass through the parish. Ecclesiastically the parish is within the limits of the presbytery of Chanonry and synod of Ross. The minister's stipend is £219. 6. 7., with a manse, and a glebe valued at £10 per annum; patron, Mr. Mc Kenzie. The church, erected in 1764, and enlarged and greatly improved in 1839, is a neat plain structure in the early English style of architecture, containing 700 sittings. The parochial school is well attended; the master has a salary of £30, with a house and garden, and the fees average £10 per annum. Some portions of the ancient churches of St. Martin and Cullicudden still remain, consisting chiefly of the gables. In opening a barrow on the farm of Woodhead, about thirty or forty years since, a sarcophagus of rudely-formed slabs was found, containing human bones of large size, which, when exposed to the air, crumbled into dust. An earthen urn of very antique character has been met with in a tumulus near Jemimaville. On the glebe was discovered the foundation of an ancient Picts' house; and near it, a vessel of stone in the form of a cup, about four inches in diameter, was found by the incumbent, in trenching a patch of moorland.

KIRKMUIRHILL, a village, in the parish of LESMAHAGOW, Upper ward of the county of LANARK, 5 miles (E.) from Lanark; containing 242 inhabitants. This village lies in the northern part of the parish, and on the road from Lesmahagow to Hamilton, at its junction with that from Lanark to Strathaven. The population is partly engaged in hand-loom weaving for the manufacturers of the district, and partly in agriculture.

KIRKNEWTON and EAST CALDER, a parish, in the county of EDINBURGH, 10½ miles (W. S. W.) from Edinburgh; containing 1441 inhabitants, of whom 289 are in the village of Kirknewton, and 419 in that of East Calder. These two ancient parishes were united about the year 1750, on the erection of the present church. The parish is bounded on the north by the river Almond, on the south by the Water of Leith; and is about six miles in length and four miles in breadth. Its surface is comparatively level towards the north, but rises towards the south to a very considerable elevation, by a succession of three terraces, of which the lowest is traversed by the road to Glasgow, the highest by the road to Lanark, and the central forms the site of the church and village of Kirknewton. The lands are watered by numerous streamlets, intersecting the parish in various directions; and there are several springs of excellent water, but none of them possessing any mineral qualities. About two-thirds of the land are arable and in good cultivation, about 600 acres woodland and plantations, and the remainder meadow and permanent pasture. The soil of the arable land, which lies chiefly in the northern portion of the parish, is generally a light free mould, with alternations of clay; and the hills, chiefly in the southern portion, afford excellent pasture for sheep and cattle. The crops are wheat, oats, barley, peas, beans, potatoes,

and turnips. The system of husbandry is greatly advanced; the lands have been partly drained and inclosed, and all the more recent improvements in the construction of agricultural implements have been adopted. Considerable attention is paid to the dairy-farms, and great quantities of cheese and butter are sent to Edinburgh, where a ready market is obtained. The cattle are chiefly of the Teeswater and Ayrshire breeds, of which latter are the cows on the dairy-farms; the sheep are of the black-faced, Leicestershire, and Cheviot breeds. The plantations are extensive, and generally in a thriving state, consisting of Scotch, spruce, and silver firs, with elm, beech, sycamore, and chesnut: there are some fine specimens in Hatton Park, an estate partly within the parish. The principal substrata are sandstone and limestone, both of which are quarried to a considerable extent. On the lands of Ormiston, a seam of coal has been discovered by boring, but no mine opened; and on the lands of the Earl of Morton is a seam twenty inches in thickness, but not of quality sufficient to encourage the working of it. The annual value of real property in the parish is £5485.

The seats are Linburn, Hillhouse, Meadowbank, Ormiston Hill, and Calderhall. The village of Kirknewton, situated a little eastward of the church, consists chiefly of numerous detached cottages with gardens: the village of East Calder, on the road from Edinburgh to Glasgow, forms a considerable range of houses on both sides of the road, with gardens in the rear. Both villages are neatly built; they contain shops amply supplied with the various articles of merchandise requisite for general use, and are inhabited by persons exercising the usual handicraft trades. On the north side of the Glasgow road is the hamlet of Wilkieston, containing eighty-one inhabitants. A post-office in the village of Kirknewton has two deliveries daily; and facility of intercourse is maintained by the turnpike-roads from Edinburgh to Glasgow and to Lanark, and by the Caledonian railway. The railway quits the parish by a viaduct over the Linhouse water, consisting of six arches, each sixty feet in span: the erection is of white freestone, and elevated more than 100 feet above the level of the stream. Ecclesiastically the parish is in the presbytery of Edinburgh and synod of Lothian and Tweeddale. The minister's stipend is £282. 16. 11., with a manse, and a glebe valued at £20 per annum; alternate patrons, the Duke of Buccleuch and the Earl of Morton. Kirknewton and East Calder church is a plain substantial structure, containing 430 sittings, and conveniently situated nearly in the centre of the northern part of the parish. There are some remains of the ancient churches of East Calder and Kirknewton, the churchyards of which are still used as places of interment. The United Presbyterian Church have a meeting-house. The parochial school affords instruction to about eighty children; the master has a salary of £34, with a house and garden, and the fees average £40 per annum. At East Calder is a private school, built originally by subscription; and in the parish are schools for females, who receive instruction in the branches peculiar to their sex. Among the distinguished persons connected with the parish have been, the eminent physician, Dr. Cullen, proprietor of Ormiston Hill, and his son, Robert Cullen, Esq., a senator of the college of justice, the remains of both of whom are interred in the churchyard of Kirknewton; and Allan Maconochie, Esq., pro-

prietor of Meadowbank, from which he took his title of Lord Meadowbank when appointed lord commissioner of justiciary. The lands of Morton, in the parish, give the title of Earl to the family of Douglas.

KIRKOSWALD, a parish, in the district of CARRICK, county of AYR, 4 miles (W. S. W.) from Maybole; containing, with the village of Mardens, 2030 inhabitants. The name of this place is derived from Oswald, a Northumbrian king, who built a church here, in gratitude, it is said, for a victory he had obtained. An abbey called Cross-Regal, or Crossraguel, was founded at a later period for monks of the Cluniac order: the last abbot was Quintin Kennedy, brother to the Earl of Cassilis. The building still remains, about two miles east of the village; and being the most entire abbey in the west of Scotland, it is preserved with the greatest care. From this institution the celebrated George Buchanan received £500 (Scots) yearly, on which account he denominated himself *Pensionarius de Crosragmol*. Both the temporalities and the spiritualities of the abbey were annexed to the bishopric of Dunblane by James VI., in 1617. This parish was also formerly remarkable as containing the ancient castle of Turnberry, the seat of the Earls of Carrick, and which was held in the year 1306 by an English garrison under Percy; it was afterwards stormed by Robert Bruce, and the structure was thus greatly desolated by the contending parties.

The PARISH is situated in the district of Carrick, and on the shore of the Atlantic Ocean; it is six miles in length from north to south, and comprises about 13,850 acres, of which 9350 are arable, 650 pasture, and the rest in wood. Kirkoswald is skirted nearly for its whole length by a fine sandy beach, and the shore is covered with verdure almost to the margin. The surface is hilly: but the eminences, of which Mochrum and Craigdow are the most considerable, do not attain any great height. From every part of the coast are interesting and beautiful prospects, comprehending the Firth of Clyde, with the rock of Ailsa, the islands of Bute and Arran, and the coast of Ireland. There are two lochs, each about thirty acres in extent; and numerous small streams traverse the parish in different directions. The whole of the lands are under tillage, with the exception of the summits of the two highest hills, several tracts of moss, and the plantations. Wheat is grown in considerable quantities, and a little barley; but the principal grain is oats, the crops of which are of very superior quality. Dairy-farming receives much attention, and the produce is chiefly cheese, disposed of at the Glasgow market: to that city also, and to Ayr, many cattle and sheep are sent for sale, having been fattened on turnips. Draining is extensively carried on; and three works are established here, producing yearly about 1,000,000 draining-tiles. Sandstone is the prevailing rock; and coal is obtained at Dulzellowlie, to the value of about £1750 per annum, thirty persons being generally employed in raising it. The annual value of real property in the parish is £10,556. Culzean Castle, the seat of the Marquess of Ailsa, was built by David, Earl of Cassilis, in the year 1777, and is surrounded by about 700 acres of park and pleasure-grounds, interspersed with thriving plantations. It is a splendid pile, situated on a rock projecting a little into the sea, and commanding a beautiful view of the Firth of Clyde: a little below are the gardens of the old house of Culzean, formed on three terraces cut out

of a rock, and kept in fine order. The village has about 300 inhabitants, who, with the rest of the population, are chiefly agricultural: a few persons are employed as cotton-weavers, obtaining work from Maybole, Girvan, and Glasgow; and many females procure flowering-webs from the same places. The agricultural produce is chiefly sent to Glasgow, from the ports of Ayr and Girvan, especially from the latter place, seven miles distant, to which large quantities of potatoes are forwarded, as well as wheat and oatmeal. There is a regular fishing-station; and besides various kinds of shell-fish, many plaice, haddock, turbot, cod, salmon, and herrings are taken, valued at about £360 per annum. The public road from Glasgow to Portpatrick runs through the parish, and steam-vessels are constantly passing.

Kirkoswald is ecclesiastically in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Crown: the minister's stipend is £213, with a manse, and a glebe of four acres and three-quarters, valued at £6 per annum. A church was erected here by David I., in the twelfth century, on the decay of that of Oswald; the present edifice, a neat structure, was built in 1777. The parochial school affords instruction in the usual branches; the master has a salary of £30, with £40 fees. There is also a school endowed by the Kilkerran family, with accommodations and £12 per annum for a master. The most striking and interesting remains of antiquity in the parish, the ruins of the monastery, stand in the middle of an area of eight acres of ground called the Abbot's Yard, or the Precinct of Crossraguel, and consist of the side-walls of the church and choir to the height of fourteen feet. Towards the east is the niche formerly containing the principal altar; and on the right are the vestry and the abbot's courtroom, handsomely arched; besides which there are several vaults and cells, of fine dressed stone. At the east end of the abbey is the ruin of the abbots' original house, and on the west are the remains of the last mansion they inhabited. The ruins of the old castle of Turnberry are still to be seen, occupying a promontory on the barony of the same name; and about half a mile to the south-east of Culzean is the castle of Thomaston, built, according to tradition, in 1335, by a nephew of Robert Bruce: it was inhabited towards the close of the last century. Near Culzean Castle are some caves, six in number, supposed to have been originally designed for the celebration of worship. The parish contains also the remains of a vitrified fort, or Phœnician place of worship dedicated to the sun, a Druidical temple, and numerous tumuli, cairns, and vestiges of encampments.

KIRKOWEN, or KIRKOWAN, a parish, in the county of Wigtown; containing, with the hamlet of Kiltersan, 1423 inhabitants, of whom 607 are in the village of Kirkowan, 6 miles (S. W. by W) from Newton-Stewart. This place, which derives its name from the dedication of its church to St. Owen, of whose history few particulars are recorded, anciently formed part of the adjacent parish of Kirkinner, from which it appears to have been separated about the time of the Reformation. The parish is bounded on the east by the river Bladenoch, and on the west by the river Tarf. It is about fifteen miles in length, and varies from less than two miles to nearly seven in breadth, comprising 30,580 acres, of which 7000 are arable, 300 woodland and plantations, and the remainder meadow, pasture, and waste. The

surface is diversified with numerous hills, few of which, however, attain any considerable degree of elevation, and with large tracts of moor, interspersed with patches of arable land of moderate fertility and in a tolerable state of cultivation. The principal rivers are the Bladenoch and the Tarf. Of these, the former has its source in Loch Maebearie, in the north, and flowing in a southern direction, separates the parish from that of Penninghame: on quitting Kirkowen, it changes its course to the east, and runs into the bay of Wigtown. The Tarf, which rises on the southern confines of Ayrshire, bounds the parish for some miles in a beautifully-winding course, and, afterwards altering its direction, intersects the south-eastern portion of the parish, and flows eastward into the Bladenoch near the church. There are several lakes; the most extensive is Loch Maebearie, about a mile and a quarter in length, and half a mile in breadth. Nearly in the centre of the parish, and within a mile of the Tarf, is a continuous chain of three lakes, connected with each other by rivulets, and extending a mile and a half in length. Salmon, trout, pike, and eels are found in the rivers and lakes, but not in great abundance.

In the north-west district the soil of the arable lands is cold and thin, but in the south-east of richer quality, light and dry, and, under good management, producing excellent crops of grain, chiefly oats and barley. The system of husbandry is much improved: the lands have been drained and inclosed; the farm-buildings are generally substantial and commodious, and most of the improvements in the construction of agricultural implements have been adopted. On the hills is good pasturage for sheep, of which about 9000 are kept, principally of the black-faced breed; they are much prized for the fineness of their fleece, and about 1200 stone of wool are annually sold, producing an income of £900. The cattle are all of the pure Galloway breed, and are usually disposed of when two years old to dealers from Dumfries, whence they are sent southwards, and, after a year's pasture in England, sold in the London market, where they are in great estimation. The plantations are in general under careful management and in a thriving state. In this parish the substrata are greywacke and clayslate, and large boulders of granite are found in several parts: the granite, which is of good quality, is hewn into blocks for lintels, door-posts, and other purposes in which strength or ornament is required. There is also a quarry of stone, of good quality for building, at no great distance from the village. A vein of slate was discovered on the Culveunan hill, and was for a time in operation; but the quality was not such as to render the working of the quarry desirable. The annual value of real property in the parish of Kirkowen is returned at £5393.

Craiglaw House, an ancient mansion finely situated in a well-planted demesne, is the principal seat. The village stands on the road to Wigtown, and near the river Tarf, on which a mill was erected in 1822 for the manufacture of woollen clothes, affording employment to about seventy persons; the articles made are blankets, plaidings, flannels, and plain and pilot cloths, for the dyeing and dressing of which the water of the Tarf, from its peculiar softness, is well adapted. A post-office has been established under that of Newton-Stewart. There are several handicraft trades carried on for the accommodation of the district, and some shops in the

village for the sale of various kinds of merchandise. Four annual fairs were formerly held here. Facility of communication is maintained by the roads to Wigtown and Portpatrick, which pass through the parish, and by bridges over the rivers. Ecclesiastically the parish is within the bounds of the presbytery of Wigtown and synod of Galloway. The minister's stipend is £292. 11. 8., with a manse, and a glebe valued at £6 per annum; patrons, the family of Agnew of Sheuchan. Kirkowen church, erected in the year 1829, is a neat substantial structure, with a tower, and is conveniently situated in the village. A congregation of dissenters assembles for public worship in an old barn which has been fitted up for the purpose. The parochial school is well conducted; the master has a salary of £25. 13., with a house and garden, and the fees average about £30 per annum. There are some remains of the ancient castle of Mindork, in the south-western portion of the parish; but nothing of its history is recorded.

KIRKPATRICK-DURHAM, a parish, in the stewartry of KIRKCOUBRIGHT; containing, with part of the village of Crocketford, 1484 inhabitants, of whom 500 are in the village of Kirkpatrick-Durham, $5\frac{1}{2}$ miles (N. N. E.) from Castle-Douglas. This place derives its name from the dedication of its church to St. Patrick: the adjunct Durham, distinguishing it from other places of the name of Kirkpatrick, arose from the dry and barren nature of the district in which the parish is situated. On account of its secluded position in the interior of the county, it does not appear to have been connected with any events of political importance; and few particulars of its early history are recorded. In various parts are found remains of circular walls and mounds, called moats; but from their general character, they seem to have been intended merely as places of security for cattle during the frequent ravages of the border warfare. The PARISH is bounded on the west by the river Urr, and is about ten miles in length from north to south, and nearly four miles in extreme breadth, comprising 20,000 acres, of which 8000 are arable, 500 woodland and plantations, and the remainder hill pasture, moorland, and waste. Its surface, though not mountainous, rises gradually towards the north, and is diversified with cragged hills of considerable elevation, mostly covered with heath, and affording pasturage for sheep and cattle; the moors in this part of the parish abound with game of every variety, and are much frequented during the shooting season. In the southern districts the surface is comparatively level, subsiding by degrees into gentle declivities, and better adapted for agricultural purposes. The river Urr has its source in Loch Urr, on the western confines of the county of Dumfries, and flowing southward through a romantic valley, falls into the Solway Firth about ten miles below the southern extremity of the parish. The salmon-fishery on this river was formerly very considerable; but from the extensive use of stake-nets near the mouth, and from various other causes, it has within the last few years been greatly injured, and very few salmon are now obtained. The river is much frequented, however, in the month of August, by the herling, a small fish of the salmon kind, known in some rivers as the whitling. There are two or three lochs of inconsiderable size, one of which abounds with trout; and various small burns flow through the lands into the river Urr.

In the lower lands the soil is tolerably good, and, though thin and sandy, is, under proper management, rendered productive, yielding favourable crops of grain: there are, too, some tracts of old pasture, which, when brought under cultivation, are luxuriantly fertile. The system of husbandry has been progressively advancing, and is at present quite on a par with what is pursued in the adjacent districts; but upon the whole, the parish is rather of a pastoral than an agricultural character, and the farmers rely chiefly on the rearing of black-cattle and sheep, of which large numbers are sent to Dumfries, Castle-Douglas, and Liverpool. There are some small remains of ancient wood to be seen on the lands of Kilquhanity and Kirk-le-Bride. The plantations are tolerably extensive, and consist of the usual hard-wood trees, largely interspersed with larch-firs to protect them from the severity of the winds: they are generally in a thriving state. The annual value of real property in Kirkpatrick-Durham is returned at £7234. Handsome mansions are numerous: Brooklands, Chipperkyle, Croyes, Doonpark, Durhamhill, Kilquhanity, and Walton Park are all of them good houses, pleasantly situated in grounds tastefully laid out, and embellished with plantations. The village of Kirkpatrick-Durham is about a mile and a half from Bridge-of-Urr. An attempt was made some years since to establish the cotton and woollen manufactures on a small scale, and was for a time attended with success; but they have both been discontinued, and there is no manufacture of any kind carried on here at present. Some of the inhabitants are employed in the usual handicraft trades, and there are several good shops for the supply of the district. A post-office, which has a daily delivery, is established in the village; and a fair is held annually on the Thursday after the 17th of March (O. S.), chiefly for plants and garden-seeds; but it is not much frequented. Races are held at the period of the fair, which were for a time numerously attended, but are now of little consequence. Facility of communication is maintained by the road from the village to Castle-Douglas, by the great road from Dumfries to Portpatrick, and by others which intersect the parish: there are good bridges over the river Urr and its tributaries. About a mile and a half southward of the village is the pleasingly-rural hamlet called Bridge-of-Urr, containing about fifty inhabitants. The village of Crocketford, of which part only is situated within the parish, is described under its own head.

Ecclesiastically the parish is within the bounds of the presbytery and synod of Dumfries. The minister's stipend is about £270, with a manse, and a glebe valued at £10. 16. per annum; patron, the Crown. Kirkpatrick church, erected in 1748, and enlarged by the addition of an aisle in 1797, is a plain structure near the southern extremity of the parish, containing 374 sittings. A Free church has been erected. There are two parochial schools in the parish: the master of the principal school, in the village, has a salary of £31. 6., with a house and garden, to which is added the interest of a bequest of £270 for the gratuitous instruction of poor children; and the school fees average about £30 per annum. The master of the other school has a salary of £16. 10., with fees averaging £10. On the lands of Doonpark are some slight remains of an ancient moat, near which were found, a few years since, some fragments of old armour; and on the lands of Areeming are

the foundations of a church, from which the adjoining farm received the appellation of Kirk-le-Bride. In various parts are the remains of other moats or mounds, of circular form, and apparently constructed for purposes of defence, or as places of security for cattle.

KIRKPATRICK-FLEMING, a parish, in the county of DUMFRIES, 6 miles (E. N. E.) from the town of Annan; containing, with the hamlet of Newton, and the village of Fairyhall with Hollee, 1692 inhabitants. This parish derives its appellation from the celebrated Irish saint, Patrick; Fleming, the name of the ancient lord of the manor, having been added, to distinguish it from other parishes called Kirkpatrick. On account of its situation near the border, it was formerly the arena of many sanguinary conflicts; and the numerous towers still remaining in the vicinity testify the active warfare to which its position exposed it. The family of Fleming, who were very conspicuous in the thirteenth and fourteenth centuries, held certain lands here by the tenure of defending them at all times against the English. Their chief seat and castle was at *Red-Hall*, where, towards the conclusion of the reign of John Baliol, thirty of their followers were besieged by an English force at the time of one of Edward's incursions into Scotland, and, after bravely defending their post for three days, chose rather to perish in the flames kindled around the castle by the enemy, than to submit to capture. This castle, as well as another at *Holm-Head*, the property of the Flemings, has entirely disappeared; but a third, at *Stone-house*, also formerly possessed by the family, and now the property of the Earl of Mansfield, is still partly standing in the neighbourhood.

The old *Tower of Woodhouse*, said to have been the first house in Scotland to which Robert Bruce came, when fleeing from Edward Longshanks, also remains. It was then possessed by the Irvines, one of whom Bruce took into his service; and after having made him his secretary, he knighted him, and in reward for his fidelity and services, presented him with the lands of the forest of Drum, in the north of Scotland. Near this tower, a little northward, stands the cross of *Merkland*, an octagonal stone pillar nine feet high, and elegantly sculptured. The time and occasion of its erection are doubtful; but it is supposed by some to have been raised to perpetuate the memory of the murder of Maxwell, master-warden of the marches, who was stabbed on this spot by a man of the name of Gas, from the parish of Cummertrees, in revenge for a sentence which Maxwell had passed upon a cousin of his. The particulars are these. Maxwell, just before the murder, had been in pursuit of the Duke of Albany and the Earl of Douglas, who for some time had been exiles in England, but who, making an incursion into their native land in 1483, proceeded to Lochmaben, and plundered the market there, in order to try the disposition of their countrymen towards them. He came up with their forces at Burnswark, from which place an action was fought as far as Kirkeconnel, when Douglas was taken prisoner, but the duke contrived to make his escape. Maxwell, having recovered the booty, and obtained a victory, was leisurely pursuing the remnant of the hostile army, and resting from his weariness through marching and fighting, when he fell by the clandestine attack of his malicious foe. The cross that surmounts the pillar is composed of three fleurs-de-lis, and, according to a tradition long current in

the district, commemorates the spot where a chief of the border family of Carruthers was slain, nearly in the manner above described, when retreating after the defeat of Solway Moss. The three fleurs-de-lis composing the cross, being the armorial bearings of the Carruthers family, give a greater air of probability to this tradition.

The present *PARISH* comprehends the old parish of Kirkconnel, which is said to have derived its name from Connel, a saint who flourished at the commencement of the seventh century; and within the burial-ground of Kirkconnel there still remains a part of the ancient church. The parish is about six miles long and three broad, and contains 11,575 acres. It is bounded on the north and north-west by the parish of Middlebie, on the east and north-east by Halfmorton, on the south and south-east by Graitney, and on the west and south-west by the parishes of Annan and Dornock. The surface consists of a succession of gentle undulations and fertile vales, in the latter of which are cultivated fields inclosed by fine hedge-rows, or ornamented with thriving plantations. The Kirtle, the only river, runs through a romantic vale; the banks are covered with rich clusters of natural wood, and adorned with plantations, gentlemen's seats, and ancient towers. It contains trout, eels, and perch; and after a course of about eighteen miles from its source in the parish of Middlebie, it falls into the Solway to the east of Redkirk, in Graitney.

The *SOIL* in some parts is light, resting upon gravel, sand, or rock. In other places it consists of a deep strong earth, of a red cast, and mixed with a considerable proportion of sand; and this description of soil, with slight variations, and lying upon a subsoil sometimes of clay and sometimes of gravel, is the prevailing kind in the southern part. Large portions of the parish are mossy land, varying in depth from six to eighteen inches, and resting upon a bed of clay. The clay found as a subsoil under ridges, peat-mosses, and soft bogs, is generally white, blue, or red. There is also in the parish a portion of the land called *whitestone* land, which, though naturally barren, is capable of some degree of improvement. About 8060 acres are cultivated or occasionally in tillage; 2009 are in coarse pasture; 900 are wet moss; and 605 are occupied by wood. Much of the land now waste is considered capable of profitable cultivation. All kinds of grain and green crops are produced, and of good quality: of the latter, turnips and potatoes are the most abundant, and the grain is principally barley and oats. An immense number of swine are kept; and fattened, to a great extent, upon potatoes. The best method of husbandry is understood and practised; farm-dung is used as manure, and lime is procured from several neighbouring places. Great advances have been made in the draining of morasses, and the conversion of moors into good arable land. The houses, also, have undergone an entire change within the last thirty or forty years, the mud and clay huts covered with thatch having been displaced by neat and convenient buildings of stone and lime, roofed with slate. The rocks in the parish are principally of the sandstone formation, and are found of various colours; but those that prevail most are a dark-red and white, which are exceedingly hard and durable, and admit of a fine polish. There is also excellent limestone. The annual value of real property in Kirkpatrick-Fleming is £7032. The mansions are, Springkell, the seat of Sir John Heron Maxwell, a re-

markedly elegant building in the Grecian style; Mossknowe, the residence of Col. Graham, enriched with fine plantations and gardens; Langshaw; Wyebic; Cove; and Broatshouse. The population are principally employed in agriculture, the only manufacture being that of cotton, which is carried on by about 150 weavers employed by a house in Carlisle. The road from Carlisle to Glasgow and to Edinburgh, by Moffat, passes for five miles through the middle of the parish, and in the western corner crosses a road which runs from Annan to Edinburgh, by Langholm and Selkirk, in a northern direction. Four bridges have been thrown over the Kirtle, and there are one or two in other parts: all of these, as well as the roads, are in good repair. Great facility of intercourse is also afforded by the Caledonian railway, which has a noble viaduct across the Kirtle; it afterwards runs along the ridge of the east bank of the river, and passing by the Kirkpatrick station on the line, quits the parish for the adjoining parish of Graitney.

For ECCLESIASTICAL purposes the parish is in the presbytery of Annan and synod of Dumfries; patrons, alternately, Sir John Heron Maxwell and Colonel Graham. The stipend of the minister is £226, with a good manse, and a glebe of about twenty-four acres, worth £25 a year. Kirkpatrick church, a plain edifice, was partly rebuilt about the year 1780, and was thoroughly repaired in 1835; it is capable of accommodating 800 persons. In the churchyard lie interred the remains of several members of the Coultarts of Coultart, chiefs of their name, who in the last century possessed considerable property in the parish. The members of the Free Church have a place of worship. There are two parochial schools: the master of the Kirkpatrick school receives a salary of £25. 13., with about £30 fees, and £5 from a bequest by Dr. Graham, of Mossknowe, for instructing eight poor children gratuitously. The master of the Gair school receives the same amount of salary as the other master, with £23 in fees; and both masters have the allowance of house and garden. The usual branches of education are taught; in addition to which, at the Kirkpatrick school, instruction is given in the classics, mathematics, and French. A parochial library and a savings' bank have been established. In the burial-ground of Kirkconnel are still to be seen the tombstones of "Fair Helen" and her favourite lover, Adam Fleming. A rival of Fleming's having unsuccessfully courted Helen, vowed revenge, and soon found an opportunity to attempt his purpose. Seeing the lovers walking together on the banks of the Kirtle, he was about to take the threatened revenge on Fleming; but being observed by Helen in the midst of the bushes, she rushed to her lover's bosom to rescue him from the danger, and received the fatal wound herself and expired. Fleming immediately despatched the murderer on the spot, and afterwards went abroad to serve under Spain against the Infidels, in the hope of wearing out the impressions of his love and grief. He soon returned, however, and stretching himself on Helen's grave, expired, and was buried by her side. Upon the tombstone are engraven a sword and a cross, with the inscription, *Hic jacet Adam Fleming*. The Scotch ballad so well known, describing the murder, is said to have been written in Spain by Fleming himself. Not far from Cove, a piece of gold worth £12 was found about a century ago, eighteen inches under ground: on one end,

the word Helenus was stamped in Roman capitals. There are three chalybeate springs in the parish, nearly alike in quality, and also one of a strong sulphureous nature, highly celebrated in scrofulous and scorbutic cases, and which Sir Humphrey Davy considered to possess properties similar to those of the Moffat well. The late eminent physician, Dr. James Currie, was born here in the year 1756. He was the author of *A Commercial and Political Letter to Mr. Pitt*, published under the assumed name of Jasper Wilson, in 1793, and which excited much attention, and passed through several editions. He also published a *Life of Burns*. This was likewise the birthplace of the late Rev. Mr. Stewart, of Erskine, so famous for the cure of consumption.

KIRKPATRICK-IRONGRAY, a parish, in the stewartry of KIRKCUDBRIGHT, 5 miles (W. N. W.) from Dumfries; containing, with the village of Shawhead, 927 inhabitants. This parish derives the adjunct Irongray, by which it is distinguished from other parishes of the same name in this part of the country, from the lands on which its ancient church was erected. It is bounded on the north by the river Cluden, which separates it from the county of Dumfries; and is about nine miles in length, and from one mile to four miles in breadth, comprising nearly 14,500 acres, of which 7125 are arable, 2114 woodland and plantations, and the remainder rough pasture and waste. In the eastern portion of the parish the surface is almost a level plain. Towards the centre the land rises into bold undulations, forming part of a ridge of hills that intersect the county; the summits are richly wooded, and the acclivities in the highest state of cultivation. Of these hills the most conspicuous are the Bishop's Forest and Gienbennan, which have an elevation of 1500 feet above the level of the sea, and command extensive and diversified prospects, embracing portions of Nithsdale and Annandale, the Solway Firth, and the hills of Cumberland. The only river strictly belonging to the parish is the Auld Water, which has its source on the confines of Kirkpatrick-Durham, and after flowing for some miles through this parish in an eastern course, curves towards the north, and falls into the Cairn, which, afterwards taking the name of the Cluden, forms a boundary of the parish. The Auld Water, near its influx into the Cairn, makes a small but picturesque cascade of two falls, the upper one twenty feet in height; and near the lower fall is a romantic bridge of one arch, which, from the noise of the water, has obtained the appellation of the Routing Bridge. The river abounds with trout and par, and, during the season, with grilse.

In some parts the soil is of a light and sandy quality, alternated with gravel, and in others a mixture of clay, with tracts of rich alluvial soil near the shores of the rivers; the crops are oats, barley, and wheat, with potatoes and turnips, and the various grasses. The system of husbandry is improved: the lands are inclosed, and the fences kept in good order; considerable quantities of waste have been brought under cultivation, and the farm houses and buildings are substantial and commodious. Great attention is paid to the improvement of live stock; the cattle are principally of the Galloway breed, and, instead of being sold as formerly to drovers, are fattened by the farmers at home for the markets, to which they are forwarded by steam-boats. The sheep are of the native breed, partaking of the Galloway kind.

Horses of the Clydesdale breed are reared in considerable numbers; and large numbers of pigs, forming a staple commodity, are sent to the market of Dumfries. In this parish the substrata are, whinstone, of which the rocks are generally composed, slate, freestone, and puddingstone: an attempt was made to discover coal, but without success. The annual value of real property in Kirkpatrick-Irongray is £6206. The Grove is a handsome mansion in the castellated style, with a tower rising from the south entrance; Drumpark is also a handsome residence. The village of Shawhead consists chiefly of a few cottages and a small ale-house. Facility of communication is afforded by good roads and bridges. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery and synod of Dumfries: the minister's stipend is £231. 6. 2., with a manse, and a glebe valued at £25 per annum; patron, James Oswald, Esq., of Aucheneruive. Kirkpatrick church, built in 1803, and situated on the bank of the river Cluden, is a neat structure containing 400 sittings. The members of the Free Church have a place of worship. There are two parochial schools, one of which is in the village of Shawhead; the masters have each a salary of £25. 13. 7., with a house and garden, and the fees average about £15 each annually. A parochial library has been established, and contains about 200 volumes. The poor have bequests yielding £23 per annum. In this parish, about four miles from the church, are the Communion Stones, where the Covenanters used to celebrate the sacrament of the Lord's Supper. Helen Walker, whose history is recorded by Sir Walter Scott in his *Heart of Mid Lothian* under the name of "Jeanie Deans", was a native of the parish; and a stone to her memory was erected here by Sir Walter.

KIRKPATRICK-JUXTA, a parish, in the county of DUMFRIES, $3\frac{1}{4}$ miles (S.) from Moffat; containing, with the village of Craigielands, 934 inhabitants. The ancient name of this parish was *Kil*-patrick, the prefix of which is of the same signification as that of *Kirk*-patrick. The suffix *juxta* has been added to distinguish the place from several other places of the same name, which are more remote from the capital of Scotland. All the Kirk-patricks appear to have received their common designation from the celebrated saint, Patrick. This locality was formerly the residence of Randolph, Earl of Murray, regent of Scotland during the minority of David Bruce: the earl possessed the old castle of Achincass, in the parish. The well-known family of Johnstone of Corehead occupied the tower of Lochhouse. The PARISH is irregular in form, but may be considered as of the mean length of six miles, and of about the same breadth. It contains 21,000 acres, and is bounded on the north and east by Wamphray and Moffat parishes, on the north-west and west by Crawford and Closeburn, and on the south by Johnstone parish. The lands of White-holm, in the parish, belong to the shire of Lanark. The general appearance of the district is bleak and hilly: the surface on the west consists of the mountain range of Queensberry; and two or three miles to the east of this, is a parallel range, between which and Queensberry lies the pastoral valley of Kinuel Water. Between the second range of hills and the river Annan, which washes the eastern boundary of the parish, is a tract of land nearly two miles broad and eight miles long, consisting of hill and valley, chiefly arable, and constituting the best part

of the parish. A small portion of this land, however, is rocky, and some of it peat-moss; another portion has been reclaimed from waste moor. The highest part of the parish is the mountain of Queensberry, the summit of which is 2140 feet above the level of the sea. The Annan, the Kinnel, the Evan, and the Garpel are the streams connected with the parish: the Annan divides it from Moffat, and after a course of about thirty miles, in which it receives several tributary waters, falls into the Solway Firth near the royal burgh of Annan.

The SOIL in general is dry, and tolerably fertile; the richest and best cultivated lies in the eastern quarter of the parish. About 7000 acres are in tillage; 230 are in woods or plantations, of Scotch fir, oak, beech, elm, ash, and spruce; and 14,000 are uncultivated, 2000 of which, however, are supposed capable of tillage, or fit for plantations. The cattle are chiefly of the Galloway breed; and the sheep pastured here consist of the native black-faced, with some Cheviots. The improvements in agriculture in the parish, during the present century, have been considerable. Formerly it was almost entirely destitute of inclosures, but this deficiency has been to some extent remedied. Draining, manuring, and the raising of green crops have each received attention; and the use of bone-dust manure for turnip land, and the practice of letting sheep eat-off the turnip crops, are two of the most approved usages of modern husbandry adopted here. The farm houses and offices are in a state of progressive improvement throughout the parish, much attention being paid to the neatness of the buildings, most of which are constructed of stone and lime, and roofed with slate. The improvement also of the cattle, and of the breeds of sheep, has been very considerable. In this parish the rocks consist of freestone, trap, and greywacke or bluestone, which last is much used for common buildings. The annual value of real property in Kirkpatrick-Juxta is £5557.

The only village is Craigielands, which is of small extent, but consists of neat buildings on a regular plan, raised some few years ago by one of the proprietors, for the accommodation of persons residing on his lands. In its vicinity is Craigielands, a handsome mansion surrounded by a park. The lines of turnpike-road running through the parish are, the road from Glasgow to Carlisle, and another, intersecting that road at Beattock Inn, from Dumfries to Edinburgh: the roads and bridges are kept in good condition. Great facility of intercourse is also afforded by the Caledonian railway, which has a station in the parish, at Beattock. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Lochmaben and synod of Dumfries; patron, J. J. Hope Johnstone, Esq. The stipend of the minister is £195, exclusive of the vicarage tithes, which consist of twenty-four lambs, and forty-eight pounds' weight of wool: he has also a manse, and a glebe of four arable and five meadow acres, worth, with garden, about £10 a year. Kirkpatrick church, built in 1799, and thoroughly repaired in 1824, is a plain building, capable of accommodating between 500 and 600 persons. There are two parochial schools, the master of the first of which receives a salary of £34 a year; the master of the second school, who is not regularly settled, receives £17, and each has also fees amounting to £15 or £20 a year. A bequest of £130 was lately vested in the purchase of a house and land, now yielding £6 per annum, appropriated

to teaching poor children; and a school, erected from the accumulations of an ancient fund, is chiefly maintained by Mr. Hope Johnstone. There are some other schools, and a library. The chief antiquity is the ruin of the castle of Achincass, the walls of which are about 150 feet square, twenty feet high, and fifteen feet thick. Traces are still visible of the Roman road leading from the great camp at Burnswark, in the parish of Middlebie, to a small rectangular encampment in this parish called *Tatius-Holm*. There are also numerous cairns and circular inclosures upon the hills. The parish contains several strong chalybeate springs.

KIRKTON, a village, in the parish of BALMERINO, district of CUPAR, county of FIFE; containing 111 inhabitants. This is a small village, or hamlet, lying north of the ruins of the celebrated abbey of Balmerino, which occupy a beautiful situation in the neighbourhood of the Tay, and form the chief object of attraction as respects the antiquities of the parish.

KIRKTON, a village, in the parish of LARGO, district of ST. ANDREW'S, county of FIFE, 1 mile (N. E. by E.) from Largo; containing 395 inhabitants. It lies in the south-eastern part of the parish, on the road from Kilconquhar to Largo; and derives its name from the situation of the parish church within its limits. The population is chiefly agricultural.

KIRKTON, a village, in the parish of KIRKMAHOE, county of DUMFRIES; containing 221 inhabitants.

KIRKTON, a village, in the parish of AUCHTERHOUSE, county of FORFAR, 8 miles (E. by S.) from Cupar-Angus; containing 134 inhabitants. The village is seated in the centre of the parish, east of the high road from Dundee to Meigle, and on an elevated site about a hundred feet above the level of the sea. From it, on the west, through an opening of the Sidlaw hills called the Glack of Newtyle, is a fine view of part of Strathmore, the district of Stormont, and the Grampians; and on the south and east are seen the Lomond hills, Largo Law, the city and bay of St. Andrew's, the Firth of Tay, and the German Ocean, which last terminates the prospect. The church is situated in the village.

KIRKTON, a hamlet, in the parish of GLENISLA, county of FORFAR, 8 miles (N. by W.) from Alyth; containing 44 inhabitants. This is a very small place, only distinguished as containing the church. It is in the southern part of the parish, and on the north bank of the Isla, which here flows in a devious course, and in nearly a south-eastern direction, until it joins the river Melgum behind Airlie Castle. The road from Lintrathen to Fergus, in the parish, passes close to the hamlet.

KIRKTON, a village, in the parish of STRATHMARTINE, county of FORFAR, 4 miles (N. N. W.) from Dundee; containing 96 inhabitants. It is nearly in the centre of the parish, on the road to Dundee, and on the banks of the Dighty water. In the village, as its name imports, is situated the kirk.

KIRKTON, a hamlet, in the parish of TEALING, county of FORFAR, 6 miles (N.) from Dundee; containing 48 inhabitants. It lies in the central part of the parish, a short distance eastward from the road leading from Dundee to Kirriemuir. The church of Tealing is in the hamlet.

KIRKTON, a parish, in the district of HAWICK, county of ROXBURGH, 4 miles (E. by S.) from Hawick;

containing 313 inhabitants. This parish is about eight miles in length, from east to west, and two miles in breadth, from north to south. Kirkton is bounded on the north-east by the parish of Hobkirk; on the west, partly by the parish of Cavers, and partly by that of Hawick; and in all other directions, by the parish of Cavers. Its surface is undulated, presenting in many parts green hills of moderate elevation and of great variety of form; and is intersected by the river Slitrig, on the western bank of which the ground rises by a gradual and continued acclivity to the boundary of the parish. The scenery is generally pleasing; but the want of wood renders it comparatively barren of beauty. In this parish the soil is mostly fertile, and the pastures rich; the whole number of acres is estimated at 10,200, comprising arable, pasture, and uncultivated land, with a very small portion in wood and plantations. The system of agriculture is in an improved state; the lands have been well drained, and inclosed partly with stone dykes, and partly with hedges, kept in good order; and the various improvements in the construction of implements have been adopted. A quarry of very excellent whinstone has been opened, which provides abundant materials for the roads and for other purposes. Facility of communication is afforded by the roads from Hawick to Liddesdale and to Newcastle, which pass through the parish; and there are various good roads kept in repair by statute labour. The annual value of real property in Kirkton is £3599. Ecclesiastically the parish is within the limits of the presbytery of Jedburgh, synod of Merse and Teviotdale. The stipend of the incumbent is £174; the manse, with its offices, was built in the summer of 1840, and the glebe is valued at £11 per annum. Kirkton church is a neat plain edifice, also built in the summer of 1840, but inconveniently situated. The parochial school is well conducted and well attended; the master has a salary of £26, with a house and garden, and the fees average about £15 per annum. About a mile south-west of the church is an encampment, upon rising ground; and still further west, in one or two places, similar vestiges occur. Dr. Leyden, the eminent Orientalist, received the rudiments of his education in the parochial school of this place, his parents residing on the farm of Nether Tofts: his native place was Denholm, a village in the parish of Cavers.

KIRKTON OF KINNETTLES, a hamlet, in the parish of KINNETTLES, county of FORFAR, $2\frac{1}{2}$ miles (S. W. by W.) from Forfar; containing 49 inhabitants. This place is situated in the south-western part of the parish, a short distance eastward from Douglaston; and is a pleasing hamlet, built in 1813, and having a chain-bridge across the Kerbit rivulet, by which the parish is intersected. Though the population is so small, it comprehends persons in various trades.

KIRKTON OF WEEM, a village, in the parish of WEEM, county of PERTH, 1 mile (N. W. by W.) from Aberfeldy; containing 50 inhabitants. It is situated in one of the detached portions of the parish, and is separated by the waters of the Tay, over which is Tay bridge, from the town of Aberfeldy. The bridge is a fine building of five arches, and was finished in 1733, under the direction of General Wade, then commander of the forces in Scotland. In the village is a good inn; and the church, in its vicinity, is conveniently situated for a large part of the population of the district.

KIRKTOUN, a village, in the parish of BURNT-ISLAND, district of KIRKCALDY, county of FIFE; containing 251 inhabitants.

KIRKTOWN, a village, in the parish of FENWICK, district of CUNNINGHAME, county of AYR, 5 miles (N. E. by N.) from Kilmarnock; containing 117 inhabitants. This village stands a short distance from that of Fenwick; it is of very small extent, and little better in appearance than a mere hamlet. The greater part of it is built upon the glebe land.

KIRKTOWN OF FORDOUN, a hamlet, in the parish of FORDOUN, county of KINCARDINE, 3 miles (S. W. by W.) from Glenbervie; containing 34 inhabitants. It consists of the manse, the parochial school-house, an inn, and three or four cottages.

KIRKTOWN OF NEW DEER, a village, in the parish of NEW DEER, district of BUCHAN, county of ABERDEEN, 6 miles (E. S. E.) from Cuminstown; containing 322 inhabitants. It is situated on the ridge of a hill, upon the high road from Ellon to Newbyth, and consists of a long street of above a hundred houses and cottages, the fields declining to the east and west: the population is almost wholly agricultural. There are a sub-post office, and two or three good inns in the village; and fairs are held in it in April, May, June, October, and November, at all which cattle and horses are exposed for sale. The mail-coach from Banff to Peterhead passes daily, and a stage-coach three times a week from Aberdeen to Ellon. The church stands near the village, where are also the parochial school and a circulating library.

KIRKURD, a parish, in the county of PEEBLES, 6½ miles (N. E.) from Biggar; containing 305 inhabitants. It is said to derive its name from the situation of its church on an eminence, *urd* being the Celtic for a height. By some, however, the name is derived from an ancient proprietor of land, named Urd Frazer, from whose connexion with the place they also deduce the names of Netherurd, Loch Urd, and Ladyurd, in the parish. In the fifteenth century the place appears to have formed part of the possessions of Sir David Scott, ancestor of the ducal family of Buccleuch. Kirkurd parish is about five miles and a half in length from east to west, and from three to four miles in average breadth. It is bounded on the north by the water of the Tarth, which separates it from the parishes of Linton and Newlands; on the east by the parishes of Newlands and Stobo; on the south by Broughton; and on the west by Skirling and Dolphington. The surface is diversified with hill and dale in nearly equal portions. Hell's Cleuch, the highest of the hills, has an elevation of 2100 feet above the level of the sea; and on the summit is a cairn, situated on a point where the parishes of Stobo and Broughton come in contact with this parish. It is called the Piked Stane, and commands an extensive view, embracing the country beyond the Forth, and the chain of mountains stretching from the eastern portion of the county of Fife to the county of Dumbarton; also North Berwick, the Eildon hills near Melrose, and the Cheviot hills in the county of Northumberland. The Tarth is the only stream of any importance; but there are several springs of excellent water, affording an ample supply, and near Castle-Craig a sulphureous spring, which, on being analysed, was found to contain properties similar to those of one of the springs at Harrogate, but inferior in strength.

The scenery is generally pleasing, and in many parts enriched with thriving plantations.

The soil is light and gravelly, and seems well adapted for the growth of timber. The whole number of acres, according to actual measurement, is 6620, of which 2200 are arable, about the same quantity meadow and pasture land capable of being brought into cultivation, 600 in woods and plantations, and the remainder chiefly sheep-pasture and waste. The crops are oats, barley, peas, potatoes, and turnips. Wheat has been raised in very small quantities, but it was not found suited to the soil. The system of husbandry is advanced; the lands are well drained, and irrigation is practised on some of the meadow lands with singular benefit: the farm-buildings are comfortable, though inferior to many others in the neighbourhood; and the various improvements in the construction of agricultural implements have been adopted. Considerable attention is paid by the farmers to the management of the dairy, and to live stock: about 2000 sheep are pastured, chiefly of the black-faced kind, and 250 black-cattle of the Ayrshire breed are kept in the parish. The woods and plantations are carefully attended to, and have been much increased of late. In this parish the substrata are not various; the prevailing rocks are of the transition class. Whilst digging for marl, the horns of an elk were discovered in excellent preservation; and in some of the boggy lands, have been dug up quantities of hazel-nuts in a perfectly sound state. The annual value of real property in the parish is £2638. Castle-Craig, the seat of Sir A. G. Carmichael, Bart., is a spacious and handsome mansion, erected by Sir John G. Carmichael, and enlarged and embellished by the late proprietor; it is situated in a highly-cultivated and improved demesne, and the gardens and pleasure-grounds are laid out with great taste. Netherurd House, formerly called Cairnmuir House, is also a handsome residence, the seat of the White family. The nearest market-towns are Biggar and Peebles, with which, and with other places, the inhabitants have facilities of intercourse by roads kept in excellent repair: the turnpike-roads from Edinburgh to Dumfries, and from Glasgow to Peebles, pass through the parish.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Peebles, synod of Lothian and Tweeddale; and the patronage is vested in Sir A. G. Carmichael, Bart. The stipend of the incumbent is £158, of which more than a half is a grant from the exchequer; the manse was erected in 1788, and the glebe comprises about nineteen acres, nearly the whole of which is good arable land. Kirkurd church, built in 1766, and conveniently situated for the population, is a neat and substantial edifice adapted for a congregation of 300 persons. The members of the Free Church have a place of worship on the south border of the parish of Newlands. The parochial school is well attended; the master has a salary of £34, with an excellent house and a garden, and the fees average £26 per annum. Attached to the school is a good library; and until the last few years there was also a parochial library, supported by subscription, in which was a considerable collection of standard works: on its discontinuance the books were divided among the members. In the vicinity of Old Harestanes are some remains of Druidical origin. Near Castle-Craig are the ancient mounts called the Castle and the Law; they are sup-

posed to have been stations for the administration of justice in former times. To the east of them is a circular intrenchment on an eminence, named the Ring; and to the west of them, another fortification, styled the Chesters; both probably military stations. A stone kistvaen, inclosing an urn of clay with human bones, was found in 1754, at Mount Hill; and at the base of that eminence was discovered, some years afterwards, a stone coffin, containing human bones, with several rudely-formed weapons of flint, and a small ring. James Geddes of Rachan, author of an essay on the *Composition and Manner of Writing of the Ancients*, and of several other tracts, was born in this parish in 1710; and the late Dugald Stewart resided for some time at Netherurd House.

Burgh Seal.

KIRKWALL and ST. OLA, a royal burgh, a seaport, and parish, and formerly the seat of a diocese, in the county of ORKNEY, of which it is the capital; containing 3599 inhabitants, of whom 2205 are in the burgh, 21 miles (N. by E.) from Huua, and 327 (N.) from the city of Edinburgh. This place, which is situated in the south-eastern portion of

the Mainland, is of great antiquity, and from a very early date has been distinguished for its importance. The rural district around the town, called St. Ola, and supposed to have been originally a separate parish, derived its name from the foundation of a church by Olave, the first Christian king of Norway, to whom the Orkney Islands at that time belonged, at a period anterior to the erection of the ancient cathedral. The buildings near its site, which now constitute a portion of what is styled the Old Town, bear evident traces of remote antiquity. The burgh appears to have derived its name, originally "Kirkcogog", now Kirkwall, from the CATHEDRAL of ST. MAGNUS, founded in 1138 by Ronald, Earl of Orkney, in honour of his uncle Magnus, the preceding earl, who had been assassinated by his relative Haco, of Norway, in 1110, and canonized after his death: this cathedral, from its splendour and magnificence, was called the Great Kirk, an appellation subsequently appropriated to the town. The see, which had jurisdiction over the whole of the county of Orkney, subsisted under a regular succession of prelates, of whom Robert Reid was the last Roman Catholic bishop, till the abolition of episcopacy in Scotland. Among its endowments were the lands of the parish of St. Ola, which, on the erection of the town into a royal burgh by charter of James III., and the cession of the Orkney Islands to the Scottish crown, were partly vested in the magistrates and burgesses as a fund for keeping the cathedral of St. Magnus in repair.

This ancient church is a stately cruciform structure of red freestone, partly in the Norman, and partly in the early and later English styles of architecture, with a massive central tower, formerly surmounted by a lofty spire, which, being destroyed by lightning in 1671, has been replaced by a low pyramidal roof. The entire length of the cathedral is as much as 226 feet, and the breadth fifty-six. Earl Ronald had begun his High

Church on no mean scale; and it was afterwards greatly enlarged in length: to this circumstance, together with its severe simplicity, its narrowness, its height, and the multiplicity of its parts, must be ascribed the most striking characteristic of the pile, its apparent vastness. It gives, indeed, to the beholder the idea of greater internal length than some cathedrals of much larger dimensions. The roof, which is richly groined, is seventy-one feet in height from the floor, and is sustained on each side by a range of fourteen pillars fifteen feet in circumference, exclusive of four massive columns twenty-four feet in circumference, supporting the central tower, which rises to a height of 133 feet, and contains a fine set of musical chimes, presented by Bishop Maxwell in 1528. The east window, inserted by Bishop Stewart in the reign of James IV., is of elegant design, thirty-six feet high and twelve feet in width, surmounted by a circular window twelve feet in diameter; in the south transept is a circular window of equal dimensions, and at the west end of the nave a window similar to that of the choir, but inferior in size and embellishment. This venerable pile, from its remote situation, escaped the havoc committed on such structures at the Reformation, and is still entire. It contains numerous finely-sculptured monuments, one of which at the east end, of white marble, was erected to the memory of Haco, King of Norway, who died in the bishop's palace after his return from the disastrous battle of Largs, in 1264, and was interred within the choir. *The Episcopal palace* appears to have been of very ancient foundation, probably coeval with that of the cathedral; but by whom it was erected is not known. It was partly rebuilt in the time of Mary, by Bishop Reid, whose initials and armorial bearings are inscribed on several parts of the walls; and on that side of the round tower facing the town is a niche, in which is a rude statue of the prelate. This tower forms at present the only portion of the palace that is in any tolerable state of preservation. The palace was the temporary residence of James V., who was entertained by the bishop when, on a progress through his dominions, he visited the Orkney Islands.

The town is situated in the northern portion of a tract of land extending from the bay of Kirkwall, on the north, to Scalpa bay on the south; and is divided into the Old Town, along the shore of the former, and the New Town, a little to the south; the two parts of the town being separated by a small rivulet, over which is an ancient bridge of one arch. It consists chiefly of one narrow and irregularly-formed street, about a mile in length, and is lighted with gas by a company of shareholders. The houses in the Old Town are mostly of very antiquated character, built with the end fronting the street, and having steep roofs, and doors and windows of diminutive size; but such of them as are of more modern erection are of handsome appearance. The New Town consists of well-built houses; in front of each is a neat garden, and there are several pleasing villas inhabited by opulent families, and numerous well-stored shops for the supply of the inhabitants with various articles of merchandise from Edinburgh, London, and other markets. There are two subscription libraries, and card and dancing assemblies are held in the rooms at the town-hall. The manufacture of kelp, formerly very extensive, has been greatly reduced; and the principal manufacture at present carried on is that of straw-

plat, by females at their own dwellings, for the manufacturers of the district, whose agents are stationed here. The plat is of various degrees of fineness, and is considered as superior to that of foreign production. The manufacture of sail-cloth and ropes is also extensive; and there are two distilleries of whisky, which, besides supplying the neighbourhood, produce considerable quantities for exportation. Two branch banks, also, have been established in the town. The trade of the port is mainly in the exportation of kelp, corn, fish, cattle, and wool; and the importation of wood, hemp, iron, tar, groceries, cloth, and coal. The harbour, which is commodiously situated in Kirkwall bay, has been much improved under an act of the 9th of George IV., and is under the management of trustees consisting of the provost and six other members of the town-council, three registered owners of ships, and three landed proprietors of the county. A commodious pier has been erected for the despatch of business, at an expense of £1100. In 1843 there were sixty-four vessels registered as belonging to the port, of the aggregate burthen of 4312 tons; and the customs received in the same year amounted to £618. Boat-building, for which there are several yards, is carried on to some extent. No regular fishery is established here; but cod, ling, haddock, skate, halibut, and coal-fish are found off the coast in abundance, for the supply of the inhabitants. There is an annual fair in August, plentifully furnished with Manchester, London, and Glasgow goods, with jewellery, haberdashery, and other wares. A powerful steamer plies weekly between this place and the port of Leith, and numerous smaller boats to the adjacent islands.

Kirkwall was erected into a ROYAL BURGH, as already stated, by charter of King James III., which recited and confirmed all previous privileges, and was ratified by charters of James V. and Charles II. There were likewise granted to the burghesses the city of Kirkwall, and the cathedral church of St. Magnus. The government is vested in a provost, four bailies, a dean of guild, treasurer, and sixteen councillors, assisted by a town-clerk and other officers. The provost and bailies are magistrates, and exercise jurisdiction extending over the whole of the royalty. They hold courts for the adjudication of civil suits, and also for trivial nuisances and petty misdemeanors, the town-clerk acting as their assessor: their decisions in the criminal cases seldom extend beyond the imposition of a small fine, or a confinement of twenty-four hours. There are four incorporated crafts, viz., the shoemakers, tailors, weavers, and hammermen, of one of which every one exercising trade within the burgh must be a member, and in which the fees for admission vary from £3 to £5 for sons of freemen or apprentices, and from £4 to £10 for strangers. Kirkwall is associated with Wick, Cromarty, Dingwall, Dornoch, and Tain, in returning a member to the imperial parliament. The town-hall is a handsome building with a piazza in front, and is three stories in height: the ground-floor contains the prison for the burgh, consisting of several separate cells; the first floor has an assembly-room, with court-rooms, and the story above it is appropriated to the use of the masonic lodge.

The PARISH, which is about five miles in length, and of nearly equal breadth, is bounded on the north by the bays of Firth and Kirkwall, on the east by Inganess bay and the parish of St. Andrew's, on the south by

Scalpa bay, and on the west by the parish of Orphir. Its surface is diversified with hills, of which that of Wideford, the only one of any considerable elevation, is about 500 feet above the level of the sea, and covered to its summit with heath. In the rocks on the east of Scalpa bay are some singular excavations, made by the action of the waves, and one of which, about 100 yards in depth, forms a narrow winding passage in the rock, generally twelve feet in height, but in some parts nearly twenty feet, with beautiful stalactites of lime depending from the roof. The soil is various; towards the hills, and in the higher lands, a mixture of cold clay and moss; near the shore, sandy; and in several parts, a rich black loam. Of late years, the system of agriculture has been greatly improved, and the rotation plan introduced; considerable progress, also, has taken place in draining and inclosing the lands. The exact area of the parish has not been ascertained, but the probable number of acres of arable land is estimated at 1500; the crops are oats, barley, bear, potatoes, and turnips, with the various artificial grasses, all of which are cultivated with success. There is a large tract of undivided common, affording good pasturage for sheep, the breed of which, as well as that of cattle and horses, has been much improved. A handsome mansion has been erected by the Dundas family, Earls of Zetland; and to the east of the town is Papdale House, the residence of Mr. Laing, and formerly of Mr. Malcolm Laing, author of the *History of Scotland*, which was wholly written here. There are several gardens where various kinds of fruit are raised with great success, and in some of which grapes are produced in hot-houses; but little or no wood is to be seen, and trees of any considerable size cannot thrive unless in well-sheltered spots. In this parish the substratum is principally clay-slate, alternated with coarse sandstone, and in some places with veins of limestone, and spar containing small crystals of galena.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kirkwall, of which this is the seat, and of the synod of Orkney, which also holds its meetings here. There are two ministers, who officiate alternately. The minister of the first charge has a stipend of £150. 18., including an allowance of £4. 3. 4. for communion elements; with £30 in lieu of a manse, and a glebe valued at £42: the minister of the second charge has a stipend of £154, including £4. 3. 4. for communion elements; with an allowance of £50 in lieu of manse and glebe: patrons of both, the Corporation. The choir of the cathedral is appropriated as the parish church, and contains 835 sittings. A church dedicated to St. Mary has been erected by subscription, at an expense of £1400, of which £200 were granted from the Church Extension fund; it is a neat structure containing 1000 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, Original Seceders, and Independents. The grammar school, which is of very early foundation, was originally an appendage of the ancient cathedral establishment, and under the care of the prebendaries. Even after the dissolution of that body, the master for some time continued to receive the emoluments of the prebend of St. Peter, which subsequently, with the other revenues of the see, merged in the crown. The present master has a salary of £38, arising partly from a voluntary contribution by the clergy and gentry of Orkney, of 2000

merks, vested in the Earl of Zetland, and partly from the proceeds of £500 bequeathed by John Balfour, Esq. : the fees average £50 per annum. This school is attended by about 100 scholars, who are instructed in the Greek and Latin classics, the English and French languages, arithmetic, mathematics, and navigation. The patronage is vested in the council of the burgh, who in 1820 erected an elegant school-house in lieu of the ancient building, which had become dilapidated. A school is maintained by the Society for Propagating Christian Knowledge, which pays a salary of £15 to the master, who also receives £5 from the Kirk Session ; and there is likewise a school for females, supported by ladies resident in the town. Three friendly societies have been established for the relief of widows and orphans, and of the indigent sick ; and there are two subscription societies. Mr. Meason, of Moredun, in 1810 bequeathed £1000, the interest to be appropriated towards keeping the cathedral in repair, as some endowment was greatly needed for the purpose.

There are considerable remains of what is called the King's Castle, and of the palace of the Earls of Orkney. At what period and by whom the former structure was founded, is not distinctly known. From some inscriptions and a mitre on the walls, it is supposed to have been originally built by one of the bishops ; but it is with more probability ascribed to Henry Sinclair, first Earl of Orkney, in the fourteenth century. This fortress, the walls of which are of great thickness, was in a tolerably perfect state in the time of Robert Stewart, created Earl of Orkney in 1581, whose son Patrick, having committed many acts of rebellion, defended it for some time against the king's forces, by whom it was at length taken and demolished. The palace of the Earls of Orkney was erected in 1607, by the above-named Patrick Stewart. It was a spacious structure of grey stone, two stories in height, and embellished with projecting towers and oriel windows of elegant design. The grand hall, a magnificent apartment fifty-eight feet long and twenty feet wide, was approached by a triple flight of steps, leading from the principal entrance in the lower story, and was lighted by a range of noble windows. The walls that are still left are in as perfect a state as when first erected, and the remains display much of ancient grandeur, though the buildings were greatly dilapidated by Cromwell's soldiers, who removed the stones for the erection of a fortress on the east side of Kirkwall bay, the mounds and intrenchments of which, raised to protect it from the sea, are yet tolerably entire. Among the eminent characters connected with the parish may be mentioned Sir Robert Strange, a celebrated engraver ; Malcolm Laing, the historian, to whom there is a tablet in the cathedral ; and Dr. Traill, the present professor of medical jurisprudence in the university of Edinburgh, all of whom were born here.

KIRRIEMUIR, a burgh of barony, a market-town, and parish, in the county of FORFAR ; containing, in 1841, 7085 inhabitants, of whom 3067 were in the town, 6 miles (W. N. W.) from Forfar, and 20 (N. by W.) from Dundee. It derives its name, which is of disputed origin, most probably from its local appearance and position, which would equally justify its appellation, in the Gaelic signifying "a large hollow", or, as is supposed by some, "a wide district." With the exception of sanguinary conflicts between the chieftains of the seve-

ral clans, during feudal times, there are no events of historical importance connected with Kirriemuir. It was usual in the fourteenth century for the Highlanders beyond the Grampian hills to form themselves into bands under some warlike chieftain, and make depredations in this part of the country ; and in 1392, three chiefs commanded by Duncan Stewart, natural son of the Earl of Buchan, came to ravage the district, when a battle occurred near the town, in which Sir John Ogilvy of this place, with many of his retinue, were slain. In 1411, Donald, Lord of the Isles, a firm adherent of the English interest, who acted as an arbitrary and despotic prince, advanced with his followers to Kirriemuir, to prosecute his claim to the earldom of Ross, in which he was opposed by Lord Ogilvy, at that time sheriff of Angus, who mustered his warlike vassals, and, with the assistance of the Earl of Mar, obtained a victory over the invader, whom he defeated with great loss. In 1445, a memorable conflict occurred between the clans of the Ogilvys and the Lindsays, in which it is said not less than 500 of the former were slain on the field of battle. At a subsequent period, a bitter feud arose between the royal burgh of Forfar and this place, originating in a dispute about some ground called the Muir Moss, which was claimed by both towns, and where a battle, celebrated by Drummond the poet, was eventually fought, in which the inhabitants of Kirriemuir had the advantage. Among the families that have been connected with the place is that of Ogilvy of Airlie, a collateral branch of the Gilchrists, Earls of Angus. Its ancestor obtained from William the Lion a grant of the barony of Ogilvy, whence he took his name. His descendant, Sir James Ogilvy, was in great favour with James IV., who created him a peer of the realm by the title of Baron Ogilvy of Airlie ; and the seventh lord, in consideration of important services rendered to Charles I., was by that monarch created Earl of Airlie in 1639.

The TOWN is pleasantly situated, partly on a plain and partly on rising ground, and consists of streets irregularly planned, from which numerous others branch off in various directions, with some handsome ranges of houses in the upper part. From the upper part is an extensive and richly-varied prospect over the whole vale of Strathmore, with its towns, castles, plantations, rivers, and lakes, and the other picturesque and romantic features that enliven and characterize its surface. The streets are paved and kept in order by statute labour ; the town is well lighted with gas by a company, and the inhabitants are scantily supplied with water. A public library, forming a large collection of volumes of general literature, is supported by subscription ; and there is also a reading-room in the town, furnished with newspapers and periodical publications. According to a census taken by the incumbent about five years ago, the town contains a population of 3112, and the Southmuir, divided from it by the rivulet Garie, a population of 1134 : within a circle of one mile, there are about 6000 souls. The chief trade carried on here, and that to which the town is indebted for its prosperity, is the manufacture of brown linen, introduced into this part of the country about the middle of the eighteenth century, since which time it has steadily continued to increase, now affording employment here to about 3000 persons. The manufacture has maintained itself at Kirriemuir in rivalry with towns more advantageously situated ;

and it has attained to such perfection that considerable quantities of yarn are sent here from Montrose and Dundee, to be manufactured for those markets. The average number of pieces made annually exceeds 50,000, containing 6,500,000 yards. The post-office has a good delivery; and a branch of the British Linen Company, with a large and commodious building, is established in the town. The market, which is abundantly supplied and numerously attended, is on Friday. Fairs are held on the hill at the upper extremity of the town, on the Wednesday after the 24th of July and the Wednesday after the 19th October, for sheep; and also, on a smaller scale, in June and December, on the Wednesdays after Glammis fairs. Means of communication are afforded by a good turnpike-road, and by bridges over the Esk and Prosen; the railway between Perth and Forfar passes within four miles of the town, and an act was obtained in 1846 for the construction of a branch railway to Kirriemuir. This place was a burgh of royalty at a very remote period, and is subject to a baron, who had formerly unlimited jurisdiction both in civil and criminal cases, but whose power, since the abolition of hereditary jurisdictions, has been greatly diminished. A bailie is appointed by the baron, Lord Douglas; but his jurisdiction is limited in civil cases to pleas not exceeding forty shillings, and in criminal cases to offences punishable by fines not above twenty shillings, or imprisonment not beyond one month. There is a justice-of-peace court held here for the district, including the parishes of Glenisla, Lintrathen, Airlie, Kingoldrum, Cortachy, Tannadice, and Oathlaw; and the peace of the town is preserved by a sufficient number of constables. A trades' hall was erected by the various friendly societies of the place; the lower part is let for shops, and the upper part, intended for the meeting of the societies, is now appropriated as a place of worship. There is a small prison for the temporary confinement of vagrants, and offenders against the peace till brought to trial.

The PARISH, which is situated to the north of the vale of Strathmore, is divided into two extensive districts by an intervening portion of the parish of Kingoldrum. The northern district, containing a population of about 300 only, is nine miles in length and from two to four in breadth, and comprises about 18,000 acres, of which 2000 are arable, interspersed with portions of fine pasture and meadow, 500 woodland and plantations, and 15,500 mountain pasture and waste. The southern district of the parish is five miles in length and of nearly equal breadth, and comprises about 16,000 acres, of which 11,000 are arable, 2000 woodland and plantations, 2000 moor and pasture, and the remainder roads, water, and waste. In the north the surface is hilly and mountainous, extending on both sides of the river Prosen, and hemmed in by a continued chain of mountains, of which the most conspicuous is the Catlaw, the first in the range of the Grampians, having an elevation of 2264 feet above the level of the sea, and by some writers supposed to be the *Mons Grampius* of Tacitus. These mountain ridges are indented with numerous small glens and occasional openings; and from many of the steep acclivities descend torrents, which afterwards form tributaries to the Prosen. Of the southern division of the parish the surface is nearly level, in some parts gently sloping, and in others varied with gentle undulations; the only heights of any importance being the braes of Inverquharly and the

hill of Kirriemuir, which are richly cultivated to their very summit. The principal streams of the parish are the South Esk, the Prosen, the Carity, and the Garie. The *South Esk* has its source among the mountains in the Clova district of the parish of Cortachy and Clova, and after receiving many tributary streams in its progress by this parish and through the eastern part of the county, runs into the sea at Montrose. The pearl mussel is common in this river, and a pearl-fishery was formerly carried on with success: some years since a considerable number of pearls found here were sold to a jeweller in the town for a considerable sum, one of them being nearly a quarter of an inch in diameter. The *Prosen* rises in the northern extremity of the parish, and extends through the whole length of the glen to which it gives name. Augmented in its course by the streams of the Lidnathy, Glenloig, Glenlogy, and numerous others issuing from the sides of the mountains, it falls into the South Esk near Inverquharly, not far from the influx, into the same stream, of the *Carity*, which rises at Balintore, in the parish of Lintrathen. The *Garie* has its source in the lake of Kinnordy, in this parish, and joins the river Dean near Glammis Castle. *Loch Kinnordy*, which was formerly extensive, and abounded with perch, pike, and eels, was drained about a century since, by Sir John Ogilvy, for the marl; but the draining having been imperfectly accomplished, it is still a lake, although of inconsiderable size. The stream which issues from it, in dry weather, is scarcely sufficient to turn a mill, though, by the construction of numerous dams to collect the water, it is made to give motion to the machinery of a large number of corn and spinning mills.

The SOIL is very various. In the northern division of the parish, it is sometimes of a gravelly nature; on the acclivities of the mountains, particularly those of gentler elevation, of a richer alluvial quality; and in other parts, especially towards the mountain summits, a deep moss, which in many places has been partially drained. In the southern division the soil is for a considerable extent sandy and gravelly: on the sloping grounds, where there is frequently an accumulation of alluvial deposit, it is richer, intermixed with black and brown loams of great fertility; in the lower tracts it is thin and dry; in some places mossy, and in others deep and fertile. The crops comprise oats, barley, wheat, potatoes, and turnips: the system of agriculture is in a very advanced state; the lands have been well drained, and inclosed partly with dykes of stone and partly with hedges of thorn, which are kept in good order. Irrigation has been practised with success on lands requiring that process; and all the more recent improvements in agricultural implements have been generally adopted. The natural woods in this parish, of which the eastern portion formed part of the ancient forest of Plater, are now inconsiderable; they consist chiefly of birch, alder, hazel, blackthorn, and willow. Around the castle of Inverquharly are some ancient chesnut, yew, and ash trees; and in other parts, some beeches of stately growth. The plantations are Scotch fir, with a few larches, and various other kinds of trees; they are well managed, and in a flourishing condition. The principal substrata are, the old red sandstone, alternated with red schistose and trap rock; slate; and limestone. A dyke of serpentine occurs on the farm of Balloch, and in Glenprosen are rocks of primitive formation, containing mica-schist,

hornblende-slate, and gneiss, in which last are found beautiful specimens of rock-crystal and garnets. The slate, which is of a grey colour, and contains some vegetable impressions, is of good quality for roofing; and the limestone is quarried, and burnt into lime in rudely-constructed kilns. The annual value of real property in the parish is £11,591. Kinnordy is a handsome mansion pleasantly situated; the gardens contain many rare and valuable plants, and in the house is a museum of natural curiosities and antiquities. Balnaboth, Logie, Ballandarg, and Shielhill are the other seats.

Ecclesiastically the parish is in the presbytery of Forfar, synod of Angus and Mearns, and in the patronage of Lord Douglas: the minister's stipend is about £250, with a manse, and a glebe valued at £11 per annum. Kirriemuir church, a neat plain edifice, was erected in 1787, and is adapted for a congregation of 1240 persons. There is also a church at South Kirriemuir, to which a district with a population of 2691 was for a time annexed; it contains 1021 sittings. A missionary, who has an income from the Royal Bounty, officiates alternately at Clova and Glenprosen. There are an episcopal chapel, and places of worship for members of the Free Church, the United Presbyterian Synod, and the Original Constitutional Synod. The parochial school affords a very liberal course of instruction; the master has a salary of £34, with £128 fees, a good house, and an allowance of £2. 2. 9½. in lieu of garden-ground. John Webster, Esq., in 1829 bequeathed about £8000 to Charles Lyell, Esq., to the minister of the parish, and others, in trust for the erection and endowment of a school; a handsome house containing five spacious schoolrooms has been erected, and teachers have been appointed by the trustees. Mr. Henry, of Kensington, near London, a native of this place, bequeathed £1400 to the minister and elders, in trust for the education of children, to which purpose the interest of £1200 was to be appropriated, that of the remainder being directed to be paid to the parochial schoolmaster for keeping the accounts. Fifty boys are taught in the parochial school from this fund, with preference of admission to those of the name of Henry; and their fees are paid out of the funds, for four years. A savings' bank, and some friendly societies established in the town, tended to diminish the number of applications for parochial relief; but they have now mostly gone down, from incorrect calculations.

There are several erect stones in the parish of large dimensions, none of which, however, have any traces of inscription; and near the hill of Kirriemuir were two rocking-stones, within a short distance of each other, one of whinstone, and the other of Lintrathen porphyry. These two stones were lately demolished by order of the proprietor. The parish also contains some caves, the most remarkable of which is one called Weems Hole, on the summit of the hill of Mearns. It is of artificial construction, built with stones, and covered with flags of rough stone six feet in width; the cave is about seventy yards in length, and has the entrance to the south. When first explored, a great number of human bones were found in it, with some querns and other relics of antiquity. There is a similar cave at Auchlishie, called the Weems Park, in which, when opened, were found a curraeh and several querns. In the loch of Kinnordy a canoe was found in 1820, of which one extremity was scarcely hidden under the surface. There are also va-

rious mutilated remains of ancient buildings, supposed to be the ruins of some of the earliest religious establishments after the introduction of Christianity into Britain. In a bed of marl in the parish was found the skeleton of a stag of large dimensions. It was discovered in an upright position, the tips of the horns reaching nearly to the surface of the marl, and the feet resting upon the bottom at a depth of nearly six feet. The horns had nine branches, and when dried weighed nearly eighteen pounds. Above the marl in this part of the parish is a deep layer of peat, in which the skeletons of other stags, though of very inferior size, have been frequently found. In the House of Logie is preserved the head of a stag of ten branches.

Many eminent persons have been connected with the parish. Of a branch of the Ogilvy family, resident at Inverquhar, was Alexander, second son of Sir John Ogilvy; he joined the Marquess of Montrose at the battle of Philiphaugh, in which he was taken prisoner, and for his loyalty he was executed at Glasgow in 1646. Captain Ogilvy, son of Sir David, attended James II. at the battle of the Boyne, and was afterwards killed in an engagement on the Rhine; he was one of a hundred gentlemen who volunteered to attend that monarch in his exile. David Kinloch, a descendant of the very ancient family of Kinloch of Logie, was born in 1560, and educated as a physician, in which profession he acquired a high pre-eminence. He travelled much in foreign countries, and was incarcerated in the dungeon of the inquisition in Spain, from which, however, he was liberated in recompense for having performed an extraordinary cure upon the inquisitor-general, after he had been given over by his own physicians. Afterwards, he became physician to James VI., and wrote several poems in elegant Latin. A portrait of him is preserved at the family seat at Logie.

KIRTLE, for a time a quoad sacra parish, formed out of the parishes of ANNAN, DORNOCK, and MIDDLEBIE, in the county of DUMFRIES, 2½ miles (S. E. by E.) from Eeelsfechan; containing above 1000 inhabitants. This district derives its name from the river Kirtle, by which it is bordered on the east. It is about four miles in length and two in breadth, and comprises tillage and pasture land in nearly equal portions, with considerable mosses, which, however, feed cattle and sheep; and some plantations in the vicinity of the river. Much of the land is of poor soil, but capable of improvement from good culture. The geological features of the district are not remarkable: red sandstone of excellent quality is much used for building and for gravestones, and two quarries are in operation. There are also two celebrated lime-works, the lime from which supplies the country around, and is even sent to Moffat, a distance of twenty miles. The scenery along the banks of the stream is diversified and beautiful; and towards Annan the ground attains a considerable elevation, but is in no part mountainous. Throughout the whole of its course here, the Kirtle is studded with handsome mansions, the grounds of which add much to the beauty of their respective localities. The village of Eaglesfield, in the district, has its name from the late proprietor of Blackethouse, Eaglesfield Smith, Esq.; and is large and populous, having at present between 450 and 500 inhabitants, many of whom are employed as weavers for the Carlisle manufacturers. Means of communication are afforded by the high road

between Glasgow and Carlisle, which runs through the middle of the district, and by other roads. Great facility of intercourse is also presented by the Caledonian railway, which has a station at Kirtlebridge. Ecclesiastically Kirtle was within the limits of the presbytery of Annan and synod of Dumfries, and the patronage was in the male communicants with one or two members of the presbytery. The church, situated in the north-eastern extremity of Annan parish, is a plain building of red sandstone, erected about 1840, by voluntary contributions, aided by the Commissioners of the Church Extension fund; it contains 600 sittings. There are two schools, one at Eaglesfield, the other at Breconbeds; the master of each receives a salary of £10, and they afford instruction each to about 100 children. In the district is a remarkable old tower, vulgarly reputed to be haunted by (*Scotticè*) a bogle, called the "Bogle of the Blackethouse."

KIRTLEBRIDGE, a village, in the parish of **MIDDLENIE**, county of **DUMFRIES**; containing 83 inhabitants. It has its name from a bridge over the Kirtle river, and is one of three villages in the parish which have arisen within the last forty years. In this vicinity is a station on the Caledonian railway, and the line is carried across the beautiful river Kirtle by a noble viaduct of nine arches, each thirty-six feet in span.

KITTOCH-SIDE, a village, in the parish of **EAST KILBRIDE**, Middle ward of the county of **LANARK**; $1\frac{1}{4}$ mile (S. E.) from Carmunnoch. It lies in the northern part of the parish, on the road from Carmunnoch to Kilbride, and near the banks of the Kittoch, whence its name. Upon two hills in its neighbourhood are the remains of ancient fortifications, respectively called Castle Hill and Rough Hill.

KNAPDALE, NORTH, a parish, in the district of **ISLAY**, county of **ARGYLL**, 8 miles (W. S. W.) from Lochgilphead; containing 2170 inhabitants. This place, the name of which is in the Celtic language accurately descriptive of the surface of the land, diversified with hill and dale, was in the year 1734 created a separate parish; as was also South Knapdale. The two districts previously formed one parish, called Kilvic-O-Charmaig after Mac-O-Charmaig, an Irish saint who, from his solitary retirement on a small island off the coast, founded several chapels in the neighbourhood. This part of the country was alternately subject, for a long period, to the aggressions of the Irish and the Danes, against whose invasions the inhabitants were continually on their guard; and on the approach of an enemy, a series of watch towers along the coast were instantly lighted up as a signal for the assembling of the military force of the district. The Lords of the Isles exercised an independent sovereignty over their vassals here till, in the reign of Bruce, they were ultimately compelled to acknowledge the royal authority.

The parish is bounded on the north and north-east by Loch Crinan and the canal of that name, and on the west by the Sound of Jura. It is about thirteen miles and a half in length, and nearly six miles in breadth. The exact number of acres has not been ascertained; there are, however, 3400 acres arable, 22,126 meadow and pasture, 1925 in natural wood, and about 250 under plantation. The surface is beautifully diversified with hills and valleys, and in some parts with gentle undulations and gradual slopes. The principal hills are,

Cruachlusach, which has an elevation of 2004 feet above the level of the sea, and **Dunardary**, **Duntaynish**, **Ervary**, and **Arichonan**, the lowest of which rises to the height of 1200 feet; they all command from their summits interesting and extensive prospects, but from **Cruachlusach** the view is unbounded and strikingly grand. There are not less than twenty inland lakes scattered over the surface; the largest is about a mile and a quarter in length, and nearly one-third of a mile in breadth, and all abound with trout. Several streams, likewise, intersect the parish; the most considerable is the **Kilmichael**, which has its source in the moor of that name, near the foot of **Mount Cruachlusach**, and after a winding course, in which it forms a picturesque cascade, falls into the sea about 300 yards below the bridge of **Kilmichael-Inverlussay**. **Dunrostan** and **Auchnamara** are streams of less importance. The coast is deeply indented on the west by the inlet of **Loch Swein**, which intersects the parish for nearly ten miles in a north-eastern direction, almost dividing it into two distinct parts: this inlet is about a mile in breadth at its entrance, but towards its northern extremity it widens to nearly three miles, and then divides into three parallel branches. Including the shores of **Loch Swein**, the extent of coast is almost fifty miles: the rocks in the north rise precipitously to a height of 300 feet; in some parts the coast is bounded by low ledges of rocks, and in others by a level sandy beach.

Near the coast the soil is light and sandy; in other places, a gravelly loam; towards the south-west, a rich friable mould of great fertility; and in other parts, an unproductive moss. The system of agriculture is improving; but the principal attention of the farmers is paid to the rearing of live stock. The chief crops are oats and potatoes; part of the lands have been improved by draining and the use of lime, and the arable farms are inclosed with stone dykes. In this parish the cattle are all of the pure West Highland breed, and in respect both of size and quality are not surpassed by any in the county; the sheep are generally of the black-faced breed. Some of the farms are well managed, and the produce is abundant. The ancient woods consist of oak, ash, mountain-ash, willow, birch, alder, hazel, and holly; and the plantations, which are in a thriving condition, are oak, ash, larch, spruce, Scotch and silver fir, elm, and beech. The annual value of real property in the parish is £5891. There are two villages, namely, **Bellanoch**, in which is a post-office under that of **Lochgilphead**, with three deliveries weekly; and **Tayvallich**. Facility of communication is afforded by good roads: that from **Lochgilphead** to **Keills** passes for fifteen miles through the parish, and a branch of it leads to the church of **Kilmichael**. A road from **Inverlussay** to **Loch Swein** is in progress, which, when completed, will greatly promote the intercourse with the eastern portion of the parish. Five vessels of thirty tons each, belonging to this place, are employed in trading to **Greenock**, **Liverpool**, and the **Irish coast**; and steam-boats from **Glasgow** to **Inverness** pass daily during the summer along the **Crinan canal**.

For **ECCLESIASTICAL** purposes the parish is within the limits of the presbytery of **Inverary** and synod of **Argyll**. The minister's stipend is about £165, with a manse, and a glebe valued at £22 per annum; patron, the Crown. There are two churches, in which the minister officiates

alternately. The church of Kilmichael-Inverlussay is a neat structure, erected in 1819, and contains 432 sittings; the church of Tayvallich, on the opposite shore of Loch Swein, distant from Kilmichael three miles by sea and ten by land, was erected in 1827, and contains 700 sittings. There are three parochial schools, the masters of which have each a salary of £17, and fees averaging £10 annually; the whole afford instruction to about 240 children. At Keills, in the south-western extremity of the parish, are the ruins of an ancient chapel of Mac-O-Charmaig's, near which is an old cross; and on Drimnacraig are those of another religious house. Not far from the site of a chapel at Kilmahunaig, of which only the cemetery remains, is a conical mound, 120 yards in circumference at the base, and thirty feet in height, called Dun-Donald, where the Lords of the Isles held courts for dispensing justice. In the parish are also numerous remains of fortresses, one of which, called Dun-a-Bheallich, on a hill near Tayvallich church, appears to have been raised to defend the pass from the bay of Carsaig to that of Tayvallich. On a rock close to the sea are the ruins of Castle-Swein, commanding the entrance of that loch, and the foundation of which is by tradition ascribed to Swein, Prince of Denmark; the remains consist of roofless walls 105 feet in length, seven feet in thickness, and thirty-five feet in height. A portion of the ruins, called Macmillan's tower, seems to be of more recent date than the rest.

KNAPDALE, SOUTH, a parish, in the district and county of ARGYLL; containing, with a portion of the quoad sacra district of Lochgilphead, 2223 inhabitants. The Gaelic term that gives name to this place consists of the two words *knap*, a hill, and *daill*, a plain, field, or dale, and is descriptive of the general appearance of the surface, which is marked by numerous hills and dales. The parish was formed at the same time as that of North Knapdale, in 1734. It is bounded on the east by Loch Fine, and on the west by the Sound of Jura, a large arm of the Atlantic Ocean; and is computed to be about twenty miles in length, and in one part half that distance in breadth, chiefly comprising large tracts appropriated as sheep-walks and to the pasturage of black-cattle, the soil and climate being alike unfriendly to extensive agricultural operations. On the south-east is a small loch, a branch of Loch Fine, called East Loch Tarbert, and having only the narrow isthmus of Tarbert between it and West Loch Tarbert, which latter borders the parish also on the south-east. The parish is washed on the west, as already stated, by the Sound of Jura; and Loch Chaolis-port or Killisport, an arm of the sound, runs into the land in a north-eastern direction for five or six miles.

The north-western coast of *Loch Killisport* is much indented, and abrupt and rocky; but the south-eastern shore is gradual in its ascent. Both sides are richly ornamented with copse wood; and excellent anchorage is found in several of its bays, for vessels seeking refuge from the swell of the south-west and other gales. The shelter is especially good within Ellanfada, at the head of the loch, where the north winds are broken by the hills rising in that direction in the form of an amphitheatre. The islands of Ellanfada, Ellan-na-Muick, and Lea-Ellan, with others, are situated in the loch; and off the point of Knap, at the extremity of its north-western shore, is a dangerous rock called Bow-Knap, the summit

of which is seen only at low water during spring tides. Near the north-west coast, also, is Ellan-na-Leek; besides which there are the islands of Ellan-More, Ellan-na-Gamhna, and Core-Ellan, all celebrated for the excellent beef and mutton produced on their pastures. The waters of the loch afford abundance of fish, comprising salmon, trout, whiting, ling, sea-the, haddock, skate, halibut, turbot, flounders, and occasionally the John-Dory. Herrings formerly visited it, and large numbers of them were caught; but they are now seldom seen here in any quantity. Loch Fine is their chief resort in this part of the country; and between forty and fifty boats belonging to the parish are engaged in the fishery there during the season, each, in a prosperous time, making about £70.

The INTERIOR of the parish is hilly and mountainous. The highest range is that of Sliabh-Ghaoil, stretching from Inverneill to Barnellan, a distance of twelve miles, and the summit of which commands beautifully-diversified and extensive prospects, comprehending Cantyre, the Ayrshire coast, Bute, and the serrated peaks of the isle of Arran, with Ireland, the isles of Mull and Jura, and many other interesting objects. The heights also embrace a view of Loch Fine, the Kyles of Bute, the mouth of the Clyde, the sound of Kilbrannan, the channel towards Ireland, the Sound of Jura, and other waters. Parallel with Sliabh-Ghaoil run subordinate ranges, with intermediate valleys traversed by numerous streams, of which the Ormsary and the Loch-head are celebrated for their fine trout. Salmon-trout, also, of good quality, are found in the inland lakes, which are four or five in number. Some portions of the parish are subject to tillage; the farms are of small size, and the usual crops are oats, bear, barley, peas, beans, turnips, clover, and rye-grass, with potatoes, the last being raised in considerable quantities, and exported. The average rent of land, however, does not exceed one shilling per acre, in consequence of the very large proportion of moor pasture. On some of the best farms, the tenements and offices have been much improved; and on one estate a threshing-mill, worked by water, has been erected. The sheep are all of the black-faced kind; and the black-cattle, many of which are of superior quality, are the West Highland. The wood, which is partly natural and partly planted, and of considerable extent, comprises oak, ash, birch, hazel, and holly, larch, spruce-fir, ash, beech, plane, and willow trees: some of the plantations are very flourishing. The annual value of real property in the parish is £5777. Ormsary, one of the principal seats, is a beautiful residence, with a fine garden and shrubbery, from which plantations are intended to be continued in clumps to the north, and in belts to the shore on the south, for the shelter of this agreeable locality. In the parish are also the mansions of Inverneill, Erines, Drimdrissaig, and Achindarroch, the last situated on the bank of the Crinan canal, and surrounded with ornamental grounds; and a spacious mansion has been built at Barmore.

An excellent road runs from Daill, the north-eastern extremity of the parish, to Barnellan, in the south, and for about twelve miles is called the Sliabh-Ghaoil road, its route being along the eastern base of the hilly range of that name. It was constructed with much labour and difficulty, under the superintendence, and by the persevering exertions, of Sheriff Campbell, and has

proved of eminent service to this and several other parishes, offering the only inland means of communication between the peninsula of Cantyre and the other parts of Argyllshire. The Crinan canal, begun in 1793, by a company, under an act of parliament obtained for that purpose, commences at the loch and village from which it takes its name, in the parish of Kilmartin, and, after a south-eastern course of about nine miles, joins the Loch Gilp branch of Loch Fine, in the north of this parish. It is a convenient and safe channel for vessels plying between the West Highlands and the Clyde: by it the dangerous course round the Mull of Cantyre is avoided; and it has been found highly beneficial to the coasting and fishing trade, for whose use it was chiefly designed. The revenue, however, being scarcely sufficient to defray the expense of maintaining the canal, an act was passed in 1848, vesting the line in the new commissioners that were then appointed for the Caledonian canal. At its opening into Loch Gilp, a village has been formed since the commencement of the canal; it is called Ardrissaig, and contains about 400 people, who are chiefly supported by the herring-fishery: a hundred boats are frequently in the harbour during the season of the fishery; and there is also much traffic by means of the Glasgow steamers, three of which in summer time, and one in winter, arrive at the port daily, for the conveyance of passengers, and goods and cattle. The northern parts of the parish chiefly use Lochgilphead, a large village in the parish of Kilmichael-Glassary, as their post-town; and the southern district the village of Tarbert, in the parishes of Kilcalmonell and South Knapdale. To the latter village the mail-bag was formerly sent from Lochgilphead daily, upon its arrival from Inverary; but it is now despatched by steam from Ardrissaig, a change productive of some inconvenience. The village of Tarbert affords means to the farmers in the south for the disposal of their produce; those in the north generally resort to Lochgilphead.

Ecclesiastically the parish is in the presbytery of Inverary, synod of Argyll, and in the patronage of the Crown: the minister's stipend is £150, with a manse, and a glebe of fourteen acres, valued at £10 per annum. There are two churches, one situated at Achoish, and the other at Inverneill, both built about the year 1775, and repaired a few years since; they are seated respectively for 212 and 300 persons. The incumbent formerly officiated at these churches alternately; but since the erection of a church at Lochgilphead in 1828, and the annexation of Ardrissaig, and some parts adjacent, to the district of that church, he has performed public worship at Inverneill every third Sabbath only. There are four parochial schools, affording instruction in English and Gaelic reading, and the other branches of a plain education; and at two of the schools instruction is given in Latin, geography, and navigation. The masters each receive a salary of £12, 12s., but no allowance is made to any of them for dwelling-house or ground; their fees amount respectively to £20, £12, £8, and £7. There is also an Assembly's school, the master of which is indebted for a house and some ground, and for the school-house, to the liberality of Mrs. Campbell of Ormsary. The remains of three ancient chapels are still visible, one of which, in Ellan-More, was built by Mac-O-Charmaig: it is arched over, and in good preservation; and in the recess of the wall is a stone coffin, with the figure of a man cut on the lid. The same saint founded the

church of Kilvic-O-Charmaig, the mother church of the two Knapdales, and, after many acts of devotion, was buried in his own island, where his tomb is yet to be seen. At Cove are the ruins of a chapel built, according to tradition, by St. Columba, before he took his departure for Iona to found his seminary there; the altar and font still remain, and the former exhibits a well-sculptured cross. The third chapel, at Kilmore Knap, seems to have been the most considerable in South Knapdale; its walls are almost entire, and a beautiful cross stands on the west side of the burying-ground. At one time there were the remains of seven ancient chapels to be seen in the parish.

KNIGHTSWOOD, a village, in the parish of NEW KILPATRICK, county of DUMBARTON, $1\frac{3}{4}$ mile (S. by E.) from New Kilpatrick; containing 178 inhabitants. It is situated in the southern part of the parish, a short distance from the river Kelvin, which here flows on the east. At Netherton, in its neighbourhood, is a valuable freestone-quarry, the stone of which is of a cream colour, easily cut when fresh from the quarry, but hardening considerably by exposure. At one period it was largely exported to Ireland and the West Indies; and it is still wrought in vast quantities, affording employment to between sixty and seventy persons.

KNOCK, for a time a quoad sacra parish, in the parish of STORNOWAY, island of LEWIS, county of ROSS and CROMARTY, 5 miles (E.) from the town of Stornoway; containing 1637 inhabitants. This district, which is called also Uii, and Eye, is connected with the main part of the parish of Stornoway by a narrow isthmus, and is bounded on the west by Broad bay, and on the east and south by the channel of the Minch, which separates it from the main land of the county. It comprises about 12,000 acres, and was erected into a quoad sacra district on the building of a church by parliamentary grant within the last few years. In all its statistical details it is identified with Stornoway; it comprises only a few rural hamlets, the inhabitants of which are engaged in the fisheries common to that parish. The church, a neat structure, contains about 800 sittings, and the minister has a stipend of £120, with a manse and glebe; patron, the Crown. The members of the Free Church have a place of worship. There are also two schools supported by the Gaelic society of Edinburgh. In the cemetery of the old church of Uii, of which there are considerable remains, it is traditionally recorded that not less than sixteen of the Mc Leods, the ancient lords of Lewis, were interred.

KNOCKANDO, a parish, in the county of ELGIN, 14 miles (S.) from Elgin; containing, with the village of Archiestown, 1676 inhabitants. Knockando derives its name from two Gaelic words signifying "the black hill", or "hill with the black head". It has the ancient parish of Macallan, or Elchies, united to it, but no distinct record of union is preserved: both parishes were vicarages, the former depending on the parson of Inveraven, and the latter on the parson of Boterie. This is considered a Highland parish, but the provincial Scotch, with a mixture of English, has entirely superseded the Gaelic language, which is spoken in the neighbouring parishes. A place here, called Campbell's Cairns, is thought by some to derive its name from a battle fought between the Campbells and some other clan, in which the former were defeated. Others, however, think

the name arose from Cossack Dhu, an ancient freebooter, who is said to have concealed his plunder among the cairns. The most important event in modern times connected with the district is the terrible flood of 1829, which produced appalling desolation to fields, houses, mills, and every description of property within the range of its fury, and the details of which have now become interwoven with the history of Moray.

The PARISH is of an irregular figure, stretching along the bank of the river Spey, extending between sixteen and seventeen miles in length, and varying from two to six miles in breadth. It is bounded on the north by Dallas and Birnie parishes; on the south by the river Spey, which separates it from Inveraven and Aberlour, in the shire of Banff; on the east by the parish of Rothes; and on the west by the parishes of Cromdale and Edinkillie. The surface is considerably diversified by a succession of hills and glens, with several level haughs near the river; and towards the west is an eminence called James Roy's Cairn, supposed to be the highest ground in Morayshire. In the moorlands are two lakes, Benschalgs and Loch Coult; but the larger does not exceed a mile in circumference. A number of burns, also, water the parish, in all of which trout are found, and which in a rainy season overflow their banks: in the celebrated flood of 1829, they came down from the hills with tremendous force, swollen to the size of rivers, and carrying every thing before them to the river Spey. The Spey is the most rapid river in Scotland, and many rafts of timber are floated along its stream from the forests of Rothiemurchus and Abernethy.

The SOIL varies very considerably, comprising black gravelly mould, heavy clay, and moss; resting in some parts upon clay, and in others upon gravel: the alluvial deposits consist of clay, bog-iron ore, peat, fullers'-earth, and marl; and oak and fir roots, and whole trees, have been found embedded in the several large mosses. Independently of the estate of Knockando, which comprehends about a third part of the parish, 2034 acres are in tillage or pasture, 7986 are uncultivated, and 680 under plantation. All kinds of grain and green crops are grown; but agriculture is generally backward, and modern practices have been only partially adopted; very few lands are inclosed, and the farm-buildings are usually of an inferior kind. Improvements are, indeed, advancing on the grounds of some of the larger proprietors; but the want of capital, the smallness of the farms, and the limited use of manure operate to prevent the extension of these improvements throughout the parish. The rocks are all of the primitive formation, and consist of granite, felspar, mica, sandstone, and rock-crystal. The annual value of real property in the parish is £3857. The mansions are, Easter Elchies, built in the year 1700, by the father of the late Lord Elchies; the house of Knockando, built in 1732, now partly in ruins, but capable of repair, and beautifully situated near the banks of the Spey; and Wester Elchies, a building of more modern date, in the castellated style, belonging to the Grant family. The scenery around these seats, particularly Knockando, is exceedingly picturesque and beautiful. The only village is Archiestown; it is three-quarters of a mile in length, and consists of a double row of houses, with a square of about half an acre in the centre. There are four meal-mills, a waulk-mill, a carding-mill, and saw and threshing mills: at

the waulk and carding mills, wool is dyed and manufactured into plaiding and broad cloth, blankets, and carpets. Spinning and weaving are carried on in the parish; and there are two distilleries, which have a very high character. On the Spey is a salmon-fishery, and trout-angling is practised to a great extent on that river and all the burns. A road to Elgin and a road to Forres run through the parish, both of which are in good order; but the other roads are in general in a deplorable state. The bridge of Craigellachie affords a transit over the Spey; and there are numerous ferries; as well as wooden bridges across the burns.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Aberlour and synod of Moray; patron, the Earl of Seafield. The stipend of the minister is £158, of which a small portion is received from the exchequer; with a manse, and a glebe of about fourteen acres, valued at £13 per annum. Knockando church, built in 1757, and repaired in 1832, is a small plain edifice, remarkably neat within; it contains 477 sittings, and is conveniently situated for the population. The Independents have a place of worship. There are two parochial schools, each of the masters of which has a salary of £25. 13., with a share of the Dick bequest, and about £8 or £10 fees: instruction is given in Latin, the mathematics, and the usual branches of education. Three other schools are supported by the Society for Propagating Christian Knowledge; two of them are taught by females. In the parish are several mineral springs occasionally used for medicinal purposes. Of two ancient caves, one is designated the Cave of Hair-nish An Tuim, supposed to be James Grant, nephew of the well-known Carron; the other is called Bane's Hole, from Donald Banc, the robber, who is said to have been shot and buried in the neighbourhood. Lord Elchies, already mentioned, a distinguished judge, was born at Easter Elchies; and Messrs. Grant, of Manchester, who have established one of the most extensive mercantile concerns in England, are natives of the parish.

KNOCKBAIN, or KILMUIR WESTER and SUDDY, a parish, in the county of ROSS and CROMARTY, $3\frac{1}{2}$ miles (N. N. W.) from Inverness; containing, with the villages of Charlestown and Munloch, 2565 inhabitants. Previously to the union of the counties of Ross and Cromarty, this parish was locally in the county of Ross only. The name Kilmuir signifies "a church dedicated to Mary"; and Suddy, "a good place for a settlement". The two districts, once separate parishes, were united in 1756, when they received the name of Knockbain, by which they have since been called, but which was originally applied only to a cold and desolate moor, whereon the church and manse are built. Little is known concerning the ancient history of the parish; but the remains of many cairns on the field of Blair-na-coi are said to be the memorials of a sanguinary conflict which took place near the spot, in the thirteenth century, between the famous Mc Donalds and the people of Inverness.

The length of the parish is between six and seven miles, and its breadth between five and six; it is bounded on the south by the Moray Firth, and on the north-west by the parish of Killearnan. The climate is tolerably healthy. In general the soil is good, but it differs greatly throughout, consisting of the several varieties of sandy loam, clay loam, moor earth, moss, gravel, and alluvial deposits. The number of acres on the estates of four

of the five heritors in the parish is, 3458 of arable land, 3496 plantation, and 3323 pasture or uncultivated: the number of acres on the estate of Suddy is not precisely known. Large quantities of wheat and barley are raised, and the farmers grow crops also of oats, peas, turnips, and potatoes. The woods consist of Scotch fir, larch, and one very large and recent plantation of oak-trees, for which the planter received a premium from the Highland Society. The estate of Drumderfit contains the most important farm in the parish; this farm has been for some centuries in the possession of the same family, and they have brought it to a high state of cultivation by the large sums from time to time expended upon it. At Allangrange, Suddy, Muirends, Munloch, and Wester Kessoek, considerable quantities of waste land have been recovered. The lands generally have been portioned into farms of the most suitable extent; good houses and fences have been raised, and the most recent improvements in husbandry are skilfully applied. On some lands, particularly those of Wester Kessoek, great encouragement has been given by granting long leases. The subsoil of the parish is clayey, in many parts tenacious, and sometimes covered with a thin stratum of iron-ore, mixed with gravel and sandstone: the rocks are of the old sandstone formation. The annual value of real property in Knockbain is £6772.

There are two villages, one named Munloch, the other Charlestown; the latter is opposite the northern entrance of the Caledonian canal, and both are built on the estate of Sir Colin McKenzie, Bart., of Kilcoy. A considerable trade has been carried on for several years with Newcastle and Hull, in the exportation of fir-props, in exchange for which lime and coal are received. A post-office is established, and the roads are in good repair: that leading from Dingwall to Kessoek-Ferry passes through the western part of the parish, and the roads from Kessoek to Fortrose and Invergordon, and from Fortrose to Beaully, run through the centre of it. Ecclesiastically the parish is within the limits of the presbytery of Chanonry and synod of Ross. The stipend of the minister is about £205, with a manse, a glebe of the annual value of £22, and a composition of £1 a year in lieu of the privilege of cutting peat; the patronage belongs to the Crown and the Marchioness of Stafford. Knockbain church is an ancient structure: when repaired about thirty or forty years ago, it was sufficiently enlarged to admit 250 additional hearers, and at present it accommodates nearly 800 persons. The members of the Free Church have a place of worship; and there is an episcopal chapel. The parochial schoolmaster has the maximum salary, with a house, and about £13 fees. There is another school, supported by the General Assembly's committee, and called Principal Baird's school, the master of which has a salary of £25, and the fees. In each of these schools the ordinary branches of education are taught, and some of the Latin authors. Major-General McKenzie, who was M.P. for Sutherland, and who fell while supporting one of the wings of the British army at Talavera, was born here: there is a monument to his memory in St. Paul's Cathedral, London.

KNOCKSHOGGLE-HOLM, a village, in the parish of COYLTON, district of KYLE, county of AYR, 5½ miles (E. by N.) from Ayr; containing 102 inhabitants. It is situated in the north-western part of the parish, a short distance west of the road from Coylton to Tar-

bolton, and consists of a group of cottages, chiefly inhabited by persons engaged in agriculture.

KYLEAKIN, a village, in the parish of STRATH, Isle of SKYE, county of INVERNESS, 8½ miles (E.) from Broadford; containing 231 inhabitants. The name is partly a corruption of *Haco*, the place being called Kyleakin, or Haco's-Kyle, in commemoration of events connected with King Haco's Norwegian expedition in 1263. The extremities of the strait between this part of Skye and the main land are styled Kyle Rhea, or the King's Kyle; and here is a ferry about a third of a mile in breadth. Lord Macdonald intended to erect a sea-port town at this place; in 1811 the plans were prepared, and on the 14th of September the foundation stone was laid with great pomp and ceremony; but the design was a failure, as the houses to be erected, of which a few compose the present village, were on too expensive a scale for the resources of the people generally, and no person of wealth or enterprise could be found to settle on the spot. It is now merely a fishing-village. There is a good line of road from the Sconer road to Kyleakin, and thence through the district of Lochalsh to Strome Ferry, whereby the Lochearron road is made to form a more convenient means of communication between Skye and the north-east coast of Scotland.

L

LADHOPE, for a time a quoad sacra parish, in the parish and district of MELROSE, county of ROXBURGH; containing 2367 inhabitants. This district is situated in the western part of the parish of Melrose, on the borders of the Gala water. Its populous villages of Buekholmside and Darlingshaugh are appendant to Galashiels, in the manufactures of which town the inhabitants are largely engaged: the first-named village is immediately connected with Galashiels by a stone bridge. Great facility of intercourse is afforded by the Edinburgh and Hawick railway. Besides the church of the district, the minister of which is appointed by the male seatholders, communicants, there is a place of worship for members of the Free Church; also several schools.—See MELROSE, and GALASHIELS.

LADY, an isle, in the parish of DUNDONALD, county of AYR, 5 miles (S. S. W.) from Irvine, and 5 (N. W. by N.) from Ayr. This island is situated in the Firth of Clyde, about two miles and a half from Troon, the nearest point of the main land of the county. It is of an oval figure, and half a mile in length. On the eastern side is good anchorage ground; and two towers or pillars, which may be easily seen at a distance, have been erected on the north-west part of the isle, for the guidance of vessels in the Firth, the coast in this part being flat and dangerous.

LADY, a parish, in the island of SANDA, North Isles of the county of ORKNEY, 25 miles (N. E. by N.) from Kirkwall; containing 909 inhabitants. Lady derives its name from the dedication of its ancient church, which was in the form of a cross, to Our Lady, or the Virgin Mary. The parish includes the eastern portion of the island, is about nine miles in length from south to north, and one mile in average breadth; it is bounded on the west by the parish of Cross and the bay of Otterswick, and on all other points is surrounded by the sea. This

district is of singularly-irregular form, stretching out into the sea by numerous narrow headlands of considerable length, of which that called the Start projects from the shore of the main land for more than two miles, in a direction due eastward. The surface is generally flat, having little elevation above the sea, and is subdivided into many small districts; the principal are Elsness, Overbister, Tressness, Coligarth, Newark, Silibister, and Northwall. At Elsness is an inlet of the sea, about 125 acres in extent, which is dry at low water; and at Tressness is another, of more than twice the dimensions: both might be easily converted into good harbours. On the extremity of the Start, a lighthouse was erected in 1802; it is 100 feet in height to the lantern, and displays a revolving light, which may be distinctly seen at a distance of eighteen nautical miles. In the northern part of the parish are four considerable lakes, of which those of Northwall and Westair are separated from each other, and also from the sea, only by a narrow slip of intervening land: these two lakes, with the others, less in extent, and more widely detached, occupy by far the greater portion of the north-eastern part of the island of Sanda.

The soil is generally sand, in some parts intermixed with clay; about two-thirds of the parish are under cultivation, and the remainder heath and waste. The exact number of acres has not been ascertained: of the land in cultivation, 2000 acres are arable, and the rest is good pasture. The crops are oats, bear, potatoes, and turnips, and in the culture of the two latter the drill system of husbandry is prevalent; the principal manure is seaweed, which is found to answer well. The breed of black-cattle has been much improved since the introduction of turnips. Garamount House, erected by the late John Traill Urquhart, Esq., of Elsness, is a handsome modern mansion, finely situated. There is no village; the population are chiefly agricultural, and employed in the manufacture of kelp and in the fisheries. The kelp manufacture, though formerly much more extensive, still affords employment to a considerable number of persons during the months of June and July; and the produce is sent to Newcastle. Cod, turbot, skate, and herrings abound in the surrounding sea, and small quantities of dried cod are occasionally exported; but there is no regular station for curing, and few more fish are taken than are required for the supply of the inhabitants.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of North Isles and the synod of Orkney. The minister's stipend is £158. 6. 8., including an allowance of £8. 6. 8. for communion elements; with a manse, and a glebe valued at £4. 8. per annum; patron, the Earl of Zetland. Lady church, rebuilt in 1814, is a neat and spacious structure containing ample accommodation for all the parishioners. There is a place of worship for members of the United Presbyterian Church. The parochial school of Sanda is common to the two parishes of that island, namely, Lady, and Cross and Burness; it is situated at the junction of the two parishes, and the master has a salary of £46. 10., with a dwelling-house. A school for the more immediate use of this parish is supported by the Society for Propagating Christian Knowledge, who pay the master a salary of £15 per annum; he has also a house, with fuel, and an allowance for the keep of a cow from the heritors.

There are numerous vestiges of ancient chapels of very diminutive structure, few of them exceeding twelve feet in length: the names of St. Peter's and St. Magdalene's chapels only have been preserved. At Newark were lately discovered the remains of a circular building of flat stones, fitted together without cement: the walls were about six feet thick, and in some parts surrounded by an outer wall, with an interval of three feet between; the diameter of the inner wall was about twelve feet, and the interior filled with stones, gravel, and a layer of red ashes, interspersed with bones of cattle, sheep, swine, rabbits, geese, and various kinds of shell-fish. There are several tumuli in the parish; and at Coliness, numerous graves were discovered lined with flag-stones, in which were many skeletons nearly entire, one with a wound in the upper part of the skull. In one of the graves was found a gold ring, and on one of the flag-stones was a rudely sculptured cross.

LADYBANK, a village, in the parish of COLLESSIE, district of CUPAR, county of FIFE; containing 102 inhabitants. The Edinburgh, Perth, and Dundee railway here divides into two branches, one of them proceeding in a north-western direction to Perth, and the other in a north-eastern to Dundee.

LADYKIRK, a parish, in the county of BERWICK, 6 miles (N. E. by N.) from Coldstream; containing, with the two villages of Horndean and Upsetlington, 504 inhabitants. This place originally consisted only of the parish of Upsetlington, the name of which is of very uncertain derivation. It appears to have acquired a considerable degree of importance at an early period; and during the disputed succession to the crown of Scotland, towards the close of the thirteenth century, a meeting took place here between eight of the competitors, attended by several of the Scottish prelates and nobility, and Edward I. of England, for the purpose of investigating their several claims, and more especially for settling the feuds of Bruce and Baliol. In 1500, a new church was erected by James IV., and dedicated to the Virgin Mary; the parish eventually took the name of Ladykirk, and its former appellation has since been confined to the village that had risen up around its ancient church. Soon after the treaty of Chateau Cambresis, a supplementary treaty was concluded here by the English and Scottish commissioners, for which purpose they met in the church of St. Mary; and on the same day the duplicates were interchanged at Norham Castle. The parish includes the suppressed parish of Horndean, annexed to it at the time of the Reformation. It is about four miles in length, one mile and a half in average breadth, and is bounded on the north by the parish of Whitsome, on the east by that of Hutton, on the south by the river Tweed, and on the west by the parish of Swinton. The surface is generally level, diversified only by a few eminences which attain no considerable elevation, and in some parts sloping gently towards the banks of the Tweed.

In this parish the soil is various, but fertile; the whole number of acres is estimated at 3100, of which about three-fourths are arable, fifty acres in plantations, and the remainder in meadow and pasture. The crops are, grain of all kinds, potatoes, and turnips; the system of husbandry is advanced, the farm houses and offices are well built and commodious, and all the more recent improvements in agricultural implements are in use. Great

attention is paid to live-stock, for which the pastures are peculiarly favourable. The cattle are mostly the short-horned, that breed having been introduced here in 1788 by Mr. Robertson, who bought some of the finest specimens he could find in the county of Durham; of the cattle reared here several have been sold for very high prices. All the sheep are of the Leicestershire breed, and they are in high estimation for their quality and the fineness of their wool. Oak and plane are the trees which appear best adapted to the soil. On the banks of the river the substrata are compact micaceous sandstone alternated with schistose, marl, and limestone of inferior quality; and in other portions of the parish, sandstone of the old red formation: no quarries, however, have been opened hitherto. The annual value of real property in the parish is £4430. The only mansion is Ladykirk House, a handsome modern residence. A salmon-fishery on the river Tweed is carried on at three several stations; but it is not so lucrative as formerly, and the whole rental does not exceed £100 per annum. An annual fair is held on the 5th of April, for the sale of linen and lintseed. Facility of communication with Coldstream, Berwick, and other places, is maintained by good roads; and a post between this place and Berwick has a delivery daily.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Chirnside, synod of Merse and Teviotdale: patron, the Crown. The stipend of the incumbent is about £168: the manse, lately repaired and enlarged, is a convenient and comfortable residence; and the glebe comprises eleven acres and a half of profitable land, valued at £33 per annum. Ladykirk church is a handsome cruciform structure in the decorated English style of architecture, but has been greatly disfigured by injudicious alterations and additions; and the general effect of the interior, originally of lofty proportions and elegant design, has been destroyed by partitioning off a portion of it for a schoolroom. It is adapted for a congregation of 300 persons. There is a place of worship for dissenters. The parochial school is well attended; the master has a salary of £34. 4. 4., with a house and garden, and the fees average £25 per annum. Some very slight vestiges of an ancient monastery may be seen on the bank of the Tweed, below the village of Upselington, in a place still called the Chapel Park; and near them are three springs of excellent water, called respectively the Nuns', the Monks', and St. Mary's well. Numbers of cannon balls have been found in a field opposite to Norham Castle, a celebrated fortress situated on the south side of the river, in England.

LADYKIRK, in the county of ORKNEY.—See STRONSAY and EDAY.

LADYLOAN, a quoad sacra parish, consisting of part of the parishes of ARBROATH and ST. VIGEAN'S, in the county of FORFAR; and containing 2116 inhabitants.—See ARBROATH.

LAGGAN, a parish, in the county of INVERNESS, 10½ miles (W. S. W.) from Kingussie; containing 1201 inhabitants. This parish derives its name from the Gaelic word *Lag*, signifying "a small round hollow or plain". It is situated on the river Spey, and is twenty-two miles in length from north to south, and of about the same breadth from east to west; comprising an area of 256,000 acres, of which 25,660 are occupied by wood, 1700

under cultivation, and the remainder mountain and hill pasture and waste. The elevation of the district is nearly the highest in Scotland, and the surface is marked by the greatest possible diversity of features. There are several chains of very lofty eminences, embosoming level and fertile tracts ornamented richly with wood and water; and in some places is a display of picturesque and romantic scenery that is almost unrivalled. The locality takes its principal character from the wild and imposing aspect of the mountains, of which, at a distance, it appears entirely to consist; but upon a nearer approach, the interesting vale of the Spey is seen, dressed in verdure, stretching east and west for about twenty miles, and measuring between one and two miles in breadth. This vale is bounded on the north by the *Monadli*, an immense ridge rising 3000 feet above the level of the sea, in some parts thirty miles broad, and reaching to the east for more than eighty miles. To the south is the interesting chain called the *Benalder* mountain, of equal height with the former, and once the resort of numerous herds of deer, which some years ago receded before the flocks of sheep that were being pastured upon its surface. About the year 1843 it was again converted into a deer-forest.

These majestic elevations are relieved by the expanse of *Loch Laggan*, eight miles long and one mile broad, from which views are obtained of the peaks and forms of the different members and masses of the Benalder range especially. The hills of Drummond separate the vale of the Spey from the vale of this loch. The principal loch, however, in the parish is *Loch Ericht*, upwards of twenty miles in length and nearly two in breadth, extending southward from Dalwhinnie, and dividing the ancient forest of Drumochtor, on the east, from that of Benalder on the west: about one-third of it is in the parish of Fortingal. In 1746 the Pretender was concealed with some of his companions, for the space of two weeks, near the banks of this sheet of water; and from this spot he set out for the ship which conveyed him to France. The mountain springs and rivulets are very numerous, and occasionally pour down their torrents with prodigious rapidity, swelling the burns and rivers below, to the destruction of crops, bridges, and tenements. In general the streams contain good trout, and, like the lochs, in which there are pike, afford fine sport to anglers. Salmon come up to spawn as far as Loch Spey, where the river of that name rises, in the western part of the parish.

The SOIL in the valleys is alluvial, in some places ten or twelve feet in depth, and, when the season is propitious, producing heavy crops of bear, oats, and potatoes, as well as sown and natural grasses. The climate, however, is highly unfavourable to agriculture; frost, snow, and rain often delaying the timely sowing, and destroying the fruits of the ground before they are ripe. No regular system of husbandry is followed: the short leases, and the precarious nature of the in-gathering, discourage the expenditure of capital and the labours of industry; and the ordinary methods of improving land and recovering waste ground are neglected for the appropriation of the farms to pasture, which is found to be more profitable. About 40,000 sheep are usually kept, mostly of the black-faced breed; black-cattle are also reared, and in general sold when young to the south-country dealers. The late Duke of Gordon possessed

two-thirds of the lands, but this portion passed by sale to other hands. The rents are determined by the number of sheep pastured; the tenants generally expect that the wool will produce sufficient to pay the landlord, and they hold their farms either as tenants at will, or on leases for a few years only. In this parish the rocks comprise gneiss, an inferior kind of slate, and excellent limestone, a bed of the last running through the centre: peat is supplied by the mosses, and is the ordinary fuel of the inhabitants. Most of the wood is natural, consisting of alder, birch, hazel, and willow; the plantations are of Scotch fir, birch, and several kinds of hard-wood, and are chiefly in the vicinity of Cluny Castle. This mansion, which is beautifully situated on the north side of the Spey, was erected at the beginning of the present century, on the site of an ancient castle burnt to the ground by the king's troops in 1746, soon after the battle of Culloden, Cluny Macpherson, the owner, having espoused the cause of Prince Charles Edward. The present proprietor has in his possession, among many other relics of antiquity, several pieces of armour worn by the prince. The other mansions are, the fine shooting-seat of the Marquess of Abercorn, situated at Ardverikie or Ardveirge, on the border of Loch Laggan, in the midst of richly-diversified scenery; Glentruin House, a modern structure; and a residence on the verge of a loch at Glenshirra. At Ardveirge, or "the Height of Fergus", tradition reports that one or more of the kings Fergus were buried. They used to resort hither, as well as others of the ancient kings, for the purpose of hunting; and it is said that the dogs were kept on an island in Loch Laggan called *Eilean nan con*, or "Dogs' island"; near which, in the same loch, is another isle called *Eilean an Righ*, or "Kings' island". Her Majesty and the royal family resided at Ardverikie for a short time in the year 1847. The annual value of real property in Laggan is £6951. The Highland mail passes and re-passes every day through one extremity of the parish: there is also regular communication, by carriers, with Perth, Kingussie, Fort-William, and Inverness, to the two last of which places the marketable produce is sent. The roads have been much improved since 1820; and the parliamentary road from Fort-William, meeting the Highland road at the bridge of Spey, near Kingussie, was made about that time. There is a road from Dalwhinnie to Fort-Augustus, round by Lochaber. Near the church is a wooden bridge over the Spey; there is a stone bridge on the line of the military road at Garvamore, and two or three others cross the smaller streams.

Ecclesiastically the parish is in the presbytery of Abertarff, synod of Glenelg, and in the patronage of the Duke of Richmond. Laggan church was built in 1843, and contains about 600 sittings: the manse is also of recent erection. The members of the Free Church have a place of worship, and there is a chapel for Roman Catholics. The parochial school affords instruction in the usual branches; the master has a salary of £34, with a house, £2 in lieu of a garden, and about £20 fees. A small school is supported by Lady Abercorn. A silver coin of the reign of Henry II. has been found. In the middle of the parish is a very lofty perpendicular rock, with the remains of a fortification on its summit; and at the east end of Loch Laggan, the ruins of the old church are still to be seen. Lachlan Macpherson, Esq., one of the coadjutors of James Macpherson in collect-

ing the poems of Ossian, and also himself a very superior Gaelic poet, was born and buried in the parish. Mrs. Grant, the poetess, resided for some time here, with her husband, the Rev. James Grant, formerly parochial minister. She was one of the last survivors of those who met Dr. Johnson while on his tour, being at that time a resident at Fort-Augustus, and in her eighteenth year; and she used frequently to describe to her friends the strong impression made on her mind by the singular appearance of the great moralist.

LAIRG, a large parish, in the county of SUTHERLAND, 19 miles (W. by N.) from the village of Golspie; containing 913 inhabitants, of whom 69 are in the village of Lairg. The name is generally supposed to be derived from the Gaelic word *Lorg*, signifying "a footpath", and to be descriptive of the situation of the parish, which lies in the direct line from the northern to the southern part of the county, and the way through which was only a footpath till the present high road was constructed. Some, however, derive the name from the compound term *La-ri-Leig*, "bordering on the lake", in allusion to the extensive and beautiful sheet of water called Loch Shin. The parish is not remarkable for any events of historical importance. There are several cairns still remaining, concerning the origin of which very little is known, the people of the country, when questioned upon the subject, merely repeating the tradition that they were built by the Fingalians. At a place called *Cnoek a chath*, "the hill of the fight", a number of tumuli are visible, which are reported to be the graves of those who fell in an encounter between the Sutherlands and the Mackays.

The PARISH is thirty miles in its greatest length, from east to west, and about ten miles in breadth, from north to south; containing 40,000 acres. It is twenty miles distant from the sea, and is bounded on the north by the parish of Farr, on the south by that of Criech, on the east by that of Rogart, and on the west by the parishes of Assynt and Eddrachillis. The surface throughout is hilly, and by far the larger part of it covered with heath: the hills vary in height in different parts, but are generally lofty, and on the northern boundary towers Ben-Chlibrig, the highest mountain in the county. The whole site of the parish, indeed, is very considerably elevated, and the air in winter is bleak and piercing, the cold being often accompanied with heavy falls of rain and snow; the climate, however, is healthy, and the inhabitants are hardy and long-lived. The lakes are about twenty in number: the principal is Loch Shin, extending nearly the whole length of the parish; it is twenty-four miles long, and its average breadth is about one mile, the depth varying from twenty to thirty fathoms. There are five rivers, four of which fall into this loch. From the east end of it issues the river Shin, which, after a rapid course of about three miles, precipitates itself over a rock twenty feet high, forming a fine cascade, and at last loses itself in the Kyle of Sutherland. Trout are found in many of the lakes; in Loch Craggy they abound, and are considered to be of as good quality as any in the kingdom.

The common alluvial deposit in the parish is peat, resting upon a subsoil of gravel; in a few places the earth is loamy and very fertile. The mossy ground, which is of great extent, is wet and spongy, and in every part embedded with large quantities of fir, the certain indications of a once well-wooded district, though at

present scarcely a tree is to be seen, except some birch growing along the lake. The agricultural character of the parish stands very low; the larger part of it is moorland, and the whole, with the exception of the lots occupied by the small tenants, has been turned into large sheep-walks. The population has consequently considerably decreased; the old tenantry have gradually passed away, and settled either on the coast, or near grounds more susceptible of cultivation. There is no great corn-farm in the parish; but the lotters raise enough grain for domestic use. The sheep are of the Cheviot breed, and much attention has been paid to the rearing of them for some years past: they are sent to the markets of the Kyle and Kincardine, in Autumn and November. The rocks of the parish are chiefly coarse granite and trap, in addition to which, at the side of the lake, is a large bed of limestone: this, however, though much wanted for agricultural purposes, the inhabitants have no means of working. The annual value of real property in Lairg is returned at £1913. There are about forty miles of road, in very good condition, and affording every facility of communication: the Tongue line from south-east to north-west, and, branching from it, the Strathfleet county road, pass through the parish. A post-gig carrying passengers arrives twice in the week. Ecclesiastically the parish is within the limits of the presbytery of Dornoch, synod of Sutherland and Caithness; patron, the Duke of Sutherland. The stipend of the minister is about £184, with a manse, built in 1845, and a glebe of ten acres valued at £9 per annum. Lairg church was erected in the year 1845. There is only one school, the parochial, in which all the ordinary branches of education are taught, with Latin and Gaelic, the latter being the vernacular tongue: the master's salary is £34, with a house, and about £8. 10. fees. The poor have the interest of £500, bequeathed by Capt. Hugh Mackay, son of the Rev. Thomas Mackay, a late minister of Lairg. His other sons were, Capt. William Mackay, author of the narrative of the ship *Juno*, from which, according to Mr. Moore, Lord Byron drew his description of a shipwreck; and John Mackay of Rockfield, who, whilst labouring under the loss of sight, wrote the Life of General Mackay of Scourie. James Matheson, Esq. M.P., of Achany, is grandson of the same clergyman.

LAMBA, an isle, in the parish of NORTHMAVINE, county of SHETLAND. This is a small uninhabited isle of the Shetland group, situated on the north-east coast of the Mainland of Shetland, about a mile and a half westward of Bigga island.

LAMBHOLM, an isle, in the parish of HOLM and PAPLAY, county of ORKNEY; containing 12 inhabitants. It is a small islet, almost circular, and about three miles in circumference, situated in Holm sound, near to the west entrance of that bay. Between it and the main land is a pretty secure harbour for vessels of 200 tons' burthen.

LAMLASH, an island, in the parish of KILBRIDE, Isle of ARRAN, county of BUTE; containing 271 inhabitants. This island is two miles and a half in length and half a mile in breadth, rising in a conical shape to the height of 1000 feet; it is situated eastward of the main land of Arran, and serves as a shelter to a spacious bay of the same name as itself. Buchanan gives the island the Latin name of *Molas*, from its having been the retreat of St. Maol Ios; and, for the same reason, it is also called the Holy Island: anciently a monastery of

friars, founded by one of the Lords of the Isles, existed here. Lamlash bay, an excellent harbour in the form of a semicircle, on the south-east side of Arran, is landlocked by the island, at the extremities of which, on the north and south, are convenient entrances. At the head of the bay is the village of Lamlash, or Kilbride, a favourite resort for bathing, and having several good inns for the accommodation of visitors.—See KILBRIDE.

LAMMINGTOUNE, a village, in the parish of WAND-DELL and LAMMINGTOUNE, Upper ward of the county of LANARK, 6½ miles (S. W.) from Biggar; containing 122 inhabitants. It is situated on the eastern bank of the Clyde, on the road from Biggar to Robertson, and near the great Caledonian railway. The place was formerly a market-town, a charter having been obtained from Charles I. to hold a weekly-market here every Thursday, and two annual fairs, one on the 15th of June, and the other on the 22nd of October; but both the market and the fairs have been discontinued. The Lammingtoun burn, a tributary to the Clyde, flows on the south-west side of the village. In the vicinity is a fine old tower, built by a laird of Lammingtoun of the ancient family of Baillie; it is of considerable height, and the walls are of great thickness.

LANARK, a burgh, market-town, and parish, in the Upper ward of the county of LANARK; containing, with the villages of Cartland and New Lanark, 7679 inhabitants, of whom 4831 are within the burgh, 25 miles (S. E.) from Glasgow, and 32 (S. W. by W.) from Edinburgh. This place, the name of which is of uncertain derivation, is of very remote antiquity, and,

Burgh Seal.

from the traces of a Roman road leading to the site of its ancient castle, is supposed to have been a Roman station. By some writers, indeed, it is identified with the *Colonia* of Ptolemy. It appears to have attained to great importance at an early period; and Kenneth II. is said to have assembled here, in 978, the first parliament of which there is any record in the history of the country. The place is referred to as a royal burgh in one of the charters of Malcolm IV., by which a portion of its lands was granted to the monks of Dryburgh; and a charter bestowed by William the Lion upon the inhabitants of the town of Ayr, in 1197, is dated from a royal castle here, the foundation of which is attributed to David I. The town was burned to the ground in 1244, the houses being chiefly built of wood; but it was soon restored, and not long afterwards it became the scene of a battle between Sir William Wallace and Sir William Heselrigg, the English sheriff, in which the latter and the forces under his command were defeated, and driven from the town. Lanark Castle, with all its dependencies, was given as security for the dower of the niece of Philip, of France, in the treaty negotiating for her marriage to the son of John Baliol, in 1298. It seems to have been garrisoned by the English in 1310, when it was surrendered, together with Dumfries, Ayr, and the Isle of Bute, to Robert Bruce, King of Scotland.

The town is beautifully situated on a gentle acclivity rising to the height of nearly 300 feet above the level of

the river Clyde, and consists of five principal streets, with a few others of less note. Most of the houses have been rebuilt, and many of them in a handsome style, by which the appearance of the town has been greatly improved. It is paved, lighted, and amply supplied with water at the expense of the corporation; and though no regular police establishment is maintained, it is watched by constables appointed by the magistrates of the burgh. There are two bridges over the Clyde, affording facility of access to the town. Of these, one, about a mile below Lanark, was erected in the middle of the seventeenth century, and displays no features of architectural importance; the other, two miles from the town, is remarkable for the elegance of its structure.

Part of the inhabitants are occupied in weaving for the manufacturers of Glasgow and Paisley at their own homes, not only in the town, but in several other parts of the parish: more than 1000 persons, of whom nearly 900 live in the town, derive support from this work, the wages, however, being now greatly reduced. The manufacture of shoes is also carried on to a considerable extent, giving occupation to about 100 persons: the making of lace employs 120 females; there are three breweries upon a moderate scale, and several flour-mills. The principal manufacture of the parish, however, is the cotton spinning and weaving introduced at New Lanark, a handsome village on the side of the river, by Mr. Dale, who in the year 1784 erected mills on a very extensive scale, which were afterwards conducted by the notorious Robert Owen, and are now the property of Messrs. Walker and Company. In these extensive and flourishing works nearly 1200 persons are regularly engaged. A branch of the Commercial Bank of Scotland is fixed at Lanark, for which a handsome house has been built of freestone, raised from the quarries near the town. There is also a branch of the Western Bank of Scotland. A spacious and commodious inn has been opened for the accommodation of the visitors who resort to this place during the season for visiting the falls of the Clyde, which are much frequented for the beauty and grandeur of the scenery that the river displays in this part of its course. Elegant assembly-rooms have been added to the hotel within the last few years, at an expense of £2400. Great facility of intercourse is afforded by the Caledonian railway, which passes through the parish, on the north of the town. The markets are on Tuesday and Saturday; the former, which is the chief, is abundantly supplied and numerously attended. Fairs are held on the last Wednesday in May, O. S., for black-cattle; the last Wednesday in July for horses and lambs; and the last Wednesday in October, and the Friday after Falkirk tryst, for black-cattle and horses. There are also three fairs for the sale of various goods, the hiring of servants, and for pleasure.

Lanark, by charter of Alexander I., was constituted a ROYAL BURGH; and the inhabitants, at various times, received charters from his successors, conferring different privileges, down to the reign of Charles I. An act of parliament of the year 1617 records that, from a very early date, the standards of weights and measures had been preserved here, for the adjustment of all the weights and measures in the kingdom; and these continued to be used till, by the act of 1826, they were superseded by the introduction of the imperial standard. The government of the burgh is vested in a provost, three bailies,

a treasurer, and a number of councillors, assisted by a town-clerk and other officers; they are chosen under the authority, and are subject to the provisions, of the act of the 3rd and 4th of William IV. There are six incorporated trades, the smiths, wrights and masons, tailors, shoemakers, weavers, and dyers, who are under the direction of a dean of guild, appointed by the deacons of the several trades: none but burgesses are eligible as members. The provost and bailies are magistrates within the limits of the burgh, and exercise jurisdiction in both civil and criminal matters; but their power is chiefly limited to holding a bailies' court, for the determination of civil pleas, and to the summary punishment of petty offences against the peace, the town-clerk acting as assessor in the bailies' court. All cases of importance are referred to the sessions for the county, which are held at this place as being the county town. The election of a member for the shire is held here, and Lanark is one of the Falkirk district of burghs. The county-hall, to which a prison is attached, was erected in 1834; it is well adapted to the purpose, containing good accommodation for holding the courts, and for transacting the business of the county and the burgh.

The PARISH, which is nearly in the centre of the county, extends from six to seven miles in length, along the bank of the Clyde, and from three to five miles in breadth. It is bounded on the north by the parish of Carluke, on the south by the parishes of Pettinain and Carmichael, on the east by Carstairs, and on the west by Lesmahagow. The surface, though generally elevated, is almost uniformly flat, scarcely rising into hills, but in some parts sloping and undulated. It is intersected by the valley of the Mouss, in a direction from east to west, between the two level tracts of Lee moor on the north and Lanark moor on the south, both of which are nearly 700 feet above the sea. Along this valley the river Mouss flows with a very devious course; and within about a mile of its union with the Clyde, it seems to have worn for itself a channel through the hill of Cartlane, forming a deep ravine about half a mile in length, composed of cragged and lofty masses of precipitous rock, rising on one side to a height of 300, and on the other of 400, feet above the bed of the river. The Mouss has its source in the northern portion of Carnwath moor, and, though it receives numerous tributary streams in its progress, is but very inconsiderable till, after issuing from the Cleghorn rocks, it spreads into a wide channel between banks which on one side are precipitously lofty, on the other more gently acclivous, and on both sides crowned with wood. Passing through the Cartlane Craigs, it falls into the river Clyde opposite to the village of Kirkfield-Bank. The Craigs abound with prominent features of romantic beauty and majestic grandeur; and the chasm, which in itself is of sufficiently impressive appearance, derives additional interest from having afforded security, as a place of refuge, to Sir William Wallace in his unwearied efforts to maintain the integrity of his country. Near the lower extremity, an elegant bridge of three arches has been thrown over the chasm, harmonizing with the character of the spot, and adding much to the beauty of the scenery.

The river Clyde washes the parish on the south and west. Entering from the east, it flows with silent course through a rich and fertile tract of level land, which it occasionally overflows; and deflecting slightly to the

south and south-west, it becomes narrower in its channel, and more rapid in its progress, passing over a rocky and irregular bed, between rugged and precipitous banks, till it reaches the bridge of Hyndford. Beyond this it is greatly increased by the influx of the Douglas water, and, proceeding northward, and dividing its stream at *Bonnington*, is precipitated over a ledge of rocks about thirty feet high, forming a picturesque cascade. After continuing its progress for half a mile, bounded by rocks nearly 100 feet in height, it exhibits another beautiful scene at *Corehouse*, where its waters descend in a perpendicular fall of eighty-four feet; and advancing with greater tranquillity through the low land at the base for about a quarter of a mile, it presents a small but picturesque cascade called Dundaf Lin. From this point, the river flows between gently-sloping banks, richly wooded, and in some parts cultivated to the margin of the stream, and for three or four miles pursues an equable and noiseless course to *Stonebyres*. Here, passing through a ridge of rocks, its waters descend in three successive falls, from a height of eighty feet, into the plain below; along which, for the remainder of its course in the parish, it flows in a tranquil stream, amid lands highly cultivated, and between banks pleasingly embellished with natural wood and luxuriant plantations. Among the chief points of attraction to persons visiting the falls of the Clyde, is the *Bonnington* fall, about two miles distant from the town, and to which the approach is, for the greater part of the way, through the grounds of Bonnington House. These grounds are tastefully laid out in walks, with seats at all the points from which the finest views of the scenery are to be had; and are open to the public on every day in the week except Sunday. A bridge has been thrown across the northern branch of the stream by the proprietor of the mansion, whence the best prospect of the fall is obtained, with the richly-varied scenery by which it is surrounded. But the *Corra Lin* or *Corehouse* fall is the most interesting of the whole. Till lately it was difficult to gain anything like a good view of it; but a flight of steps has been excavated along the face of the opposite rock, leading to a spacious amphitheatre on a level with the bottom of the fall, from which it is seen in all its beauty, combining every characteristic of sublimity and grandeur. The fall at *Stonebyres* closely resembles that at *Corra Lin* in all its leading features.

The SOIL in the western portion of the parish is a stiff clay; along the banks of the rivers, light and gravelly; in some parts, wet and clayey; and in the moors of Cartlane and Lanark, of a hard tilly nature, with some tracts of moss. The exact number of acres has not been ascertained; about 8200 acres may be arable, 750 in common belonging to the burgh, 750 in woods and plantations, 1500 in pasture and waste land, and about sixty in orchards. The crops are oats, wheat, barley, potatoes, and turnips: the system of agriculture is improved; much of the land has been drained, and irrigation has been practised to some extent. The farm-buildings, however, are indifferent, and the lands but very partially inclosed. Considerable attention is paid to the dairy and the improvement of the cattle, to which the distribution of premiums by the various agricultural societies has greatly contributed; the cows are all of the Ayrshire breed. Horses, chiefly for draught, are reared for the use of the parish and neighbouring districts.

The woods consist of oak, ash, birch, hazel, mountain-ash, alder, and hawthorn; the plantations are of Scotch fir, larch, and spruce fir. On the lands of Lee is a fine old oak of extraordinary size, supposed to be a relic of the ancient Caledonian forest; also a larch of very stately growth, thought to have been one of the first trees of that kind introduced into the country. In this parish the substratum is chiefly the old red sandstone, traversed in some parts with whinstone. On the lands of Jerviswood, a vein of quartz alternated with small seams of iron-ore has been found, but not in sufficient quantity to encourage any attempt to render it available. Carboniferous limestone, also, in which petrified shells are found, occurs in some places, and is extensively quarried at Craighend hill: freestone was wrought formerly, but the works have been abandoned. The annual value of real property in the parish is £17,780. Lee, the seat of Sir Norman Macdonald Lockhart (a minor), is a handsome castellated mansion, situated in a well-planted demesne containing some stately timber. Bonnington House is a modern mansion, also in a highly-picturesque demesne. Smyllum and Cleghorn are spacious antique mansions, and Sunnyside Lodge an elegant villa on the steep bank of the Clyde, about a mile and a half from the town.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Lanark, synod of Glasgow and Ayr: patron, the Crown. The stipend of the incumbent is about £315; the manse is a comfortable residence, and the glebe comprises several acres, valued at about £16 per annum. Lanark church, situated in the centre of the town, was built in 1777, and has been thoroughly repaired within the last fifteen years; it is a neat and substantial edifice, and is adapted for a congregation of 2300 persons. There are places of worship in the town for members of the Free Church, the United Presbyterian Church, Independents, and another body. A grammar school is supported by the corporation, who appoint the master, to whom they pay a salary of £40, and to an assistant £20 per annum. Connected with this school are twenty-eight bursaries, of which nine were endowed in 1648 by Mr. Carmichael, commissary of Lanark, and the others by one of the Earls of Hyndford, by the Mauldslic family, and by Chamberlain Thompson; they are of different values, and, after the payment of the school fees, leave a remainder of £2 or £3 to the holders. A free school in the town was founded by Mrs. Wilson, who endowed it with £1200, for the instruction of fifty children. There is a school supported by subscription; and at Nemphlar and Cartlane are schools the masters of which receive £5 per annum from the heritors, with a school, school-house, and garden, in addition to the fees. A school at New Lanark is supported by the proprietors of the cotton-works, and attended by about 500 children. The poor have the rents of hospital lands producing £70 annually: Mr. Wilson bequeathed property yielding £32 a year, and the late Mr. Howison, of Hyndford, £700, the interest of which is distributed among the poor not receiving parochial relief. There are several benevolent and friendly societies in the parish, and a savings' bank. The Castle hill near the town is supposed to have been the site of a Roman fort, or station, and a silver Faustina is said to have been found there; but nothing remains either of the Roman fort, or of the royal castle

which formerly existed; the site has been ploughed up, and converted into a bowling-green. There are some remains of two Roman camps in the vicinity, the larger of which, near Cleghorn House, includes an area 600 yards in length and 420 in breadth, and is said to have been constructed by Agricola; the smaller, situated on Lanark moor, is still more distinctly to be traced. The Roman road from Carlisle to the wall of Antoninus passed through the area of this latter camp. Upon an eminence on the bank of the river Mouss are the remains of a lofty tower, of which nothing, however, is known; it gives title to the Lockharts of Cambusnethan. On a prominent part of the Cartland Craigs are the small vestiges of an ancient stronghold called Castle Quaw; but there is no history connected with it. About a quarter of a mile from the town are the venerable remains of the old parish church, displaying traces of an elegant structure, of which a series of six arches that separated the aisle from the nave is in good preservation. The cemetery is still used as the parish churchyard; and the effect of these fine ruins, which were suffered for a long time to fall into dilapidation, has been destroyed by the erection of an unsightly square tower in the centre, for the purpose of watching the graves. The area has, however, been surrounded with a wall to prevent further dilapidation; and some steps have been taken to restore part of the ruins. Lanark gives the title of Earl to the Duke of Hamilton.

LANARK, NEW, a populous manufacturing village, in the parish, and Upper ward of the county, of LANARK, 1 mile (S. by W.) from the town of Lanark; containing 1642 inhabitants. This place owes its rise to the introduction of the cotton manufacture by Mr. David Dale, who, in 1784, erected extensive mills for spinning and weaving cotton. New Lanark is situated near the river Clyde, and is surrounded by steep and richly-wooded hills, which give it an air of seclusion and retirement; it is regularly and handsomely built, and is inhabited chiefly by persons employed in the cotton-works, which ever since their introduction have been carried on with adequate success. The first of the mills erected was 154 feet in length, twenty-seven feet in width, and sixty feet in height; and a tunnel nearly 100 yards in length was cut through a rocky hill, to form a passage for the water of the Clyde, by which it was propelled: in 1788 a second mill of the same dimensions, and subsequently two others, were built. The mill that was first erected was totally destroyed by an accidental fire in the year 1788, but was rebuilt in the year following. The works were afterwards carried on by Robert Owen, son-in-law of Mr. Dale, till 1827, since which time they have been conducted by the firm of Messrs. Walker and Company. Their machinery is of the most improved construction, and about 1200 persons are employed in the works, of whom nearly sixty are mechanics and labourers engaged in keeping the machinery in repair: many are children, for whose comfort the company have made every requisite provision. A school has been established by the proprietors of the works, for the instruction of the factory children, of whom a large number attend at stated hours, and receive a course of instruction adapted to their improvement in knowledge and in morals. A benefit society, for the support of its members in cases of sickness, is maintained by small weekly payments; and there are also two funeral societies in the village.

LANARKSHIRE, an extensive inland county, in the south of SCOTLAND, bounded on the north by the counties of Dumbarton and Stirling; on the east, by the counties of Linlithgow, Edinburgh, and Peebles; on the south, by Dumfriesshire; and on the west, by the counties of Renfrew, Ayr, and Dumfries. It lies between 55° 14' 42" and 55° 56' 10" (N. Lat.) and 3° 22' 51" and 4° 22' 51" (W. Long.), and is about fifty-two miles in length, and thirty-three miles in extreme breadth, comprising an area of 926 square miles, or 592,640 acres; 85,326 houses, of which 3868 are uninhabited; and containing a population of 426,972, of whom 208,312 are males and 218,660 females. This county, called also Clydesdale, from the valley of the Clyde, which forms its central portion, was at the time of the Roman invasion inhabited by the *Damnii*, and under the Roman yoke formed part of the province of *Valentia*. After the departure of the Romans, the original inhabitants appear to have extended their ancient limits, which they called *Ystrad Cluyd*, in the British language, signifying "the warm vale;" and to have acquired the sovereignty over Liddesdale, Teviotdale, Dumfriesshire, Ayrshire, Renfrewshire, part of Peebles, the western part of Stirling, and the greater part of Dumbartonshire. This ample territory formed a kind of independent kingdom, including nearly all that portion of Scotland to the south of the Forth. It was peopled with subordinate British tribes, among whom were the *Selgova*, *Attacotti*, &c., who had frequent wars with the Picts and others, but resolutely maintained their independence till their power began to decline from the union of the Pictish and Saxon forces, and their metropolis of Dumbarton was taken, in the eighth century.

After the subjugation of the Picts by Kenneth II., every exercise of independent power gave way to the authority of the Scottish monarchs; and the various British tribes of Strath-Cluyd, by degrees, intermingled with the Saxons, Normans, Gaelic Scots, and Irish from Cantyre, by whom successive encroachments were made. The descendants of the *Damnii* alone, when they could no longer retain their independence, rather than yield to the power by which their territories were assailed, resolved to emigrate, and, crossing the Solway and the Mersey, found a retreat in the mountains of Wales. In the twelfth century, numerous Flemish families settled in the Strath of Cluyd, many of whom obtained grants of land from the Abbot of Kelso; and with the exception of a few brief intervals, the county progressively advanced in prosperity till after the death of Alexander III., when the wars which arose on the disputed succession to the Scottish throne, involved it, in common with other parts of the kingdom, in frequent calamities. It was here that the celebrated hero, Wallace, performed his first exploit, in expelling the English from the town of Lanark. In the reign of James I., a portion of Strath-Cluyd was separated from the county of Lanark, and formed into the county of Renfrew. James II., exasperated by the turbulent ambition of the Douglas family, marched into Lanarkshire, and destroyed Douglas Castle, and all the lands of Douglas, including Douglasdale and Avondale, with the lands of the first Lord Hamilton. During the war in the reign of Charles I., and the attempts to re-establish episcopacy during that of Charles II., this part of the country suffered materially; but, since the Revolution, it has continued to make steady

progress in agricultural improvement, and in manufacturing and commercial prosperity.

In former times the county was included in the diocese of Glasgow; it is at present in the synod of Glasgow and Ayr, and comprises several presbyteries, and fifty parishes. For civil purposes, the county is divided into the Upper, Middle, and Lower wards, under the jurisdiction of three sheriffs-substitute, who reside respectively at Lanark, Hamilton, and Glasgow. It comprises the royal burghs of Glasgow, Rutherglen, and Lanark; the towns of Hamilton, Douglas, Biggar, Strathaven, Carnwath, Bothwell, Airdrie, and Lesmahagow; and numerous villages. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament. The SURFACE is greatly varied. In the Upper ward, which is the largest division of the county, it is principally mountainous, rising to the greatest height towards the confines of Dumfriesshire. The summit of one of the Lowther hills is 2450 feet above the level of the sea; the Culter Fell has nearly the same height; and the hill of Tinto, the loftiest on the northern boundary of the mountain district, has an elevation of 2236 feet. In the Middle ward the land may be averaged at only 300 feet above the level of the sea; but throughout that district the surface is every where diversified with undulations, leaving little level ground except in the valleys of the river Clyde. The principal river in the county is the Clyde, which has its source in numerous small rills issuing from the wastes and mountains that separate Lanarkshire from the counties of Peebles and Dumfries. It takes a northern course, receiving various tributaries in its progress, and making a curve towards Biggar, after which, being augmented by other streams in its approach to Lanark, its course is obstructed by projecting rocks and precipices. Here it makes several picturesque and beautifully-romantic cascades, the principal of these celebrated falls being Bonnington, Corra, and Stonebyres. The Clyde afterwards flows in gentle meanderings through a fertile vale, pleasingly embellished with woodlands, plantations, orchards, seats, and numerous interesting features, to Glasgow, and, running thence to Greenock, after a total course of 100 miles disappears in the Firth of Clyde. Its tributaries connected with Lanarkshire are the Douglas water, the Moss, the Nethan, the Avon or Aven, the Calder, the North Calder, the Kelvin, and inferior streams. There are numerous lakes in the county, but none of them are of sufficient extent or importance to require particular notice; they contain trout, pike, and perch.

The SOIL, varying in different parts of the county, is in many places exuberantly fertile, and even in the higher lands is light, dry, and productive. In some of the uplands are tracts of spongy moor; in others, pastures richer than are found in some of the lower lands. The soil of the Middle ward generally, both in the arable and meadow lands, is luxuriant, but a very considerable portion of it is moss: this district abounds with orchards, gardens, and plantations, and is in the highest state of cultivation, constituting the chief agricultural district and the greater portion of the vale of the Clyde. The crops of all kinds are abundant, the system of husbandry being in the most advanced state; the lands have been well drained and inclosed; the farm-buildings are substantial and commodious, and all the more recent improvements in the implements of agriculture have been

adopted. The cattle are usually of the Ayrshire breed, and particular attention is paid to the rearing of cows for the dairy, of which a large number are pastured; the sheep, of which 120,000 are fed on the hills, are of the black-faced breed, with a few other varieties. In this county the substrata are freestone, limestone, and whinstone, of which last the hills generally consist. Under the freestone are seams of coal, which prevail throughout Clydesdale, and are extensively wrought; ironstone is largely worked, and there are quarries of limestone both for agricultural and building purposes. Near the southern extremity of the county are extensive mines of lead. A vein of copper-ore was discovered in the same part of Lanarkshire, but it has not been wrought with any profitable success; antimony has also been found in the immediate neighbourhood. The ancient forests have long since disappeared; but there are numerous coppices, and some flourishing plantations, together occupying nearly 10,000 acres, the greater portion of which has been formed within the last thirty or forty years. The seats are Hamilton Palace, Douglas and Bothwell Castles, Carstairs House, Bonnington House, Corehouse, Stonebyres, Lee House, Mauldslee Castle, Milton-Lockhart, Dalziel House, Cambusnethan Priory, Allanton House, Airdrie House, Newton House, Monkland House, Castlemilk, and numerous other elegant mansions.

The principal manufactures are the cotton, the linen, the woollen, the lace, and the iron manufactures. Of these, the cotton manufacture is by far the most extensive: the principal seat of it is Glasgow, where there are numerous mills, and it gives employment also to great numbers of people throughout the county, who work for the Glasgow houses, at their own dwellings; there are likewise large cotton-mills at Blantyre and New Lanark. The linen and woollen manufactures, though vastly inferior in extent to that of cotton, still afford occupation to a considerable number. A manufacture of lace forms the most flourishing trade of Hamilton. The Clyde and other iron-works are very important, and embrace every department of the iron manufacture; large chemical and other works are carried on, and the lead-works at the village of Leadhills are also extensive. The annual value of real property in the county is £1,834,999, of which £902,992 are returned for houses, £341,122 for lands, £140,213 for railways, £129,827 for iron-works, £66,098 for canals, £58,303 for mines, £9193 for quarries, and the remainder for other kinds of real property not comprised in the foregoing. Facility of communication is afforded by good roads in almost every direction, the most important of them being the great road to England by Carlisle, a new line between Edinburgh and Ayr intersecting the county from Cambusnethan to Strathaven, and new lines of road from Glasgow to Dumfries by Lanark, and from Edinburgh by Biggar and Chesterhall. But the chief means of intercourse are those presented by the lines of the Caledonian, and the Edinburgh and Glasgow, railway companies. There are several remains of Roman roads, of which that from Carlisle to the wall of Antoninus is the most conspicuous; and near Cleghorn House, and on Lanark moor, are vestiges of Roman camps, of which the former is 600 yards in length and 420 in breadth, and the other, of less dimensions, is still more distinct. Roman vases, coins, and other relics have been found in the vicinity. There are also remains of British camps, numerous ruins

of ancient castles, cairns, tumuli, Druidical circles, and remains of abbeys, priories, and other religious establishments.

X LANGHOLM, a burgh of barony and a parish, in the county of DUMFRIES; the parish containing, with the village of New Langholm, 2820 inhabitants, of whom 1305 are in the burgh, 14 miles (N. E. by E.) from Ecclesfechan, 18 (E. by N.) from Lockerbie, 18 (N. E. by N.) from Annan, and $20\frac{1}{2}$ (N.) from Carlisle. This place derives its name from the level lands, or holms, here, on the river Esk; and appears to have been indebted for its origin to the erection of an ancient border fortress by the powerful family of Armstrong: of this fortress the ruins are still in tolerable preservation. The town is situated on the east bank of the Esk, in a beautifully-wooded portion of the vale through which the stream flows, and on the road from Carlisle to Edinburgh. It consists principally of one spacious street of well-built houses, roofed with slate; and is connected with the village of New Langholm, on the west side of the river, by a handsome bridge of three arches. The streets are lighted with gas, and the inhabitants are amply supplied with water. A public subscription library was established in the town in 1800, and is well supported; it contains a valuable collection of standard volumes and periodical works, and claims to receive a disputed bequest of £1000 by the late Mr. Telford, civil engineer, who was a native of this place. There is also a library for tradesmen, established in 1815, at New Langholm. The woollen manufacture is carried on to a considerable extent, in two factories, one about half a mile north from the town, on the side of the Ewes, and the other at New Langholm, both belonging to the same company, and together affording employment to about 120 persons. The cotton manufacture was established at New Langholm about the year 1800, and is still continued: about ninety persons are occupied in this and in the linen trade, working by hand-loom for the houses of Glasgow and Carlisle. There is a distillery situated half a mile from the town, on the road to Carlisle, and another erected lately on the side of the Tarras water, two miles and a half south-east from Langholm. In the town is a brewery.

Langholm was erected into a burgh of barony by charter granted in 1643; and the Duke of Buccleuch, who is the superior of the burgh, appoints a baron-bailie and a baron officer. Courts are sometimes held for the trial of assaults and petty offences, punishable by fine or imprisonment; but the number of cases tried is very inconsiderable. The town-hall and gaol, situated in the market-place, were erected in 1811; they form a handsome structure surmounted with a spire. The post-office has a good delivery; and there are two branch banks established here. A customary market is held weekly on Wednesday, for provisions. Fairs take place annually on April 16th, for seeds; the last Tuesday in May, O. S., for cattle; the Wednesday before Whitsunday, for hiring servants; the 26th of July, for lambs and wool, which is numerously attended; the 5th of November, for cattle; and the Wednesday before Martinmas, O. S., for hiring servants. At all these fairs, shoes, earthenware, haberdashery, and jewellery articles are also exposed for sale. Facility of communication is afforded by roads and bridges kept in excellent repair; the road from Carlisle to Edinburgh passes through the

town, and roads to Annan, Lockerbie, Lochmaben, and Dumfries, through other parts of the parish.

This parish, to which that of Halfmorton was formerly annexed for ecclesiastical purposes, was erected in 1703, and was made the seat of a presbytery in 1743. It comprises about 14,320 acres, of which 12,800 are the property of the Duke of Buccleuch, and nearly all the remainder belongs to George Maxwell, Esq., of Broomholm: of the whole area, 1900 acres are arable, 420 woodland and plantations, and the rest meadow and pasture. Along the banks of the rivers the surface is level, and in other parts diversified with numerous hills of no great elevation, which are in general clothed with verdure to their summits, affording excellent pasturage for sheep. The river Esk has its rise in the mountainous districts to the north, and flows through the parish in a southern direction, receiving in its course the waters of the Black Esk, the Megget, the Ewes, the Wauchope, and the Tarras, and falling into the Solway Firth. In the lower lands the soil is a light and fertile loam, and on the hills of a gravelly quality: on the south-west of the town is some fine orchard-ground, producing fruits of various kinds in great perfection. The system of husbandry is in an advanced state, all the more recent improvements having been adopted; the lands have been mostly drained and inclosed; the fences are well kept, and the farm-buildings are substantial and commodious. Considerable attention is paid to the rearing of live stock: the sheep, of which the average number pastured on the hills is about 9000, are principally of the Cheviot breed. The cattle are in general of the Galloway breed, and thrive well; they are eagerly bought up by the Galloway dealers, and, after being kept for a year on the pastures of that district, are sent, with others, to the English markets. Horses of the Clydesdale breed are also reared, and many of them sell for £35 and £40 each; very large numbers of swine are fed here, and when cured forwarded to Newcastle, Carlisle, and Longtown. The plantations are oak, ash, beech, plane, and forest trees of every kind, of which there are many stately specimens. Beneath the surface of the parish are strata of greywacke, greywacke-slate, limestone, greenstone, and coal; there is abundance of fine white freestone, and lead-ore has been found on the lands of the Duke of Buccleuch, and also on those of Broomholm. The annual value of real property in the parish is £6026. Langholm Lodge, one of the seats of the Duke of Buccleuch, is a spacious mansion of white freestone, beautifully situated on the banks of the Esk, about half a mile from the burgh, in a demesne enriched with ornamental plantations, and containing a great variety of picturesque scenery. Over the river is a handsome cast-iron bridge of one arch 100 feet in span, leading to a private walk in the demesne. Broomholm House is an ancient mansion on the south-east bank of the Esk, two miles from the town, and also finely situated amidst richly-varied scenery; and about a mile to the south, near the confluence of the Esk and the Tarras water, is Irvine House, occupied by the chamberlain of the Duke of Buccleuch.

Ecclesiastically the parish is within the limits of the presbytery of Langholm and synod of Dumfries. The minister's stipend is about £222, with a manse, and a glebe valued at £27. 10. per annum; patrons, the Crown, and the Duke of Buccleuch. The church was opened in 1845: it occupies a more eligible site than the old edifice,

rebuilt for the last time in 1779. In the cemetery of the decayed church of Staplegorton is a handsome mausoleum, erected by the late Captain George Maxwell, of Broomholm, at an expense of £1000. There are places of worship for members of the Free Church, the United Presbyterian Church, and Burghers. The parochial school, situated at New Langholm, is well conducted; the master has a salary of £34, with a house and garden, and the fees average about £40 per annum. The Broomholm free school, at Langholm, was established by Capt. Maxwell, who endowed it with £500, to which the Kirk Session added £100: the money is laid out by the managers to the best advantage, and the amount of interest given as a salary to the master, who is obliged to teach twenty-six poor scholars gratis, but may admit as many more as the house will contain, as pay-scholars. There are various other schools in the parish, some of the teachers of which have a house rent free or a small annual donation. In the western portion of the parish are two mineral springs, one of them chalybeate and one sulphureous. The castle of Barntalloch, near Staplegorton, was once the head of a barony; and around it rose an ancient burgh, where a large fair was annually held for many years, until at length transferred to Langholm. There are no remains of this castle; but some lands in the vicinity still bear the appellation of the Boroughs of Staplegorton. Wauchope Castle, the site of which was afterwards occupied by the old manse, was the baronial residence of the Lindsays, adherents of Malcolm Canmore in the twelfth century; the small remains are situated on an abrupt precipice overhanging the river Wauchope, a short way to the west of the present manse, on the side of the public road. The remains of the old castle of Broomholm were removed about the year 1745: near the site may still be traced a Roman road. About the year 1790, six golden denarii, three being of the reign of Nero, two of Vespasian, and one of Domitian, were found, in good preservation, on the farm of Broomholm; and a few years after, two denarii, and a coin of the reign of Otho, were discovered near Wauchope bridge.

Among the distinguished characters connected with the parish have been, John Maxwell, Esq. (great-grandfather of the present proprietor of Broomholm), the ingenious author of an *Essay on Time*; Admiral Sir Thomas Pasley, who distinguished himself under Earl Howe, in the defeat of the French fleet, on the 1st of June, 1794; Major-General Sir Charles William Pasley, K.C.B., now living; William Julius Mickle, translator of Camoens' *Lusiad*; Capt. George Maxwell, R.N., already mentioned, who signalized himself in an action with the Dutch fleet off the Dogger Bank, in 1781; David Irving, LL.D., author of the *Life of George Buchanan*; and the late Mr. Telford, already mentioned, all of whom were born in Langholm parish. A pillar 100 feet in height has been erected on a hill eastward of the town to the memory of Sir John Malcolm; and there is a monument in the market-place, opposite the town-hall, to his brother, Admiral Sir Pulteney Malcolm. Both were of the Burnfoot family in the parish of Westerkirk, and the latter resided a considerable number of years in the parish of Langholm.

X LANGHOLM, NEW, a village, in the parish of LANGHOLM, county of DUMFRIES; adjoining the town of Langholm, and containing 1057 inhabitants. This village, delightfully situated on the west side of the river

Esk, near its confluence with the Wauchope, was erected on ground leased by the Duke of Buccleuch, in 1778. It consists of about 140 houses, constructed on a regular plan, and to each of which is attached a portion of land, varying in quantity according to the extent of the building, and held at a low rent on lease for fourteen years; the streets are lighted with gas, and the inhabitants are amply supplied with water. A subscription library was established in the year 1815. Facility of intercourse with the burgh of Langholm, to which the village forms a kind of suburb, is maintained by a handsome bridge of three arches over the Esk. The trade of the place is closely connected with that of Langholm; the cotton and linen manufactures are largely carried on here, and the principal articles made are stockings, stuffs, serges, and black and white plaids.—See LANGHOLM.

LANGLOAN, a village, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, $2\frac{1}{2}$ miles (W. by S.) from Airdrie; containing 1111 inhabitants. This is one of the principal villages of the many in this great mining and manufacturing parish: it is situated on the road from Airdrie to Glasgow, and has of late years increased exceedingly in extent and population. The Langloan iron-works have five blast furnaces in operation for smelting the ore. In the vicinity is a considerable red-sandstone quarry.

LANGRIGG.—See LONGRIDGE.

LANGSIDE, a village, in the parish of CATHCART, Upper ward of the county of RENFREW, $2\frac{1}{2}$ miles (S. W. by S.) from Glasgow; containing 125 inhabitants. This village is situated on the road from Glasgow to Ayr, and is ever memorable for the battle which took place in its immediate vicinity between the forces of the regent Murray and those of Mary, Queen of Scots, and which decided the fate of that unfortunate sovereign. The particulars of this battle are shortly these. The Earl of Murray, learning the resolution of Mary to march from Hamilton to Dumbarton, immediately drew up his army on the moor beside Glasgow, with a view to watch her movements, and if possible bring her troops to an engagement. The moment he became aware that the queen's forces kept the south side of the Clyde, he gave orders that his horsemen should ford that river, while the rest crossed it by a neighbouring bridge; and these movements were scarcely completed when Mary's vanguard appeared and the battle commenced. For a time the conflict was doubtful; but at length the queen's ranks were broken by Murray's chief leaders, and irretrievably thrown into confusion. Murray himself, who had hitherto stood with a part of his troops on the defensive, contenting himself with repulsing the enemy's cavalry, which was far superior in numbers and equipment to his own, now seized the moment to charge with the main division; and the flight became general. This decisive engagement lasted but three-quarters of an hour: on the queen's side there were about 300 slain, or, according to some accounts, only half that number; while on the regent's, merely a single soldier fell. Previous to the conflict, Mary had taken her station upon an eminence half a mile distant, which commanded a view of the field; and here, surrounded by a small suite, she watched the vicissitudes of the fight. At last, when Murray's charge took place, she fled with great precipitation, and at full speed, in the direction of Dumfries, nor did she venture to delay in her progress until she

found herself in the abbey of Dundrennan, sixty miles from the field. Though formerly of much greater extent, the village now consists only of a few scattered houses; the neighbourhood is enriched with wood, and the surrounding scenery, which is naturally picturesque, derives a peculiar degree of interest from the recollection of events with which it is associated.

LANGTON, a parish, in the county of BERWICK, $2\frac{1}{2}$ miles (W. S. W.) from Dunse; containing, with the village of Gavinton, about 500 inhabitants. It derives its name from the ancient town, which was remarkable for its length of straggling houses, extending from the manor-house to the eastern extremity of the parish. From its situation on the confines, the place was continually exposed to all the accidents of border warfare; it was frequently plundered by the English, and in 1558 was burnt by the forces under the command of Sir Henry Percy and Sir George Bowes. In the reign of David I., the manor belonged to Roger de Ow, a Northumbrian, who granted the church with its appendages to the abbey of Kelso, to which establishment it was confirmed by William de Vipont, a subsequent proprietor of the lands. On the death of Sir William Vipont, who fell in the battle of Bannockburn in 1314, the estates passed, by marriage with his daughter and heiress, to the family of Cockburn, of whom Alexander Cockburn of Langton was keeper of the great seal in the reigns of Robert II. and Robert III., which office was annexed to the barony of Langton by charter of James IV., in 1504. In 1627, William Cockburn was created a baronet by Charles I.: his descendant Sir Alexander Cockburn was killed in the battle of Fontenoy. The lands continued in the family till the year 1758, when they were sold to David Gavin, Esq., who, finding the old town an obstacle to the improvement of his estate, granted the inhabitants a more eligible site, upon very advantageous terms: here they erected the present village, which they called after his name; and in a few years every vestige of the former town disappeared. With a trifling exception, the lands are now the property of the Dowager Marchioness of Breadalbane.

The PARISH is about five miles in length and three miles in breadth. Its surface is extremely hilly, forming a portion of the Lammermoor range of heights, which in this part of them are called Langton Edge, and have an elevation of nearly 1000 feet above the level of the sea. The scenery, in numerous parts barren and rugged, is relieved by many features of natural beauty, and in some places is enriched with wood. Several small streams, also, run through the parish, of which the principal is Langton burn, a rivulet that rises in the hilly grounds, and flows into the Blackadder. A smaller stream passes near Langton Lees, between precipitous banks crowned with foliage, and in its course through Langton wood displays much beautiful and picturesque scenery. In the higher parts the soil is light, and unfit for cultivation; in the lower lands, richer, and of greater fertility. The whole number of acres is estimated at 7000, of which nearly 4000, lying chiefly in the Lammermoor hills, are appropriated to the pasture of sheep; 2800 are arable, and about 400 acres woods and plantations. The system of agriculture is advanced, and generally the five-shift course is practised; the crops are wheat, barley, oats, beans, peas, potatoes, and turnips. The lands are well drained and inclosed; the farm-houses and offices are

substantial and commodious, and all the more recent improvements in implements of husbandry are in use. The sheep are of the Leicestershire and Cheviot breeds, with a few of the black-faced; the cattle are almost all of the short-horned or Tceswater breed. In this parish the wood consists chiefly of oak, ash, elm, beech, plane, and larch, Scotch, and spruce firs; the trees are well managed, and in a very thriving state. Langton House, the property and occasional residence of the Dowager Marchioness of Breadalbane, is a handsome seat; the grounds are tastefully laid out, and have been greatly improved. The village of Gavinton is neatly built, and pleasantly situated: facility of communication with Dunse the nearest market-town, and with other places in the vicinity, is maintained by roads kept in excellent order. The annual value of real property in the parish is returned at £5980.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Dunse, synod of Merse and Teviotdale: patroness, the Dowager Marchioness of Breadalbane. The stipend of the incumbent is £215; the manse, erected in 1767, and repaired and enlarged by the late marquess in 1819, is a comfortable residence, and the glebe comprises ten acres of profitable land, valued at £24 per annum. The ancient church, the date of which is not distinctly known, was situated near Langton House, and was in use till the year 1798, when the present church was erected in the village of Gavinton; the edifice is adapted for a congregation of 250 persons. There is also a place of worship, built by the Dowager Marchioness, for members of the Free Church. The parochial school is well conducted; the master has a salary of £34. 4. 4., with a house and garden, and the fees average £20 per annum. A parochial library is supported by subscription; it contains a good collection of works on divinity, history, and biography. A friendly society, also, has been established. On the hill near Raeleugh Head are traces of a Danish camp, the ditches of which are still tolerably entire; and at a place called Camp Muir, near Choice Lee, where a regiment was stationed after the rebellion in 1715, are traces of the military works thrown up on that occasion. Upon Crumstane hill was a large cairn, on the removal of which, in 1792, were found several urns of different dimensions, containing human bones. Various stone coffins have been also discovered on the lands of Middlefield and Crease. In 1813 there was found, in a small streamlet flowing through a spot called the Battle-Muir, a bracelet of gold, nine inches in circumference, and which weighed nearly ten ounces.

LANTON, a village, in the parish and district of JEDBURGH, county of ROXBURGH, $1\frac{1}{2}$ mile (N. W. by W.) from Jedburgh; containing 175 inhabitants. The village is chiefly distinguished for its tower, which is still entire, and almost the only one remaining of the numerous fortifications raised in various parts of the parish for the defence of the district. The land is of good quality, and the system of agriculture greatly improved.

LARBERT, a parish, ecclesiastically united to the parish of DUNIPACE, in the county of STIRLING; containing, with the villages of Carron, Kinnaird, Stenhouse-Muir, and part of the village of Carronshore, 4404 inhabitants, of whom 487 are in the village of Larbert, 2 miles (N. W.) from Falkirk. This parish is bounded on the south by the river Carron, and is about three miles

in length and two and a half in breadth, comprising an area of 3400 acres, of which, with the exception of 200 acres of woodland and plantations, the whole is arable, meadow, and pasture. The surface rises gradually from the south-west to the north-east, where it attains an elevation of nearly 100 feet; and though not commanding an extensive prospect, yet it embraces numerous interesting and impressive features. Formerly the river abounded with salmon; but since the establishment of the Carron iron-works, they have almost disappeared. A small stream called the Chapel burn rises in the parish of Dunipace, and after a course of about three miles, in which it turns two mills, falls into the Carron near the village of Carronshore.

In general the soil is fertile, and near the confines of Falkirk there is a considerable tract of rich carse land; the crops are wheat, oats, barley, beans, and hay. The system of agriculture has of late years been greatly improved; the lands have been drained and inclosed, and the farm-buildings are commodious. The plantations are almost confined to the grounds of the principal landholders, and consist of oak, ash, beech, sycamore, Huntingdon willow, and firs. In the grounds of Kinnaird are some fine oaks, and an avenue of lime-trees, and there are also some stately trees at Carron Hall; but in general the soil is unfavourable to the growth of timber. The main substrata are sandstone, coal, and ironstone, all of which are wrought to a great extent; the coal on the lands of Carron Hall and Kinnaird is worked by the Carron Company, who employ about 150 men in the collieries. The annual value of real property in Larbert is £26,246. The village is situated in the south-western portion of the parish, on the road from Stirling to Falkirk, with which latter parish it has a communication by a bridge over the Carron. A post-office has been established here; and the Falkirk trysts are held upon a heath near the village, the property of Sir Michael Bruce of Stenhouse, on the second Tuesday in August, September, and October, chiefly for black-cattle and horses. The number of cattle sold at the first of these trysts seldom exceeds 4000, and of horses 400: at the second, 17,000 cattle and 700 horses; and at the October tryst, 20,000 cattle and nearly 1000 horses. For the accommodation of the persons attending these meetings, there are numerous inns. Facility of intercourse is maintained by good turnpike-roads which pass through the parish, and by the Scottish Central railway, which has a station here, and in the parish of Falkirk joins the Edinburgh and Glasgow and the Caledonian railways.

Larbert and Dunipace are within the bounds of the presbytery of Stirling, synod of Perth and Stirling: the stipend of the united living is £272, with a manse, and a glebe valued at £26. 10. per annum; patron, the Crown. Larbert church, situated at the western extremity of the parish, is a handsome structure in the later English style of architecture, erected in 1819, after a design by Mr. Hamilton, of Glasgow, and containing 1200 sittings. The members of the Free Church have a place of worship. Larbert parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £60 per annum. Among the relics of antiquity formerly existing, was a conical building of stone called Arthur's Oven, supposed to have been of Roman origin, and which was demolished in 1743 for

the sake of the materials. The interior, twenty feet in diameter, was surrounded with two stone shelves near the base, and was open towards the vertex; the entrance was arched, and over it was a kind of window of square form, tapering towards the summit. Roman mill-stones and fragments of pottery were found within 300 yards of the site, by some labourers draining a peat-moss, in the year 1800; and in other parts of the parish are some remains of ancient square towers, thought to have been the residences of chieftains. The most distinguished person connected with the parish was James Bruce, the Abyssinian traveller, who died at Kinnaird in 1794. He was descended from the Rev. Robert Bruce of Kinnaird, a preacher known for his bold and uncompromising defence of presbyterianism; Robert Bruce died at Kinnaird about 1632, and his tombstone yet remains in Larbert churchyard.—See CARRON, DUNIPACE, &c.

LARGO, a parish, in the district of St. ANDREW'S, county of FIFE; containing, with the villages of Drumochy, New Gilston, Kirkton, Lundinmill, Temple, and Woodside, 2751 inhabitants, of whom 423 are in the village of Largo, 3 miles (E. N. E.) from Leven. The barony of Largo was given by James III. to Sir Andrew Wood, a distinguished naval officer, in recompense for his eminent services; and the grant was confirmed by James IV. It afterwards became the property of the family of Gibson, of Durie, from whom it was purchased in 1663 by Sir Alexander Durham, Lyon king-at-arms, whose descendant is the present proprietor. The estate of Lundin, which formerly included the greater part of the parish, belonged to the Lundins from the time of David I. till the reign of William the Lion, King of Scotland, when it passed, by marriage with the heiress of that family, into the possession of Robert, the king's son. Subsequently, by marriage with another heiress, it became the property of John Drummond, second son of the Earl of Perth; and on the attainder of that family in 1745, it came to Lady Willoughby D'Eresby, from whom it passed to the family of Erskine, and thence to Capt. Erskine Wemyss, of Wemyss Castle, its present owner. The parish, which is situated on the bay of Largo, is about six miles in length from north to south, and three miles in breadth; and is bounded on the north by the parish of Ceres, on the south by the bay, on the east by the parish of Newburn, and on the west by Scoonie. Its surface is agreeably diversified with hills and undulating valleys. The principal hill, Largo Law, rises in a conical form to an elevation of nearly 1000 feet above the level of the sea, terminating in a double apex, and sloping gradually on the eastern side: to the west of its base is a deep valley, extending two miles in length, called Keil's Glen. Towards the shore the surface is flat; but the scenery generally, which is enriched by thriving plantations, abounds with interesting and romantic features.

In this parish the soil is various, but fertile, consisting in the northern parts of a rich black loam, and in the southern of loam, intermixed with lighter lands, and in some places with a friable clay. The whole number of acres is 6820, of which 6000 are arable, nearly 300 in pasture, and 500 in woods and plantations. The system of agriculture is in an improved state, and the crops are favourable and abundant. Considerable attention has been paid to draining and inclosing the lands, and nearly all the waste has been brought into a state of profitable

cultivation. In general the farm buildings are substantial and commodious, and roofed either with slate or tiles. The cattle are of the Fifeshire breed, with sometimes a cross of the Teeswater; the rearing of horses, also, principally for agricultural purposes, is much attended to, and several from Yorkshire have been introduced with a view to the improvement of the breed. A few sheep are fed for home use, of the Leicestershire breed; and great numbers of hogs, chiefly the Chinese, are fattened for the neighbouring markets, where they find a ready sale. The plantations consist mainly of Scotch fir and larch, which thrive well; in those of more recent formation are oak, ash, elm, beech, and plane. The oak attains to a luxuriant growth, and in the grounds of Lundin House is a grove of lime-trees of very stately size; the planes in the demesne of Largo House are of singular beauty, and many of the elms are of large dimensions. The substratum is chiefly limestone of a grey colour, and sandstone of a reddish colour; the limestone is found in strata fifteen feet in thickness, and is quarried for building purposes and for burning into lime. Freestone of good quality is quarried, but not extensively, as the stone lies at a great depth, and the expense of working it is scarcely remunerated by the produce. Coal is also found in the parish, and is chiefly worked for the lime-kilns; it occurs in seams about eighty feet thick, but is very sparingly used, as coal of a much better quality is obtained from Wemyss at only a moderate increase of price. The annual value of real property in the parish is £10,815. Among the principal seats is Largo: the ancient mansion, of which a circular tower is still remaining, was inhabited by Sir Andrew Wood; the present structure, erected in 1750, is spacious and in a handsome style, situated in grounds embellished with fine plantations, and commanding an extensive and diversified prospect over the surrounding country. Lundin, the property of Capt. Erskine Wemyss, is a modern edifice, from the centre of which rises a square tower of great antiquity, the only existing portion of the residence of the Lundin family; it is beautifully situated, and the demesne comprises some venerable and stately timber. There are a few other handsome houses of proprietors of land in the parish, which, from their situation and the plantations around them, contribute to enrich the scenery.

A salmon-fishery in Largo bay, after being carried on for some years with very indifferent success, producing not more than £130 per annum, was totally discontinued; but it has been revived, under better management, and is now pursued to advantage. The spinning of flax is carried on in the parish, affording employment to nearly 100 persons, for which purpose there are two mills driven by water, and one of them also by steam. Largo port or harbour has a limited coasting-trade, and three small vessels belong to it; a steam-boat sails twice a day during summer, and once a day during winter, between this place and Newhaven. The harbour, which is formed at the influx of the river Kiel into the Firth of Forth, is incommodious; but its improvement might be effected at a comparatively trifling expense, and would contribute greatly to restore the trade of the place, which was formerly far from being inconsiderable in the exportation of coal, salt, iron, and the produce of the quarries, to Holland, and the importation of timber from Norway. A subscription library, containing more than 500 vo-

lumes, is well supported; and a savings' bank has been opened, in which the various sums deposited, chiefly by labourers, amount to a large sum. Facility of intercourse with the neighbouring market towns is maintained by turnpike-roads kept in excellent repair, and the parish generally is improving. A post-office is established under Leven.

For ECCLESIASTICAL purposes, the parish is within the limits of the presbytery of St. Andrew's and synod of Fife. The stipend of the incumbent is £253: the manse, built in 1770, and in 1823 greatly enlarged and improved, is a handsome and comfortable residence; and the glebe comprises five acres of good land, valued at £20 per annum, to which may be added £11 paid in lieu of "foggage". Largo church was erected near the site of a more ancient structure in 1817, and enlarged in 1826; it is a neat edifice with a spire, and is adapted for 836 persons. There are places of worship for members of the Free Church, the United Presbyterian Church, and Baptists. The parochial school is well conducted; the master has a salary of £34, with a house, and the fees average about £30 per annum, including £7. 15., the bequest of the late James Kettle, Esq., for teaching four children. There are three other schools in the parish, the masters of two of which receive, in addition to the fees, a salary of £5, paid by the heritors. An hospital was founded by John Wood, Esq., a descendant of Sir Andrew Wood, who bequeathed £68,418 Scots in trust for its erection and endowment, for thirteen indigent persons of the name of Wood, a chaplain, a porter, and a gardener; the chaplain to have a stipend of £17 sterling per annum. The building was erected in 1667, and rebuilt in 1830 in a handsome and substantial style, at an expense of £2000. It contains two apartments each for sixteen inmates, who receive £15 per annum paid monthly, and a supply of vegetables; there is a large hall in which they assemble for prayer morning and evening, and above the hall is a room where the patrons of the hospital meet for the transaction of business connected with the institution. The hospital is under the patronage of the Earl of Wemyss, and the lairds of Largo, Lundin, and Balfour, with the minister of the parish, and the members of the Kirk Session, for the time being. There are also under the management of the Kirk Session, the interest of £100 bequeathed by Mrs. Wood for the benefit of orphans; of £600 bequeathed by Mr. Kettle, one-half for the instruction of four poor children, and the remainder to be given in sums of £2 each to persons not on the parish list; and the interest of £500 for distribution among widows of the name of Jameson who have children under sixteen years of age, in sums of £5 per annum each. This last fund, for want of applicants, has accumulated to £1100. On the banks of the river Kiel are the venerable ruins of the ancient castle of Baleruvie, the residence of the Crawford family; and to the south and east of Lundin House are three stones of rude triangular form, supposed to be either of Roman origin, or the gravestones of some Danish chiefs who fell here in battle with the forces of Banquo and Macbeth. Two pieces of similar stone were discovered on the Largo estate, at the distance of a mile from each other, which, when anted, formed an antique carved cross. On an eminence to the north have been found silver coins of the earlier Roman emperors; and at Bal-

housie have been discovered three urns containing ashes, and near them some stone coffins, and the bones of an infant. The late Sir John Leslie, professor of mathematics in the university of Edinburgh, and author of *The Progress of Mathematics in the Eighteenth Century*, was a native of this parish.

LARGO, LOWER, a village, in the parish of LARGO, county of FIFE, 4 miles (N. E. by E.) from Leven; containing, with the hamlets of Temple and Drumochy, 567 inhabitants. This village is pleasantly situated, and well inhabited: there are places of worship for members of the United Presbyterian Church and Baptists. Alexander Selkirk, whose adventures on a desolate island are, under the name of *Robinson Crusoe*, narrated by De Foe, was a native of this village, in which he was born in 1676. Embracing a sea-faring life, he was, in 1703, left on the island of Juan Fernandez, where he remained for more than four years in perfect solitude: he was brought to England by Capt. Woode Rogers, but, after nine months' residence on shore, he returned to sea, and was not heard of afterwards.

LARGS, a parish, in the district of CUNNINGHAME, county of Ayr; containing, with the former quoad sacra district of Fairlie, 4044 inhabitants, of whom 3523 are in the town and suburbs of Largs, $13\frac{1}{2}$ miles (N. N. W.) from Salteoats, and $79\frac{1}{2}$ (W. by S.) from Edinburgh. The name of this place is supposed to be derived from the term *Learg*, signifying "a plain;" but this etymology, the only probable one assigned, is not clearly established, as there is no considerable portion of ground in the locality answering to that distinctive appellation. The ancient records connected with Largs refer chiefly to the history of its church, which was dedicated to St. Columba, abbot of Iona, and was a rectory, the patronage belonging to the lordship. At the beginning of the fourteenth century, Walter the Stewart, "for the safety of his own soul and that of his late spouse Marjory Bruce," granted the church with all the tithes, "in pure and perpetual alms," to the monastery of Paisley. The church continued in the possession of the monastery till the Reformation, when Lord Claud Hamilton, commendator of Paisley, obtained the patronage and tithes of Largs, and the other revenues and lands of the monks, the whole of which were made a temporal lordship for himself and his heirs, with the title of Lord Paisley. In 1621, he was succeeded by his grandson, James, Earl of Abercorn, from whom, in the reign of Charles I., the patronage and tithes of the church of Largs passed to Sir Robert Montgomerie of Skelmorlie. Lilius Montgomerie, heiress of Skelmorlie, by marriage in 1735 carried them to Alexander Montgomerie of Coysfield; and their son and heir, Colonel Hugh Montgomerie of Coysfield, succeeded in 1796 to the earldom of Eglinton; so that Archibald William, thirteenth Earl of Eglinton, is now patron of the church of Largs. A celebrated battle took place here on the 3rd of October, 1263, between the Norwegians and Scots. The former, under their king, Haaco, were at first victorious; but fearing that subsequent reinforcements might enable the Scots finally to triumph, they retreated, and Haaco not long afterwards died at Kirkwall, in the Orkneys, on his return to his kingdom of Norway. His son and successor, Eric, however, married one of King Alexander's daughters; and thus all future hostilities were prevented.

The town was formerly but a small village clustering round the church, and has attained its present populous and thriving condition by degrees, chiefly from its situation on the shore of the Firth of Clyde, from its superior facilities for sea-bathing, from the salubrity of the climate, and the beauties of the surrounding scenery. Some parts of the vicinity are marked with features of a bold character. The hills on the east, which form a barrier against the violence of the winds, rise to a great elevation as they approach the town, and comprise the eminences called the Hill of Stake, and, more southward, Irishlaw and Knoekside hill; reaching respectively the height of 1691 feet, 1576 feet, and 1419 feet above the level of the sea. From the summits of these heights, and from their abrupt declivities bordering on the town, views of the most diversified and picturesque scenery may be obtained. Among the other objects of interest is the Gogo river, which, rising in the south-eastern quarter, receives the water of the Greeto about the middle of its course, and falls into the sea on the south side of the town. The Noddle rises in the north-east, and after traversing the vale of Brisbane, empties itself into the sea on the north of the town. Largs has been celebrated for a considerable period as an agreeable and healthy summer resort; and from the month of May till about the middle of October, the population derives an increase, owing to the influx of visitors, varying from 300 or 400 to 1000. The plain on which the town stands consists of a fine gravel, quickly absorbing the moisture after rain; the whole coast is perfectly safe, and by its gentle slope the beach affords good opportunities of bathing at all times of the tide. The town has been completely remodelled and enlarged since the beginning of the present century, and lighted with gas since the year 1839. The environs are richly studded with elegant villas; but the only public building is that of the baths, which, in addition to accommodations for hot and cold bathing, contains a large billiard and reading room. Two circulating libraries have been established. About three miles south of Largs, and also on the coast, is the pleasing little village of Fairlie, inhabited by above 300 persons, and, on account of its retired and attractive character, and the handsome villas lately erected there, preferred by many persons to the town.—See FAIRLIE.

About 240 or 250 hands in the parish are employed in the manufacture of shawls and shawl borders, the work being obtained chiefly from Paisley. There are branches of the Western Bank of Scotland and the City of Glasgow Bank, and a general post-office. The public road to Ayr and Irvine runs along the coast; and an excellent road has been formed of late years across the moor, passing in a south-eastern direction to Kilbirnie and Dalry, and being of great benefit to the neighbourhood for the conveyance of lime and coal. A parish road, also, has been constructed through the vale of Brisbane to the boundary of the parish, near Loch Thom; it joins the Greenock parish road, and shortens the distance between that place and Largs about two miles. The boundaries of the harbour extend from Haylie to Noddleburn, and there is a considerable traffic carried on by means of steam-boats. Till lately the accommodation for them was indifferent; but on application to Sir Thomas Macdougall Brisbane, Bart., he agreed to give some ground for a pier, receiving its

value in shares: a subscription was commenced, and an act of parliament being obtained in 1832, the foundation-stone was laid on the 10th of January, 1833, and the pier opened on the 1st of December, 1834. Great advantage has been experienced in the landing and shipping of passengers and goods by this pier, the cost of which was £4275; the shareholders are thirty-one in number, and the shares, of £50 each, return about six per cent. The produce of the parish is generally sent for sale to Greenock, Glasgow, and Paisley; but a considerable portion is reserved for domestic use. A fair, called vulgarly Comb's-day, from St. Columba, is held on the second Tuesday in June, O. S., for pigs, horses, and especially young cattle, large numbers of which last are brought from the Highlands. The town has a baron-bailie appointed by the superior; but he rarely interferes in judicial matters, the justices holding a monthly court, where cases of small debt and breaches of the peace are tried.

The PARISH stretches along the coast of the Firth for nine miles, and measures in breadth a little more than four miles, comprising 19,143 acres, of which 8598 are heath and moorland pasture; the remainder comprehends 1145 acres in tillage, 3300 pasture and meadow, 5500 green pasture, and 600 woodland and gardens. The usual kinds of grain and green crops are raised, with the exception of wheat, which is but little cultivated; and the four and the six shift courses of husbandry are each in operation. About 600 cows, of the pure Ayrshire breed, are kept for the dairy; the farmers near the town mostly sell the milk, or make butter, while those in the rural district convert the produce into cheese. The number of young cows yearly reared is about 300; nearly 500 head of cattle are fattened, and 4600 sheep are kept on the high lands, besides a few English sheep on some of the lower grounds; with a considerable number of swine. Improvements of various descriptions are gradually advancing, especially the draining and recovering of waste land; and some new plantations have been formed. Red and white sandstone are quarried for building houses in the neighbourhood: the substrata of the higher grounds consist mainly of secondary trap. The annual value of real property in the parish is £13,743. Among the seats is the old mansion of Kelburne Castle, which was originally a square tower, but was enlarged by David, Earl of Glasgow, and is the seat of the present earl, having been the property of the family from a remote period; it is situated two miles south of the town, and embraces beautiful views of the Firth and the surrounding scenery. The house of Brisbane, the seat of Sir Thomas Macdougall Brisbane, who is of a family long located here, and the chief of their name, stands two miles north of the town, in the beautiful glen of Brisbane. Skelmorlie Castle, a seat of the Earl of Eglinton's, is an ancient structure, having been built in the year 1502; and is pleasantly situated on a commanding eminence upon the coast, four miles north of Largs. In addition to these, are numerous elegant residences and villas, among which is that of Hawkhill, on the Gogo, near the town.

Largs is in the presbytery of Greenock, synod of Glasgow and Ayr, and in the patronage of the Earl of Eglinton; the minister's stipend is £246, with a manse, and a glebe valued at £36. 8. per annum. The parish belonged to the presbytery of Irvine until 1834, when

it was transferred to that of Greenock, newly formed. The present church was built on a new site in 1812, and enlarged in 1833; it contains 1268 sittings. The Skelmorlie aisle of the old church, with the monument erected by Sir Robert Montgomerie, and the enrichments of the ceiling, attracts and merits the attention of the antiquary, being unquestionably the finest sepulchral design extant in the west of Scotland. A chapel in connexion with the Establishment, containing 300 sittings, was erected at Fairlie in 1833, by private subscription, and made the church of a quoad sacra parish in 1835; but it has now no ecclesiastical district attached. There are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school affords instruction in the usual branches: the master has a salary of £25. 13., with a house, and about £2 fees; also the interest of £175 bequeathed for his use. A school, likewise, has been founded by Sir Thomas M. Brisbane, and premises erected, with a house for a master, at a cost of £350; the nomination of the teacher, who has a salary of £30, and the management of the institution, are vested in the family of Brisbane, and the minister and Kirk Session of Largs. In the south of the parish, and situated within the ancient barony of Fairlie, is the ruin of an old castle, which belonged for more than 400 years to a family of that name, and at the beginning of the 18th century was sold to David, Earl of Glasgow, with whose descendants it still remains. The ruins of the house of Knock are also yet standing: the Frazer family possessed the estate for about 250 years till 1650, when the property passed into other hands. Kelburne confers the title of Viscount on the Earl of Glasgow; David, Lord Boyle, having been created Viscount Kelburne and Earl of Glasgow, April 12, 1703.

LARKHALL, for a time a quoad sacra district, in the parishes of DALSERF and HAMILTON, Middle ward of the county of LANARK; containing, with the village of Millheugh, 2453 inhabitants, of whom 1609 are in the village of Larkhall, 3½ miles (S. E.) from Hamilton. The district comprised the lands of Broomhill, West Machan, and Meadowhill; a portion of Dalsersf lying between those lands and the river Avon; and considerable strips of the parish of Hamilton to the north and west. The village of Larkhall, which is situated in the Dalsersf portion of the district, and on the great road from Glasgow to Carlisle, is of modern erection, built on a regular plan, and has latterly very much increased in population. It is the largest village in Dalsersf parish, and mostly inhabited by weavers. In its vicinity are several hamlets, rows of houses, and other dwellings, the whole so approximating with it as to be considered parts of one town. Within the last few years, a post-office, subordinate to Hamilton and Glasgow, has been established; and other facilities are fast tending to the improvement and importance of the place. A small fair is held in the month of June. The river Clyde flows at a distance of two miles on the north-east. Ecclesiastically Larkhall is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr; and the patronage is vested in the male communicants: the stipend of the minister is £80, derived from seat-rents. The church, built by subscription, aided by the General Assembly's extension fund, was opened for divine service in January, 1836, and contains 720 sittings, of

which thirty are free. There is also a place of worship for the United Presbyterian Synod, containing about 700 sittings. A parochial school is held, in which, besides the usual branches of education, Latin is taught: the master has an annual salary of £5, with a house, schoolroom, and garden, and the school-fees. The same branches are taught in another school. A library, instituted in the year 1809, contains upwards of 500 volumes.

LASSWADE, a parish, in the county of EDINBURGH; containing, with the village of Loanhead, and the former quoad sacra district of Roslin, 5025 inhabitants, of whom 539 are in the village of Lasswade, $2\frac{1}{2}$ miles (W. S. W.) from Dalkeith. This parish is supposed to have derived its name from the situation of the church and village in a well-watered pastoral district. Lasswade was anciently much less extensive, now including the parishes of Pentland and Melville, which were suppressed at the Reformation. On the north lie the parishes of Colinton and Liberton; on the east, those of Dalkeith, Newbattle, Cockpen, and Carrington; on the south, the parish of Penicuik; and on the west, Colinton, Glencross, and Penicuik. The parish is about eight miles in length and five miles in breadth, and of extremely irregular form, comprising an area of ten square miles. Its surface, with the exception of the Pentland district, is chiefly a level tract of arable and pasture land in a high state of cultivation, abounding with scenery of unrivalled beauty, and with features strikingly romantic. The loftiest of the Pentland hills within the parish is Allermuir, which exceeds 1600 feet in height above the level of the sea. The North Esk river flows through the parish, between precipitous and richly-wooded banks, and is remarkable for the picturesque character of the vale along which it pursues its course. It winds round the ruins of the ancient castle of Roslin, and near the mansion of Hawthornden, and, intersecting the village of Lasswade and the pleasure-grounds of Dalkeith, runs into the South Esk about a mile below the Palace. That portion of the parish which was for a time annexed to the church of Roslin is described in the article on that place.

The SOIL is luxuriantly rich; and the tracts of moor and wet moss that abounded in the southern parts have been reclaimed, and brought into a good state of cultivation. The lands are principally arable, producing excellent crops of grain: the oatmeal of this place has long been noted for its superior quality. The dairy-farms are also under careful management, and the produce forwarded chiefly to the Edinburgh market. Much land is laid out in nurseries and gardens, yielding abundant supplies of vegetables and fruits of all kinds for the use of the city, to which great quantities of strawberries, particularly, are sent daily in the season. The Pentland hills are covered partly with heath, and in other parts with grass affording excellent pasture; the meadows and low-land pastures are exceedingly fertile. In this parish the substrata are coal and limestone, with red sandstone, freestone, and whinstone, the last a very good material for the roads: the coal is extensively wrought in the vicinity of Loanhead, and not less than 30,000 tons a year are sent from the mines to Edinburgh. The annual value of real property in Lasswade is £21,833.

Melville Castle, the residence of Lord Viscount Melville, is an elegant and spacious structure in the castellated style, with circular towers, erected about the

close of the last century, on the site of an ancient house said to have belonged to David Rizzio, secretary to Mary, Queen of Scots. It is situated on the bank of the North Esk, in an ample and richly-wooded demesne, and forms a conspicuous and highly interesting object. George IV., when visiting Scotland in 1822, was hospitably entertained in this noble mansion. *Hawthornden*, the romantic seat of Sir James Walker Drummond, built by the poet Drummond, and incorporated with the remains of the baronial castle of that ancient family, stands on a precipitous rock below Roslin, on the south bank of the North Esk; and is remarkable for the numerous artificial caverns beneath the mansion, and in various parts of the rock. These, during the war with England in the reign of Edward I., afforded secure shelter to the adherents of Bruce, of whom Sir Alexander Ramsay, concealing himself with his followers in these almost inaccessible retreats, frequently sallied forth upon the enemies of his country, whom he surprised and defeated with great slaughter. The principal of the caverns are, the King's Gallery, the King's Bedchamber, and others; and in one of them, detached from the rest, and of smaller dimensions, called the Cypress Grotto, Drummond is said to have composed many of his poems. In the court-yard is a deep dry well, from which a narrow opening leads to a long subterraneous passage; on both sides of the passage are various small apartments, and below them some of larger dimensions, the entry to which is lighted from a fissure in the rock. The house is adorned with numerous ancient relics, and family and other portraits, among which is a portrait of Mary, Queen of Scots. The pleasure-grounds attached to it abound with interesting features, and with picturesque and romantic scenery. *Mavisbank House* is a handsome mansion in the style of an Italian villa, beautifully situated on the right bank of the North Esk, in a demesne of highly-pleasing character. *Springfield House* is also a good mansion; and on the same bank of the river are *Dryden* and *Rosebank*: on the left bank are *Polton*, *Glensesk*, and *Gorton*.

Lasswade village is seated in the deeply-sequestered and well-wooded dell watered by the North Esk. The houses are irregularly scattered along both banks of the river, and are surrounded with gardens and plantations, which, combining with the sylvan aspect of the vale generally, render this one of the most attractive villages in Scotland. The beauty of its scenery, and the mildness of the climate arising from its sheltered situation, have made it a favourite place of resort for the citizens of Edinburgh; and numerous handsome villas have been erected in the immediate vicinity, as residences during the summer months. The principal manufactures carried on here are those of paper and carpets. There are three extensive paper-mills, in which several hundreds of persons are employed. The carpet manufactory at St. Anne's was established in the year 1834, by Messrs. Richard Whytock and Co., for the production of Tournay and Axminster carpets of all sizes and shapes, without seam; and a new kind of Brussels carpet, of great beauty, resembling tapestry, with various fabrics in velvet pile, has been invented by the proprietors, and is in much request in London and other places. In this establishment more than 100 persons are constantly employed. There are also an iron and brass foundry, and several corn and oatmeal mills. Within the parish

are likewise the villages of Loanhead and Pentland, and there are two post-offices connected with Edinburgh and Dalkeith, each of which has two deliveries daily. Facility of communication is afforded by parish-roads kept in excellent order, by the turnpike-roads to Edinburgh and other places, and by the Edinburgh and Hawick railway.

For ECCLESIASTICAL purposes the parish is within the limits of the synod of Lothian and Tweeddale and the presbytery of Dalkeith. The minister's stipend is about £180, with a manse on an eminence near the church, and a glebe of eight acres, valued at £40 per annum; patron, Sir George Clerk, Bart. Lasswade church, erected in 1793, and substantially repaired and improved within the last few years, is a neat structure adapted for a congregation of about 1000 persons: the remains of the ancient church, within the churchyard, consist chiefly of one of the aisles, which has been converted into a sepulchral chapel for the Dundas family. There are places of worship for members of the United Presbyterian Church and Reformed Presbyterians. The parochial school is well conducted, including in its course of studies the Latin, Greek, and French languages, and the mathematics; and is numerously attended: the master has a salary of £34, and the fees average about £150 annually. There are also schools at Hawthornden and Pentland, the masters of which have salaries and rent-free houses; and in the villages of Lasswade and Loanhead are good subscription libraries. Upon the river North Esk, half a mile above Hawthornden, is Wallace's Cave, an artificial excavation in the rock, in the form of a cross, and capable of containing about seventy persons. On the north side of the Bilston burn, about a mile from its confluence with the North Esk, is Wallace's Camp, in the shape of a semicircle, eighty-four feet in circuit, and defended by a broad and deep ditch. At Springfield, near a ford on the Esk, is a narrow road supposed to have been part of a Roman way between two camps; and not far from Mavisbank House is a circular mound of earth, near which have been found several ancient weapons and various other relics of antiquity. An ancient stone coffin, containing the skeleton of a male, was lately found at Polton, by some workmen who, in the course of certain improvements at that seat, were excavating within a few feet of the oldest part of the mansion-house. At a few yards' distance from the coffin, the remains of a horse were found. The poet Drummond was a native of this parish, and was buried in its churchyard; the late Mr. John Clerk, author of a *Treatise on Naval Tactics*, resided on the estate of Eldin, and Sir Walter Scott resided for a time after his marriage in a cottage at Lasswade.

LATHERON, a parish, in the county of CAITHNESS, 17 miles (S. W.) from Wick (reckoning to Latheron church); containing, with the late quoad sacra districts of Berriedale and Lybster, and the villages of Dunbeath and Swiney, 7637 inhabitants. This place, which is situated on the south-eastern coast of Caithness, is supposed with great probability to have derived its name, signifying in the Gaelic language "the resort of seals", from its shores having been formerly frequented by vast multitudes of those animals, of which considerable numbers are still found in the caverns near the sea. From the numerous remains of castles and fortresses, extending along the coast from the Ord of Caithness to Bruan,

where the parishes of Latheron and Wick meet, it would appear to have been the scene of ancient warfare; but the only authentic record of its early history preserved, is that of the last invasion of the country by the Danes. On the landing of a large body of troops under the command of the young Prince of Denmark, near the town of Thurso, the inhabitants of that district, unable to meet them in the field, retreated before the invaders to the hill of Ben-a-gheil, in this parish, where, having taken up a favourable position, they resolved to give the enemy battle. The Danes pursued them to this post, and attempted to dislodge them; but the Scots, having in the retreat considerably increased their numbers, bore down upon them in one compact body, broke their line, and, killing their leader, put them completely to the rout.

The PARISH is bounded on the south-east by the North Sea, and on the west by the county of Sutherland. It extends along the coast for nearly twenty-seven miles, and varies from ten to fifteen miles in breadth, comprising an area of about 140,000 acres, of which 10,000 are arable, 800 woodland and plantations, and the remainder meadow, pasture, and waste. The surface in general is boldly marked with hills and valleys; and towards the west are numerous mountains of various height and aspect, between which are deep and precipitous ravines of dangerous access. Of these ravines the most intricate are Brenahegleish, Benachielt, and one at the Ord of Caithness. The most conspicuous of the mountains are Morven, Scaraben, and the Pap. Morven has an elevation of nearly 4000 feet above the level of the sea, and is a fine landmark for mariners; near the summit is a spring of excellent water. The prospects obtained from most of these mountains comprehend more than twelve counties. There are also straths of great beauty and fertility, the three principal of which are watered by the rivers of Langwell, Berriedale, and Dunbeath; the steep banks of these vales were formerly covered with wood, and there is still sufficient remaining to add greatly to the richness of the scenery. The three rivers have their rise on the western confines of the parish, and, after courses of from twelve to sixteen miles through the straths to which they give name, fall into the sea on the east; they are but small streams in the summer, but are much swollen in winter, and they all abound with trout and salmon. In this parish the only lakes of importance are those of Rangag and Stempster, in both of which are found trout and eels. The line of coast is defended by a chain of rocks, rising precipitously to heights varying from 100 to 300 feet, and in many places perforated with deep caverns, some of them sixty feet in length: these caverns, as already stated, are frequented by seals, great numbers of which are taken. The principal headlands are, the Ord of Caithness, on the south; Berriedale head; and Clyth Ness, to the north. There are numerous small bays, the outlets of the several rivers which intersect the parish, affording shelter for boats employed in the fisheries off the coast.

Though generally shallow, the SOIL is easily cultivated, and well adapted to all kinds of grain; on the lands of Langwell and Dunbeath it is of a sharp gravelly quality, and on the lands of Clyth a dry loam. The crops are grain, potatoes, and turnips, with the usual grasses; considerable improvement has been made in the system of husbandry, and much waste land has

been reclaimed and brought into cultivation. Many of the farm-buildings, also, are vastly improved; but there are still some of very inferior order. Great attention is paid to the rearing of live stock, for the conveyance of which to the best markets facilities are afforded by steam navigation. The sheep on the lands of Langwell and Dunbeath are mostly of the Cheviot breed, and frequently obtain prizes at the Inverness shows; on the other farms they are chiefly a cross between the Cheviot and the Leicestershire: 12,000 are fed on the whole. The cattle, of which about 4000 are pastured, are principally a mixture of the Teeswater and Highland breeds, and fetch good prices in the Edinburgh market. In this parish the geological features are different from those of the rest of the county. The only village of any importance is Lybster, which is noticed under its own head; the others are small fishing-hamlets. The annual value of real property in the parish is £10,967.

The principal dependence of the population is upon fishing, of which there are four distinct branches carried on, viz. the herring, the cod, the salmon, and the lobster fisheries. The herring fishery is prosecuted with great assiduity and enterprise, affording occupation during the season to about 3200 persons, and employing during the winter and spring from 1500 to 2000 in the making of nets; the season commences in July, and ends in September. The stations along the coast in this parish, and to which are attached convenient harbours, are Dunbeath, containing seventy-six boats; Latheron-Wheel, thirty-five; Forse, thirty-two; Swiney, ten; Lybster, 101; Clyth, fifty-three; and East Clyth, eighteen boats; in the aggregate, 325 boats, each having a crew of four men, and from twenty to thirty-eight nets. It is calculated that the number of barrels cured at these stations annually is 40,000, to which may be added 3000 cured by the fishermen at their own dwellings; and about 1000 barrels are generally sold in a fresh state to strangers from different parts of the country. On an average the price of the cured fish is £1 per barrel; and of the fresh, nine shillings. The cod-fishery is not carried on to so great an extent, being generally abandoned, when the herrings appear in sufficient numbers, for the more lucrative employment of herring-fishing; the number of cod cured during the season averages 10,000, and they are sold at sixpence each. The salmon-fishery is pursued at Berriedale and at Dunbeath; the fishery at the former, belonging to Mr. Horne of Langwell, is rented at £275 per annum; and the fishery at the latter, the property of Mr. Sinclair of Freswick, at £27 per annum only, the number of fish having greatly diminished. At both places the fish are of excellent quality, the salmon selling for one shilling, and the grilse for sixpence per pound: few are sold on the spot; they are chiefly packed in kits, and sent to London. The lobster-fishery is but little attended to, though great numbers are sometimes taken. A small pier has been erected at Clyth, for the loading of vessels in moderate weather; and there is also a harbour at Lybster; but from the rocky nature of the coast, and the want of shelter for vessels of any considerable burthen, the navigation is attended with great danger; and applications have been consequently made to government, for the construction of commodious harbours, which would materially promote the prosperity of the district. The nearest market-town is Wick. Fairs are held at Dunbeath and at

Lybster twice during the year; there are also post-offices there. Facility of communication is afforded by good roads, of which the road along the coast passes through the whole length of the parish to Wick, whence there is conveyance by steam to Aberdeen and Leith.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Caithness, the synod of Sutherland and Caithness. The minister's stipend is £219, with a manse, and a glebe valued at £15 per annum; patron, Sir James Colquhoun, Bart. The parish church, situated near the coast, was erected in 1734, and enlarged and new roofed in 1822; it is a neat plain structure, containing 870 sittings. Churches were built in Berriedale in 1826 and at Lybster in 1836. There is also a missionary station connected with the Established Church, founded by the Society for Propagating Christian Knowledge, at Bruan, the eastern extremity of the parish, bordering on Wick. Attached is a comfortable manse, erected by subscription, at an expense of £232; and a glebe of four acres of excellent land was granted to the minister by the late Sir John Sinclair, Bart., whose estates were chiefly benefited. The church contains 600 sittings; and the missionary has a stipend of £25, granted by the society, and augmented to £100 by seat-rents. Four catechists are appointed by the Kirk Session, and paid by the families whom they visit. There are two or three places of worship for members of the Free Church. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average £30. Two schools are supported by the General Assembly, and one by the Society for Propagating Christian Knowledge; the masters receive salaries of £20 each. The poor have the interest of various bequests producing about £18 per annum. Sir John Sinclair, editor of the *Statistical Account of Scotland*, resided for many years at Langwell, now the property of Donald Horne, Esq.

LAUDER, a royal burgh, a parish, and the seat of a presbytery, in the county of BERWICK, 25 miles (S. E.) from Edinburgh, and 35 (W. by S.) from Berwick-upon-Tweed; containing 2198 inhabitants, of whom 1050 are in the town. This place, the name of which is in the Celtic language descriptive of its situation in the valley of the Leader, was granted in the early part of the twelfth century, by David I., to Hugh de Moreville, constable of Scotland. De Moreville gave the lands of Thirlstane, in the parish, to one of his kinsmen, whose grand-daughter conveyed them by marriage to Sir Richard Maitland, ancestor of the present Earl of Lauderdale, the principal proprietor of the parish. The chief historical events connected with the place are, the erection of Lauder Castle by Edward I., King of England, during his invasion in the time of Bruce; and a meeting of the nobles of Scotland, who, when James III. encamped with his army near Lauder in 1482, assembled in the church, and, after a conference, resolved upon the death of six of that monarch's favourites, whom they hanged on a bridge over the Leader. There was formerly a royal mint here.

Burgh Seal.

The town is delightfully situated in the centre of the vale, upon gently-rising ground between the river Leader on the north and the South burn of Lauder. It consists principally of one wide clean street, lighted with gas, on the road from Edinburgh to Kelso; and nearly in the middle, where the street expands into greater breadth, is a row of houses, at the western extremity of which is the town-house. The air is extremely pure, and there is a good supply of water. The houses are irregularly built, and of mean appearance; and the town is inhabited chiefly by retail shop-keepers, persons employed in handicraft trades, and agricultural and other labourers. The approaches have been much improved within the last few years. A subscription library is supported here by a company of shareholders, and there is also one for mechanics. Fairs are held in the early part of March, for seed-corn and the hiring of farm servants; in April and October, for the hiring of household servants; in June, for cattle, chiefly milch-cows; and in July, for the sale of lambs. The post-office has a good delivery; and facility of communication is afforded by turnpike-roads, of which one, on the east of the river Leader, to Greenlaw, Dunse, Berwick, Coldstream, and Kelso, passes for six miles, and another, on the west, to Melrose and Jedburgh, passes for eight miles, through the parish. Lauder is supposed to have been erected into a ROYAL BURGH by charter of William the Lion, in the beginning of the thirteenth century; and after the loss of the original documents during the border warfare, the inhabitants received from James IV. in 1502 a new charter, which was confirmed in 1533. The government is vested in two bailies and fifteen councillors. The burgesses possess a common of 1695 acres, divided among them in proportion to their number, and are entitled to freedom of trading, exemption from customs, and other privileges. In this burgh the magistrates exercise but little either of civil or criminal jurisdiction; of the former, there are scarcely any cases of importance on record, and the latter extends only to trifling misdemeanors. The gaol, indeed, is not adapted for permanent confinement. In front of the town-hall was an ancient cross, the site of which is marked by a radiated pavement. Lauder is associated with Haddington, Dunbar, North Berwick, and Jedburgh, in returning a member to the imperial parliament.

The PARISH, which is one of the most extensive in the county, is about thirteen miles in extreme length from north to south, and from eight to nine miles in extreme breadth; but being divided by an intervening portion of the parish of Melrose, its length is in fact only eleven miles and a half. It comprises an area of nearly fifty-eight square miles, and the number of acres is estimated at 37,500, of which 12,000 are arable, 600 woodland and plantations, and the remainder chiefly hill pasture and waste. The surface is diversified with hills, of which the Lammermoor range forms the northern boundary of Lauder; and within the limits of the parish the highest of that range is the Lammerlaw, 1500 feet above the level of the sea. The valley of the Leader, the richest portion of the lands, is from one to two miles in breadth; and on each side of the river, towards the south-east, are ranges of hills of moderate height, cultivated to their summits. The Leader has its source in the union of two streams issuing from the Lammermoors about four miles above the town, and after a

winding course of nine or ten miles through the beautiful valley to which it gives name, it falls into the Tweed at Drygrange; it abounds with trout, and is much frequented by anglers. There are springs of excellent water in different parts.

In this parish the SOIL is various; in the valley, deep, rich, and fertile; in the higher grounds, of lighter quality. The crops are, grain of all kinds, turnips and potatoes, and the several grasses; the system of agriculture is in a very advanced state, and great improvements have taken place under the auspices of the Lauderdale Agricultural Society, of which the Earl of Lauderdale is patron. The lands have mostly been well drained and inclosed, and the least productive have been much benefited by a plentiful use of lime. The farm-buildings are substantial; several of them are of superior order, and on some of the farms are threshing-mills driven by steam. The hilly districts afford good pasturage for sheep and cattle, of which considerable numbers are reared. The sheep are mostly of the Cheviot breed; but on two or three of the higher farms the black-faced kind are pastured, and on others, in the low lands, are some of the Leicestershire. In general the cattle are of the short-horned or Teeswater breed; but such of the farmers as do not rear a sufficient number to eat off their turnips, purchase young stock of the Angus and West Highland breeds. The plantations are of oak, ash, beech, elm, birch, poplar, willow, and larch, Scotch, and spruce firs, all in a thriving condition. The substratum here is principally greywacke; the rock is of good quality, and large quantities are raised both for building purposes and for mending the roads. The annual value of real property in the parish is £12,596. Thirlstane Castle, the seat of the Earl of Lauderdale, is beautifully situated northward of the town, on the banks of the river: the original building, Lauder Fort, erected by Edward I., was rebuilt by Chancellor Maitland, and enlarged and improved by the Duke of Lauderdale and the present earl. The mansion is a spacious and handsome structure, containing many stately apartments, and a large collection of paintings and family portraits; and is surrounded by a park tastefully laid out. Allanbank, to the west of the town, is a good residence, of modern date, with grounds of considerable extent, embellished with plantations.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Lauder, synod of Merse and Teviotdale. The minister's stipend is £272, with a manse, and a glebe valued at £18 per annum; patron, the Earl of Lauderdale. The church was erected in 1673, on the south-west side of the town, by the Duke of Lauderdale, to replace the original church, which he removed when he enlarged Thirlstane Castle; it is a plain cruciform structure, containing 773 sittings. A massive service of communion plate was presented to the church by the same noble family in 1677. There are places of worship for members of the Free Church and the United Presbyterian Church. Lauder parochial school is well attended: the master has a salary of £30, with a good house and garden; he also receives £5 from the corporation for the gratuitous instruction of poor children, and the fees average £70. There are three schools dependent solely on the fees, of which two are for females. Vestiges of a Roman road running through the parish towards Channekirk may be still traced:

near it are the remains of a military station; and on eminences to the north are vestiges of three round camps, having entrenches on the east and west sides, and fortified by double intrenchments. A similar camp is found at Tullius' or Tollis hill, on the northern extremity of the parish. Ancient coins have been found, among which were some inscribed with the names of Julius Cæsar, Lucius Flaminius, and others. There are also numerous tumuli, near which have been discovered fragments of military weapons.

Burgh Seal.

LAURENCEKIRK, a burgh of barony, and a parish, in the county of KINCARDINE, 9 miles (N. by W.) from Montrose, and 10 (N. E. by N.) from Brechin; containing 1904 inhabitants, of whom 1356 are in the burgh. This place, anciently called *Conveth*, derived its present name from the dedication of its original parish church to St. Laurence. The burgh, which was pre-

viously a very inconsiderable hamlet, owes its importance to Francis, Lord Gardenstone, a judge of the supreme court of session, who, about the year 1765, purchased the lands of Johnston and Blackiemuir, in the parish, which he greatly improved, and divided into inclosures by hedges and plantations. He laid out the plan of a village, and portioned off sites for the erection of houses: these, being leased on advantageous terms, soon attracted tenants; and in 1772 a thriving town had arisen, which, increasing in population, was erected in 1779 into a burgh of barony. The town consists chiefly of one street, about a mile in length, on the road from Perth to Aberdeen; the houses are well built, and to each is attached a portion of garden-ground, giving to the place a pleasingly-rural aspect. A public subscription library, originated by Lord Gardenstone, and to which he attached a small museum, still exists, but the number of volumes has materially diminished. The library of the clergy of the diocese of Brechin, founded chiefly by the late Bishop Drummond, and containing more than 1000 volumes, is deposited in the episcopal chapel in the town, and is accessible to persons of literary pursuits. Laurencekirk was erected into a free and independent burgh of barony by royal charter, vesting the government in a bailie and four councillors elected triennially by the burgesses, and granting the privileges of a weekly market and an annual fair. Every resident proprietor of a house and garden is qualified as a burghess. The jurisdiction of the magistrates in civil cases has not been clearly defined, and scarcely any such cases have been brought before them for decision; but in criminal cases their jurisdiction is exercised in petty delinquencies subject to small fines, though these have not in many instances been enforced. A treasurer, and a town-officer to whom the police is entrusted, are appointed by the magistrates. The courts are held in a handsome building the upper part of which is used as a masonic lodge: and a gaol, but seldom required, has been erected by the Prison Board.

The weaving of linen by hand-looms is carried on here, for the manufacturers of Aberdeen, Montrose, and Brechin, who supply the yarn. The manufacture of snuff-boxes of wood, also, for which the place has long

been celebrated, is still carried on, by the son of the original inventor, Mr. Stiven: the boxes are remarkable for their beauty, and the peculiar construction of the hinge, the principle of which has recently been adopted in the binding of valuable books or prints in wood. The establishment of a weekly market has been attempted, but hitherto without success, except for the sale of grain, which, when purchased for exportation, is sent to Montrose and Gourdon. Fairs are held on the third Wednesday in January, O. S., for cattle, and for hiring servants; the last Thursday in April, for cattle; the 27th of May, or the day after Whitsunday, O. S., for hiring servants; the Thursday after the third Tuesday in July, O. S., for cattle and horses; the first Thursday in November, for cattle; and the 23rd of November, or the day after Martinmas, O. S., for hiring servants. Besides these, a monthly market during the winter, for sheep, cattle, and horses, has been established, commencing on the second Monday after the first November fair, and continuing to be held on the second Monday of each month until the April fair. The post-office, to which Auchinblae is attached as a sub-post-office, has a tolerably good delivery; and facility of communication with Montrose, Aberdeen, Perth, Dundee, and the city of Edinburgh, is afforded by railway, the Aberdeen line having a station here. There are also roads kept in excellent repair.

The PARISH, which is situated in the eastern portion of the valley of Strathmore, is about four miles in length, and varies from less than one mile to almost three miles in breadth, comprising an area of 5381 acres, of which 5000 are arable, sixty pasture, 220 woodland and plantations, and the remainder roads and waste. Its surface rises gradually towards the north and south, but is not diversified with hills or striking inequalities, the highest ground in the northern portion attaining only an elevation of 220, and in the southern of 450 feet. The river Luther, which intersects the parish in a direction from north-east to south-west, has its source in the lower range of the Grampian hills, and falls into the North Esk, receiving in its progress numerous burns both from the north-west and south-east. In the district south-east of the Luther the soil is a deep clay loam of great fertility; on the banks of the river are large alluvial deposits of clay and sand; and in the lands north-west of the river the soil is of inferior quality, generally cold, and comparatively sterile. The crops consist of oats, barley, small quantities of wheat, also peas, beans, potatoes, and turnips, with the usual grasses: the system of agriculture is improved; the lands have been drained and partly inclosed, and a wide tract of unprofitable marsh has been reclaimed in consequence of a new cut having been made for the Luther. In general the farm-houses are roofed with slate. Great attention is paid to the management of the dairy-farms, and large quantities of butter and cheese are sent to Montrose. The cattle are chiefly of a mixed breed between the Angus and the Aberdeenshire; a great part of them are fed for the London, Glasgow, and Edinburgh markets, and the remainder are sold as drove stock. The horses used for agriculture are chiefly reared in the parish, and resemble the Lanark and Clydesdale breeds. The plantations, mostly of recent growth, consist of larch, spruce, and Scotch firs; and in the hedge-rows are some good specimens of ash, elm, beech, oak, birch, and sycamore, of older date.

There is nothing peculiar in the geology of the parish. Sandstone and freestone were formerly quarried, and Johnston Lodge was erected with stone raised from the quarries; but the working of them has been discontinued since the opening of the Laurieston and Forth quarries, in the adjacent parishes of St. Cyrus and Garvock, from which stone of finer texture and more durable quality is raised. The annual value of real property in Laurencekirk is £7388. Johnston Lodge is a handsome modern mansion, commanding a fine view of the valley of Strathmore and the Grampian hills.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is averaged at £243, including £10. 4. 6., the rent of some land attached to the living from time immemorial; and there is a manse, with a glebe valued at £40 per annum: patrons, the Principal and Professors of St. Mary's College, in the University of St. Andrew's. Laurencekirk church, erected in 1804, and enlarged in 1819, is a plain structure containing 766 sittings. An episcopal chapel was erected, and endowed chiefly, by Lord Gardenstone, and there are neat places of worship for Independents and members of the Free Church. The parochial school is attended by about seventy children; the master has a salary of £20, with ten bolls of meal, and an allowance of £10. 2. in lieu of house and garden. His school fees average £30 per annum; and he also receives £3. 6. 8., the interest of a bequest by Sir Alexander Falconer, of Glenfarquhar, ancestor of the present Earl of Kintore, for teaching seven children gratuitously. The parochial library contains nearly 300 volumes, chiefly for young people. There are few monuments of antiquity in the parish; but coins have been found at various times, among which was a Roman coin with the heads of two emperors, Aurelius on one side and Antoninus on the other. About forty large silver coins, mostly Spanish, and in good preservation, bearing dates from 1616 to 1623, were found about thirty or forty years since on the farm of Northhill. Thomas Ruddiman, the grammarian, was master of the parochial school of this place from 1695 till 1700; and Dr. Beattie, author of *The Minstrel*, was a native of the parish. The lands of Halkerton give the title of Baron to the Falconer family, Earls of Kintore.

LAURIESTON, a village, in the parish of BALMAGHIE, stewardry of KIRKCUDBRIGHT, $6\frac{1}{2}$ miles (W. N. W.) from Castle-Douglas; containing 275 inhabitants. This place takes its name from William Kennedy Laurie, Esq., proprietor of the lands on which it is built. It appears to owe its origin to the resort of numerous invalids, attracted by the medicinal virtues of a powerful chalybeate spring at Lochinbreck, and for whose accommodation a commodious inn had been erected near the spot. The water, which is perfectly transparent, is strongly impregnated with sulphate of iron and carbonic acid, and has been found efficacious as a tonic, and in complaints of the stomach arising from obstruction and debility. In cases of ague, also, and in obstinate intermittents, it has proved a complete restorative, when bark and other medicines have been unavailing. The road from Kirkcudbright to New Galloway passes through the village. Lochinbreck is one of five considerable lochs in the parish; it abounds in trout, and hence its name, signifying "the lake of trout". The members of the Free Church have a place of worship. The principal parochial school

is situated here, and a dwelling-house has been lately erected for the master by the heritors.

LAURIESTON, for a time an ecclesiastical district, on the south side of the river Clyde, and within the jurisdiction of the city of GLASGOW, county of LANARK. This district was formed of a portion of the parish of Gorbals adjoining the suburb of Tradeston. It was in the presbytery of Glasgow, synod of Glasgow and Ayr, and the patronage was vested in the Church-Building Society of Glasgow: the church was built upon a site purchased by the commissioners in Warwick-street.

LAURIESTON, a village, in the parish of FALKIRK, county of STIRLING, $1\frac{1}{2}$ mile (E.) from Falkirk; containing 1198 inhabitants. This place, originally called *New Merchiston*, from Francis, Lord Napier, of Merchiston, on whose lands it was built in 1756, received the name of Laurencetoun, of which its present appellation is a contraction, from Sir Laurence Dundas, a later proprietor of the estate, and whose descendant, the Earl of Zetland, is the existing lord. The village is pleasantly situated on the road to Edinburgh, and consists of a handsome square, and several streets intersecting each other at right angles; the houses are well built, and of modern appearance, and from its occupying an elevated site the surrounding scenery is extensive. The inhabitants are chiefly employed in weaving for the manufacturers of Glasgow, and in the manufacture of nails, which is carried on to a considerable extent. There are numerous well-stored shops; and many persons are engaged in the various trades requisite for the accommodation of the adjacent district, and for the traffic which the place derives from its position on a public thoroughfare. A post-office under that of Falkirk has been established here, and there is every facility of communication with the neighbouring towns. In the village is a place of worship for Reformed Presbyterians; and of several schools, one was erected by the Dundas family.

LEADHILLS, formerly an ecclesiastical parish, in the parish of CRAWFORD, Upper ward of the county of LANARK; containing about 1200 inhabitants, of whom 950 are in the village, 18 miles (W. N. W.) from Moffat. The village derives its name from its situation in a romantic valley surrounded by hills that abound with mineral produce, of which the principal is *lead-ore*; the hills are generally covered with heath, and towards the south-east form a lofty ridge, well known as the Louthers, rising to an elevation of nearly 2500 feet above the level of the sea. From the summit of this ridge is an imposing and richly-diversified prospect, embracing the Solway Firth, the Isles of Arran and Man, and the mountains of Skiddaw, Ben-Lomond, and Helvellyn, with the whole range of the Pentland hills. The village is of peculiar appearance, the houses, which are chiefly inhabited by persons employed in the mines, being placed on eminences, or a kind of terraces. The principal mansion of importance is the Hall, a seat of the Earl of Hopetoun's, whose family take their title from this place, formerly called Hopetoun; it is an ancient structure, and one of the wings has been converted into a commodious chapel. The house, also, belonging to the representative of the Scottish Mining Company, is a handsome building in tastefully-disposed pleasure-grounds, surrounded by thriving plantations of beech, larch, mountain and common ash, elm, and other trees. A library established in 1741 by Allan Ramsay the poet, a native

of Leadhills, is well supported, and has a collection of nearly 2000 volumes. The lands near the village are not by nature fertile; but a considerable part of them has been brought into profitable cultivation by spade labour, and good crops of potatoes, with hay and summer grass, are raised by the industry of the persons working in the mines, to whom the proprietor gives portions of land rent-free.

The mineral district extends about three miles in length and two miles and a half in breadth, and consists of a substratum of greywacke and greywacke-slate combined with transition clay-slate, in which most of the mineral ores are deposited. The chief veins of lead run in a north and south direction, with a dip of about one foot in three, and have produced large quantities of ore. Lead-mines are believed to have been wrought here by the Romans, an opinion partly confirmed by the fact of one of their principal roads having passed through the parish, and by the remains of Roman camps, several of which may be distinctly traced in this and the adjoining parish. The chief mines at present in operation are those of High-Work, Meadow-Head, and Brow: that of Susannah, after having been worked to the depth of 140 fathoms, has been discontinued, the price of lead being insufficient to remunerate the expense of sinking to a greater depth. The average produce of the mines is 500 tons annually, valued at about £8000. The common galena ore is that chiefly raised; but there are several veins of green, yellow, and black ore, sulphate and sulpho-tricarbonates of lead, and phosphate and earthy lead ores; and copper and iron pyrites, malachites, azure copper-ore, grey manganese, blende, and calamine are also found. In the various veins are likewise discovered quartz, calcareous and brown spar, and sparry ironstone. Silver is found in the lead-ore, in a very small proportion; and gold occurs in all the streams that intersect the district. In the sixteenth century many men were, by permission of the Scottish regent, employed in searching for gold, of which considerable quantities were collected, and sent to Edinburgh, to be coined, and manufactured into different ornaments. Specimens of native gold, weighing some ounces, were at times discovered; but of late few have been found weighing more than half an ounce, and these are now of very rare occurrence. There are also considerable lead-works at Wanlockhead, in Dumfriesshire, not more than a mile distant from this place. A post-office has for about a century been established in the village; and facility of intercourse with the neighbouring towns is maintained by good roads. Fairs are held on the second Friday in June, and the last Friday in October; the principal articles sold are provisions and merchandise, for the supply of the inhabitants. Leadhills was separated from the parish for ecclesiastical purposes under an act of the General Assembly in 1834, but in consequence of the subsequent abrogation of that act, it has now ceased to exist as a *quoad sacra* parish: the minister's stipend is paid by the Earl of Hopetoun and the Scottish Mining Company, with a house and garden. The church is adapted for a congregation of about 850 persons. A school has been established for more than a century, and is attended by 100 children; the master receives a salary from the earl and the company.

LECROFT, a parish, partly in the county of STIRLING, but chiefly in that of PERTH, 4 miles (N. W.) from

Stirling; containing 513 inhabitants. Some antiquaries identify this place with the ancient city on the west bank of the river Allan, about a mile above its confluence with the Forth, and which is called by Ptolemy *Alauna*; and they suppose that the Roman road to Ardoch passed through the lands of Keir, in this parish. There are still remaining here vestiges of one of a chain of forts designated Keirs, all extending along the north side of the vale of Monteith, and thought to have been erected by the Caledonians, to watch the movements of the Roman army. The sites are usually marked out by the mounds of loose stones, now covered with grass, on which they stood. Some of the forts, however, have been wholly destroyed to furnish stones for building inclosures and for various other purposes. The lands of Keir, according to records still extant, formed part of the possessions of the Princess Marjory, sister of Robert Bruce, which he surrendered to the king in favour of William de Monteith. In the vicinity of the church is a hill where the ancient barons held their courts, and near it another called Gallow Hill, the place for the execution of criminals.

The PARISH is watered on the south-west by the river Teith, and on the east by the river Allan, both tributaries of the Forth, by which it is bounded on the south. It is nearly in the form of an equilateral triangle, and comprises by measurement 3102*a*. 1*r*. 24*p*., of which 2553 acres are arable, 30 pasture, 451 woodland and plantations, 18 acres peat-moss, and the remainder homesteads, roads, and waste. The surface is intersected by a high bank or ridge, stretching in a direction parallel with the north side, and which divides the parish into two distinct portions, the lower being rich carse land, and the more elevated of a dry light soil. From this bank is obtained an extensive and varied prospect of the adjacent country, including, in the foreground, the waters of the Teith, the Allan, and the Forth, flowing in one united stream, between wooded banks, through a tract of fine open campaign studded with well-cultivated farms having hedge-rows interspersed with stately trees. On the opposite side of the valley appear the castle of Stirling, occupying the summit of a precipitous rock; the rocks of Craighforth and Abbeycraig; the tower of Cambuskenneth Abbey; the bridge of Stirling; and the meadows on the banks of the Forth, adorned by handsome villas and pleasure-grounds; with the hills of Falkirk in the distance. The Ochils are seen on the east, the mountain of Benvoirlich on the north, and Ben-Ledi and Ben-Lomond on the west. The SOIL of the carse land is extremely rich, and that of the uplands, though of lighter quality, is fertile; the crops are wheat, barley, oats, peas, beans, potatoes, and turnips, with flax, rye-grass, and clover. The system of agriculture is highly improved, the farm-buildings are generally substantial and well arranged, and the woods and plantations thriving. In this parish the substratum is a stiff clay, resting chiefly upon a bed of hard rock; and from an experiment lately made, it has been ascertained that both coal and ironstone exist, but in seams too thin to remunerate the trouble of working them. The annual value of real property in Lecroft is £2227.

Keir House, the seat of Archibald Stirling, Esq., the principal landowner, is a spacious and handsome mansion, to which two wings have been added within the last twenty or thirty years. It is situated nearly in the

centre of the parish, and contains numerous apartments splendidly decorated, and a picture-gallery seventy feet in length, having a valuable collection of paintings by the first masters; the grounds are tastefully laid out, and the gardens and hot-houses are extensive and productive. A bleaching establishment at Keirfield, conducted upon the most scientific principles, affords employment to nearly 100 persons, under the immediate superintendence of the proprietor. There is a flour-mill in operation, as well as a mill for grinding oats and barley, both containing machinery of the most approved kind driven by the river Allan; and a fishery, chiefly for salmon-trout, produces a rental of about £20 per annum. The great road from Stirling to Perth, Aberdeen, and the Highlands passes through the parish. Ecclesiastically Lecropt is within the bounds of the presbytery of Dunblane, synod of Perth and Stirling. The minister's stipend is £147. 13. 8., with a manse, and the glebe is valued at about £16 per annum; patron, Mr. Stirling. Lecropt church, built in 1827, is a handsome structure in the later English style, with a square embattled tower embellished with sculptured figures of some of the Scottish reformers, in high-relief. The parochial school embraces a very complete course of classical and commercial instruction; the master has a salary of £34, with a house and garden, and the fees, averaging £12 per annum. An infants' school is supported by the Stirling family. Principal Haldane, of the university of St. Andrew's, is a native of this parish.

LEEDS, NEW, a village, in the parish of STRICHEN, district of DEER, county of ABERDEEN, 12½ miles (W. N. W.) from Peterhead; containing 203 inhabitants. This village lies in the eastern extremity of the parish, on the high road from Aberdeen to Fraserburgh.

LEETOWN, a village, in the parish of ERROL, county of PERTH; containing 112 inhabitants. It is the largest of three small villages or hamlets in the parish, all distant from the village of Errol: the population is chiefly agricultural.

LEGERWOOD, a parish, in the county of BERWICK, 5½ miles (S. E. by E.) from Lauder; containing 571 inhabitants. The name of this place, signifying in the Saxon "the light or hollow wood," is supposed to have been derived from the situation of its church in a spot almost surrounded by woods. At one time, the whole or part of the lands belonged to the family of Stewart, to whom they were confirmed by charter of Malcolm IV., King of Scotland, in 1160. Legerwood is about six miles in length and four and a half in breadth, is bounded on the west by the river Leader, and comprises 8430 acres; 3470 acres are arable, 1800 meadow and pasture, 400 woodland and plantations, and the remainder moorland and hill pasture. The surface is generally elevated, and is traversed in the northern part by three ridges of hills, of which the highest, Boon Hill, is nearly 1100 feet above the level of the sea; in the southern part is also a hill of considerable elevation, rising by a gentle acclivity from the east. The scenery is diversified with valleys, and enriched with woods of ancient growth, and thriving plantations. The Eden, a rivulet which has its source in the Boon Hill, pursues a winding course through the parish, and falls into the Tweed below Newton-Don. Numerous smaller streams, tributaries to the Leader and the Eden, rise in the higher grounds, and in parts of their course exhibit some very pleasing scenery; and

there are also many springs, affording an excellent supply of water. A lake of considerable extent, on the lands of Corsbie, has been drained, and partly converted into meadow land.

The SOIL is very various in different parts of the parish, but upon the whole is tolerably fertile, and, under good management, produces favourable crops of oats, barley, beans, potatoes, and turnips. The system of agriculture is in an advanced state, and the five-shift rotation generally practised; the lands are drained and inclosed; the farm houses and offices are substantial and well arranged, and all the more recent improvements in implements have been adopted. Much attention is paid to live stock, and considerable numbers of sheep and cattle are pastured; the sheep are of the Leicestershire and Cheviot breeds, with an occasional cross between the two, and the cattle chiefly the short-horned. The little natural wood consists of oak, ash, alder, birch, and hazel: the plantations are larch, spruce, and Scotch firs, with a small proportion of hard-wood; they are well managed, and appear to be in a flourishing state. In this parish the substrata are mainly sandstone of the secondary formation, greywacke, and greywacke-slate. Small portions of copper-ore have been discovered on the lands of Dods farm, supposed to have been washed from the soil by rain; and particles of copper have been found in various parts of the parish. The Boon Hill is composed of a species of conglomerate; and a quarry has been opened, supplying materials for the roads, for which use it is well adapted. Facility of communication with the nearest market-town and other places in the vicinity is afforded by good roads, of which those from Kelso and Hawick to Edinburgh pass, the former on the east, and the latter on the west, side of the parish: there are also commodious bridges over the different streams, kept in excellent repair.

Ecclesiastically the parish is in the presbytery of Lauder, synod of Merse and Teviotdale, and in the patronage of Henry Ker Seymer, Esq.; the minister's stipend is £205. 4. 6., with a manse, and a glebe valued at £15 per annum. Legerwood church, an ancient edifice, repaired in 1717 and 1804, and enlarged in 1837, is a substantial and neat building, adapted for a congregation of about 300 persons. The parochial school affords instruction to about seventy children; the master has a salary of £28, with £20 fees, and a house and garden. Several children of the parish, on account of their distance from this school, attend the schools of Westruther and Melrose. A small library, supported by subscription, is gradually extending its collection; and the parish regularly contributes to the various missionary schemes of the General Assembly. On a small mount, richly wooded, and formerly surrounded by the lake of Corsbie, which has been drained, are the remains of an ancient castle, the residence of the lords of the barony: there are also remains of a baronial castle at Whitslaid. The date of the foundation of these castles is unknown; but they are thought to have been erected in the reign of James II. Upon the summits of Legerwood and West Morriston Hills are traces of ancient camps, and there are vestiges of another on Birkin-side Hill; but they have all been much defaced by the plough, and have nearly disappeared under the modern improvements in cultivation. On the Boon Hill is an upright shaft of sandstone, rising from a block of the same material; it is called

Dods Corse Stane, and is said by some to be an ancient cross pointing out the site of a market formerly held here, whilst others say that the stone denotes the place where a duel was once fought.

Burgh Seal.

LEITH, a burgh and a sea-port town, in the county of EDINBURGH, $1\frac{1}{2}$ mile (N. by E.) from Edinburgh, and 400 (N. N. W.) from London; the parishes of North and South Leith together containing 28,268 inhabitants. This place, which is of considerable antiquity, formerly belonged to the abbey of Holyrood, and, in a charter of David I. to the

monks of that establishment, is noticed under the designation of Inverleith, from its position near the influx of the river or Water of Leith into the Firth of Forth. Its earlier history is almost identified with that of the city of Edinburgh, of which it forms a kind of suburb, and within the jurisdiction of which, notwithstanding its charter of incorporation, it was until recently essentially included. Previously to the commencement of the fourteenth century, though possessing every advantage of situation, it had acquired little importance as a commercial town: in 1329, its harbour, and the mills which had been erected, were obtained by the corporation of Edinburgh, by grant from Robert Bruce, on the payment of fifty-two merks annually. In the year 1398, Sir Robert Logan, lord of Restalrig, and superior of the town, resisted the claims of the corporation to the banks of the river of Leith, which they consequently bought of him for a very considerable sum; and in 1561 the superiority of the burgh, which had been sold by his family to Mary, queen of James V., then regent, for 10,000 merks, was purchased from Mary, Queen of Scots, by the town-council of Edinburgh, by whom the inhabitants of Leith were held in a state of abject vassalage. By act of the corporation, they were restrained from carrying on any trade, and from building warehouses for the reception of merchandise landed at the port, which, immediately on its arrival, was forwarded to Edinburgh. They were also prohibited from keeping shops of any kind, and from opening inns or houses of entertainment for strangers, or even for passengers arriving by the vessels; nor was it permitted that any merchant in Edinburgh should enter into partnership with an inhabitant of Leith, under a penalty of forty shillings and forfeiture of the freedom of the city for one year.

In 1313, and also in 1410, the town suffered severely from the English, who burnt all the ships in the harbour; and in 1488, after the battle of Bannockburn, it was seized by the insurgent nobility who had taken arms against James III. During their occupation of it the Firth of Forth was scoured by the ships of Sir Andrew Wood, the firm adherent of that monarch, with whose successor, James IV., he afterwards held an interview at this place. The town was plundered in 1544 by the English forces under the Earl of Hertford, who had landed at Royston with an army of 10,000 men, and who, after securing the whole of the vessels in the harbour, and leaving 1500 of his soldiers here, advanced to Edinburgh, on his return from which, previously to

the embarkation of his troops, he set fire to Leith. The place suffered a similar calamity in 1547, from the same leader, then Duke of Somerset, who seized thirty-five vessels at that time in the Firth. In 1549, the French General D'Esse landed at Leith with a force of 6000 men, for the assistance of the queen regent against the lords of the congregation, and strongly fortified the town, which the lords fruitlessly endeavoured to take by escalade, but which subsequently surrendered by capitulation. It was besieged by the English in 1560; and two of the mounds raised by the troops on that occasion, and from which they discharged their artillery, are still to be seen on the Links. In 1561, Mary, Queen of Scots, upon her return from France, landed here on the 20th of August, and after remaining a few hours to rest from the fatigue of the voyage, proceeded to Edinburgh, where she was received with joyful acclamations. Not long afterwards, the fortifications, which consisted of an octangular rampart, defended with strong bastions at the angles, were demolished by order of the corporation of Edinburgh; but the town was partly fortified by the Earl of Morton in 1571, when the regency was held by the Earl of Lennox, who made it his residence, and held his court here for some time, during which the misunderstandings between him and Morton frequently involved the inhabitants in all the calamities of civil war. In 1590, James VI. landed here with his queen, Anne of Denmark; he arrived in the roads on the 1st of May, but was compelled, from want of accommodation in the town, to remain on board till the 6th, during the preparation of Holyrood palace for his reception.

At the commencement of the war in the reign of Charles I., it was proposed again to fortify Leith; and considerable progress was made in the works by numerous volunteers who gratuitously gave their assistance, persons even of the higher classes undertaking the performance of most laborious tasks. In 1643, the Solemn League and Covenant was zealously subscribed by the inhabitants, who had almost exclusively embraced the doctrines of the reformed religion. During the continuance of the plague in 1645, not less than 2430 persons fell victims to its ravages, and, for want of room in the churchyards, were buried in the Links, where immense quantities of human bones, wrapped in blankets, have at various times been discovered. In 1650, the town was taken possession of by the army of Cromwell, who made it their head-quarters, and levied monthly contributions on the inhabitants. After Cromwell's return to England, General Monk, his commander-in-chief, built a strong fortress here called the Citadel, at an expense of £10,000; but the site of this fortress, which was in the form of a pentagon, with bastions at the angles, and having an entrance towards the east, is now occupied by the buildings of the docks and the Mariners' church. During the residence of Monk in the town, he induced several English families to settle here, who contributed greatly towards the establishment of its subsequent commercial prosperity.

In 1705, Capt. Green, of the *Worcester* East Indiaman, who had taken shelter in the harbour, was, by a singular incident, recognised as having committed murder and piracy on the crew of a Scottish vessel off the coast of Malabar, and, together with three of his crew who had been concerned in that transaction, was hanged within flood-mark, on the shore. During the enterprise of the

Pretender in 1715, Brigadier Mc Intosh of Borlone, with a party of his adherents, took possession of the Citadel, which he occupied for some time ; but being pursued by the Duke of Argyll, he evacuated the post in the night, and after plundering the custom-house, and liberating the prisoners in the gaol, retreated over the sands at low water. In 1779, a party of Highland recruits who had enlisted into the 42nd and 71st regiments refusing to embark on board the transport vessels in the harbour, a serjeant with a detachment of soldiers was sent from Edinburgh Castle to enforce order, when a violent conflict arose, and the serjeant being twice severely wounded by the Highlanders, his party fired upon the mutineers, of whom twelve were killed, and twenty severely wounded. In the same year, the appearance of the notorious pirate, Paul Jones, with three armed vessels, excited some alarm ; and a battery of nine guns was erected to the west of the Citadel, to protect the town from the threatened attack : but a storm which arose, dispersing the vessels, delivered the inhabitants from all further apprehension. The town was anciently celebrated for its public games, of which golf was the most prevalent ; and it was while he was engaged in this sport, on the Links, that Charles I. was informed of the Irish rebellion, when he instantly left the ground, and on the following day returned to London. Races were formerly held on the sands, under the patronage of the corporation of Edinburgh, who annually gave a purse, and attended them in their habits of ceremony ; but in 1816 they were transferred to the Links of Musselburgh, where they are still held, and numerous attended. George IV., on his visit to Scotland in 1822, arrived in the Leith roads on the 14th of August, and on the following day landed at the harbour, and was received by a vast concourse of the nobility and gentry, attended by the civic functionaries, who escorted him from the town to the palace of Holyrood House. Leith was also visited by Her present Majesty, when making a tour through her Scottish dominions, in September 1842 ; the visit was paid on the 3rd of that month, and on the auspicious occasion the provost and magistrates presented a loyal address to the queen, then entering the burgh, from Dalmeny Park, on her way to Dalkeith. A triumphal arch had been erected, and every other means adopted to testify the joyous feelings of the inhabitants.

The town is situated on the south side of the Firth of Forth, at the influx of the Water of Leith. It is of considerable extent, and has within the last few years been greatly improved by the erection of several spacious and well-formed streets, crossing each other at right angles. The more ancient part, situated between Kirkgate-street and the river, consists chiefly of narrow lanes and alleys of mean houses, inhabited only by persons of the lowest order ; but that portion of the town which is of more modern date is uniformly built, containing handsome houses ; and the public buildings are of elegant character. Kirkgate-street, in which are the church of South Leith and the Mariners' Hospital, forms a continuation of Leith Walk (a noble line of approach from Edinburgh), and contains several remnants of antiquity, among which was till lately the mansion of the Balmerino family, now demolished, where Charles II. slept on the night of his arrival in Scotland by invitation from the Scottish parliament, in 1650. Other houses are said to have been the occasional residence of the queen regent and of

Oliver Cromwell. Parallel with Kirkgate-street is Constitution-street, a handsome and uniform range of buildings, joined at one extremity by St. Bernard's street, from which Baltic-street, leading into Salamander-street, branches off. Great Junction street, conducting to the fort, is a spacious avenue ; and there are various other regular and well-formed streets. The town is lighted with gas, and amply supplied with water. In 1846 an act was passed for regulating the repair of the roads and streets within the town.

Two public subscription libraries, containing extensive collections of interesting volumes, are well supported. Card and dancing assemblies take place in an elegant suite of rooms in the Exchange Buildings in Constitution-street, where also are held the meetings of the Philharmonic Society, established in 1831, concerts being given every Wednesday evening from the commencement of October till the end of April. In the same edifice are the library and lecture-room of the mechanics' institution. The Exchange Buildings were erected at an expense of £16,000, and form a spacious structure in the Grecian style of architecture, consisting of a projecting centre and two slightly-projecting wings. In the centre is a stately portico of four Ionic columns, rising from a rusticated basement to the roof, and supporting an entablature and cornice surmounted by a triangular pediment ; the wings are also embellished with Ionic columns, between which are entrances to other parts of the building. The interior contains the assembly and concert room, with card, tea, and supper rooms adjoining, a library and reading-room, the lecture-room for the mechanics' institution, already noticed, and the post-office, in addition to the various offices and apartments for the purposes of the exchange. On the Links, behind Constitution-street, are the Seafield baths, to which is attached an hotel, the whole erected in 1803, at an expense of £8000, by a proprietary of £50 shareholders, and replete with every accommodation. At Leith Fort, to the west of the custom-house, are the artillery-barracks, a spacious range. The ancient stone bridge across the Water of Leith, erected by Robert Ballendean, abbot of Holyrood, has been removed, and a handsome bridge of stone erected a little above the town ; there are also two bridges of wood over the river, affording facility of communication between the districts of North and South Leith.

The manufactures carried on in the town and its vicinity are various and extensive. They include those of paints and colours, prussiate of potash, soap, candles, ropes, cordage, sailcloth, and bottles : there are several breweries, a distillery, a large establishment for the refining of sugar, another large establishment for cooking, and preserving in tin cases, all kinds of fresh meat and vegetables, for naval stores, &c. ; some extensive saw-mills, and cooperages ; some iron-foundries, and other works. The foreign trade of the port is chiefly with the North of Europe and the West Indies, in addition to which it has an important coasting-trade ; the principal imports are wine, tobacco, timber, hemp, and tallow. The number of vessels registered as belonging to the port, in 1843, was 263, of the aggregate burthen of 27,897 tons : the number which in that year entered inwards, was 266 British, of 38,647 tons, and 364 foreign, of the burthen of 33,671 tons ; and the amount of customs was £628,008. In 1848, the number of registered

vessels was 211, and the amount of customs £563,452. There are three companies engaged in the trade with London, in which they collectively employ twenty-two vessels; five vessels are employed in the trade with Hull, four in that of Newcastle, five in that of Aberdeen, four in the trade with Inverness, several also with Greenock, Wick, Dundee, Stirling, Liverpool, and other ports, and seven vessels in the Greenland trade. Leith harbour, upon the improvement of which very considerable sums have been expended, is under the management of commissioners appointed by act of parliament in 1838. The entrance is defended by a martello tower: at the mouth is a lighthouse with reflecting lamps; and another, with a revolving light, has been erected on the small island of Inch-Keith, in the middle of the Firth, about four miles from the shore. The present docks were commenced in 1800, and completed in 1817, under the superintendence of the late Sir John Rennie, civil engineer, at a cost of £285,000, of which £265,000 were borrowed from government by the corporation of Edinburgh. The two wet-docks are each 250 yards in length and 100 yards in breadth; they are protected from the sea by a strong wall, and are capable of containing 150 ships of ordinary size. On the north side are three graving-docks, each 136 feet long and seventy feet wide, with an entrance thirty-six feet in breadth; and on the south side of the wet-docks is a range of warehouses, for the bonding of grain, foreign wines, and other articles of merchandise. The pier has been greatly improved at the joint expense of government and the corporation of Edinburgh: the Leith roads afford good anchorage for vessels of any burthen; and of the vessels employed in the coasting-trade, the greater number lie in the harbour and the remainder in the wet-docks. Ship-building is carried on to a considerable extent, and there are several yards for that purpose, from which various fine steamers and other vessels have been launched: in 1840, a government steamer and a merchantman of very large dimensions were built here.

The custom-house, situated on the north side of the harbour, and at the west end of the lower drawbridge, is an imposing structure in the Grecian style of architecture, erected in 1812, at a cost of £12,617. In the centre of the principal front, which has a slight projection, is a receding portico of two lofty columns, rising to the roof, and supporting a triangular pediment, in the tympanum of which are the royal arms: the wings also project slightly beyond the main line of the building. The whole edifice is crowned with a handsome entablature and cornice surmounted by a parapet panelled in compartments, and relieved in the intervals with an open balustrade. The Leith Branch of the National Bank, in St. Bernard's street, is a neat building, likewise in the Grecian style, two stories in height: the centre of its main front has a semicircular projecting portico of four Ionic columns, sustaining an entablature and cornice continued round the building, and surmounted by a graceful dome; and the front on each side of the portico is embellished with pilasters of corresponding character. In the Tolbooth wynd is the market-place, which is well arranged, provided with convenient stalls, and plentifully supplied with fish and with provisions of all kinds. Facility of communication is maintained with Edinburgh and the neighbourhood by roads kept in excellent order; and a branch of the North-British railway, four

miles in length, has its terminus here, contiguous to which are spacious inclosed yards belonging to the proprietors of the several collieries in the vicinity, whence the inhabitants are chiefly supplied with coal. In July 1844 an act was obtained for the extension of the Edinburgh and Trinity-pier railway to Leith and to Granton-pier: the line belongs to the Edinburgh, Perth, and Dundee Railway Company.

The BURGHS, under a succession of charters from the time of David I. to that of Charles II., by which king the charters were recited and confirmed, was till recently subordinate to the corporation of Edinburgh. Its government was vested in one of the magistrates of that city, who had the title of Admiral of Leith, and in two resident bailies chosen from the inhabitants of Leith by the Edinburgh town-council. Under the provisions of the Municipal act of the 3rd and 4th of William IV., however, the burgh affairs are entrusted to a provost, four bailies, a treasurer, and ten councillors, exercising jurisdiction independently of Edinburgh. There are four principal chartered incorporations, viz., the Shipmasters, or the Corporation of the Trinity House, the Merchants' Company, the Maltmen, and the Trades. Of these the last is subdivided into the several crafts of wrights, coopers, hammermen, bakers, tailors, cordicrs, fleshers, barbers, and weavers, each of which sends a member to the association of conveners, also deemed a separate corporation. The freedom of the burgh is obtained by entrance into one of the four bodies, for which the fees vary extremely according to the age of the person; in some, from £50 to £150 for strangers, about half that sum for sons and sons-in-law of freemen, and for apprentices from £20 to £30: in other companies the fees are very inconsiderable. The provost is admiral, and the four bailies are deputy-admirals, of Leith; they hold courts of admiralty, and, as magistrates of the burgh, courts for the determination of civil pleas. There is also a sheriff's court. The police of the town is under the superintendence of commissioners, consisting of the provost and magistrates of Edinburgh and Leith, the masters of the several corporations, and others chosen by inhabitants renting houses of £15 per annum. There is a separate police for the docks, appointed by the dock commissioners. An act of parliament was passed in 1848, to provide for the municipal and police government of the burgh, and for other purposes.

The Town Hall, erected in 1827, about the centre of Constitution-street, is a handsome building comprising convenient rooms for holding the sheriff and police courts, and offices for transacting the business of the police commission. The Trinity House, now called the *Mariners' Hospital*, situated in Kirkgate-street, was erected on the site of the ancient building designated Trinity Hospital, in 1817, at an expense of £2500. It is in the Grecian style, with a portico of two duplicated columns of the Doric order, surmounted by a balustrade, behind which is a Venetian window between duplicated columns of the same order, supporting an entablature and cornice, which are continued round the building, and are crowned in the centre by a triangular pediment having in the tympanum the emblems of navigation, well sculptured. On each side, the front is ornamented with pilasters, between which are handsome windows. In the hall where the masters hold their meetings are some good paintings, including portraits of the queen regent, Lord

Duncan, and others; and in another of the rooms is an ancient view of the town. *The Council Chambers*, built on the site of an ancient structure, form a remarkably neat and elegant building in the Norman style of architecture, comprising the burgh court-house, and several well-aired apartments for the confinement of prisoners. In conjunction with Portobello and Musselburgh, the burgh returns a member to parliament.

The parish of NORTH LEITH once belonged to the abbey of Holyrood, from which it was separated in 1606; and in 1630 the baronies of Newhaven and Hillhousefield were severed from the parish of St. Cuthbert, and annexed to this parish. It now extends rather more than a mile and a half along the shore of the Firth, and is about a quarter of a mile in average breadth, containing a population of 8492. The lands in the rural district are all inclosed, and, with the exception of a few acres of arable land, are laid out in gardens, and in pleasure-grounds and plantations attached to the villas with which the parish abounds. Towards Newhaven, the sea has made very considerable encroachments. Ecclesiastically the parish is within the bounds of the presbytery of Edinburgh, synod of Lothian and Tweeddale; patrons, the heads of families. The minister's stipend, including the vicarage tithes on fish, is £285, with an allowance of £60 in lieu of manse, and a glebe valued at £394 per annum, subject to deductions for repairs. North Leith church, erected by the heritors in 1815 at an expense of £9000, and situated to the south-east of the fort, is an elegant though unpretending structure in the Grecian style of architecture, after a design by Mr. Burn, with a portico of four Ionic columns, supporting a triangular pediment. Above is a tower of three diminishing stages, of which the first is of the Doric, the second of the Ionic, and the third of the Corinthian order; and this tower is surmounted by a tasteful spire rising to the height of 158 feet from the pavement. The interior of the edifice is well arranged, and contains 1768 sittings. There are also places of worship for the Free Church and the United Presbyterian Synod. The parochial school is well conducted; the master has a salary of £21, with a house and garden, and the fees average about £8 per annum. Of several other schools, four are supported by subscription.

The parish of SOUTH LEITH, which is much more extensive than North Leith, includes the villages of Jock's-Lodge and Restalrig, the former quoad sacra district of St. John's, and part of the former quoad sacra districts of Glenorchy and Portobello; and contains a population of 19,776, of whom 3428 were in St. John's. It is about three miles in length, from the harbour of Leith, on the eastern bank of the river, to the confines of Portobello, and is about a mile and a half in breadth; comprising 1200 acres, and including the east side of Leith Walk, the Calton Hill, the North Back of the Canongate, and other portions of the environs of Edinburgh. The rural district, with the exception of the Calton Hill, consists of rich arable land in high cultivation, fertile meadows, extensive nursery-grounds, and vegetable, fruit, and flower gardens; it is thickly interspersed with stately mansions surrounded by plantations and pleasure-grounds, and with villas inhabited by opulent families. In South Leith the ministerial charge is collegiate: the stipend of the first minister, who is appointed by the Crown, is £396, with a glebe valued at £80 per annum;

the stipend of the second minister, appointed by the Kirk Session and the Incorporations, is £247. The church, originally the chapel of the Virgin Mary, was made parochial in 1609, when the parish church of Restalrig was destroyed as a monument of idolatry, by order of the first General Assembly after the Reformation. It is a very ancient structure, erected prior to the year 1490, and has suffered no alteration, except in 1791, when a gallery that obstructed the light was removed; the edifice contains 1717 sittings. John Home, author of *Douglas*, who was born at Leith in 1722, lies interred in the cemetery that surrounds St. Mary's. The church dedicated to St. John was erected by subscription in 1773. A church dedicated to St. Thomas, with a residence for the minister, was erected and endowed in 1840, in connexion with an asylum for females and some schools, by John Gladstone, Esq. (now Sir John Gladstone, Bart.), of Fasque, a native of the town, at an expense of £10,000. The church is a handsome structure in the later English style; and the asylum, in which is accommodation for ten patients, and the schools, form a neat range of buildings of a similar character; the whole after a design by Mr. Henderson, of Edinburgh. Part of the district assigned quoad sacra to the church is in North Leith parish. An assistant minister of the parish of South Leith officiates at Restalrig; and there are four or five preaching stations, where divine service is performed by missionaries, who are licentiates of the Established Church, and have a stipend of £50 each. The episcopal chapel dedicated to St. James was erected by subscription in 1805, at a cost of £1600. It is a handsome structure in the Grecian style of architecture, with a receding portico in the centre, and two slightly-projecting wings ornamented in the upper part with duplicated columns, and crowned by a parapet divided into compartments by pedestals supporting urns. The interior is well arranged, and contains 380 sittings. There are places of worship for members of the Free Church, the United Presbyterian Synod, Independents, and Wesleyans.

The High School, situated in the south-west part of the Links, in the immediate vicinity of the town, is under the direction of the magistrates of the burgh, the heads of the various corporations, and the ministers of the parish; to whom, as trustees, was paid over their share of Dr. Bell's bequest for the foundation of burgh schools on the Madras system, namely, £4894. 16. 8. three per cent. consols, and £4895. 16. 8. bank annuities. It is conducted principally by a classical master and an assistant, a mathematical master, two masters for English, and one for writing and arithmetic, who, in addition to the fees, receive certain salaries from the trustees. There were lately added an English master with a salary of £50, and a writing-master with a salary of £30, paid from Dr. Bell's endowment; and these teach on the Madras system. The building, erected by subscription in 1805, is a handsome structure two stories in height, with two projecting porticos of two columns each, rising from a rustic basement; it is surmounted by a square turret, ornamented at the angles with columns of the Ionic order, and crowned by a graceful dome. The hall, and the several class-rooms, are spacious and well arranged. There are various other schools, of which one for 120 boys, another for 80 girls, and an infant school in which are 170 children under

the management of ladies, are supported by voluntary subscription. The Hospital of King James, to which James VI. in 1612 transferred the funds of the ancient preceptory of St. Anthony, with other endowments, has been long under the patronage of the Kirk Session, for the relief of poor widows, and indigent members of the several corporations. An asylum for females labouring under incurable diseases was endowed in 1840, by Sir John Gladstone, in connexion with St. Thomas's church : it maintains ten inmates, at an annual cost of £300. There are also a dispensary, a humane society, and various other religious and benevolent associations, including a Bible Society, a British and Foreign Bible Society, a Sabbath-School Society, and a Religious Tract Society.

LEITH-LUMSDEN, a village, in the parish of AUCHINDOIR and KEARN, district of ALFORD, county of ABERDEEN ; containing 233 inhabitants. This village has sprung up within the last thirty years, and is the only one in the parish : the population is agricultural.

LEITH, ST. JOHN'S, for a time a *quoad sacra* parish, in the parish of SOUTH LEITH, county of EDINBURGH, $1\frac{1}{2}$ mile (N. by E.) from Edinburgh ; containing 3428 inhabitants. This parish was separated for ecclesiastical purposes under act of the General Assembly in 1834 ; it was about three-quarters of a mile in length, and one-quarter of a mile in breadth, and entirely occupied by buildings of the town. The stipend of the minister was £250, of which £200 were secured by bond of the managers, on the part of the congregation, who were the patrons, and the remainder was variable according to the state of the funds. The church, erected by subscription in 1773, is a neat structure containing 1000 sittings. There is a place of worship for a congregation denominated Separatists. A school is supported ; and there are numerous Sabbath schools, in which about 500 children receive instruction.

LEITH, WATER OF, a village, in that part of the large parish of ST. CUTHBERT, EDINBURGH, which formed the *quoad sacra* parish of DEAN, in the county of EDINBURGH ; containing 1024 inhabitants. This place is in the immediate vicinity of the Leith Water, whence the name ; and is a western suburb of the city of Edinburgh, *which see*.

LEITHOLM, a village, in the parish of ECCLES, county of BERWICK, 5 miles (N. W.) from Coldstream ; containing 365 inhabitants. It lies in the eastern extremity of the parish, near the Let water, the boundary on that side ; and is on the high road from Kelso to Berwick. This is the largest village in the parish, and has a by-post to Coldstream.

LEMPITLAW, a village, in the parish of SPROUSTON, district of KELSO, county of ROXBURGH, $2\frac{1}{2}$ miles (S. E.) from Sprouston ; containing 119 inhabitants. This place was the head of the barony of Lempitlaw, which was formerly a distinct parish : at what particular time the parish was annexed to Sprouston is not exactly known. The village stands on the road from Kelso to Coldstream, a short distance from the Tweed, which flows westward of it ; and consists chiefly of a few small farm-houses in detached situations, and about twenty-five neatly-built cottages, inhabited by persons principally employed in husbandry.

LENNOXTOWN, a village, in the parish of CAMPSIE, county of STIRLING, 3 miles (N. W. by W.) from Kirk-

intilloch ; containing 2821 inhabitants. This is a considerable place, situated in the centre of the parish, and deriving its name from the family of Lennox of Woodhead, on whose property it was built. It stands about nine miles north of Glasgow, and nearly a mile south of the base of Campsie fells ; the road from Kirkintilloch to the village of Campsie passes through it, and it has a branch, called the Campsie branch, of the Edinburgh and Glasgow railway. On account of its central position, and its proximity to large public works, it has now become the residence of almost half the population of the parish. Here are prepared the various chemical products of the Campsie alum-work, at the east end of the village ; and in the neighbourhood are several coal-mines and lime-kilns. Calico-printing is extensively carried on : indeed, the Lennox-mill printfield is said to be the largest establishment of the kind in Scotland, employing upwards of 700 persons. The Kincaid and Lillyburn printfields, and Clachan and Glenmill bleach-fields, are in the vicinity of the village, and are also very extensive concerns, in which a great number of hands are engaged : all these works are within the parish. Numerous persons are, likewise, employed in a variety of handicraft trades ; and few places of the same size are the scenes of greater enterprise and industry. Both sheriff's courts and justice-of-peace courts are held in the village, which is also the polling-place for the district. A post-office has been established under Glasgow. Among the most striking objects around Lennoxtown is the elegant and newly-built mansion of Lennox Castle, the residence of J. L. Kincaid Lennox, Esq., superior of the village ; this splendid edifice was commenced in 1837, and completed in 1841, and is in the boldest style of old Norman architecture. The principal entrance is by a handsome portico on the north front ; and from the lofty towers, which overtop the aged trees that formerly adorned the ancient mansion-house of Woodhead, is a prospect of considerable extent and beauty. The grounds surrounding the castle are laid out with artistic taste, and plans for their improvement and extension are still in progress. Campsie parochial church, a handsome edifice, built in 1829, is situated here ; and a spacious school-house, consisting of two large rooms, one of which is at present used as a juvenile and the other as an infant school, has been erected by Messrs. Lennox and Dalglish, assisted by subscribers, for the benefit of the numerous children in the locality. A Roman Catholic priest resides in the village, for the superintendance of the Irish population in Campsie, amounting to between 600 and 1000 persons ; and there is a place of worship for members of the United Presbyterian Church.

LENRATHEN, in the county of FORFAR.—See LINTRATHEN.

LEOCHEL and CUSHNIE, a parish, in the district of ALFORD, county of ABERDEEN, $3\frac{1}{2}$ miles (S. S. W.) from Alford ; containing 1084 inhabitants. These two ancient parishes, the etymology of the names of which is altogether uncertain, were united in 1618 by a decret of the lords of Plat ; but this union was dissolved about three years subsequently through the influence of Bishop Patrick Forbes, a central church for the two districts not having been built according to the conditions of the annexation. In 1793, however, a process of annexation was commenced on the part of the heritors ;

and a decret for the union was passed by the court of Teinds on the 28th January, 1795, in consequence of which, two years afterwards, a central church was built. The Earls of Mar appear to have been the first possessors of land in Leochel of whom any account remains, Gilchrist, Earl of Mar, having, between the years 1165 and 1170, given to the church of St. Mary at Monymusk, and the Culdees there, the church of Leochel, with all its tithes and offerings, and the portion of land in which the church was situated. This gift was confirmed and enlarged by some of his successors, and was also ratified by a charter of Alexander II., about the year 1234. The most ancient and the principal estates in the district of Leochel are the lands of Corse, Craigievar, Easter Fowlis or Fowlis-Mowat, Wester Fowlis, and Lynturk; those in Cushnie are, Cushnie, and Hallhead. The lands of Corse are locally in the adjoining parish of Coull, but are annexed quoad sacra to this parish, a union supposed to have taken place about 1621, when Leochel and Cushnie were disunited by the exertions of Bishop Forbes.

The PARISH is situated in the upper part of the district of Alford, and is rendered extremely irregular in its outline by a projection on the north-west, and another on the east, independently of which it measures about five miles from east to west, and three and a half from north to south. Its whole extent is 11,208 acres, of which 5455 are arable, 963 pasture, 3790 moor, and 1000 wood. The climate is rather cold, causing the harvests to be in general somewhat later than those in the lower part of the district; and the scenery partakes of the variety and boldness produced by a combination of mountains, hills, and valleys in almost uninterrupted succession. On the western boundary is the Soccoch, or hill of Cushnie, a mountain range rising 2000 feet above the level of the sea, and from the base of which four lofty ridges stretch eastward throughout the whole length of the parish, each accompanied by its valley and refreshing stream. The summits of these eminences are barren, the cultivated ground lying on the northern and southern slopes, and in the beds of the valleys, the lowest parts of which are only 500 feet above the level of the sea. The prospects are extensive and beautifully picturesque, especially those from the hill of Cushnie, comprehending in the panoramic range the fertile vale of Cromar on the south, backed by the lofty Grampians; Morven and Benaven on the west; the windings of the Don along the valley of Towie, the mountain of Benrines, the Buck of Cabrach, and the Tap of Noth, to the north-west and north; and, towards the north-east and east, the vale of Alford, well cultivated and wooded, with the district of Garioch, and the level tracts reaching to the Buchan coast. There are various rivulets in the locality, generally flowing from west to east, and falling into the principal stream, the burn of Leochel, which, after a circuitous route of ten miles through the parish, joins the river Don at Alford. All these waters abound with trout, especially the Leochel; and frequently, by their sudden and violent floodings, they occasion much damage to the bridges and the adjacent lands.

In some parts the SOIL is a rich loam, and in the valleys, and near the streams, occasionally exhibits alluvial deposits; in general, however, it is much mixed with clay. It is commonly incumbent on a retentive clayey subsoil. Grass and turnips succeed best, but a considerable por-

tion of grain is raised, averaging annually in value about £8000; and about 500 head of black-cattle are sold yearly: these are of the Aberdeenshire horned or polled breed, and are the chief live-stock, very few sheep being kept. Great improvements have been for some time in progress in husbandry, which is here practised sometimes by the six-shift, but most frequently according to the seven-shift, course; the farm-buildings are in good condition, and threshing-mills have been considerably multiplied, forty-five being now in operation, besides four meal-mills. The rocks in the parish consist principally of granite, of a red colour in some parts, and in others inclining to grey: limestone has been also found, but in too small quantities to repay the expense of quarrying. The annual value of real property in Leochel and Cushnie is £3298. The plantations are mostly of Scotch fir and larch, but the latter, after about fifteen years' growth, generally decays: the whole of the wood has been planted since the year 1820, with the exception of some fine trees in the vicinity of the several mansions. Craigievar Castle, the seat of Sir John Forbes, Bart., is in perfect repair, having been new-roofed in 1826. It is considered a fine specimen of the old baronial mansion of the period of James VI. The hall, a noble apartment, with its lofty roof, its spacious fire-place, and venerable aspect of feudal grandeur, is particularly admired; and the grounds of Craigievar, ornamented with ancient ash and beech, render the scenery highly interesting. The house of Cushnie and that of Hallhead are each about 150 years old, and are dilapidated and untenanted.

The chief manufacture in the parish is that carried on at a carding-mill, where plaids and blankets are made to a small extent. Many aged women are engaged in knitting stockings, from worsted, for a house at Aberdeen, and their labours produce a total annual return of between £70 and £100. The fuel chiefly in use was formerly peat and turf; but these are now obtained with great difficulty, the mosses in the parish being nearly exhausted, and coal is frequently procured from Aberdeen. The Alford and Aberdeen turnpike-road passes within five miles of the centre of the parish, on the north; and that from Tarland to Aberdeen runs along the southern border of the lands of Corse. A good commutation road joins the Alford line at Whitely, in the parish of Tough; and the government road from Donside to Deeside intersects the lower part of the parish of Leochel and Cushnie. The nearest post-offices are those of Alford on the north-east, and Tarland on the south-west, each six miles distant from the middle of the parish. The chief communication for the sale of produce is with the market at Aberdeen. Fairs for cattle, horses, sheep, and wool are held on a moor near Scuttrie, on the estate of Craigievar, in April, May, July, August, and September.

Leochel and Cushnie are ECCLESIASTICALLY in the presbytery of Alford, synod of Aberdeen; and Sir John Forbes, Bart., and the Rev. Henry Thomas Lumsden, proprietor of Cushnie, are alternate patrons of the united parish, as respectively representing the patrons of the two old churches. The minister's stipend is £197, with an allowance in addition from the proprietor of Corse of £4. 16. 2. for ministerial services to the tenants of that district, a manse, and a glebe valued at £18 per annum. The church, containing 500 sittings, is in a dilapidated state, though built as late as 1797. The old

churches are unroofed and ruinous, but the burying-grounds attached are still used. A small place of worship belonging to the United Presbyterian Church is situated near the eastern boundary. There are two parochial schools, affording instruction in the ordinary branches: the masters have each the minimum salary, with a house and garden, from £12 to £15 fees, and an allowance of £30 from the Dick bequest. A school is supported by the General Assembly, and two others are maintained partly by endowment, one having a bequest of £300 from the late Charles and Peter Ritchie in Wester Leochel, and the other school having been endowed by the late Peter Mc Combie, Esq., of Lynturk. There is a small library in each of the two parochial districts; and considerable benefactions have been made for the use of the poor. About the year 1826, a gold coin of the Roman Emperor Constantius was dug up in Cushnie; and in 1839, a silver coin of James VI., struck after the union of the crowns, was found near the manse. The chief antiquities are, several subterraneous places called Picts' houses, some intrenchments on the hill of Corse, and the ruins of the castles of Lynturk and Corse. Patrick Forbes, Bishop of Aberdeen, a prelate distinguished for his learning and piety; and his son, Dr. John Forbes, professor of divinity in King's College, Aberdeen, were both proprietors of Corse; and the latter was buried in the family aisle at Leochel. Dr. Matthew Lumsden, the celebrated Orientalist, and professor of Persian and Arabic in the college of Fort-William, Bengal, belonged to the ancient family of Lumsden of Cushnie. Sir John Forbes is styled a Baronet from the property of Craigievar.

LEONARD'S, ST., a parish, in the district of St. Andrew's, county of FIFE; containing 554 inhabitants. This parish derives its name from the dedication of its ancient church, and appears to have had its origin in the frequent pilgrimages made by large numbers of devotees to visit the relics of St. Andrew, said to have been deposited by Regulus, a Grecian monk, in the church of St. Andrew in the city of that name. The conventual buildings there were inadequate for the accommodation of these pilgrims; and to remedy this deficiency, a house was erected for their entertainment, with a church and other requisite appendages, forming together the hospital of St. Leonard, under the patronage of the prior and brethren of the Augustine monastery at St. Andrew's, by whom it was endowed, and within whose jurisdiction it was situated. After the practice of visiting the relics of departed saints had begun to subside, the hospital was converted into a college, in connexion with the university of St. Andrew's; and its original endowment was appropriated to the maintenance of a principal, four chaplains, and twenty-six scholars, of whom six, under the direction of the principal, were to devote themselves exclusively to the study of theology. This college was afterwards united to that of St. Salvator, an act of parliament for the purpose of effecting the union being passed in 1747. The buildings, with the exception of the chapel, were then sold, and all the classes of the United College have since been taught at St. Salvator's, in the parish of St. Andrew's.

The chapel is situated at the east part of South-street, a little removed from the street; and though it has long been roofless and in ruins, it is still a fine specimen of pointed architecture. It measures seventy-eight feet in

length and eighteen feet in width, in the interior; and both the wall and pavement contain remains of monuments, some of which are worthy of notice. The largest monument is that of Robert Stuart, Earl of March, Bishop-elect of Caithness, and after the Reformation commendator of the Augustine priory of St. Andrew's: it is in the Grecian style, and about fifteen feet in height. A monument in memory of the famous Wynram, sub-prior of St. Andrew's, and after the Reformation superintendent of Fife, records that he died at the advanced age of ninety years, in 1582. Another commemorates Robert Wilkie, who was principal of the college from 1579 to 1611, having succeeded his uncle James Wilkie in the office: he was a great benefactor to the institution, and is styled in the inscription on the monument "a very famous man." About forty feet to the south of the chapel still remains entire, and in good condition, the official residence of George Buchanan, the celebrated principal of the college, and promoter of the Reformation: it is now occupied by Sir David Brewster, principal of the United College. The old library and hall are also entire, and are the property of Major Hugh Lyon Playfair, of St. Leonard's, to whom the city of St. Andrew's owes so much as its chief magistrate and distinguished improver.

The PARISH is principally within the limits of the city of St. Andrew's, to which it forms an appendage, and with which in all civil matters it is intimately connected. That part of it not surrounded by the city is bounded on the north by the parish of St. Andrew's, on the east by the parish of Kingsbarns, on the south by Crail, and on the west by Dunino. The surface of the rural district is pleasingly diversified, and the soil generally fertile; the whole number of acres is 981, of which about 650 are arable and in a state of profitable cultivation, and 300 in pasture and waste land. There is very little natural wood; and the parish contains few plantations of any extent. The system of agriculture is in an improved condition, and the crops are oats, barley, wheat, potatoes, and turnips; the lands are partially inclosed, and the farm houses and offices in general substantially built and commodious. In this parish the substrata are chiefly freestone and sandstone; the former, though soft, is of good quality, and very durable, and both are quarried for building and other purposes. The principal landed proprietors are, the principal and masters of the United College of St. Salvator and St. Leonard, and the corporation of the city of Glasgow. The annual value of real property in the parish is £797.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of St. Andrew's and synod of Fife: patron, the Crown. The stipend of the incumbent was formerly five chalders arising from the revenues of the priory of St. Andrew's, and the rent of half an acre of land bequeathed about 200 years since for the support of the minister. By act of parliament for the augmentation of small livings, passed in 1810, the income has been raised to £150 per annum, of which £88 are received from the exchequer. There was neither manse nor glebe; but within the last few years a glebe of four acres, with half an acre additional for the site of a manse, has been appropriated, and is at present let for £18 per annum. The church, once belonging to the college of St. Leonard, and for more than two centuries the parish church, having fallen into a state of dilapidation, the chapel of St. Salvator's College has been ever since ap-

propriated as the church of St. Leonard's parish, though situated in the parish of St. Andrew's. This chapel, erected by Bishop Kennedy in the fifteenth century, was, previously to its being mutilated at the time of the Reformation, an elegant and spacious structure in the decorated English style of architecture; and it still retains much of its original character, though greatly curtailed in its dimensions, and stripped of many of its ornaments. It is well adapted for a congregation of nearly 500 persons, and besides the splendid tomb of the founder, contains monuments to the memory of Dr. Hugh Spens, principal of St. Salvator's from 1505 to 1534; Dr. Alexander Pitcairn, principal from 1693 to 1698; and Lieut. W. D. Playfair, eldest son of Provost Playfair, who fell at the battle of Soobraon, in India, in 1846: this last was erected by the brother officers of the deceased. There is no school of any kind; the children receive instruction in the schools of the city of St. Andrew's.—See ANDREW'S, ST.

LERWICK, a parish, a sea-port, market-town, and royal burgh of barony, in the SHETLAND Isles; containing 3284 inhabitants, of whom 2787 are in the town, 95 miles (N. E.) from Kirkwall, 126 (N. E. by N.) from Wick, 166 (N.) from Peterhead, and 272 (N. by E.) from Edinburgh. This place, which has long been celebrated as the resort of whale-ships, Dutch herring-boats, and numerous foreign and wind-bound vessels, originated in the seventeenth century, in connexion with the Dutch fishermen. Capt. Smith, however, who visited the islands in 1633, and describes the harbour, makes no allusion to the town, and in 1700 it contained not many more than 200 families. It is situated on the eastern shore of Mainland, opposite the island of Bressay, from which it is separated by the narrowest part of Bressay Sound, otherwise called Lerwick harbour, and well known to mariners who navigate these seas as a secure roadstead in bad weather. The town is built on a tract originally covered with deep peat-moss, called the Commony of Sound, and consists of one principal street leading to the harbour, from which avenues or lanes branch off at different places. The most ancient houses are constructed without any regularity, projecting from the line of parallelism, and nearly meeting each other by their abutment. Many improvements, however, have been made within the present century; and several houses have been erected in a more modern style, and with a greater regard to order, by which the general appearance of the town has been much altered. The gradual increase of the population led to the cutting up of the peaty soil of the surrounding land, for the purposes of fuel, in consequence of which the ground exhibited a rocky or stony exterior; but the aspect of the vicinity has since the year 1820 been rendered more attractive by the inclosure of a common of about forty acres, encompassing the town, and by its partition into thirty-one "parks," most of which are under grass. Considerable portions, also, of adjacent land have been brought into useful and ornamental cultivation by resident gentlemen, at a great expense; and neat and elegant houses and cottages have been raised, which are surrounded by well laid-out grounds and small but flourishing plantations. The chief of the villas are, Seafield Cottage, built by the late Charles Ogilvy, Esq.; Hayfield, the property of William Hay, Esq.; and Gremista, the occasional residence of Sir Arthur Nicolson. A fort, said to have been erected

in Cromwell's time, is situated on an eminence at the northern end of the town, and serves for the protection of the harbour at its entrance in that part. It was thoroughly repaired in 1781, when it was named Fort-Charlotte, after Her Majesty, the consort of George III.; and it was garrisoned till the peace of 1783. For the defence of the southern entrance of the sound, a government road has been formed, commencing half a mile south from the town, and reaching to a promontory called the Knab: by this road, the transit of artillery or military stores can be effected at any time.

The inhabitants are occupied partly in agricultural operations, and as shopkeepers and merchants, but chiefly in the ling, cod, and herring fisheries, the last of which, however, has for some years past been falling off. The ling fishery, which continues from May to the middle of August, engages a few boats from this parish; and many sloops of small burthen are employed in the summer time in taking cod. To the herring fishery, 174 boats were sent in 1839, chiefly from Lerwick. Independently of the fisheries, there is scarcely any traffic carried on beyond what arises from a good general mercantile business; and the only manufacture is that of various articles of hosiery, such as stockings and gloves, made by girls and women. A straw-plat manufactory formerly existed here; but it has long been discontinued. The making of herring-nets, however, which has been introduced into some neighbouring parishes, is considered likely, on account of the demand for the article, to be successful here, and is about to be commenced under the auspices of the leading residents. The general mercantile business transacted is very considerable; almost the whole exported produce of Shetland passes through the hands of the Lerwick merchants, and they import nearly all the groceries and manufactured goods used in the islands. There are a branch of the Union Bank of Scotland, and a savings' bank. Several schooners having accommodation for passengers are engaged in the coasting-trade between Leith and Lerwick; and in virtue of a contract with government, the Aberdeen, Leith, and Clyde Shipping Company convey the mails to Shetland once a week, by means of a steam-boat during the months from April to September inclusive, and by a sailing-packet during the rest of the year. The sailing-packet plies directly between Aberdeen and Lerwick; the steamer starts from Granton Pier, calls at Arbroath, Montrose, Stonehaven, and other places, receives the mails at Aberdeen, and touches at Wick and Kirkwall on her way to Lerwick. The exports are chiefly fish, butter, hides, tallow, calf and rabbit skins, and stockings; and the imports, coal, cloth, groceries, and grain: the foreign imports, principally from Norway, are timber, and wood goods, such as boats, scoops, shoes, &c., a little bark, &c. This being the seat of the custom-house, all Shetland vessels are registered here: the customs received at the port during the year 1844 amounted to £463. Several vessels have been built at Lerwick by Messrs. Hay and Ogilvy, some of them of from 100 to 200 tons.

This is the county-town of the Shetland Isles, and the sheriff-substitute of this division of the united sheriffdoms of Orkney and Shetland resides, and holds his courts, here. The foreign cod and herring fishermen assemble at Lerwick in great numbers; and by an act of the 48th of George III., it was made the rendezvous of the British

deep-sea herring fishermen, who are inspected here previously to their engaging in the fishery. For the furtherance of this object, by the establishment of a resident magistracy, a royal charter was granted in January 1818, erecting the town into a BURGH OF BARONY, the council to consist of two bailies and nine councillors, to be elected every three years, on the first Thursday in September. The bailies and council, and the electors or burgesses, must be proprietors or occupants of premises of the value of £10 per annum, and must all reside within the burgh. At the time of the passing of the late Municipal Corporations' act, the rental of property within the burgh was estimated at £3600; and the number of persons resident whose rents in property or tenancy amounted to £10 and upwards, was forty-eight, of whom forty-one were burgesses, and the rest females or minors. The annual income of the corporation does not exceed £5, and the expenditure is about £15, the excess of the latter over the former being provided for by a voluntary assessment of the inhabitants, as the magistrates are not empowered to raise any taxes for the support of the municipal establishment. By the statute 35 George III. c. 122, the magistrates consider themselves vested with the jurisdiction reserved to independent burghs of barony under the statute 20 George II. c. 43, and with other powers within the burgh competent to justices of the peace. Weekly burgh-courts are held under the Small-debt act; and there are courts, when necessary, for the punishment of offences and the removal of nuisances. A treasurer is appointed by the magistrates and council; and a fiscal, peace-officer, and town-crier by the magistrates alone. There being no local act, the inhabitants have adopted the general police act in regard to its provisions for cleansing, paving, and the supplying of water; and for these purposes they assess themselves in the sum of sixpence in the pound.

The PARISH stretches along the coast, and measures about six miles in length from north to south, and one mile in breadth. It is separated by the sea on the east and north-east from the island of Bressay, which here forms the harbour of Bressay Sound, at whose northern extremity, not far from the shore, rises the dangerous rock called the Unicorn. The surface of the parish, like that of the surrounding country, is rocky and mountainous, the highest point being about 300 feet above the level of the sea; the soil on the elevated grounds is a deep peaty moss, and that of the arable land, which lies in patches along the sea-shore, light and sandy, and tolerably productive. The rocks consist of sandstone and conglomerate, and a quarry is in operation. The annual value of real property in the parish, as determined for the property-tax, is £7006. Ecclesiastically this place is in the presbytery of Lerwick, synod of Shetland, and in the patronage of the Earl of Zetland. The minister's stipend is £150 per annum, with an allowance of £8. 5. 9. for communion elements. Of these sums, £27. 15. 6. are derived from the hishopric rents of Orkney, £16. 13. 4. from the town of Lerwick, £23. 0. 8. from lands in the rural district, and £90. 16. 3. from the exchequer under the Small-stipend act. There being neither manse nor glebe, a compensation of £50 per annum is paid by the heritors in lieu thereof. The church is a modern edifice, with a Doric front of hewn stone, and stands above the town, towards the northern extremity. The salary of the parochial schoolmaster is £34. 4. per annum, with about

£30 fees. The ruins of several chapels were recently visible at Gulberwick; but the only relic of antiquity of any note now remaining is a castle of Pictish origin, on a small island in a lake near Lerwick; and this is fast falling to decay.

LESLIE, a parish, in the district of GARIOCH, county of ABERDEEN, 7 miles (W. S. W.) from Old Rain; containing 553 inhabitants. This place is said to have derived its name from a family who held the lands so early as the eleventh century. It is very pleasantly situated on the banks of the Gady, a beautiful stream celebrated by Arthur Johnstone, the elegant Latin poet; and was erected into a burgh of barony by James II. in favour of George, "dominus de Lesly," with the privilege of holding a weekly market on Thursday and a yearly fair at Michaelmas, both of which, however, have long since been disused. The parish measures three and a half miles in length and two and a half in breadth, and comprises 4000 acres, 2800 of which are cultivated. It is crossed by a ridge, in some parts considerably elevated, stretching from east to west, and dividing it into two nearly equal parts. Between this ridge and the high grounds separating the parish from the Alford district, is a valley watered by the Gady. Upon the north side of the river the soil is a light loam, on a gravelly or sandy bottom; and upon the other side a strong rich mould, incumbent on clay: the lands are well farmed, the seven-shift course generally prevailing; and they produce good crops of grain and turnips. The sheep are a cross between the Leicesters and the Cheviots, and the cattle are the native Aberdeenshire; the latter produce yearly about £1620. In this parish the landed proprietors are Sir Andrew Leith Hay, and F. Leith, Esq. The substratum consists principally of serpentine rock, with felspar, quartz, and a variety of minerals in small portions. There is no good wood, the only plantation being very small and not in a flourishing state. The fuel used is, peat obtained from a moss in the parish, and coal from Inverury.

The inhabitants are chiefly employed in agricultural pursuits; there is no manufacture with the exception of that of worsted stockings, in the knitting of which the aged females are particularly expert. The farm-produce is sold at Huntly and Inverury; but chiefly at the latter town, for conveyance to Aberdeen by canal. There are two communication roads, one running parallel with the Gady, by Premnay, to the turnpike-road between Inverury and Aberdeen; and the other, in the direction of Kinnethmont, joining the turnpike-road to Huntly. The annual value of real property in the parish is £2472. Ecclesiastically this place is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of Sir Andrew Leith Hay: the minister's stipend is £159, of which nearly a third is paid from the exchequer; with a manse, and a glebe valued at £11. 5. per annum. Leslie church, containing nearly 300 sittings, is situated on the southern bank of the Gady, not far from the eastern extremity of the parish; it was built in 1815. There is a place of worship for Independents. The parochial school affords instruction in the usual branches: the master has a salary of £25. 13. 4., and £2. 2. 9. in lieu of a garden, with about £13 fees; also £1. 13. 4. left for teaching the children of poor widows. The chief relic of antiquity is Leslie House, formerly the seat of the barons of Leslie, a castellated building now in ruins, founded in 1661, and once inclosed by a rampart and fosse.

LESLIE, a parish and manufacturing town, in the district of KIRKCALDY, and county of FIFE; containing 3625 inhabitants, of whom about 2000 are in the town, 9 miles (N. by W.) from Kirkcaldy, and 20 (N.) from Edinburgh. This place is by some writers supposed to have derived its name from the Gaelic *Lis*, a garden, or richly-cultivated spot, and from its situation on the river Leven. Others, however, deduce the name from the Earls of Rothes, who became possessed of certain lands here, to which they are said to have given their family name, and from which that appellation may in process of time have been extended to the whole parish. At the period of the Roman invasion of Britain, the Caledonians, who had defeated the ninth legion on the Orr, disputed the passage of the Leven in the neighbourhood, it is said, of this place, and on being repulsed, retired to the heights of Lomond, while the Romans encamped on the heights of Balsillie, where both Roman and Caledonian battle-axes and other warlike instruments have been discovered. The parish appears to have been distinguished at an early period as a favourite resort of the Scottish kings for hunting and the celebration of various sports; and many of the lands are still called by appellations referring, in their Gaelic origin, to the ancient games, which seem to have been continued till within a recent period. The Earls of Rothes, one of whom was created a duke by Charles II., granted the inhabitants numerous privileges by a charter which erected the place into a burgh of barony; and their descendants still retain possession of their ancient lands, the property of the present earl.

The PARISH is about five miles in length and from three to four miles in breadth, and is bounded on the south by the river Leven, which separates it from the parish of Kinglassie. It comprises nearly 6000 acres, of which 4300 are arable, 1000 meadow and pasture, and thirty undivided common. The surface is pleasingly undulated from the bank of the Leven to the heights of Lomond, and is intersected by two streams that flow into that river from the north and west respectively, enlivening the scenery, which is otherwise agreeably varied, and richly embellished with the plantations in the grounds of Leslie House and Strathendry. The Leven issues from the lake of that name, and after a course of about twelve miles through a fertile and highly-cultivated district, falls into the sea at the thriving town of Leven. The banks of this river abound with beautiful scenery. Its stream gives motion to numerous mills, and affords an abundant supply of excellent water for the bleachfields in the parish, and for other works that have been erected on its sides. Previously to the establishment of the bleachfields, the river abounded with trout and eels of remarkably fine size and flavour; and so abundant were the latter that the lands of Strathendry, before the dissolution of monasteries, paid a tribute of many thousand eels annually to the abbey of Inchcolm, on which the estate was dependent. The SOIL is every where rich and fertile, and the lands are in the highest state of cultivation under an improved system of husbandry; the crops are barley, oats, wheat, potatoes and turnips, with the usual green crops. The farm-buildings are substantial and well arranged. Great improvements have been made by draining and inclosing the lands; the fences on some farms are hedges of thorn, and on others stone dykes, and both are kept in good order.

The plantations are ash, elm, beech, oak, and silver-fir, with some larch and sycamore; the trees on the Leslie estate are remarkably fine, and leading to the house is a noble avenue of beech, of more than two hundred years' growth, several of the trees measuring nearly seventeen feet in girth at a height of four feet from the ground. In general the substratum is whinstone, interspersed in places with gravel and sand, which rest upon it to a considerable depth: limestone is also prevalent, and quarried for burning into lime; and in the eastern part of the parish coal is found, but the mines have been nearly exhausted, and are not wrought to any great extent. The annual value of real property in the parish is £5488.

Leslie House, the seat of the Earl of Rothes, a noble quadrangular mansion erected by the Duke of Rothes in the reign of Charles II., was mostly destroyed by an accidental fire in 1763; but a remaining side of the quadrangle, forming the present residence, was repaired by John, Earl of Rothes, in 1767. It is beautifully situated in a tastefully-disposed and richly-embellished demesne, comprehending much interesting and picturesque scenery, and through part of which the Leven winds its course between banks crowned with flourishing plantations. The house contains many stately apartments, with a valuable collection of paintings and family portraits, and some beautiful tapestry: among the subjects of the last are the Story of Leander, the Journey of the Children of Israel through the Wilderness, and the Anointing of Saul by Samuel. *Strathendry* is a handsome spacious mansion in the Elizabethan style, erected within the last few years; it is pleasantly situated in a wide domain, and has thriving wood, chiefly of recent growth.

The town is neatly built, and mostly inhabited by persons employed in manufactures and in agriculture. The weaving of linen is one of the chief branches of trade, nearly 300 persons being engaged in it, for the manufacturers of Glasgow: there are six mills for spinning flax, affording occupation to more than 800 persons; and three bleachfields, in which about 150 are occupied. Prinlaws, a considerable place, has arisen since the establishment of an extensive flax-mill and bleaching-ground by John Fergus, Esq.; it contains 760 inhabitants, chiefly employed in the works, and the houses, to each of which is attached a garden, are ornamented with shrubs and evergreens. Fairs are held on the first Thursday in April, O. S., for milch-cows and horses, and the 10th of October for lean stock; the former of these is numerously attended, but the latter has been for some years declining. Leslie, as a burgh of barony, is under the government of two bailies and a council of sixteen; but they exercise no jurisdiction of any consequence, except in matters of police. A circulating library is supported by subscription under the management of a committee. A daily sub-post has been established between this place and Markinch; and facility of intercourse with the adjacent towns is maintained by good roads, kept in repair by statute labour. Ecclesiastically the parish is in the presbytery of Kirkcaldy, synod of Fife, and in the patronage of the Earl of Rothes: the stipend of the incumbent is £257. 8. 6., with a manse, and a glebe valued at £18 per annum. Leslie church, situated in the centre of the parish, is a neat and substantial edifice with a spire, erected in 1820, and adapted for a congregation of nearly 1000 persons. There are places

of worship for the United Presbyterian Synod and members of the Free Church. The parochial school affords a liberal education; the master has a salary of £34, with £38 fees, and an allowance in lieu of a house and garden. Besides the aid periodically raised for their relief, the poor have the interest of permanent funds belonging to the Kirk Session for their use, producing annually about £30. Leslie Green, in the parish, is said to have been the scene of King James' poem of *Christ's Kirk on the Green*.

Upon several of the eminences are large erect stones, on the removal of one of which, some time since, a coffin containing human bones was discovered. On these eminences, which are generally called Knowes, and, in allusion to some warlike exploits, are also distinguished by proper names, other relics of antiquity have at various times been found: on the Gallant Knowe, near Strathendry, an urn of Roman pottery was discovered in 1760. Near Pitcairn House a tumulus was opened in 1770, in which was a kistvaen containing a great number of human bones, and at the eastern extremity were two urns of bluish clay, filled with bones which had evidently been burnt. A fragment of a deer's horn, nine inches and a half in circumference at the widest end, has been found in a bed of gravel, at seven feet below the surface. Arrow-heads of flint, and the head of a spear apparently belonging to a standard, have been also found.

LESMAHAGOW, a parish, in the Upper ward of the county of LANARK, 6 miles (S. W. by W.) from Lanark, and 22 (S. S. E.) from Glasgow; including the villages of Abbey-Green and Turfholm, Boghead, Crossford, Hazelbank, Kirkfield-Bank, Kirkmuirhill, and New Trows; and containing 6992 inhabitants. This place is supposed to have derived its appellation from a Celtic term signifying "garden," and from the name of its tutelar saint, who is said to have had a cell here about the sixth century. In 1140, a monastery was founded by David I. for Tyronensian monks, wherein he placed brethren from his abbey of Kelso, to which it became subordinate: the last remains were removed on the erection of the present church. The PARISH is about twelve miles in length and eight in breadth. It is bounded on the north-east by the river Clyde, and comprises 42,840 acres, of which 26,900 are arable, 1500 woodland and plantations, 600 acres coppice, and the remainder moorland pasture, and waste. The surface is generally elevated, and towards the west and south-west rises into a range of hills, forming a boundary between the counties of Lanark and Ayr; the highest of these hills are 1200 feet above the level of the sea, and all afford excellent pasture for sheep. Besides the Clyde, the chief rivers are, the Poniel water, which has its source in the south-west of the parish, and after a course of more than seven miles, falls into the Douglas; the Logan, the Nethan, and the Kype waters, which rise in the hills on the west, and, receiving numerous smaller streams, join the Clyde; and the Cander, which, on quitting the parish, separates for a few miles the parishes of Stonchouse and Dalsersf, and flows into the Avon. The banks of the Nethan are richly ornamented with plantations, and studded with handsome villas and neat farm-houses. The Kype displays little beauty in its course, and frequently, after rain, descending from the higher lands with impetuous violence, does much damage

to the cultivated plains. There are springs of excellent water in various parts, and several impregnated with iron and other minerals; many of them issue in streams sufficiently powerful to give motion to mills and machinery. The falls of the Clyde are noticed in the account of the parish of Lanark, which is separated from this parish by the river.

The SOIL is chiefly clay of a yellow colour, with tracts of lighter and more friable quality, and some portions of gravel and sand; the crops are, grain of all kinds, potatoes, and turnips. The system of husbandry is advanced, and draining has been practised to a considerable extent; the lands have been inclosed, chiefly with hedges of thorn and beech, and partly with stone dykes; and the farm-houses have within the last few years been greatly improved. Much attention is bestowed on the management of the dairy; the cheese made on the several dairy-farms is principally the Dunlop kind. The cattle are of the Ayrshire breed; and the sheep, of which large numbers are fed in the hilly pastures, are the old black-faced, these being better adapted to the nature of the soil than the Cheviots. The woods are judiciously managed, and the plantations are also kept in good order, and are very flourishing; the annual produce from both is estimated at about £700 per annum. Coal is wrought in several parts. A fine kind of cannel coal is found at Auchinheath; it occurs in seams varying from ten to twenty inches in thickness, and is sent in considerable quantities to the gas-works in Glasgow and other places. The rocks are chiefly whinstone; limestone of good quality is also abundant, and is extensively worked. Ironstone occurs in several places, but not in such abundance as to have led to the establishment of any works; lead-ore, likewise, is supposed to exist, and several attempts have been made to procure it, but hitherto without success: few minerals, indeed, have been found. Petrified shells are thickly embedded in the limestone, as also are the fossil remains of various animals. The annual value of real property in the parish is £27,056. Several handsome seats have been erected by heritors residing on their lands, and all of them are embellished with flourishing plantations: Stonebyres is a fine mansion, the oldest portion of which was built in 1398, and a more modern in 1596; a splendid addition in the same style of architecture was made in 1844.

The inhabitants of the parish are partly employed in the mines and quarries, and in Glasgow manufactures: many of them reside in the villages, which are all separately described. Fairs for hiring servants are held in March and October, and a cattle-fair in the spring. Facility of intercourse is maintained by good roads, which have been greatly improved within the last few years, and of which the turnpike-road from Glasgow to Carlisle, and that from Glasgow to Lanark, pass, the former for eight, and the latter for about five, miles within the parish. In 1847, the Caledonian railway company obtained an act for the construction of a branch from their Clydesdale Junction line to the Lesmahagow and Douglas mineral fields; also an act for an extension of the Motherwell branch of the Clydesdale Junction line to the Auchinheath mineral field. A post-office has been established; and there is a small library, supported by subscription. Ecclesiastically the parish is in the presbytery of Lanark, synod of Glasgow and Ayr, and in the patronage of the Duke of Hamilton. There are two ministers, the church

having been made collegiate at the Reformation: the minister of the first charge has a stipend of £283. 4. 2., with a manse, and a glebe valued at £20 per annum; the minister of the second charge has an equal stipend, with a manse, but no glebe. Lesmahagow church, built in 1804, is handsome and substantial, and is adapted for a congregation of 1330 persons. There are places of worship for members of the Free Church, Independents, Reformed Presbyterians, and the United Presbyterian Synod. The parochial school affords a liberal education, and is well attended; the master has a salary of £34, with £45 fees, and a house and garden. A school for teaching girls to read and to sew is supported by subscription; it is situated in the village of Abbey-Green, and is attended by about thirty children. In different parts are other schools, the masters of which receive annual donations from the heritors, in addition to the fees. The poor have the interest of various funded bequests yielding about £100 per annum; the principal is a bequest of £2600 by the late Dr. White, of Calcutta. There are three friendly societies, which have contributed greatly to prevent applications for relief from the parochial funds; and also a savings' bank, duly encouraged. Some slight remains exist of the ancient castle of Craignethen. Roman coins have been found near the site of a Roman road which within the last few years has been totally obliterated by the progress of cultivation; and many ancient cairns have been removed, to furnish materials for stone dykes. A Caledonian battle-axe, and about 100 silver coins of Edward I., were dug up in opening ground for laying down a drain.

X LESSUDDEN, a village, in the parish of St. Boswell's, district of MELROSE, county of ROXBURGH, 4 miles (E. S. E.) from Melrose; containing 399 inhabitants. The name of Lessudden, often given to the parish, is more appropriately applied to this village. It is probably derived from Edwin, King of Northumbria, who had a fortress here; and in a charter of Robert II., by which the lands were granted to the abbey of Melrose, the place is called *Lessedwin*, signifying "the manor of Edwin." The village is beautifully situated in the north-eastern part of the parish, adjacent to the south bank of the Tweed, and on the high road from Melrose to Jedburgh; it is built at the east end of a spacious flat green, amid pleasant gardens, and in the neighbourhood of woods that overhang the Tweed. The air is salubrious; and from the advantages the village possesses, it is likely to increase in extent and population. A subscription library, containing more than 1000 volumes, was established here in 1799, under the patronage of Sir David Erskine, of Dryburgh Abbey.

LESWALT, a parish, in the county of WIGTOWN, 4 miles (N. W.) from Stranraer; containing 2712 inhabitants. The name is of doubtful origin, but is supposed to signify "the meadow along the burn." In the reign of James V. this parish was the property of the monks of Tongland, the vicarage then paying a tax of £12. 13. 4., a tenth of its estimated value: at the time of the Reformation the tax was £26. 13. 4. Leswalt church was made over to the king in 1587, and by him vested in 1589 in the bishops of Galloway; but when episcopacy was abolished, it became again the property of the crown. The parish is about eight miles in length, and nearly of the same breadth. • It has the Irish Channel on the west, Loch Ryan on the east, the parish of Kirkcolm on the

north, and Portpatrick on the south; forming a portion of the peninsula called the Rhyns of Galloway. The surface is for the most part exceedingly hilly, and along the coast rugged and rocky, and frequently broken by immense chasms. There are two large streams, the Soleburn and the Pooltanton; and a beautiful sheet of water called Loch Naw, which covers a space of thirty acres.

In some parts the soil is rich and productive; but in many others, especially towards the south, it is wet and heavy: there are large tracts of moss, totally unfit for tillage, but employed for pasturing sheep and young cattle. The oats produced are estimated at the value of about £6000 yearly: some attention is now paid to the cultivation of wheat, and considerable quantities of potatoes are raised. Much land that was formerly rough pasture, or waste, has been improved by the application of lime and shell-sand manure, and brought into good cultivation; and the care recently bestowed on the fences and the farm-houses has effected great changes in the appearance of the parish. Black-cattle of the Galloway breed are reared for the English markets; the sheep are chiefly the Cheviot and the black-faced. Greywacke and red sandstone form the principal strata of the parish. Lochnaw Castle, on the border of the loch of the same name, with its plantations and gardens, forms an object of admiration: the only plantations in the parish are those above the castle. There are two villages, Clayhole and Hillhead, forming part of the suburbs of Stranraer. An excellent road runs through the middle of the parish, branching off in one direction round Loch Naw to Portpatrick, and in another by Kirkcolm to Stranraer. The annual value of real property in Leswalt is £5826. Ecclesiastically this place is within the bounds of the presbytery of Stranraer, synod of Galloway, and the patronage is in the Crown. The stipend of the minister is £143, of which nearly a fourth is received from the exchequer; with a manse, built in 1811, and a glebe of nearly twenty acres, valued at about £30 per annum. Leswalt church, built in 1828, contains 550 sittings. The members of the Free Church have a place of worship; and there is a parochial school, the master of which has a salary of £25. 13. 3., with £20 fees, and a house and garden. There is also a parochial library of nearly 400 volumes.

LETHAM, a village, in the parish of MONIMAIL, district of CUPAR, county of FIFE, 4 miles (W. by N.) from Cupar; containing 383 inhabitants. It is situated in the western part of the parish, about a mile north of the high road from Cupar to Collessie; and is a considerable village, the population of which is chiefly engaged in the weaving of linen. The Independents have a place of worship. A large subscription school was established here in 1821; and there is a miscellaneous circulating library, besides a religious library in the vestry of the parish church, which is about half a mile distant.

LETHAM, a village, in the parish of DUNNICHEN, county of FORFAR, 5 miles (E. by S.) from the town of Forfar; containing 745 inhabitants. This village, which is of comparatively recent origin, stands principally on the lands of the late George Dempster, Esq., of Dunnichen, by whom the plan of its erection was laid down. It is pleasantly situated, and regularly built, containing many neat and several handsome houses; and is

inhabited chiefly by persons engaged in manufactures, and in the various handicraft trades requisite for the supply of the district. A public library is supported by subscription, and has a collection of more than 500 volumes of works on religion, morals, history, and general literature, several of which were donations from individuals interested in its success. The principal trade carried on is the weaving of the coarse linen cloth called Osnaburghs, and the finer sorts of linen for shirting and sheeting, in which great numbers of females are employed. In connexion with these, a mill has been erected in the Den of Letham, near the village, for spinning lint and tow into yarn: the works are propelled by the Vinney water. Several attempts have been made to introduce power-looms, but hitherto without effect, the weaving being still carried on in the houses of the weavers, many of whom have small farms, or portions of land, which they cultivate at their leisure hours for health and amusement. There is a place of worship for Independents. Connected with the manufacture is a linen-hall, which has some time been appropriated as a schoolroom, and on Sunday forms a place of worship for a congregation in connexion with the United Presbyterian Synod. The number of children attending the school varies from eighty to 100; and many of the children employed in the spinning-mill are taught the rudiments of general learning. Fairs are held twice a year, for cattle, and for hiring farm-servants. Near the Den of Letham graves have been discovered, containing vast numbers of human bones, and several urns, which crumbled into dust on exposure to the atmosphere.

LETHENDY and KINLOCH, a parish, in the county of PERTH, 4 miles (S. W. by W.) from Blairgowrie; containing 662 inhabitants. These two ancient parishes were united about the year 1806. The district of Lethendy measures five miles from east to west, and one mile and a half at its greatest breadth, comprising 1633 acres, of which 1486 are well cultivated, and the remainder in plantations, with the exception of a small portion of pasture. The district of Kinloch contains 2824 acres, of which 1503 are cultivated in the best manner, 269 are under plantations, and the remainder waste, or used only for pasturage. Lethendy is bounded on the east by the burn of Lunan, separating it from Blairgowrie; and the land gradually rises from that burn to within a short distance of the western limit, where it exhibits a sudden declivity about half a mile in extent. In Kinloch the surface in general is irregular: there are two large brooks, Lorny burn and Lunan burn; and three sheets of water, called respectively the loch of Drumelie, the Rae loch, and the Fenzies loch. The soil of the parish is partly a black mould, inclining in some places to a reddish argillaceous earth, and producing all kinds of crops of excellent quality: in the eastern quarter the lands become more heavy and wet, the soil is blacker, and not so fertile. Between 200 and 300 head of black-cattle are kept, many of which are fattened for the market. The annual value of real property in the parish is £4489. The principal residences are, the house of Balclid, a very old building; the house of Marlee; and the house of Kinloch, a neat modern structure. The fuel in general use is peat and wood, obtained in the parish; but coal is procured from Fifeshire, and also from Newcastle and Sunderland, through Perth, to which place the agricultural produce is sent, especially potatoes for the

London market. For ecclesiastical purposes the parish is in the presbytery of Dunkeld, synod of Perth and Stirling, and in the patronage of the Crown. The minister's stipend is £211, with a manse, a glebe of eight acres in Lethendy, valued at £18 per annum, and another of the same extent and value in the Kinloch district. The church of Kinloch is a plain modern structure; that of Lethendy very ancient, and much dilapidated. The members of the Free Church and the United Presbyterian Church have places of worship. There is a parochial school in each of the two districts, where the usual branches are taught; the master of that of Lethendy receives a salary of £25, has a house and garden, and £12 fees, and the master of the school in Kinloch has a salary of £35, with a house and garden, and £12 fees. In the parish are the old tower of Lethendy, and a Druidical temple in Kinloch; and a great many tumuli are to be seen in the latter district, called the Haer cairns, on a moor where some suppose the famous battle to have been fought between Agricola and Galgacus.

LETHNOTT and NAVAR, a parish, in the county of FORFAR, 7 miles (N. W.) from Brechin; containing, with the hamlet of Balfield, 400 inhabitants. These two ancient parishes, united in 1723, measure fifteen miles in length from north-west to south-east, and about five miles in average breadth. There are not more than 2324 acres under cultivation, the remainder being extensive hills and moorland in a state of undivided common, and used as sheep-walks. The parish is surrounded by the Grampians on all sides except the east; and among the many lofty hills the most elevated is that of Wirren, or "the Hill of springs". The cultivated portion chiefly forms an irregular glen watered by the West water, a tributary of the North Esk; the lands rise gradually from the stream, and stretch into the hills and mountains. The scenery is improved by about fifteen or twenty acres of wood, disposed in clumps; and in the southern quarter is some level ground, adjacent to rivulets, of which there are several in this and other parts of the parish.

In general the soil is clay and loam on a tilly bottom, producing barley and oats, and the usual green crops; no wheat is ever sown. The higher grounds are not so much loaded with the debris of the hills as the lower, whither it is brought down by the rains and streams; but the soil there is more gravelly, and much thinner, and the value of the farms in the hilly part consequently depends chiefly upon the right to hill pasture. The rotation system of husbandry is followed; and the average rent of arable land is 12s. per acre, the leases running for nineteen years. In this parish the inclosures are of stone, and are mostly in good condition; the chief deficiency is in the farm-buildings, which are very indifferent. Vast improvements have taken place within the last thirty years, by the reclaiming, draining, and liming of land; and in some districts the extent of ground under tillage has been nearly doubled. The greatest discouragements to the farmers are, the rugged and uneven state of the roads, and the distance of a market-town, the nearest being Brechin, to road to which, moreover, lies across a steep hill. Lord Panmure, the principal proprietor, in order to encourage his tenants in this parish and those of Edzell and Lochlee, several years since instituted an annual show of sheep and cattle, at which premiums are awarded for the best specimens.

The hills consist of clay-slate and mica-schist, upon a bed of gneiss. A vein of blue slate intersects the parish from east to west, extending, as is supposed, from the German Ocean to the Western Isles : this is thought to be a continuation of that found at Dunkeld and at Easdale, and it was wrought a few years since for a short time, but the working was discontinued. A little limestone also exists ; and in the lower parts of the valley are gravel, sand, clay, marl, and peat. The last partly supplies the inhabitants with fuel ; but they also burn a good deal of turf, and coal brought from Montrose, the nearest sea-port town, sixteen miles distant. The annual value of real property in the parish is £1399. It is ecclesiastically in the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Crown : the minister's stipend is £158, of which nearly a third is received from the exchequer ; with a manse, and a glebe valued at £20 per annum. The church is a plain edifice, built in 1827, and accommodates 250 persons with sittings. The parochial school affords instruction in the usual branches ; the master has a salary of £34, with a house and garden, and £7 fees. A school, five miles distant from the other, is supported partly by a small endowment, and partly by subscription. Lord Panmure takes part of his title from this parish, being Baron Panmure of Brechin and Navar.

LEUCHARS, a parish, in the district of St. ANDREW'S, county of FIFE ; containing, with the village of Balmullo, 1901 inhabitants, of whom 592 are in the village of Leuchars, $7\frac{1}{2}$ miles (N. E. by E.) from Cupar. This place is thought to have derived its name, supposed to signify in the Gaelic language "a marshy flat", from the low grounds east and west of the village, which, previously to the draining of the land, were covered with water during the greater part of the year. It seems to have been chiefly the property of the Earls of Southesk and the family of Bruce of Earlsdale, but nothing of its origin prior to that period is known ; nor has it been connected at any time with events of historical importance. From the style of the older portions of the parish church, it would appear that it was originally founded at a very early date ; by whom, or under what particular religious establishment, if any, is not clear. There was also an ancient chapel dedicated to St. Bennet, which subsisted till the Reformation ; but not a vestige of it is remaining. The PARISH is situated on the bay of St. Andrew's, and is about nine miles in length and five miles at its greatest breadth ; it is bounded on the south by the river Eden, and comprises 12,350 acres, of which 7900 are arable, about 500 woodland and plantations, and the remainder pasture, meadow, and waste. Towards the bay on the east the surface is an extensive level, but towards the west rises by a gradual acclivity to the height of nearly 300 feet above the level of the sea, forming a range of hills which separate the parish from the parish of Logie : the principal of these hills, within the parish, are the Lucklaw, the Airdit, and the Craighoodie. The Eden receives the waters of the Moultry, which intersects the parish from north to south, and also of the Monzie burn, which falls into the Moultry before the influx of that stream into the Eden.

The SOIL near the sea-shore, which is a dead flat about two miles in breadth, is sandy and comparatively barren, but it increases in richness towards the inland parts, where it becomes a deep loam, alternated with extensive

beds of strong blue clay. The system of husbandry is in a highly-improved state ; and, according to the quality of the soil, a five, six, or eight years' rotation is pursued : the crops are oats, barley, wheat, potatoes, and turnips, with the usual green crops. The farm houses and offices are substantial and commodious ; the lands have been well drained, and inclosed with dykes of stone ; and on most of the farms are threshing-mills, some of which are driven by steam. The chief fuel is coal, brought from Newcastle and the Firth of Forth. Great numbers of sheep are fed in the pastures during summer, and on turnips during winter ; they are of the Leicestershire, Cheviot, and Highland breeds, the last kind being generally fattened for the butcher, and the two former kept for breeding. The cattle are of the Teeswater, crossed with the Fifeshire ; and the horses mostly of the Clydesdale breed. In this parish the plantations are well managed ; on the light and sandy soils Scotch fir thrives well, and attains to a stately growth. The substratum is various ; to the north-west, chiefly whinstone : Lucklaw hill is composed of trap, alternated with greenstone interspersed with veins of calcareous spar and porphyritic felspar ; and near the Eden is a stratum of red sandstone, but not sufficiently compact for building purposes. The annual value of real property in the parish is £15,527. Earlsdale, the chief mansion-house, is a castellated structure of venerable antiquity, part of which is still kept in repair : the walls and roof of the great hall, which is very spacious, are ornamented with heraldic devices, and it displays a fine specimen of baronial grandeur. The grounds are extensive, and embellished with thriving plantations. Pitcullo and Airdit are also castellated mansions, partly fallen into decay. Pitlie is with good reason believed to have been a hunting-seat of the Kings of Scotland : the royal arms carved in stone are still preserved.

A large number of the working classes are employed in weaving towelling and sheeting for home use, and coarse linens, dowlas, Osnaburghs, and Silecias for the manufacturers of Cupar and Dundee, to be exported to America and the West Indies : 130 looms are constantly in operation. A distillery at Seggie, on the shore of the Eden, for many years previously to 1836 consumed 100 quarters of grain daily, affording employment to about 100 persons. On the Moultry and the Monzie burn are meal and barley mills, driven by those streams ; and there are mills in the parish for linseed, oatmeal, and for sawing timber. The village of Leuchars is neatly built, and appears to have increased since the conversion of the tract of land called the Tents Moor into farms, and the consequent removal of numerous cottages on it, the occupants of which now reside in the lately-erected houses. It is pleasantly situated, and has a cheerful and healthy appearance ; the surrounding scenery, also, is diversified. The inhabitants of the village, who are chiefly employed in weaving, and in the trades requisite for the supply of the parish, have facility of intercourse by means of good turnpike-roads, by which the village is intersected. The Eden is navigable for vessels of considerable tonnage to Guardbridge, near Seggie, where a small harbour has been constructed for the convenience of trade ; and at Seggie is a pier for the use of the distillery there. A prosperous salmon-fishery is carried on in the bay. A few salmon and trout are taken in the Eden during the season ; and near the mouth of the river are extensive

beds of mussels, which are let to tenants who bestow great attention upon the management of them. Two annual fairs for the sale of cattle and pedlery are still held in the village; but they have been for some years declining, and are but thinly attended. Balmullo is pleasantly situated, and has of late years become greatly enlarged. The Dundee line of the Edinburgh, Perth, and Dundee railway passes through the parish and village of Leuchars; it has a station to the south of the village, and still further to the south, near Seggie, diverges the St. Andrew's branch of the line.

Ecclesiastically the parish is in the presbytery of St. Andrew's, synod of Fife, and in the patronage of the Crown. The minister's stipend averages £220, with a manse, and a glebe valued at £30 per annum. Leuchars church, situated in the village, is a highly-interesting structure, and appears to have been erected at different periods, exhibiting beautiful specimens of the ancient and later styles of Norman architecture, with additions of a much more recent character. It consists of three portions, of which that to the east, the most ancient portion, is of semicircular form, and decorated externally by a range of ten circular arches with zigzag mouldings, supported on double pillars: above is a series of nine similar arches and pillars, surrounding the walls. The interior of this portion of the building is lighted by a tier of three circular-headed windows of corresponding character, inserted in the intervals between the pillars; and above the upper series of arches are corbels grotesquely ornamented, from which spring the ribs of the groined roof. The central portion of the edifice differs from the former chiefly in having a series of pointed arches formed by the intersection of circular arches resting on the alternate columns, and in the higher elevation of the roof, which is not groined. It is lighted by two windows on the south, and one on the north. The western portion is not distinguished by any striking features of architectural embellishment. Together with the central part, it is fitted up as the parish church, and adapted for a congregation of nearly 900 persons. There is a place of worship for members of the Free Church, and in the village of Balmullo is one for a congregation of the Original Secession. The parochial school is under good arrangement: the master has a salary of £34, with about £10 fees, and a house and garden; also a glebe of two acres of land, and the interest of 2000 merks Scotch bequeathed by the Rev. A. Henderson. A school for English reading and sewing is supported by the Lindsay family; and a parochial library has been established in the village of Leuchars, which already contains a collection of some hundred volumes of general and religious publications. The poor have the rent of land in the hands of the Kirk Session amounting to £24 a year.

At a short distance from the village of Leuchars is a circular mound once surrounded by a moat, on which the ancient castle of Leuchars was erected; but no vestige of the building is remaining: it was a place of great strength, and one of the strongholds of the Earls of Fife, but the fortifications were demolished by the English in the fourteenth century. On Craigie hill, an earthen vase containing about a hundred silver coins of Severus, Antoninus, and other Roman emperors, was turned up by the plough in 1808: most of them are now in the possession of the Lindsay family.

LEVEN, a sea-port, an ancient burgh of barony, and a bathing-place, in the parish of SCOONIE, district of KIRKCALDY, county of FIFE, 3 miles (W. S. W.) from Largo, and 9 (N. E.) from Kirkcaldy; containing above 2000 inhabitants. This place, which is agreeably situated on the sea-shore at the mouth of the river whence it takes its name, was erected into a burgh of barony by charter of the proprietor of the lands of Durie, formerly in the possession of the Gibson family, whose descendants, the Lords Durie, are distinguished in Scottish history. These lands now belong to Charles Maitland Christie, Esq. The town consists chiefly of two parallel streets, connected with each other by several smaller streets crossing them in various directions; the houses are neatly built, and the inhabitants are supplied with water, and the town cleansed and lighted, by a board of police that has been established some years under act of parliament. A handsome carriage-bridge has been constructed over the river, near its mouth, in connexion with the new road leading to Kirkcaldy: the want of this was long severely felt, as there was no bridge for carriages nearer than Cameron bridge, about three miles further up the stream. A subscription library, containing a well-chosen collection of nearly 700 volumes, has been for some time founded; and there is also a mechanics' institution, to which is attached a library of useful works. The weaving of linen is one of the chief branches of the trade of Leven, affording employment to about 170 persons at handlooms in their own dwellings. There are also five mills for the spinning of flax and tow, in which 250 persons are engaged, of whom upwards of 150 are females. An extensive iron-foundry has been many years in operation, and gives constant occupation to about fifty men; about thirty are employed in a saw-mill, and a considerable manufactory of bricks and tiles is carried on. The town derives a degree of traffic from its proximity to the market-towns of Kirkcaldy and Cupar; and the post-office has two deliveries daily. Fairs are held in the spring annually, and likewise in July and October, the former fair for linseed, and the two latter for white linen: about half a century ago, they were numerously attended by merchants from distant parts of the country; but they have now become little more than pleasure-fairs.

The trade of the port consists in the exportation of the coal procured on the Durie estate, and of linen-cloth and yarn, bone-dust for manure, grain, potatoes, whisky, cast and pig iron, ochre, and bricks and tiles; and in the importation of flax, hemp, malt, coal, stone for building, timber, slates, herrings, and bones to grind for manure. There belong to the port two brigs, of 374 tons' aggregate burthen, chiefly in the American trade; and five sloops, of 188 tons' aggregate burthen, employed in the coasting-trade. In a late year, fifteen foreign ships, and 222 coasters, entered inwards; the value of the exports was £60,483, and of the imports, £43,190. Leven harbour, naturally formed by a creek of the river, is accessible at spring-tides to vessels of 300 tons, which can unload and take in their cargoes at the quay; but from the banks of sand near its mouth, which after storms or floods frequently shift their position, the entrance is rather difficult. The quay, also, is not sufficiently extensive for the increasing trade, which, if it should continue to make the same

progress it has made for the last few years, must ultimately lead to the improvement of the harbour and the enlargement of the quay. Facility of intercourse with the neighbouring market-towns is afforded by turnpike-roads; the Edinburgh and Northern railway passes a few miles to the west of the town, and there is also communication with Edinburgh by steam-boats, which leave the port during the summer twice, and in winter once, every day. The parochial church is in the vicinity of the town; and there are places of worship for members of the Free Church, the United Presbyterian Church, and Independents.

LEVERN, for a time a quoad sacra parish, in the Upper ward of the county of RENFREW; comprising the villages of Crossmill, Dovehill, Hurlet, and Nitshill; and containing 2490 inhabitants. This parish consisted of a south-eastern portion of the Abbey parish of Paisley, an eastern part of Neilston, and a western part of Eastwood parish; and the district was so called from the river Lovern, by which the lands are intersected. It measured three miles in its greatest length, and two miles and a half in its greatest breadth, comprising about 2275 acres. The parish was formed under an act of the General Assembly in 1834. Lovern is in the presbytery of Paisley, synod of Glasgow and Ayr, and the patronage is vested in the communicants: the stipend of the minister is £84, derived from seat-rents and collections, with a manse and garden valued at £20 a year. The church was built in 1834, and opened for divine service in 1835; and a session-house and two porches have since been added; the whole completed at a cost of £890: there are 660 sittings. The Roman Catholics have also a place of worship.

LEWIS, an island in the Atlantic Ocean, partly in the county of INVERNESS, but chiefly in that of Ross and CROMARTY; containing, with adjacent islands, 21,466 inhabitants, of whom 4429 are in the county of Inverness. This island, which forms part of the series called Long Island, and is the largest of the Hebrides, or Western Isles, is separated from the main land of Ross and Cromarty by the channel of the Minch, and is about eighty-two miles in length, and from eleven to twelve miles in average breadth. It contains the parishes of Barvas, Lochs, Stornoway, and Uig in the north, and the parish of Harris in the south, the last being in the county of Inverness; and the whole comprises an area of nearly 700,000 acres. The surface is deeply indented with bays and inlets from the sea. Of these the principal are, Seaforth on the east and Loeh Reasort on the west, which respectively bound the parish of Harris on the north-east and north-west; and East and West Tarbert, which, by still deeper indentations, almost divide that parish into two detached portions. The island is generally hilly, though the Harris district is more mountainous than the rest of Lewis, from which it is separated by a chain of very considerable height; towards the coast are some tracts of fertile land, but the aspect of the interior is for the most part frightfully dreary and barren. Numerous small streams, issuing from inland lakes, flow through the lower grounds into the sea. Several of them abound with trout and salmon; and the numerous lochs that indent the shores afford lucrative fisheries for herrings, and for white-fish of all kinds. The eastern portion of the isle is in general appropriated to the grazing of sheep and black-cattle,

of which considerable numbers are reared; in the western district are some small tracts of arable land, the soil of which is among the most fertile of the Hebrides. The system of agriculture, though slowly improving, is still in a very backward state; and the cottages are built of bog with stone facings inside and out, and roofed with thatch: timber of every kind is extremely scarce. In some parts of the island the coast is low and sandy, and in others abruptly steep and rocky; the bay of Stornoway affords convenient and safe anchorage, well sheltered from all winds, and there are numerous other harbours. The principal inhabited islands off the coast are Bernera, Pabbay, Scarp, Tarrinsay, Anabich, Ensay, Hermitray, Killigray, and Sealpa. At the Buffs of Lewis, or northern headland, is a colony of Danish origin, which has preserved its ancient character without the slightest assimilation to that of the other inhabitants, with whom they scarcely hold any intercourse, though speaking the Gaelic language in all its purity; they are engaged in the fisheries off the coast. There are some remains of forts, Druidical circles, cairns, upright stones, and other monuments of antiquity.—See the articles on the various parishes and islands.

LEWISTOWN, EAST and WEST, a village, in the parish of URQUHART and GLENMORRISTON, county of INVERNESS; containing 183 inhabitants. These places are merely small clusters of cottages, and the population chiefly agricultural labourers.

LEY OF HALLIBURTON, a hamlet, in the parish of KETTINS, county of FORFAR, 3 miles (S. E.) from Cupar-Angus; containing 48 inhabitants. It lies nearly in the centre of the parish, on the road leading from Collace to Meigs.

LEYSMILL, a village, in that portion of the parish of INVERKEILLOR which formed part of the quoad sacra district of FRIOCKHEIM, county of FORFAR, 4 miles (E.) from Dunnichen; containing 173 inhabitants. It is situated in the western part of the parish; and in its vicinity is a considerable pavement quarry, where the stone is dressed by machinery driven by a steam-engine, affording employment to about fifty of the population.

LHANBRYDE, in the county of ELGIN.—See ST. ANDREW'S.

LIBBERTON, a parish, in the Upper ward of the county of LANARK; including the village of Quothquan, and containing 796 inhabitants, of whom 117 are in the village of Libberton, $2\frac{1}{2}$ miles (S. by E.) from Carnwath. This place, the name of which is of uncertain derivation, is situated on the banks of the river Clyde, and comprehends the ancient parishes of Libberton and Quothquan, the latter having been annexed to the former in 1669. The parish is about seven miles in length from north to south, and four miles and a half in average breadth, forming a peninsula bounded on the south and west by the Clyde, and on the north by the river Medwin. It comprises 8703 acres, of which about half are arable, 500 acres woodland and plantations, and the remainder hill pasture and waste. The surface is generally elevated, and along the banks of the rivers level, but in other parts varied with hills, of which Quothquan Law, the highest, is 600 feet above the sea, and covered with verdure to its very summit. The Clyde frequently overflows its banks, adding great fertility to the adjacent lands; it is of very various depth, and fordable in many

places during the summer. In some parts its banks have a height of fifty or sixty feet. The Medwin, which rises in the parish of West Linton, pursues a course of several miles, receives the waters of the North Medwin, and then flows into the Clyde. A branch of it, taking an eastern direction, at Dolphington forms a boundary between the counties of Peebles and Lanark, and afterwards falls into the Tweed. The scenery is pleasing, and in some places embellished with thriving plantations.

In this parish the SOIL is various; near the Clyde, extremely fertile; in other parts, comparatively poor. The crops are oats, barley, bear, potatoes, and turnips: the system of husbandry is advanced; and draining has been practised to a considerable extent, embankments constructed, and much unprofitable land reclaimed and brought into cultivation. The farm-buildings have been also improved, though still inferior to many in other districts of the county. The lands have been inclosed, partly with stone dykes and partly with hedges of thorn, which are kept in good order; and the plantations have been extended. Attention is paid to the management of dairy-farms, and large quantities of butter and cheese are produced for the supply of the neighbouring markets; the cows are all of the Ayrshire breed. The sheep fed in the pastures are a cross between the Cheviot and the Leicestershire. The plantations, chiefly on the lands of Cormiston, Shieldhill, Huntfield, and Whitecastle, are larch, spruce, and Scotch firs, intermixed with various other kinds of trees, and are in a very thriving state. The landed proprietors' residences and tastefully-embellished demesnes add greatly to the beauty of the scenery. Libberton village is pleasantly situated: it has facility of intercourse with Carnwath, the nearest market-town, by a tolerably good road; and the turnpike-road from Peebles to Glasgow passes for nearly a mile through the parish. Quothquan is also pleasantly situated. The annual value of real property in the parish is £4730. It is ecclesiastically in the presbytery of Biggar, synod of Lothian and Tweeddale, and in the patronage of the Lockhart family, of Lee and Carnwath; the minister's stipend is about £226, with a manse, and a glebe valued at £16 per annum. The church, erected in 1812, is a neat edifice adapted for a congregation of 350 persons. The parochial school, situated in the village of Libberton, is well attended; the master has a salary of £30, with £20 fees, and a house and garden. There is also a school at Quothquan, the master of which has £2. 10. annually, being the interest of a bequest, and £6 from house-rents, in addition to the school fees. A friendly society, established in 1811, has contributed to reduce the number of applications to the parish for relief. Near the village are the remains of a circular camp, situated on the extreme edge of a barren moor, about half a mile from the Clyde; it comprises an area of about an acre and a half, and is surrounded by a double intrenchment with a deep fosse.

LIBERTON, a parish, in the county of EDINBURGH, 2 miles (S. S. E.) from Edinburgh; containing, with the village of Morton, part of New Craighall, and the former quoad sacra parish of Gilmerton, 3450 inhabitants. This place is supposed to have been originally called *Lepers' town*, from an ancient hospital for lepers, of which a memorial is retained in the name of the lands near the site. It is of considerable antiquity, and has been long celebrated for the beautiful remains of CRAIG-

MILLAR CASTLE, which render it a favourite resort of the inhabitants of Edinburgh. At what time, or by whom, the castle was originally founded, is not precisely known; but for more than three centuries, previously to its coming into the possession of the Gilmour family, its present owners, it was the baronial seat of the Prestons of Preston, whose armorial bearings appear on the walls. During the reign of James III., John, Earl of Mar, the younger brother of that monarch, was for some time detained in confinement in the castle; which was subsequently the residence of James V., when in his minority, while a contagious disease was prevalent at Edinburgh. Craigmillar Castle sustained considerable damage in 1543 and 1547, from the English, by whom it was partly demolished. It was soon restored, however, and, after her return from France, became a residence of Mary, Queen of Scots, whose retinue of French attendants lived in a small village situated at the base of the castle hill, and which, from that circumstance, obtained the appellation of "Little France." In 1566, after the murder of David Rizzio, a conference took place here of the Earl of Huntly, the Earl of Argyll, and others, having for its object the procuring of a divorce between the queen and Darnley, which her majesty refused to sanction; and the castle was subsequently the scene of various historical events. The remains of this once stately edifice are situated on the summit of a rock rising, almost perpendicularly on the south, to the height of 360 feet above the level of the sea. They were once defended by an outer wall with a deep fosse; and within the line of this is still an embattled wall with circular towers on the east, built in 1427, and inclosing the court, into which is an entrance on the north. The ascent to the castle is by a flight of steps, leading into the ancient hall, which is yet entire; and there are several other apartments in good preservation, one of which, of very small dimensions, is said to have been the queen's bed-chamber. On the east is the ancient chapel, now in ruins, and used as a stable; the family chapel built by Sir John Gilmour is also a ruin. The grounds have been lately planted.

The PARISH, which extends from the eastern confines of the Pentland hills nearly to the Firth of Forth, and from the vicinity of Edinburgh to within a mile of Dalkeith, is about seven miles in length and three in mean breadth, comprising an area of rather more than 4700 acres. Of this area almost 4000 acres are arable, 370 meadow and pasture, and the remainder woodland and plantations. The surface is boldly undulated, attaining in some parts a considerable elevation, and commanding views over a wide extent of richly-fertile and highly-cultivated country, with many interesting features, and much romantic scenery. The view from Craigmillar Castle embraces the city of Edinburgh, the Pentland, Braid, and Blackford hills, the Firth of Forth, the coasts of Fife and East Lothian, and various other objects. In the lower districts the SOIL is a rich loam; in the higher lands, a thin but retentive clay; and on the confines of the Pentland hills, a dry gravel. The crops are wheat, oats, barley, potatoes, and turnips. The system of agriculture is in the highest state of improvement; the lands have been well drained, and, from the abundance of excellent limestone found in the parish, have been rendered extremely fertile. The lands are, however, but partially inclosed. Efforts have been made

of late for the improvement of the farm-buildings. Portions of land are laid out in gardens, in which fruit and vegetables are raised for the supply of the Edinburgh market. A sycamore-tree at Niddrie measures nineteen feet in circumference, and one at Morton Hall fourteen feet; and at Moredun, Drum, and Inch are also many fine trees.

In this parish the substrata are chiefly coal and limestone. The former, constituting part of the coalfield of Mid Lothian, was extensively wrought for many years at Gilmerton; but in 1838 the works were suspended, partly from the expiration of the lease, but chiefly from the abundant supply brought to Edinburgh at a more moderate cost: they subsequently came again into operation. A vein of ironstone has been discovered at the same place. The limestone is of excellent quality and very pure, containing about ninety-five per cent of carbonate of lime. There are quarries of it at Burdiehouse and Gilmerton, both in extensive operation. The stone of the former occurs in a seam twenty-seven feet in thickness, of a deep blue colour on the upper surface, and of a light grey beneath; and contains numerous shells, some perfect impressions of different plants, small fishes, and other remains. The stone of the latter is about nine feet in thickness, and contains various organic remains, which are exclusively marine. On the north side of the castle hill at Craigmillar was an excellent quarry of freestone, from which materials were raised for the erection of the Regent's-bridge, George-square, and many of the streets in the southern district of the city of Edinburgh, the barracks at Piershill, and other buildings. The annual value of real property in the parish is £23,715.

Inch House, the seat of Walter Little Gilmour, Esq., is an ancient spacious mansion, erected prior to the year 1617, and beautifully situated in an extensive demesne enriched with wood, and commanding some fine views. Morton Hall, the seat of Richard Trotter, Esq., erected in 1769, and improved by the present proprietor, is a handsome mansion in a demesne tastefully embellished with thriving plantations. The house of Drum, the residence of Miss Innes, is also handsome; it was erected by Lord Somerville. Moredun, the seat of David Anderson, Esq., built by Sir James Stewart; Brunstane, erected in 1639 by Lord Lauderdale; and the houses of Southfield, Sunnyside, St. Catherine's, and Mount-Vernon, are all beautifully situated. The chief village is Gilmerton, which contains 548 inhabitants. There is a branch office here, connected with the Edinburgh post-office; and facility of communication is maintained by various roads, and the lines of the North-British railway company.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Edinburgh, synod of Lothian and Tweeddale. The minister's stipend is £326. 14. 7., including £10 prebendal fees; with a manse, and a glebe valued at £20 per annum: patron, the Crown. Liberton church, erected in 1815, is a handsome structure with a lofty embattled tower, forming an interesting object in the landscape, and contains 1430 sittings. A church, to which a quoad sacra parish was for a time annexed, was erected at Gilmerton (*which see*) in 1837; and this is now a preaching-station, supplied regularly by a preacher of the Establishment: he receives an annual salary of £80, raised by subscription and collections in

the parish church. The members of the Free Church have a place of worship and a school. Liberton parochial school is attended by about eighty children; the master has a salary of £34, with a house and garden, and the fees average £45 per annum. There are schools also at Gilmerton, Burdiehouse, and Niddrie, the teachers of which have an endowment from the resident proprietors, in addition to the fees; and the teacher at Niddrie has, besides, a house. At Kames is a girls' school, established and supported by Mrs. Trotter. To most of the schools are attached libraries for the use of the children. There are some slight remains of the ancient chapel of Niddrie, formerly a distinct parish; it was founded in 1387 by Robert Wanchop of Niddrie-Marshall, was dedicated to the Virgin Mary, and made subordinate to the abbey of Holyrood: the burying-ground is still used. The ancient chapel and burying-ground of St. Catherine have long since disappeared. Near their site is a mineral well, the water of which has been found efficacious in the healing of cutaneous disease: a black oily substance constantly floats on the surface of the water. This well was inclosed by James VI., who visited it in 1617; but it was destroyed and filled up by Cromwell's soldiers in 1650: it has, however, been restored, and is now in good preservation. In the vicinity of Morton Hall are several tumuli; and to the west is the hill of Galachlaw, on which Cromwell encamped his army of 16,000 men previously to the battle of Dunbar. At Gilmerton is an artificial cavern of several apartments, excavated in the solid rock in 1724, by an eccentric individual who lived there with his family till 1735, and carried on the trade of a blacksmith. On the lawn in front of the house of Drum are the remains of the ancient market-cross of Edinburgh, placed there in 1756 by the Somerville family.

LIFF and BENVIE, a parish, chiefly in the county of FORFAR, and partly in the county of PERTH; containing, with the villages of Backmuir, Benvie, Birkhill-Feus, Dargie, Invergowrie, Liff, Muirhead, and part of Lochee, 3980 inhabitants, of whom 136 are in the village of Liff, 5 miles (W. N. W.) from Dundee. The word *Liff* is a North-British or Pictish term signifying "a flood" or "an inundation," but the reason of its application to the first-named of these two ancient parishes is not now known. The name of Benvie is supposed to be derived from the Celtic term *beinn buidhe*, "the yellow hill or mount". The parishes were united in November 1758. That of Liff, long before this, had received considerable augmentations. The parish of Invergowrie had been annexed to it before the middle of the seventeenth century; and the parish of Logie, including the lands of Balgay and Blackness, had been united to it *quoad civilia* a short time after that period. The lands of Logie, Balgay, and Blackness, however, containing a large portion of the suburbs of Dundee, have been from time immemorial, and are still, connected *quoad spiritualia* with Dundee.

The PARISH is situated at the south-western corner of the county of Forfar, and is bounded on the east partly by Dundee, and on the west and south-west by Fowls Easter and Longforgan, both in Perthshire. The river Tay forms its southern limit; and the Dighty, a small stream, divides the parish from Auchterhouse and Lundie on the north. It measures six miles from east to west, and four from north to south, comprising about 6000

acres, of which nearly 5000 are under cultivation, fifty or sixty acres in pasture, and the remainder in plantations. The surface rises gently from the Tay for nearly three miles, and attains an elevation of 400 feet, but afterwards declines towards the north. Several rivulets flowing from the west water the different lands, and being joined, at the distance of a mile from the Tay, by a stream running from the east through Lochee, form together the burn of Invergowrie, and after impelling the Invergowrie flour-mills, fall into the bay of the same name.

The SOIL in the lower grounds is either a black loamy earth, or clay, and is much enriched by the facilities afforded to the industrious tenants of obtaining manure from the town of Dundee: on the higher grounds the earth is generally light and sandy, resting upon rock or lime. All kinds of grain are raised, and great attention is also given to green crops, especially turnips and potatoes, of which latter large quantities are usually grown, many of the farmers letting out fields in small allotments for the purpose. The ground is mostly cultivated under the five-shift course; the tenants are skilful and indefatigable, and farm their lands to the best advantage. Dairy husbandry is much on the increase, and numerous cows are kept, of the Ayrshire breed: the rest of the cattle are the Angus, and the sheep the North Highland, but little attention is paid to the improvement of these. The farm-buildings are in general convenient. The substrata of the parish comprise many varieties: the stratified rocks are red and grey sandstone. Great interest has recently been excited among geologists by the discovery of fossil organic remains in the denes of Balruddery, most of which have been determined, by competent authority, to belong to entirely new species; and in consequence also of various doubts with respect to the precise formation of their beds, a minute investigation is expected to take place. Several quarries of excellent freestone are in operation, particularly at Lochee, where they have long been wrought: from one of these a large portion of the material was taken for the construction of Dundee harbour. The yearly value of the whole of the stone raised is estimated at £1800. The plantations are extensive and interesting, adding much to the general beauty of the scenery: they comprise a great variety of trees, some of them, especially about the mansions, of very fine growth; the whole are in a thriving condition, and produce by the sale of cuttings £800 a year. The annual value of real property in the parish is £10,503.

The House of Gray, belonging to the representative of the ancient family from which it is named, is a noble and commanding turreted edifice in the manor-house style, built in the year 1716, and the whole in very good condition. It is surrounded by a beautiful park of 200 acres, finely ornamented with choice and venerable old trees; and on the estate are valuable plantations. *Camperdown*, formerly *Lundie House* is an elegant modern Grecian structure, embellished on the east with a portico supported by eight massive Ionic columns; it is built of white Killala sandstone. The interior contains a beautiful saloon, lighted by a cupola: and among the ornaments of this splendid mansion is a striking and much-admired painting by Sir John Copley, representing the scene on board the *Venerable* immediately after the battle of Camperdown, in which De Winter appears as

one of the principal characters, delivering up his sword to the British admiral. Adjoining the house is preserved a large mass of wood exhibiting the effigy of a lion, which was the bulkhead of De Winter's ship, *Vryheid*. About a quarter of a mile from the house are extensive shrubberies and gardens. The mansion of *Invergowrie*, lately much enlarged, is delightfully situated on a slope near the Tay, and commands a view of the bay of Invergowrie, of the course of the river, and of the Carse of Gowrie. *Balruddery House* is a modern edifice, of considerable elegance, and from its elevated site embraces fine prospects of the surrounding scenery, including numerous romantic dells of great beauty, and several rich and extensive tracts in the distance.

The chief village is Lochee, situated partly in the parish of Dundee, and which contains a large population, closely connected in commercial matters and general traffic with the town of Dundee. It is described under its own head, as are the other principal villages enumerated at the commencement of the article. The Kirk-town of Liff contains about twenty-six families, and there are thirty-five in Birkhill-Feus: this latter place has been recently let out in small allotments for houses, and is likely to become a settlement for weavers and others, on account of its situation on the turnpike-road from Dundee to Meigle and Cupar-Angus, between four and five miles distant from the first of these towns. Household linen was formerly made in the parish to a considerable extent; but the chief manufacture now carried on is the weaving of coarse linen-cloth principally for exportation, in which many young persons of both sexes, as well as adults, are engaged, except during the spring and in harvest time, when they obtain agricultural work. It is supposed that, out of the population of Lochee connected with this parish, amounting to 2439, two-thirds, both male and female, are occupied in manufactures, and the remainder consist of mechanics, handicraftsmen, and common labourers. Three spinning-mills have been erected in the village since the year 1825; as also one at Denmiln; and at Bullion, near Invergowrie, works of some extent have lately been established for bleaching and dyeing yarn and cloth. The railway and the turnpike-road from Dundee to Perth pass near the southern limit of the parish, and the turnpike-road from Dundee to Meigle and Cupar-Angus through the eastern portion. The agricultural produce is taken for sale to Dundee, only three miles distant from the parish boundary; and from the same place, coal and other necessary articles are procured.

Ecclesiastically the parish is in the presbytery of Dundee, synod of Angus and Mearns, and in the patronage of Lord Gray: the minister's stipend is £268, with a manse, and a glebe of ten acres including the garden. The church, rebuilt in 1831, is beautifully situated in the park of Lord Gray, who liberally granted to the heritors sufficient ground for the site and precincts: seats are provided for 750 persons. The cost of the building was upwards of £2200, exclusive of the spire, which rises from a bell-tower, at the east end of the structure, to a height of 108 feet from the ground. A church was erected at Lochee about the year 1830, at a cost of £2000; it contains nearly 1200 sittings, of which 100 are free, and the income of the minister, who is appointed by the male communicants, is derived from seat-rents and collections. There are also places of

worship for members of the Free Church and the United Presbyterian Church. The parochial school affords instruction in the usual branches; the master has a salary of £34. 4., with a house and about £37 fees. A school in connexion with the former quoad sacra parish of Lochee was established, and premises erected, in 1837, partly by subscription and partly by a government grant, at an expense of nearly £300; the sum of £12. 10. is annually allowed, as a kind of endowment, by the General Assembly's Education committee. There is also a school of industry, under the patronage of the Countess of Camperdown. The remains are still to be seen here of a castle or palace called Hurly-Hawkin, built by Alexander I., who, having narrowly escaped assassination, founded the church of Scone in gratitude for his deliverance, and made over to it his lands of Liff and Invergowrie. A subterraneous building, with several compartments, was discovered some years since near Camperdown House, and from the domestic utensils found, and other circumstances, it appears to have been inhabited. The walls of the church of Invergowrie, also, are yet standing; it is supposed to be the most ancient place of Christian worship north of the Tay. Among other antiquities is a Druidical temple consisting of nine large stones; and a place on the borders of the parish, to the east, called Pitalpie, or "Pit of Alpine", is supposed to have been the scene of an engagement in the 9th century between the Picts and the Scots, in which the latter were vanquished, and Alpine their king, with many nobles, slain. Not far distant is a stone designated the King's Cross, where it is said the royal standard was planted during the battle. Near the village of Benvie is a strong chalybeate spring, formerly in great repute. The late Professor Playfair, of Edinburgh, was born at Benvie on March 10th, 1748; and Admiral Viscount Duncan resided occasionally at Camperdown, his family seat. The ingenious William Playfair, brother of the professor, was also a native of the parish.

LIGHTBURN, a village, in the parish of CAMBUSLANG, Middle ward of the county of LANARK, $1\frac{1}{4}$ mile (E. S. E.) from the village of Cambuslang; containing 163 inhabitants. This place lies nearly in the centre of the parish, on the road from Hamilton to Glasgow; and is one of thirteen villages within its limits the population of which are chiefly colliers, weavers, cotton-spinners, and operatives of various kinds connected with the mines and manufactures of the district.

LILLIESLEAF, a village and parish, in the district of MELROSE, county of ROXBURGH; containing 771 inhabitants, of whom 355 are in the village, 6 miles (E. S. E.) from Selkirk. This parish, the name of which has in various records been written Lillesclive and Lillesclif, is seated on the river Ale, which, after forming its boundary for about four miles, intersects the parish of Ancrum, and then falls into the Teviot. In common with other places similarly situated, it was thickly studded with fortresses, as a defence against the incursions of the enemy during the border warfare, in which it largely participated. Of these there were not less than fourteen, the most considerable being one on the highest part of the eminence whereon the village is built. It was two stories high, and rendered strong by its position, having a gradual ascent from the Ale on the north, and a large pool and morass on the south; the fortress was of rectangular form, and capable of maintaining 100

men within its walls. There were numerous smaller towers, called peels, in the village, in which the inhabitants commonly resided, their houses at that period being necessarily constructed for defence against incessant attacks: the remains of two of these towers are still to be seen. On the suppression of conventicles in the reign of Charles II., the moors in this parish were, from their secluded situation, selected for holding meetings; and some of the inhabitants were visited with imprisonment, exile, and death for attending them.

The PARISH is nearly six miles in length and about two miles and a half in breadth, comprising 7000 acres, of which 2800 are arable, 3500 meadow and pasture, 650 woodland and plantations, and fifty acres waste. Its surface is intersected from east to west by several ridgy heights, and is agreeably varied with rich valleys and well-cultivated declivities, interspersed with flourishing plantations, and presenting altogether an aspect of cheerfulness and fertility. In some places the soil is a loam, but generally it is a heavy clay with a substratum of whinstone. During the last five and twenty years, there have been great improvements in agriculture; a large proportion of the land bears good crops, and is now in a high state of cultivation. The pool and morass which during the border warfare served as a defence to the principal fortress, and which was formerly a resort of sea-gulls, has been partially drained; cattle now pasture on some parts of it, and on others the grass is cut for hay. The system of agriculture called the four-shift course is prevalent. The want of lime, which is to be procured only from a distance of nearly thirty miles, and at a very considerable expense, is deeply felt; but on some farms where it has been used, the increase of the crops, and the melioration of the soil, have been found commensurate with the cost. The plantations are larch and Scotch fir, with a portion of oak, ash, elm, and beech; and being well managed, they are generally thriving. A saw-mill, for the purpose of cutting and preparing timber for paling, fire-wood, and other purposes, has been erected some years on the Riddell estate; it is worked by water, and has been found of extensive use. Many of the farm-houses have been lately rebuilt, in the construction of which, there is much more attention to comfort and convenience than formerly; the fences are well kept, and add greatly to the beauty of the landscape. The principal fuel is coal, which, being brought from a distance of about thirty miles, is of rather high price; but peat of inferior quality, brushwood, and the thinnings of the plantations, are very generally used, though, from the scarcity of the peat, which is nearly exhausted, and the dearness of brushwood, coal is little more expensive. The annual value of real property in the parish is £5684. The principal gentleman's seat is Riddell, for many generations the property and residence of the Riddell family, but which, on the death of Sir John B. Riddell, Bart., in 1819, was purchased by Mark Sprot, Esq.

The village is pleasantly situated, and such of the houses as have been lately built are neat and comfortable; the old ones are the very reverse. A few of its inhabitants are employed in weaving stockings for the manufacturers of Hawick, but the majority are engaged in trades dependent upon agriculture, and a few in agriculture itself. A subscription library has been formed within the last thirty or forty years, which consists of a large collection

of volumes; and a post-office has been established in the village. Facility of communication with the neighbouring towns is maintained by roads kept in repair at the expense of the landowners, their tenants and householders. Ecclesiastically the parish is in the presbytery of Selkirk, synod of Merse and Teviotdale, and in the patronage of the Duke of Roxburgh: the minister's stipend is £243. 8. 5., with a manse, and a glebe valued at £17 per annum. Lilliesleaf church, built in 1771, is in good repair, and conveniently situated for the resort of the parishioners, but, from the lowness of the site, is subject to damp; in the eastern aisle is a stone with the date 1110, removed from the old church, which must have been of great antiquity. There is a place of worship for the United Presbyterian Church. The parochial school, for which a very commodious building has been erected by the heritors, affords a useful education; the master has a salary of £30, with £17 fees, and a house and garden. There is a private school, for which a schoolroom has been provided rent-free; and the ladies in the neighbourhood patronize and encourage a school for girls, who are taught sewing, reading, and the elements of arithmetic. The sum of £100 was bequeathed to the Kirk Session above a century since; the interest is appropriated by the heritors in lessening the assessment for poor's rates. Two stone coffins, one containing an earthen pot filled with ashes and arms, and inscribed with the date 727, and the other containing the bones of a skeleton of gigantic stature, and bearing the date 936, were discovered in the ancient chapel on the Riddell estate, which has long ceased to exist. These are supposed to have been the remains of ancestors of the Riddell family, to one of whom, Walter Rydale, sheriff of Roxburgh, a charter was granted by David I., confirming to him the estate of Lilliesclive, and others which his father, Gervasius de Rydale, possessed at the time of his death.

LIMEKILNS, a village and sea-port, in the parish and district of DUNFERMLINE, county of FIFE, 3 miles (S.) from the town of Dunfermline; containing 949 inhabitants. This place, which was formerly considerable for its trade, appears to have been of some note at an early period. Not far from the harbour is an ancient vault, called the King's Cellar, in which most probably were stored the various articles imported for the use of the royal household in the palace of Dunfermline, and on which is the date 1551. The village stands upon the north shore of the Firth of Forth, and is neatly built. Its inhabitants are chiefly employed in the neighbouring lime-works, and in the exportation of coal, lime, wool, and other produce, in which several vessels belonging to the port are engaged. Ship-building, and the curing of fish, are also carried on to a moderate extent. Limekilns harbour, which is accessible to vessels of 300 tons' burthen at spring-tides, is spacious and commodious; and the several shipowners here were incorporated as an Insurance Company, by act of parliament, in 1834. There is a ferry to Blackness; and the steamboats to and from Stirling used to touch at the port. A merchant-seamen's fund has been established. There is a place of worship for the United Presbyterian Church, and a school is held in a room over the King's Cellar.

LINDORES, a village, in the parish of **ABDIE**, district of CUPAR, county of FIFE, $2\frac{1}{2}$ miles (E. S. E.) from Newburgh; containing 95 inhabitants. This place,

which is of great antiquity, most probably arose under the protection of the Macduffs, thanes of Fife, to whom the lands originally belonged, and of whose baronial castle some vestiges remain. The village is of pleasing and rural appearance, and delightfully situated near the lake of the same name. This lake is about one mile in length, and three-quarters of a mile in breadth, its banks abounding in rich scenery; and in the immediate neighbourhood is the handsome mansion of Lindores, the residence of Admiral Maitland, built on a commanding eminence. The high road from Cupar to Newburgh, and the Perth section of the Edinburgh, Perth, and Dundee railway, both pass near the village. The Grange of Lindores, of which the population is 166, is also in Abdie parish.—See **ABDIE**, and **NEWBURGH**, in which latter article is a notice of Lindores Abbey.

LINGA, an isle, in the parish of **DELTING**, county of **SHETLAND**. It is of very small extent, and is one of a group of islands lying in Yell sound, between Yell and the Mainland. There is safe anchorage for fishing-sloops between this place and Delting.

LINGA, an isle, in the parish of **FETLAR**, county of **SHETLAND**. It lies northward of Fetlar, a short distance from it, and between that island and Unst; and is uninhabited.

LINGA, an isle, in the parish of **TINGWALL**, **WHITE-NESS**, and **WEESDALE**, county of **SHETLAND**; containing 13 inhabitants. This is one of a cluster of isles, lying in the sound of Scalloway, which opens into the bay of the same name.

LINGA, an isle, in the parish of **UNST**, county of **SHETLAND**; situated in Blomel sound, south of the main land of the parish, and uninhabited.

LINGA, an island, in the parish of **WALLS** and **SANDNESS**, county of **SHETLAND**; containing 9 inhabitants. This isle is situated in Gronfirth voe, St. Magnus' bay; and eastward of the island of Muckle Roe.

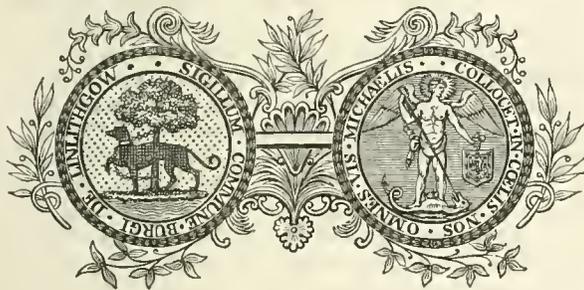

LINGA, MUCKLE and LITTLE, two isles, in the parish of **STRONSAY**, county of **SHETLAND**. These are small islands, one lying to the north-west of Stronsay; and the other, which is the larger, and sometimes called the Holm of Midgarth, situated in the channel of Linga sound. This channel has two entrances to its convenient harbour, severally northward and southward; and through the latter, which is the wider entrance, large vessels may pass, with the assistance of a pilot, and find safe anchorage in four fathoms of water. On Muckle Linga are the ruins of a chapel.

LINGAY, an isle, in the parish of **BARRA**, county of **INVERNESS**. This is one of the Hebrides, and lies in the sound of Pabbay, a short distance north of the island of Pabbay; it is of very small extent, of nearly circular form, and uninhabited.

LINGAY, an isle, in the parish of **HARRIS**, county of **INVERNESS**. It is an island of the Hebrides, and one of a group lying in the sound of Harris, a little to the east of Groay, and about three miles south of the main land of the parish. Like the preceding, it is nearly of circular shape, and has no population.

LINKTOWN, a town, in the parish of **ABBOTSHALL**, district of **KIRKCALDY**, county of **FIFE**; containing 3240 inhabitants. This town is situated on the west side of Kirkcaldy bay, and consists of one principal street, nearly a mile in length, and of several lanes which lead into it from various parts of the parish. These are

all narrow and inconveniently formed; and the houses, with the exception of some of more modern erection, are low and of mean aspect. The streets are lighted with gas from works erected in the parish for the supply of Kirkcaldy, Newtown, and places adjacent. Nearly in the centre of the town is a handsome residence belonging to John Pratt, Esq., of Glentarkie, which, being surrounded by grounds tastefully laid out, and embellished with shrubberies and young plantations, adds much to the scenery and general appearance of the place. Most of the chief manufacturers of the parish reside in this town, which contains works of various kinds. The principal trade is the weaving of ticking, and the manufacture of dowlas, canvas, and a thin kind of sheeting; there are several spinning-mills, a pottery for the coarser sorts of earthenware, and a small-beer brewery. The proximity of the market of Kirkcaldy renders the establishment of any at this place unnecessary; but a fair is held on the third Friday in April, formerly much attended for the sale of linseed; and another on the third Friday in October, formerly for the sale of black-cattle. These, however, have both very much declined; and at present, shoes and a few articles of pedlery only are exposed for sale. Great facility of intercourse is afforded by the Edinburgh, Perth, and Dundee railway. A society for supplying meal at a moderate cost when that article is dear, has been established, and operates as a salutary check upon sudden fluctuations in the price of bread. The town is a burgh of barony, and is under the government of a bailie appointed by the Ferguson family, of Raith. There is a small prison for the temporary confinement of persons convicted by the bailie of trifling offences against the peace; but it is very seldom used.—See ABBOTSHALL.

Seal.

LINLITHGOW, a royal burgh, a parish, and the seat of a presbytery, in the county of LINLITHGOW, of which it is the principal town; containing, with part of the village of Linlithgow-Bridge, 5950 inhabitants, of whom 3872 are in the burgh, 8 miles (E. S. E.) from Falkirk, and 16 (W.) from Edinburgh. This place derives its name, signifying in the Saxon language "the lake of the sheltered valley", from the beautiful expanse of water on which it is situated, in a secluded and richly-fertile vale. It is supposed to have been constituted a royal burgh by David I., who had a castle and a grange here, which formed part of the royal demesnes, and around which the town of Linlithgow, even now wearing an appearance of great antiquity, gradually arose. The earliest charter extant is one granted by Robert II.; but, long before that period, the town had been governed by two bailies, whose names were subscribed to the deed of

submission tendered to Edward I. of England in 1292; and during the occupation of the Scottish burghs by the English in the reign of David II., the place had been constituted one of the four principal burghs of the kingdom. On the night previously to the battle of Falkirk, Edward I. encamped his forces on the plains adjoining the town; and in the year 1300 he erected a castle at this place, where he spent the following Christmas, and in which he left an English garrison. The castle was, however, taken by Robert Bruce, who, introducing a few armed men concealed in a waggon-load of hay, obtained admittance for his followers, and put the whole of the garrison to the sword.

James IV., while at the palace of Linlithgow, visited the church previously to his expedition into England, and is said to have received, when offering up prayers for his success, a supernatural warning of the melancholy fate which attended him in the battle of Flodden Field, in 1513. The supposed scene then presented in the church is described in the fourth canto of Sir Walter Scott's *Marmion*. A severe engagement took place at Linlithgow-Bridge in 1526, between the forces of the Earl of Angus, whose party, during the minority of James V., held that prince in their power, and those of the Earl of Lennox, who sought to obtain possession of the royal person, and deliver him from their arbitrary control. The Earl of Lennox, after receiving promise of quarter, was killed by Sir James Hamilton; and the place of his interment was long distinguished by a mound called Lennox's Cairn. In 1570, the Earl of Moray, then regent, was shot while passing through the town, from the balcony of a house belonging to the Archbishop of St. Andrew's, by Hamilton of Bothwell-Haugh; his remains were conveyed to Holyrood House, and interred in the church of St. Giles at Edinburgh. During the prevalence of the plague in Edinburgh in 1646, the meetings of the parliament were held in the palace of Linlithgow, in which the members, upon various occasions, had previously assembled; and the town also derives no inconsiderable degree of interest from the circumstance that it was the birthplace of Mary, Queen of Scots, who was born in the palace on the 8th of December, 1542. Linlithgow was visited by Her present Majesty on the 13th of September, 1842, in the course of her tour through Scotland in that year; and every demonstration of respect and loyalty was made by the inhabitants.

The PALACE, which, from a very early period, was the occasional residence of the Scottish kings, is supposed to have been first erected on the site of a Roman station; the original buildings, however, were destroyed by fire in 1424. The present structure, raised by James I., received considerable additions in the reigns of James IV. and James V.: upon the marriage of the latter with Mary of Guise, it became the favourite residence of that queen; and it was afterwards much improved by James VI., on his visit to Scotland in 1617. At this time the buildings occupied a quadrangular area, 175 feet in length and 165 feet in breadth; and though the exterior had a heavy appearance, the interior of the quadrangle displayed much elegance of style and beauty of decoration. In the centre of the inner court was a fountain of freestone, elaborately sculptured in various devices; the surrounding buildings were also ornamented with sculpture. Placed in a canopied niche was a well-executed statue

of Pope Julius II., who presented the sword of state to James V. on his coronation, and on each side of this was the figure of an ecclesiastic, in a smaller niche; but these were destroyed in the eighteenth century. In the rebellion of 1745, General Hawley, who commanded a detachment of the English forces under the Duke of Cumberland, quartered his troops in the palace, which, during their occupation of it, was by some accident set on fire, and reduced to its present ruinous condition. The principal portions now left are, the hall in which the parliaments were held, a noble apartment ninety-nine feet long, thirty feet wide, and thirty-five feet high to the summit of the walls, which alone remain; the room where Queen Mary was born; the banquet-room; and the chapel. What exists of this venerable structure is preserved from further decay by the Commissioners of Woods and Forests, and is under the superintendence of Sir Thomas Livingstone, Bart., as representative of the Earls of Linlithgow, hereditary keepers. Within the last seven years, very considerable and judicious repairs have been executed in the palace. The stair of the north-western turret leading to Queen Margaret's Bower has been made good, so that safe access is now obtained to this favourite retreat of James IV.'s lovely consort, who is said to have hence viewed the departure of the king for the field of Flodden. From this place the surrounding country is seen to great advantage. In 1845 the outer gateway was completely and splendidly restored; the four orders of knighthood borne by James V. were set up anew, and in a style of the most elegant workmanship.

The town is beautifully situated on the south bank of the lake from which it takes its name, and extends about a mile along the high road from Stirling to Edinburgh, consisting principally of one street, which, towards the middle, expands into an open area. In this part is the Cross-well, an hexagonal structure, richly sculptured with grotesque figures, and surmounted by a unicorn, the whole rebuilt in 1807 in close imitation of the ancient structure, which had fallen into decay: pure water issues thence, from thirteen different openings, for the supply of the town. The houses are generally of ancient and venerable aspect, interspersed with many of more modern style; and the town is well lighted with gas. The manufacture of boots and shoes is very considerable, giving constant employment to about 300 persons. The tanning and currying of leather are also among the trades carried on here: in the former are five establishments, affording occupation to about thirty men; and in the latter, nine, in which fifty men are employed. An extensive distillery, and a large brewery, engage many hands; there are some works for the making of glue, and part of the female population are occupied in needlework for Glasgow houses. The market day is Friday; and fairs are held on the first Friday after the second Tuesday in January, the last Friday in February, the third Friday in April, the second Friday in June, and the first Fridays in August and November. Facility of communication with the surrounding districts is presented by excellent roads, by the Union canal, and the Edinburgh and Glasgow railway. Linlithgow contains a post-office, and a branch of the Commercial Bank of Scotland; and a small monthly paper called *Dick's Advertiser* is published here, and circulated through the county.

The BURGH, under a succession of charters confirmed and extended by Charles I., is governed by a provost, four bailies, a dean of guild, a treasurer, and a council, together amounting to twenty-seven members. The magistrates have jurisdiction within the royalty, and for a mile beyond its boundaries; but the residence of the sheriff-substitute in the burgh relieves them from exercising any jurisdiction, except in trifling police cases. There are eight incorporated trades, the smiths, weavers, bakers, wrights, tailors, shoemakers, fleshers, and coopers; the fee of admission for a stranger, as a trade burgess, is one guinea, and as a member of the guild £5. The town-house, built in 1668, contains a hall for the transaction of the public business of the burgh, the sheriff's court-house, and the council chamber: the under part of the building was formerly used as a gaol for the town and county, but is now converted into useful apartments connected with the courts. The new gaol, opened in 1845, was erected by the county prison board, at a very considerable expense, and is on an improved plan. In the rear of the town-house are the county-buildings, plain in their exterior, but internally well arranged; the hall is a spacious and handsome apartment, and is embellished with portraits of John, Earl of Hopetoun, by Raeburn, and of Sir Alexander Hope, by Gordon. In connexion with Falkirk, Airdrie, Hamilton, and Lanark, the burgh returns a member to the imperial parliament; the number of persons within the boundaries, occupying houses of £10 per annum and upwards, is about 100.

The PARISH is bounded on the west by the river Avon, separating it from the county of Stirling; and is about five miles in length from east to west, and three miles in breadth; comprising an area of 11,960 acres, of which, with the exception of a moderate portion of land inaccessible to the plough, and under plantations, all are arable. Towards the east and north-east the surface is tolerably level, but towards the south is intersected by a continuous range of hills of various elevation, the highest of which, Cocklerue (Cuckold de roi) and Binny Craig, are each about 600 feet above the level of the sea. On the north side of the loch of Linlithgow, also, are the Irongath or Bonnytown hills, of inferior height, but commanding fine views of the Firth of Forth and the adjacent country. The lake is about a mile in length, a quarter of a mile in breadth, and of considerable depth, communicating with the Avon by a small rivulet called the Loch burn: towards the centre it is deeply indented by the site of the ancient palace, the grounds of which form a kind of peninsula. The scenery of the lake is strikingly beautiful, its shores rising into eminences richly wooded, and being embellished with the gardens and pleasure-grounds of the palace, whose stately and venerable ruins form a prominent feature. The Avon, likewise, flows through a tract of country abounding in picturesque scenery; and the aqueduct that continues the Union canal across the valley, and the viaduct of the Edinburgh and Glasgow railway over the same valley, add greatly to the beauty of the landscape. In the lower districts the soil is a loam alternated with gravel; and in the higher, of lighter quality, resting on a retentive clay: the system of agriculture is in the most improved state, and the crops are generally abundant. The farms vary from 125 to 500 acres in extent; the lands are well inclosed and drained, and the farm-

buildings substantial and commodious. The cattle are for the most part of the Ayrshire breed, especially on the dairy-lands; there are also many of the short-horned kind. Few sheep are reared, but considerable numbers are pastured: the horses are mostly of the Clydesdale breed. The plantations, some of which are recent, are well managed, and in a thriving state; and the parish in general is well wooded. Limestone is plentiful, and is extensively wrought; coal, also, occurs in thin seams in the southern district, but no mines are in operation. At Kingscavil, Hillhouse, and East Binny are extensive quarries of freestone: from the first was taken the stone for the erection of the palace; and in the last is found a bituminous substance which is sometimes made into candles. On the lands of the Earl of Hopetoun, in the southern part of the parish, a vein of silver was formerly wrought; but every attempt to recover it has failed. The annual value of real property in the parish is £21,384.

For ECCLESIASTICAL purposes this place is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale. The minister's stipend is £304. 19. 2., with a manse, and a glebe valued at £11 per annum; patron, the Crown. Linlithgow church is supposed to have been originally founded by David I. in the twelfth century as the chapel-royal. The present edifice was built to replace a church consecrated in 1242, and burned down in 1424. It is an ancient and venerable structure in the pointed style of architecture, with a square embattled tower formerly surmounted by a turret in the form of an imperial crown: the church measures 180 feet in length and 105 in breadth; and the walls were once decorated with statues, of which, however, only that of the patron saint, St. Michael, is now remaining. In the south aisle, dedicated to St. Catherine, James IV. received the premonition of his defeat at Flodden Field, already noticed; and in an aisle adjacent lie interred the remains of the Earls of Linlithgow, in leaden coffins. The whole building, which is one of the finest specimens of the kind in Scotland, displays elegant details; it was repaired and enlarged in 1813, and now contains 1100 sittings. There are also places of worship for members of the United Presbyterian Church, the Free Church, and Independents. The burgh school, under the patronage of the town-council, was formerly conducted by a rector who had a salary of £30 per annum, and an assistant with a salary of £15; but since the last appointment, it has been taught by a rector only. A school for girls was founded by the late Mrs. Douglas. Dr. Henry, the historian, bequeathed his library to the parish; and there is likewise a subscription library and public reading-room. The incorporated trades give small annual payments to decayed members: there are also numerous friendly societies.

Traces of a Roman road, on the summit of a height on the north side of the lake, are plainly discernible, and near it was lately found an urn containing ashes; at the base of the hill of Cockerlue are vestiges of a Roman station, and on the Boroughmuir 300 Roman coins were discovered some years since. To the west of the town are two eminences, one of which was in ancient times the place for administering justice; the plain below is still designated Domesdale. On the eminence called Friars' Brae, southward of the town, was a Carmelite convent, supposed to have been founded in 1290. There

was likewise a monastery of Black friars, of which some traces may be seen in the eastern portion of the town; where was also the hospital of St. Magdalene for lazars, subsequently appropriated by James I. for the entertainment of strangers, and the site of which is now covered by the Union canal. A tablet of stone, elegantly sculptured in compartments, was many years since found while digging a grave in the churchyard. In one compartment, the Saviour is represented in the attitude of prayer, with the three Disciples asleep; and in another as saluted by Judas, and seized by the guards, while healing the ear of Malchus, with a figure of Peter sheathing his sword.

LINLITHGOW-BRIDGE, a village, partly in the parish and county of LINLITHGOW, and partly in the parish of MUIRRAVONSIDE, county of STIRLING, 1 mile (W.) from the town of Linlithgow; containing 633 inhabitants. It is situated on the Avon, on the high road from Linlithgow to Falkirk; and is distinguished for a battle, fought in 1526, between the faction of the Earl of Angus, who had possession of the person of James V., then a minor, and the party who sought his deliverance from the influence of the Douglasses: the conflict took place close to the village, which has given its name to the engagement. The present bridge was built by Alexander, Earl of Linlithgow, about the year 1650, as appears by a grant of its customs to Earl George, by Charles II., in 1677. Near the village are the Avonfield print-works and a paper-mill, at both of which a great many hands are employed. There is a subscription library in the village.

LINLITHGOWSHIRE, a county, in the south of Scotland, bounded on the north by the Firth of Forth; on the east and south-east, by the county of Edinburgh; on the south-west, by Lanarkshire; and on the west, by the county of Stirling. It lies between 55° 49' and 56° 1' (N. Lat.) and 3° 18' and 3° 51' (W. Long.), and is about twenty-one miles in length and twelve miles in extreme breadth; comprising an area of 112 square miles, or 71,680 acres; 5675 houses, of which 5333 are inhabited; and containing a population of 26,872, of whom 13,797 are males and 13,075 females. This division of the country, sometimes called West Lothian from its forming the western district of the ancient and extensive province of Lothian, was at the time of the Roman invasion inhabited by the British tribe *Gadeni*. It afterwards became a portion of the province of *Valentia*, and the western boundary of the Roman conquests in this part. No district of the province abounded more with Roman works than this county. A Roman road from the village of Cramond extended along the shore of the Firth to Carriden; where, indeed, the wall of Antonine, of which a very considerable portion traversed the district, is supposed to have also terminated. Upon the departure of the Romans, great numbers of the emigrants from the Irish coast, who had established themselves in Cantyre, removed to these parts, and for a long period retained possession of their settlements, though much harassed by the Picts and others. After the union of the two kingdoms under Kenneth II., they became identified with the Scots; and in the reign of David I., this district of the Lothians was erected into a separate sheriffdom.

With respect to ecclesiastical matters, the county was included in the archdiocese of St. Andrew's, and subse-

quently in the diocese of Edinburgh, of which it constituted the archdeaconry of Linlithgow. It is now in the synod of Lothian and Tweeddale, and comprises one presbytery and twelve parishes. The civil affairs are transacted at Linlithgow, which is the county-town and a royal burgh, where all the courts are held; the shire contains also the royal burgh of Queensferry, the burgh-of-barony of Bathgate, and the burgh-of-regality of Borrowstounness, with some smaller towns and populous villages. Under the act of the 2nd of William IV., it returns one member to the imperial parliament. The surface is for the most part pleasingly diversified with gentle undulations, and is intersected nearly in the centre by a range of eminences of moderate elevation. In the east and south the land is generally level; but towards the west are some hills, though of inconsiderable height, which are clothed with verdure, and crowned with woods. The principal river is the Almond, which has its source among the hills of Lanarkshire, and, intersecting the county in a north-eastern direction, flows into the Firth of Forth at the village of Cramond: it is navigable for boats and small craft for a quarter of a mile from its mouth. The river Aven, or Avon, after forming for some distance a boundary between the county and Stirlingshire, falls into the Firth to the west of Borrowstounness. The only lake of any importance is Linlithgow loch, about a mile in length and a quarter of a mile wide, comprising an area of 154 acres. It is beautifully situated among rising grounds richly wooded, and embraces much picturesque and romantic scenery. On the south bank are seated the town and palace of Linlithgow, the gardens of which latter extend westward along its margin; and at the north-west extremity is a small rivulet called the Loch Burn, which, after a short course, flows into the Avon.

About four-fifths of the land are arable, and the remainder woodland, plantations, and waste. Though various, the soil is in many parts extremely fertile; in the lower districts, a gravelly loam; and in the higher parts, chiefly clay resting on a retentive subsoil. Considerable progress has been made in draining, and great improvements have taken place in the system of agriculture; the lands have been inclosed with fences of thorn; the pastures are rich, and the dairy-farms under excellent management. The cattle are principally of the Teeswater and Ayrshire breeds, and the horses chiefly of the Clydesdale breed. There are not many sheep; they are the black-faced, with a few of the Leicestershire breed, which appear to thrive well. The ancient forests, which were very extensive, have mostly disappeared, and have been replaced by modern plantations, adding greatly to the general beauty of the scenery; they are of oak, ash, elm, beech, lime, sycamore, chesnut, and larch, Scotch, silver, and spruce firs. A large portion of the land is also laid out in gardens. The substrata are mainly coal, limestone, and freestone. Ironstone is likewise found in abundance in some parts; lead-mines were formerly wrought in the Bathgate hills, and the ore contained a considerable proportion of silver. The coal is extensively worked, especially in the vicinity of Borrowstounness; and there are large quarries of the limestone and freestone, which latter is of fine texture. Marl, and clay for the manufacture of bricks and pottery, are also abundant. In this county the seats are Binns House, Hopetoun House, Duddingston House, Dalmeny Park,

Amondell, Kinneil, Houston House, Wallhouse, Lochcote, Bonhard, Kirk Hill, Middleton, Champfleurie, Balbardie House, Boghead, Polkemmet, Binny, Newliston, Dundas Castle, Craigiehall, and various others. Of the palace of Linlithgow, the birthplace of Mary, Queen of Scots, which was destroyed by fire in 1746, the walls, and some of the principal apartments, are still remaining. Among the principal manufactures are those of salt and of shoes; the spinning of cotton, and printing of calico, employ a considerable number of persons, and there are extensive tanneries, breweries, and distilleries. The chief commerce is the exportation of coal, of which large quantities are shipped from Borrowstounness. Facility of communication is afforded by turnpike and parish roads, kept in excellent order: among the former are the great north road to Edinburgh, the Edinburgh and Glasgow road, and the road from Lanark and Glasgow to Queensferry, where steamers convey passengers across the Firth of Forth. There are also the Union canal, the Edinburgh and Glasgow railway, and the Bathgate railway. The annual value of real property in the county is £109,322, of which £82,842 are returned for lands, £21,149 for houses, £3561 for mines, £831 for quarries, and the remainder for other kinds of real property. Numerous vestiges remain of Roman roads, camps, altars, vases, coins, and other memorials of that age; also ruins of ancient castles, Druidical remains, monasteries, and other relics of antiquity.

LINTON, a village, in the parish of PRESTONKIRK, county of HADDINGTON, $\frac{1}{2}$ a mile (S. W.) from Preston; containing, in 1841, 775 inhabitants. It derives its name, by which the whole parish was originally designated, from its situation on the banks of the river Tyne, which in this part of its course, obstructed by precipitous and overhanging rocks, once formed a *lynn*, or waterfall, of great beauty. This fall, since the recent cutting of the crags to facilitate the progress of salmon up the stream, is now scarcely perceptible, except after continued rains, or sudden floods, when the cascade displays its wonted grandeur. The removal of the obstructions has not added to the quantity of the salmon, which are still of small size and in small numbers; but trout of large size, eels, and flounders, are obtained in great plenty and of excellent quality. The village is neatly built and well inhabited; the surrounding scenery, also, is agreeably diversified. The principal approach is by the London road, which passes for four miles through the parish, crossing the river by an ancient bridge near the village, which is inconvenient for the passage of carriages. A post-office is established, and facility of intercourse is afforded by good roads, and by the North-British railway, which crosses the Tyne by a grand viaduct a little above the old bridge, and has a station here. The opening of the railway and the establishment of a corn-market have added much to the importance of the village, which is a rising place. The spinning of wool and the weaving of blankets were formerly carried on to some extent, affording employment to many of the inhabitants; but they have been for a long time discontinued. The parochial school, and a place of worship in connexion with the United Presbyterian Synod, are in the village; there are also a female parochial school, one or two libraries, and two or three friendly societies, which last have contributed to diminish the number of claims on the parish. A little westward of the village is an upright stone, sup-

posed to point out the site of sepulture of some chieftain who was killed in battle.

LINTON, otherwise WEST LINTON, a parish, in the county of PEEBLES; containing, with the village of Carlops, 1515 inhabitants, of whom 550 are in the village of Linton, 11 miles (N. E. by N.) from Biggar. This parish, whose name is derived from the river Lyne, comprises 25,400 acres, of which 4000 are arable, 400 woodland and plantations, and the remainder hilly moor, affording excellent pasturage for sheep. Its surface is pleasingly varied, and the lands have a general elevation of about 600 feet above the level of the sea; the scenery is diversified with wood and water, and from the higher grounds are obtained some interesting and extensive prospects over the adjacent country. The Lyne has its source in the hills to the north; it traverses the parish, and flows into the Tweed. In the same range rise the smaller rivers Esk and Medwin, the former of which constitutes the eastern, and the latter the western, boundary of the parish. There are every where springs of excellent water, yielding an abundant supply. On the lands of Rutherford is a spring called Heaven-Aqua, the properties of which are similar to those of the water at Tonbridge-Wells, in England; it has been rendered easy of access by the new line of turnpike-road which passes close by the spring, and an elegant and commodious hotel has been erected for the accommodation of persons who visit the spot. Near Slipperfield is a fine lake, about a mile and a half in circumference, and of great depth, which abounds with pike and perch, and is frequented by almost every variety of aquatic fowl. It is situated in the centre of a wide tract of barren heath, for the improvement of which considerable efforts have been lately made.

The SOIL in the upper part of the parish is much interspersed with patches of heath and moss of various kinds, and of different degrees of depth. In the lower parts is a rich loam, occasionally intermixed with sand; in some places, a light dry soil well adapted for the growth of turnips; and in others, a sandy loam mixed with clay and moss. The chief crops are oats, turnips, and potatoes; the system of agriculture is highly advanced, and all the more recent improvements in the construction of agricultural implements have been extensively adopted. The farm houses and offices are substantially built, and well arranged; and on all the farms threshing-mills have been erected. Considerable attention is paid to the management of the dairy and the rearing of live stock. About 350 milch-cows are kept on the several farms, of the Ayrshire and Teeswater breeds, with an occasional cross of the two; 450 young cattle are pastured, and some of them sold off annually to the butcher. The number of sheep on the various pastures is 9700, of which 3700 are of the Cheviot, and the remainder of the black-faced, breed; and about 180 horses are kept for agricultural uses. There are very few remains of the ancient woods that abounded in the parish, which is situated in the immediate vicinity of Ettrick forest; the plantations are generally well managed, and in a very flourishing condition. The substrata are mainly limestone and coal, both of which have been worked to a considerable extent. There is a very extensive limestone-quarry, and lime-works are carried on at Carlops and at Whitfield; the average quantity of lime is estimated at 20,000 bolls annually. The coal is wrought at Carlops,

and also at Harlamuir and Coalyburn. Freestone is quarried at Deepsykehead; and near the village is a hill called Leadlaw from a supposition that it contained lead-ore, frequent attempts to obtain which have been made without success. Pebbles of great beauty are frequently found, closely resembling, and in some instances nearly equal to, the Cairngorum. The annual value of real property in the parish is £7696.

The village of Linton is pleasantly situated on the banks of the river Lyne; the place is irregularly built, and many of the houses are of antique appearance. It is inhabited by persons employed in hand-loom weaving for the manufacturers of Glasgow, and in the various trades requisite for the supply of the neighbourhood. A fair is held on the last Tuesday in June, for sheep, and is well attended from the neighbouring districts. Fairs are also held on the Friday before the first Monday in April, and the Friday before the 25th of September, for the sale of live stock, and the hiring of farm servants. There is a public show of stock annually in August; and in the winter a ploughing-match takes place, when prizes are awarded to the successful competitors. The approach to the village has been greatly improved by a new line of road lately formed, which has also facilitated the intercourse of the inhabitants with the market-town and other places in the vicinity. Ecclesiastically the parish is in the presbytery of Peebles, synod of Lothian and Tweeddale, and in the patronage of the Earl of Wemyss; the minister's stipend averages £233, with a manse, and a glebe valued at £20 per annum. Linton church is a neat and substantial edifice, erected in 1776. There is also a place of worship for the members of the United Presbyterian Church. The parochial school is well conducted; the master has a salary of £34, with about £35 fees, and a house and garden. A parochial library has been established some years, and forms a collection of more than 500 volumes of standard works in the general branches of literature. Cairns are to be seen in several parts of the parish; and in one on the lands of Temple, near Linton village, was discovered a stone coffin of very rude formation, containing human bones; in another, which is still remaining on Garvald-foot moor, a Roman urn is said to have been found. Stone coffins have at various times been dug up in the parish.

LINTON, a parish, in the district of KELSO, county of ROXBURGH, 6 miles (S. E. by S.) from Kelso; containing 526 inhabitants. This place derives its name, signifying "the town of the lakes," from its situation on the north-west border of a lake of great extent called Linton loch, now drained, and from another lake designated Hoselaw, in the eastern extremity of the parish. The church appears to have been bestowed in the reign of David I. upon the abbey of Kelso by Sir Richard Cumyn, ancestor of John Cumyn who aspired to the crown of Scotland; and the lands of the parish were granted in the reign of William the Lion to William de Somerville, son of Roger, Baron of Whichnor in England, as a reward for his having destroyed a ferocious animal that committed great depredation in the neighbourhood. He was afterwards made principal falconer to the Scottish king, and sheriff of Roxburghshire. The new proprietor resided in the castle of Linton, which he had founded, and which afforded an asylum to his father, Roger de Somerville, on the subsequent defeat of the English

barons who had extorted from King John the grant of *Magna Charta*. Roger died in this castle, which continued to be the seat of his descendants till near the close of the fourteenth century, when they removed to the castle of Cowthally, in Carnwath. Linton Castle was besieged by the Earl of Surrey in the reign of Henry VIII., and razed to the ground; and scarcely any vestiges of the building are now to be traced: within the last half century, a large iron door was dug out of the ruins, which appears to have belonged to the dungeon. Walter de Somerville, the third baron, was a faithful adherent to the fortunes of Wallace, under whose banner he fought against Edward I. for the defence of his country; and his son, John de Somerville, strenuously maintained the cause of Bruce, after whose defeat at Methven he was taken prisoner by the English. During the border warfare, this parish, forming part of the Dry Marches, was the principal thoroughfare between the two kingdoms, and consequently participated largely in the transactions of those times, in which the family of Kerr of Graden distinguished themselves. There are still some traces in the parish of their ancient residence, which seems to have been a strong fortress, surrounded by a moat.

The PARISH is about six miles in length and two in breadth, and is bounded on the east by the county of Northumberland. It comprises about 6500 acres, of which nearly 5500 are arable, eighty woodland and plantations, and the remainder rough pasture and waste. The surface rises in gentle undulations from a rich and fertile vale near the western boundary, and is inclosed on the north by a range of hills, of which Kiplaw, Hoselaw, and Blakelaw are the principal. Linton loch, the larger of the two lakes from which the parish took its name, was nearly circular in form, and had an area of about fifty acres; it was surrounded by hills of considerable height cultivated to their summit, except on the west, where was a valley through which its superfluous waters found their way into the river Kale. The lake has, however, been drained, and the soil is now under corn husbandry: beneath is a bed of rich marl, which is wrought by the tenant to a good extent. Hoselaw lake comprises a rectangular area of about thirty acres, and is of an average depth of fifteen feet; it abounds with perch and silver-eels, and is much resorted to in summer by anglers. There are springs of excellent water in various parts of the parish, and numerous rivulets descend from the neighbouring hills. The SOIL of the western district is various, consisting of loam, clay, and gravel; in the eastern portion the land is of a lighter quality. The chief crops are wheat and barley, with a due proportion of oats; the plantations consist of fir, oak, ash, and elm, for which the soil seems favourable. Lime is obtained from the county of Northumberland, whence also coal is brought for fuel; a small seam of coal was discovered in the parish, but found incapable of being wrought with any profit. The substratum is generally whinstone rock, in which crystals are frequently discovered: and there is a quarry of freestone of excellent quality, but not worked to any great extent. Considerable improvements have been made in draining, and much waste land has been lately brought into cultivation. The fences of thorn are kept in good order, and interspersed with hedge-row timber, which is highly ornamental. The farm-buildings are substantial and commodious, and the cottages of the labouring

class have an air of cleanliness and comfort. In general the pastures are good; and great attention is paid to improvement in the breeds of cattle and sheep: the former are principally of the short-horned kind, and the latter of the Leicestershire. The agricultural produce finds a ready market at Berwick; the live stock is chiefly sent to the markets of Edinburgh and Morpeth. The principal landowner is Mr. Elliot of Harwood and Clifton, to whom rather more than two-thirds of the land belong, and whose seat, called Clifton Park, is in the valley at the western extremity of the parish, in the centre of a thriving plantation. The annual value of real property in the parish is £5586.

Linton is ecclesiastically in the presbytery of Kelso, synod of Merse and Teviotdale, and in the patronage of Mr. Elliot: the minister's stipend is £239. 2. 10., with a manse, and a glebe valued at £12 per annum. The church, occupying the summit of a circular hill, and approached by an avenue of stately trees, is of very great antiquity, and has been put into a state of substantial repair within the last fifty or sixty years; it affords accommodation to 200 persons, and though situated at a distance from the eastern part of the parish, is easily accessible to the great majority of the parishioners. The parochial school affords education to about forty children; the master's salary is £34, with £30 fees, and a house and garden. There are several mineral springs, one of which, on the farm of Bankhead, is deemed efficacious in scorbutic complaints. Jasper, in large masses, is frequently turned up by the plough in different parts. The site of Linton Castle may still be traced on the summit of a hill near that on which the church is situated; but it has been planted with trees. On the summits of various other hills are remains of round encampments, probably formed during the wars of the border; and in many places are tumuli, some of which have been opened, and found to contain urns of clay of circular form, inclosing human bones. Some of them are supposed to be of Roman origin; and in parts of the parish the tumuli are so numerous as to warrant the conjecture that it must have been the scene of some considerable battle. In repairing the church, a large grave was discovered containing fifty skulls, many of which showed marks of violence, and which are supposed to be those of warriors slain in the battle of Flodden Field. In the moss, about three feet beneath the surface, has been found a Roman spear of brass.

LINTRATHEN, a parish, in the county of FORFAR, 7 miles (W.) from Kirriemuir; containing, with the village of Bridgend and the hamlet of Pitmudie, 981 inhabitants. This parish, which derives its name from a Gaelic term signifying "rapid lynn", on account of a waterfall near the church, is ten miles in length and five in extreme breadth, and comprises an area of about 10,000 acres; about 3000 are cultivated, above 1000 occupied by wood, and the remainder moorland. It is situated in the district usually called the Braes of Angus, consisting of that portion of the county between the Grampian range and the valley of Strathmore. The upper division is formed of part of the inferior Grampian elevations, and the lower of sloping valleys, separated by hills of moderate height. On the west the parish is partly divided from Glenisla parish by the Isla, a beautifully-picturesque stream flowing for two miles of its course between rocky banks, more than 100 feet high,

and of singularly-diversified forms. In its progress the river displays the two cascades of the Reeky Lynn and the Slug of Achrannic, and increases the striking impression of the romantic scenery around by the fury of its action in the rocky cavities into which it precipitates itself at the latter fall. The Melgum, rising in the mountains, flows smoothly till it reaches the village, where its bed becomes rocky, and whence, for about three miles, to its confluence with the Isla, it rolls onwards in a series of waterfalls that constitute some of the most attractive features in the scenery. The loch of Lintrathen, situated within a quarter of a mile of the church, is nearly circular in form, and highly picturesque: the ground on the north and south sides is several hundred feet high, and ornamented with plantations; and at the western extremity is the Knoek of Formal, having an elevation of 1500 feet, and covered with wood to the summit. Trout are abundant in this water, as well as in the rivers; and perch also are taken, with a few pike.

The prevailing SOIL is a deep black loam, lying chiefly on granite and trap. The lands are under the best system of cultivation, and produce all the usual kinds of grain, of good quality, though but little wheat is grown, on account of the severity of the winters. Turnips, also, and potatoes are raised to a considerable extent, and the whole of the produce of the parish averages annually in value £12,480. The six-shift course is mostly followed; wedge-draining has been successfully practised, and, with the liberal application of lime and bone-dust manure, has greatly increased the worth of the land. Most of the farms are inclosed with stone fences, and the buildings are of a superior character. The cattle are very numerous; they are of the Angusshire polled breed, with a few of the Teeswater. In this parish the only natural wood is on the banks of the rivers; but 1200 acres of plantations, consisting of larch and Scotch fir, with sprinklings of oak, ash, beech, and plane, have been formed within the last forty or fifty years. The annual value of real property in the parish is £3838. The village, situated near the church, is in a ruinous state; but the houses are expected shortly to be rebuilt. The fuel generally in use is peat, obtained from the mosses, which however are nearly exhausted: coal is sometimes procured from Dundee, whither, as well as to Forfar and Kirriemuir, the produce of the district is for the most part sent for sale. Ecclesiastically the parish is in the presbytery of Meigle, synod of Angus and Mearns, and in the patronage of the Earl of Airlie. The minister's stipend is £159, of which more than a third is received from the exchequer; with a manse, and a glebe valued at £12 a year. Lintrathen church is a plain structure that will hold 400 persons: it was built in 1802, and repaired in 1829; but is inconveniently situated near the southern boundary of the parish, eight miles and a half from the opposite extremity. The parochial school affords instruction in the usual branches; the master has a salary of £30, with a house, and £26 fees.

LINWOOD, a village, and for a time a quoad sacra parish, in the parish of KILBARCHAN, Upper ward of the country of RENFREW, $2\frac{1}{2}$ miles (W.) from Paisley; containing 1126 inhabitants. This village, which has arisen entirely since the introduction of the cotton manufacture, is situated on the lands of Blackstone, and consists of numerous well-built houses and neat cottages

inhabited by persons employed in factories. The principal factory, originally erected in 1792, and burnt down in 1802, was rebuilt by the present company in 1805. It has a central range 170 feet in length and sixty-one high, with a west wing 100 feet long and forty-one in height, and an east wing eighty feet in length and about thirty high. The machinery is propelled by two water-wheels and a steam-engine, together of sixty-eight horse power; and the number of persons employed is on the average 400. There is also a mill belonging to Mr. Henderson, sixty-seven feet in length and forty-four feet in breadth, in which are 4000 spindles, put in motion by a steam engine of sixteen-horse power, and affording occupation to about forty persons. A school has been established by the proprietors of the works, who allow the teacher a salary of £20, with a school-house; his income, with the fees, amounting to about £60.

LISMORE and APPIN, a parish, in the district of LORN, county of ARGYLL; containing, with the quoad sacra parish of Duror, 4193 inhabitants, of whom 1399 are in Lismore and 1102 in Appin, the former 7 miles (N. N. W.) and the latter 10 (N. by E.) from Oban. The name of the first of these two places, in Gaelic *Lios-Mor*, "a great garden", is generally considered as having been applied to the locality from the unusual richness of its soil, it being situated in a part of the country which is of comparative sterility. The etymology of Appin is altogether uncertain. Many think it probable that it has been corrupted from the appellation *Abb-fhon*, "abbot's land", as the upper parts of the district anciently belonged to the parish of Elean-Munde, so called from St. Munde, who was an *abbot* in Argyll in the tenth century. Some are of opinion, however, that the name of Appin is derived from the word *Appennine*, as descriptive of the mountainous features of the surface. Lismore and Appin were formerly called the parish of Kil-Muluag, or Kil-Maluag, from a saint who lived in the seventh, or, as some imagine, in the twelfth, century, and whose remains were brought to Lismore for interment. The spot, indeed, where the debarkation took place is still shown, and is named Port-Maluag. Lismore was once the seat of the bishopric of the Isles, and afterwards formed the head of that of Argyll, this county being erected into a separate see upon a petition presented to the pope by John the Englishman, Bishop of Dunkeld, on which occasion the new bishop fixed his residence at Lismore, where the ruins of his castle are yet to be seen. The humble cathedral now forms the parish church.

This Highland PARISH is in the district of Upper Lorn, and is of prodigious extent. It consists of the island of *Lismore*, one of the Hebrides, situated in the arm of the sea generally designated Loch Linnhe, but sometimes Linnhe-Sheilich; the tract of *Kingerloch*, belonging to the old parish of Lismore, and on the western side of the loch; and the extensive tract called *Appin*, stretching from the coast of Loch Linnhe on the west to Perthshire on the north-east, and upon the north having the waters of Loch Leven, by which it is separated from Inverness-shire. Loch Creran forms the south-eastern boundary of the parish: the Lynn of Lorn, an arm of the sea three leagues wide, runs on the south; and on the west is the sound of Mull. *Lismore* is ten miles long, and one mile and a half in average breadth, comprising 9600 acres; while *Kingerloch* is sixteen miles

long and four broad, and includes 40,960 acres. The length of *Appin*, from south-west to north-east, is about forty-eight miles, and the medium breadth ten miles; the number of acres is computed at 307,200, making the aggregate number in the parish 357,760, of which 4000 are cultivated, the same number occupied by wood, and the remainder pasture and waste. The parish comprehends, in the most attractive combinations, every description of Highland scenery, consisting of lofty hills and mountains; romantic glens and valleys, enlivened and ornamented with picturesque waters and cascades; and several fine fertile plains. The SEA-COAST embraces altogether a line of about eighty miles. That of *Appin* measures forty-six miles, from the extremity of Loch Creran, on the east, to the head of Loch Leven on the north, and is in general sandy, often bold and exceedingly irregular, and marked with many curvatures and indentations forming convenient bays and harbours. From the port and village of Appin the line is tolerably straight to Keill, or Cuil, where it makes a sudden flexure to the west, constituting a fine expansive bay; it then winds, with considerable irregularity, round towards the north of the district, and assumes a pretty uniform appearance at Loch Leven. To the south of the village of Appin, the indentations and harbours are very numerous. At the mouth of Loch Creran is safe anchorage for small craft; westward is the well-sheltered bay of Airds, where shoals of herrings are sometimes taken; and a few miles to the north is the sound of Shuna, formed by the island of that name and the main land of Appin, and affording ample security for shipping in the most stormy weather. The bay of Cuil, already referred to, is bounded by a semicircular line measuring a mile between its extremities, and has a fine sandy beach: large draughts of herrings that visit the bay are often brought to shore. To the north of this is the bay of Kentailen, a small creek well defended by the adjacent heights, which are crowned with wood.

The *Lismore* coast, twenty-four miles in extent, is also bold, and the water deep even at the shore, except towards the north-east, where the island is low and sandy. At the northern extremity of the isle, on the west coast, is Port-Ramsa, a spacious harbour with good anchorage, protected by several small islands; and a little to the south-west of this is Loch Oscar, or Osear's bay, so called, it is said, from the circumstance of a party of Fingalians, who came hither to enjoy the pleasures of the chase, having anchored their vessel in the bay. The landing-place is still called Portnamurlach, or Port-na-mor-laoch, "the landing-place of the great heroes;" and in the vicinity is an eminence, whence the female part of the company beheld the sport, and which is yet designated *Druim-nam-Ban-Fionn*, or "the ridge of the Fingalian ladies." The bay affords a secure retreat for large vessels, protected by several islands, among which the chief is *Elcin-Loch-Oscair*, or "island of Osear's bay;" but it is of dangerous entrance on the north. Several smaller harbours, comprehending principally *Salen*, *Killchiaran*, and *Achnacroish*, are only fit for boats. The navigation is highly hazardous in some parts, especially at the rock of *Carraig*, between the southern end of *Lismore* and the island of *Mull*: here, also, is a most violent current; but a lighthouse erected about 1833, on the little island of *Musdale*, has proved of great service in preventing accidents. The *Kinger-*

loch district embraces a coast of sixteen miles, which is sandy, often bold and rocky, and contains a harbour called *Gerloch*, or *Loch Chorey*, the most spacious in the whole parish, being a mile long and half a mile broad; it has good anchorage for vessels at all seasons. Most kinds of fish common to the shores of the county are caught off this parish, including cod, ling, haddock, whiting, lythe, mackerel, and flounders, with considerable quantities of salmon and herrings; they are all taken principally for domestic use, except the salmon, many of which are sent to the south. Oysters are found in *Loch Creran*, and the usual sorts of shell-fish on every part of the coast.

The loftiest elevations in the INTERIOR of the parish are the mountains of *Glencoe*, celebrated by *Ossian*, and in the neighbourhood of which the country is wild in the extreme, and uninhabited, consisting for the most part of hill, moss, moor, and glen. These sublime and commanding masses, piled in immense bodies one upon another, in some places attain 3000 feet above the level of the sea. They are accessible only among their lower portions, where tolerable pasture is afforded for sheep; the summits, which are the resort of eagles, have never been explored by any human being. The heights rise almost perpendicularly, and with surpassing grandeur, on each side of the glen, the deep narrow gorge and solitary recesses of which are seldom warmed by the rays even of the summer's sun. The hills of *Ballichulish*, a beautiful range covered with rich verdure nearly to their summits, attain an elevation of about 2000 feet above the sea, and, in a few scattered trees still remaining, exhibit relics, and define the western boundary, of the ancient Caledonian forest. The *Kingerloch* coast is marked by hills of less height, but much more abrupt and rocky, and broken by many ravines opening into pleasing valleys, and by some caves of inferior extent. Several recesses, also, of this description occur on the *Lismore* coast. The chief rivers in the parish are the *Coe* and the *Creran*: the former traverses *Glencoe*, and joins *Loch Leven* at *Invercoe*; while the latter, having passed through *Glencreran*, and received the *Ure* and other tributaries, empties itself into *Loch Creran* at its head. *Kingerloch* contains the smaller stream of the *Coinich*; and the parish is also watered by the *Duror*, the *Laroch*, and the *Leven*, all of which produce salmon and good trout. *Lismore* abounds in springs of beautiful water, which find reservoirs in the numerous fissures and caverns penetrating the great bed of limestone rock whereof the island consists. There are also several lochs in *Lismore*, of moderate dimensions; some of them contain fine trout, and one is well stocked with eels.

The climate of the parish is exceedingly moist, the sleet and rain that fall here being considerable; but the mildness of its temperature, and the genial nature of the soil in some parts, especially in *Lismore*, which is considered to a great extent a grain country, favour the operations of husbandry; and the crops, though not large, are in general excellent. *Appin*, comprehending the districts of *Airds*, *Strath of Appin*, *Duror*, *Glencreran*, and *Glencoe*, is almost entirely a pastoral district; but there are some flat grounds adjacent to the sea-shore, on which the soil is generally light and gravelly, producing good crops of potatoes, barley, and oats. The farms and houses here, which have a very interesting and picturesque appearance, are, however,

soon succeeded by grazing tracts, stretching far into the more hilly country, where the soil is frequently clayey and mossy. The sheep are mostly the native black-faced; but the Cheviots have been lately introduced, some of which are crossed with Leicesters. A large number are always kept, the average being about 25,000; and, like the cattle, which are chiefly the Highland breed, they are of a very good description. Many fine horses are kept, and Lismore is celebrated for its beautiful grey and dappled breed. Several improvements have been introduced on the estates of the chief proprietors within these few years, principally consisting of draining, inclosing, and the reclaiming of waste lands; and the rotation system of crops is practised to a limited extent. The arable land in Appin and Kingerloch is always let with large uncultivated tracts, at one given rate per acre; in Lismore, some farms, to which there is no hill pasture, pay about £1. 10. per acre. The annual value of real property in the parish is returned at £15,708.

The substrata in Lismore are entirely limestone. In Appin, among the varieties of rock, slate is prominent, and is extensively wrought on the farm of Laroch, near South Ballichulish, at the foot of Glencoe. At the works there, which have been in operation for about fifty years, a fine compact and durable material is raised, suited in every respect for roofing; of a deep-blue colour; and having pyrites, called "diamonds" by the quarrymen, wrought completely into its texture. The total number of people employed, with the carpenters, blacksmiths, and others, is about 300; they mostly live on the estate, in neat well-built tenements with a portion of ground attached, and are in comfortable circumstances. From five to seven millions of slates are raised yearly, and sent to numerous sea-ports in Scotland and Northumberland, from a harbour almost close at hand, where there is a large wharf, to which the cargoes are conveyed by tramroads on an inclined plane from the quarries. There is also lead in several places; but the attempt to work it has proved unsuccessful. The wood growing in Lismore consists of the hard species, comprising plane, beech, and ash: that district is said to have been at one time covered by a large deer-forest. The trees usually grow in clusters, and, being interspersed about the island, supply an agreeable relief to the uniformity of its scenery arising from the continuous verdant and arable tracts. The wood in Appin is partly natural and partly planted: among the former are oak, ash, birch, and hazel; and the latter comprises plane, beech, ash, elm, and several kinds of fir, the whole interspersed with beautiful hollies of rich green hue. The sea-shore of Appin, and the lands immediately stretching from it, are favourite localities for gentlemen's seats. Elegant and pleasing mansions, mostly of modern erection, embosomed in well-wooded valleys, and enlivened by neighbouring rivulets and cascades, rise in various directions, backed by lofty mountains and commanding in front fine sea views. The chief are Kinlochlaich, Appin House, Airds, Achnacone, Ardsheal, Ballichulish, Fasnacloich, and Minefield.

The villages in the island are Clachan and Port-Ramsa, the latter of which, a fishing-village, has a good harbour; those in Appin are Laroch, Port-Appin, Tay-ribbi, and Portnacroish. The whole of them are small, with the exception of Laroch, where the population,

consisting to a great extent of people engaged in the slate-mines, amounts to about 500, and is gradually increasing. A post-office is established at Appin, communicating daily with Inverary; and a sub-office at Lismore communicates twice a week with Appin. A sub-office, also, at Kingerloch, communicates twice a week with Strontian. The Kingerloch district is destitute of roads; those in Lismore are in tolerable order, but far inferior to the roads in Appin. Much traffic is carried on in pigs, poultry, and eggs, which were formerly sold at the market-town of Oban, distant ten miles by land from Appin, and seven by sea from Lismore. This description of produce, however, is now chiefly sent to Glasgow by steam-vessels, which pass on their way from Inverness, and touch here twice a week in summer, and once in winter. The sheep and cattle are disposed of principally to drovers. A fair is held at Duror, in Appin, in the month of April, and another in October; and cattle-markets for receiving the stock from the various districts, are held at the periods when the drovers are passing through to the south-country markets. A fair of minor importance, and only for local purposes, is held at Lismore in October.

This parish is ECCLESIASTICALLY in the presbytery of Lorn, synod of Argyll, and in the patronage of the Duke of Argyll. The minister's stipend is £213, with a manse, and a glebe of ten acres, valued at £17. 10. per annum. There are two parochial churches. That at Lismore, situated on the Appin side of the island, was formerly the cathedral of the diocese, but presents no features either of grandeur or of beauty. It is less than sixty feet in length by thirty in breadth; there are no aisles, and it seems to have had neither transepts nor nave. It was newly roofed in 1749, and accommodates 540 persons with sittings. Appin church, containing 350 sittings, was built in 1749, and enlarged in 1814; it is conveniently situated in the Strath district, in the midst of the incumbent's charge. There is also a quoad sacra church at Duror, about nine miles from the parish church of Appin, and to which the districts of Duror and Glencoe are attached. Two missionaries, supported by the Royal Bounty, officiate in Kingerloch, Glencoe, and Glencerran: but these places are only the parts of their charge belonging to this parish, their services being shared with other parishes adjacent. The members of the Free Church have a place of worship in Glencoe. An episcopal chapel is maintained in Glencoe, and another at Portnacroish in Strath of Appin; they were till lately served by the same clergymen, who officiated alternately. A Roman Catholic chapel is situated near the slate-quarry at South Ballichulish; and there was formerly a Roman Catholic seminary in Lismore, instituted in 1801, but removed from the island in 1831. Of the six parochial schools, two are in Lismore, and four in Appin; three of the latter, situated respectively at Glencerran, Glencoe, and Duror, sprang from the chief school in Appin. Gaelic and English reading, and the usual elementary branches, are taught in all these schools, and Latin and mathematics in some of the schools if required. The master of the principal school in Lismore has a salary of £17, a sum of £10 from Queen Anne's mortification, and about £10 fees; the master of the second school receives £19 per annum, and £12 fees. The master of the chief school in Appin has a salary of £20, with £10 from Queen Anne's mor-

tification, and about £10 fees; and the three other masters respectively £6, with £5 fees; £18, with £8 fees; and £8, with £6 fees.

In this parish the relics of antiquity comprise the remains of numerous castles, the chief of which is that of *Elein-an-Stalcaire*, or "the island of the falconer," built by Duncan Stewart of Appin, who was constituted its hereditary keeper, for the accommodation of King James IV. when hunting. It is situated on a rock, in the sound separating Lismore from Appin; and was new-roofed and floored in 1631. *Castle-Coeffin*, in Lismore, also a very ancient structure, covered with ivy, is said to have been erected by a Danish prince after whom the castle is named. Nearly opposite, on the Kingerloch coast, is *Castle-Mearnaig*, sometimes called the Castle of Glensanda, standing on a rock, and celebrated for its fine echo. There are also the castle of Shuna, and those of Tirefoor and Achinduin in Lismore, at the last of which the bishop of Argyll occasionally resided. The other antiquities consist of obelisks, cairns, tumuli, and the remains of religious houses, none of them of much note.—See GLENCOE, and DUROR.

LITTLE COLONSAY.—See COLONSAY, LITTLE. *And all places having a similar distinguishing prefix, will be found under the proper name.*

LITTLE-MILL, a village, in the parish of OLD KILPATRICK, county of DUMBARTON; containing 136 inhabitants. This village is situated on the north bank of the river Clyde. Messrs. Mills and Wood had a considerable yard here for ship-building; it was opened by them in the spring of 1834, and they built in it several steamers of the larger size: no trace of it is now to be seen. About 50,000 gallons of whisky are annually produced in a distillery here. There is a small school.

LIVINGSTONE, a parish, in the county of LINLITHGOW; containing, with part of the village of Blackburn, about 1000 inhabitants, of whom about 140 are in the village of Livingstone, $2\frac{1}{2}$ miles (W. by S.) from Mid Calder. This place derived its name from a personage of consequence in early times, called Levin; and the old charter name of the parish was *villa Levini* (Levinstun). Livingstone Peel, in the time of David I., was the baronial residence of the family of Livingstone, whose descendants were elevated to the peerage by the title of Barons Livingstone, and of whom Alexander, the seventh baron, was by James VI. in the year 1600 created Earl of Linlithgow. This title, however, became extinct on the attainder of James, the fourth earl, for his participation in the rebellion of 1715. Of the ancient castle there were some remains till the middle of the last century, consisting chiefly of the fosse and rampart; but they have entirely disappeared; and the more modern mansion of the Livingstone family was taken down by the present proprietor, the Earl of Rosebery, soon after he purchased the lands. About half a mile north-eastward of the castle, was once a building said to have been a hunting-lodge of the kings of Scotland during their residence in the palace of Linlithgow, and of which the fragment of a square tower was remaining within the last forty or fifty years.

The PARISH was formerly of much greater extent than at present, as it included the parish of Whithorn, which was separated from it in 1730. It is now about seven miles in extreme length from north-east to south-west, and something less than one mile and a half in breadth,

comprising an area of 5800 acres, of which, with the exception of nearly 300 acres of woodland and plantations and 200 acres of moss, the whole is arable and pasture. The surface, though boldly undulated, scarcely rises into hills of any striking height, except in the north-eastern extremity, where the Dechmont-law, or Knightsridge hill, attains an elevation of 686 feet above the level of the sea, commanding an extensive and richly-diversified prospect. The lower grounds are watered by the river Almond, which in its course through the parish is but a moderate stream turning some mills, though, when flooded, it frequently bursts its banks, and expands into considerable breadth. In general the soil is clay, much improved by draining and manure; the crops are favourable, and the lands not under the plough afford good pasturage for cattle, of the Ayrshire and Teeswater breeds, with occasional crosses. The lands are well inclosed, and all the more recent improvements in husbandry have been adopted. The plantations consist of spruce, larch, and Scotch fir, with an intermixture of the hard-woods: they are well managed, especially those on the lands of the Earl of Rosebery, the yearly thinnings of which are considerable. The annual value of real property in the parish is £4556. Limestone, coal, and whinstone are the principal substrata; but they have not been wrought to advantage. Compact basalt is found near the base of Dechmont-law; and still nearer the base, on the eastern side, is fine blue shale: the summit is greenstone. There are several quarries of whinstone and sandstone; and near the village of Blackburn is a quarry of lakestone, producing excellent stone for laying ovens; it is regularly wrought, and stones are sent from it to all parts of the country. Excellent clay for tiles is found at City, and wrought to a considerable extent.

Blackburn House is a handsome mansion, pleasantly situated in grounds embellished with thriving plantations. The village of Livingstone has a public library containing about 300 volumes, supported by subscription: at the village of Blackburn, which is described under its own head, the cotton manufacture is carried on to a considerable extent. Facility of intercourse with the adjacent district is maintained by good roads. Ecclesiastically the parish is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale. The minister's stipend is £188. 12., with a manse, and a glebe valued at £18 per annum; patron, the Earl of Rosebery. Livingstone church, rebuilt in 1732, and recently repaired, is a neat structure containing 263 sittings. There are also places of worship for members of the Free Church and Independents. The parochial school, a handsome edifice built in 1844, is attended by about seventy children; the master has a salary of £34, with a commodious house and garden, and the fees amount to about £35. There is also a school at Blackburn, supported by subscription.

LOANHEAD, a village, in the parish of LASSWADE, county of EDINBURGH, $1\frac{1}{4}$ mile (W. by S.) from Lasswade; containing 810 inhabitants. This is a rural and pleasant village, situated a little east of the high road from Liberton to Penicuik. Loanhead is a favourite retreat in summer for families from the larger and more busy towns around, particularly Edinburgh, from which city it is distant between four and five miles. It contains a number of good houses and several handsome villas; and possesses the advantage, not usual in such small places, of an excellent supply of water, brought in pipes.

In the neighbourhood are collieries, considerable paper-mills, and a brewery; employing a large part of the population. There is a Cameronian meeting-house; and the visitors have the benefit of a subscription library.

LOANHEAD, a village, in the parish of **DENNY**, county of **STIRLING**, $1\frac{3}{4}$ mile (S. S. W.) from the village of Denny; containing 74 inhabitants. This village is situated in the eastern portion of the parish, upon a stream that flows into the river Bonny. It is chiefly inhabited by persons employed in the collieries and in the various manufactories in the neighbourhood. There is a place of worship for members of the United Presbyterian Church; and a library, containing 500 volumes, is supported.

LOANS, a village, in the former quoad sacra parish of **TROON**, parish of **DUNDONALD**, district of **KYLE**, county of **AYR**, $7\frac{1}{2}$ miles (S. W. by W.) from Kilmarnock; containing 205 inhabitants. This village is situated on the turnpike-road from Ayr to Irvine, and is inhabited chiefly by persons employed in the works in the immediate vicinity.

LOCHALSH, a parish, in the county of **ROSS** and **CROMARTY**, 9 miles (W. N. W.) from Kintail; containing, with the village and former quoad sacra parish of Plockton, 2597 inhabitants. This parish, of which the name is said to be of Danish origin, and of which little of the early history is known, is situated at the south-western extremity of the county, and is bounded on the north by Loch Carron, and on the south by Loch Alsh. It is skirted on the east by a lofty range of hills, and on the west by the Atlantic Ocean and the narrow channel which separates the Isle of Skye from the main land. Lochalsh parish is about twenty-eight miles in extreme length, and eight miles in average breadth; and more than one half of it is uninhabited. The surface is hilly and mountainous; but the hills are less rugged than in the more northern districts, and of many of the smaller hills, the lower acclivities are susceptible of cultivation, and the summits clothed with a thin moss affording tolerable pasture. About 1500 acres are arable, 3000 meadow and green pasture, 2500 woodland, 800 moss, and about 45,000 acres hill pasture, moorland, and waste. The moors abound with grouse and other species of game; red-deer frequent the higher hills, and the hills near the coast are visited by aquatic fowl of every variety, in great numbers.

In the hollows between the hills, and on some of the acclivities, the soil is tolerably fertile, producing favourable crops of oats, barley, and potatoes, of which last great quantities are raised; and within the last few years the system of husbandry has made considerable progress. Numbers of black-cattle and sheep are reared in the pastures, and much attention is paid to the improvement of the breed; the dairies, also, are under good management, the butter made here obtaining a decided preference in the market. The cattle and sheep are sold to dealers, who purchase them for the southern markets. During the intervals of their agricultural pursuits, the inhabitants are engaged in the fisheries, on the produce of which they depend for a considerable portion of their subsistence. The fish chiefly taken here are herrings and sythe or cole-fish, which are found in great quantities in the lochs; and ling, cod, and skate are occasionally obtained off the coast. The parish contains extensive remains of natural wood; and the plantations, which consist of firs,

interspersed with other kinds of trees, are generally in a thriving state. There are neither mines nor quarries of any kind in operation. Fairs, chiefly for black-cattle and horses, are held in May, September, and November. The only village is Plockton, which is described under its own head. Ecclesiastically the parish is within the bounds of the presbytery of Lochcarron and synod of Glencg; the minister's stipend is £160. 17. 10., with a manse, and a glebe valued at £48 per annum; patron, the Crown. Lochalsh church, erected in 1810, is a neat plain structure containing 650 sittings. A church was built at Plockton by parliamentary grant in 1827, to which a quoad sacra district was afterwards for a time annexed. The parochial school is well attended; the master has a salary of £25. 13. 6., with a house, and an allowance of £1. 7. 8. in lieu of garden, and the fees average about £25 per annum.

LOCHANS, a village, in the parish of **INCH**, county of **WIGTOWN**, $2\frac{1}{2}$ miles (S. S. E.) from Stranraer; containing 103 inhabitants. It lies in the southern extremity of the parish, and is a very small village, of which the population is agricultural.

LOCHARBRIGGS, a village, in the **OLD CHURCH** parish of **DUMFRIES**, county of **DUMFRIES**, $3\frac{1}{2}$ miles (N. N. E.) from the town of Dumfries; containing 213 inhabitants. This place is situated in the extreme north of the parish, and on the river Lochar, from which, and from a bridge across that stream, it has its name. In the vicinity is a quarry. From Locharbriggs to the sea the distance is about ten miles.

LOCHBROOM, a parish, in the county of **ROSS** and **CROMARTY**, 45 miles (N. W. by W.) from Dingwall; containing, with the former quoad sacra parish of Ullapool, 4799 inhabitants. This place derives its name from two considerable inlets, by which it is intersected for some miles towards the east, and of which the larger is situated in the north, and the smaller, or Little Loch Broom, in the southern portion of the parish. It is bounded on the west by the channel of the Minch, separating it from the island of Lewis. The parish is from forty to fifty miles in length, and from twenty to thirty miles in extreme breadth; but owing to the numerous indentations of its coast, and the irregularity of the surface, its extent has not been correctly ascertained. It is divided into a number of promontories by lochs or inlets from the sea, and in the interior the surface rises into mountainous heights of considerable elevation, between which are some rich and fertile valleys. The principal mountains are, Stac, Cumhill-Mhor, and Big Rock, to the north; Ben-Deirg to the east; Fannich in the south-east; and those of Strath-na-Sealg on the south-west. Among the chief valleys are Strathceannard and Rhidorch, in the barony of Coigach, the former watered by the river Ceannard, and the latter by the small river Ceannchruinn, which issues from the inland Loch Achall, and runs into the bay of Ullapool. The larger and smaller valleys of Lochbroom are watered respectively by the rapid river Broom and the Little Broom, which receive in their course various mountain streams. The valley of the Laigh is watered by the Meikle, which issues from Loch-na-Sealg, and by the small river Greenyard, which forms part of the southern boundary of the parish. All these streams abound with salmon, grilse, trout, and other kinds of fish. The chief inland lakes are, Loch Achall, beautifully situated in a richly-wooded vale; and

Loch-na-Sealg, a fine sheet of water more than seven miles in length and a mile broad, whose shores are marked with features of picturesque character. The coast is bold and precipitously rocky, rising into promontories of considerable elevation; the most conspicuous are those of Mhor, Riff, Dunan, Duard, Ardeha-duill, Handerick, and Stadaig. Off the coast are several islands: the principal are, Tanara containing ninety-nine, Martin forty-five, and Ristal nineteen, inhabitants; and the Summer islands, which, though uninhabited, afford excellent facilities for wintering young cattle.

The SOIL in the valleys is generally fertile; but, except on the lands of Dundonnell, which have been greatly improved during the present century by their proprietors, little progress has been made in husbandry. Only a comparatively small portion of the land is under cultivation, and the quantity of grain raised in the parish is far from being adequate to the supply of the inhabitants. The principal attention is devoted to cattle and sheep, for which the hills afford good pasture, and of which some thousands are annually reared. The cattle are of the West Highland breed, and are of small stature; the sheep, originally of the native breed, were fifty years since superseded by the black-faced, and these are in their turn giving way to the introduction of the Cheviot breed. But comparatively small remains exist of the ancient woods with which the parish abounded. There are plantations on the demesne of Dundonnell and a few other spots, consisting of some fine specimens of oak, ash, birch, green, mountain-ash, and bird-cherry, with thriving plantations of fir. The principal substrata are old red sandstone, quartz, and gneiss, with veins of granite: limestone is also found, but from the difficulties of the ground and the scarcity of fuel, it is little used. Dundonnell, the seat of Hugh Mc Kenzie, Esq., of Ardrross, is a handsome mansion, beautifully situated near the romantic glen of Strathbeg, in grounds tastefully laid out in shrubberies and plantations by the late proprietor. The only village is Ullapool, which is described under its own head. There are various fishing stations; and during the season large shoals of herrings frequent the bay of Loch Broom, and other bays in the parish. The herrings are partly sent to Dingwall, but great numbers are sold for curing to the agent of Mr. Methuen, who is stationed at the isle of Ristal. Numerous boats are engaged in this fishery, and find good anchorage in the several bays, of which that of Loch Broom affords safe shelter for vessels of the largest burthen: at the isle of Tanara, also, is an excellent harbour. Facility of communication is afforded by a road from Dingwall to Ullapool, which passes through the valley of Loch Broom; but it is not at present in good repair.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lochcarron and synod of Glenelg. The minister's stipend is £298. 10. 9., with a manse and glebe; patron, the Marchioness of Stafford. The church, situated at the head of Loch Broom, was built in 1844-5; it is a neat structure containing from 700 to 800 sittings. A church has been erected by parliamentary grant in the village of Ullapool, and the members of the Free Church have a place of worship. The parochial school is well conducted, and affords instruction to about fifty children both in Gaelic and English; the master has a salary of £34, with a house

and garden, and the fees average £6 per annum. There are also two schools supported by the General Assembly; four by the Gaelic Society of Edinburgh, who allow the masters a salary of £20 each; and a female school; together affording instruction to about 500 children. Norman Mc Leod and Murdoch Mc Leod, both Highland poets of some eminence, were natives of this parish. The Rev. James Robertson, minister of Lochbroom in 1745, a man of gigantic strength, and remarkable for his stedfast loyalty, obtained, by his intercession with the government, the pardon of several of his parishioners who had taken part in the rebellion of that time.

LOCHCARRON, a parish, in the county of Ross and CROMARTY, 19 miles (N. by W.) from Glenshiel; containing, with the village of Janetown, 1960 inhabitants. This parish derives its name from an estuary in its vicinity, called Loch Carron, which is so named from the winding river Carron falling into it, the word in the Gaelic language signifying "a winding stream". In ancient times this place was the scene of dreadful conflicts among the neighbouring clans, and was successively in the possession of various distinguished chiefs: the famous Mac Donalds of Glengarry occupied the western part, in the vicinity of Strome, but were expelled, after several bloody feuds, by Lord Seaforth of Kintail, who seized upon the castle of Strome in the year 1609. So late as the middle of the last century the people were in a state of the greatest ignorance; but their moral and social condition has since been greatly meliorated by education, and the labours of their religious teachers. The PARISH is twenty-five miles in length, and varies in breadth from six to ten miles. Its surface is diversified by hill and dale, mountain and valley; and the lower grounds are watered by numerous rivulets and streams. The climate is very rainy, on account of the mountainous character of the country, and its proximity to the sea; the parish is, however, remarkably pleasant in fine weather, and abounds in attractive scenery. On the eastern side is a beautiful glen, encompassed by irregular hills, and gradually expanding into extensive tracts of heath; and the Carron, running through this valley, with its silvery stream and verdant banks greatly enriches the interesting prospect. At a small distance, from a lofty hill thickly wooded with ash, birch, and alder, are seen Loch Dowal with its three islands, and, a little further on, Loch Carron, resembling in the perspective a fresh-water lake. The finest view, however, of Loch Carron, and of the wide range of neighbouring scenery, is from an elevation in Lochalsh, above Strome ferry, whence, towards the north-east, the waters of the loch expand into a sheet apparently about twenty miles in circumference, and deriving a peculiar interest and beauty from the number of lofty hills by which it is surrounded.

There are many varieties of soil, and the land is divided between two proprietors. The number of acres cultivated, or occasionally in tillage, is 1238; 1500 acres are occupied by wood, and it is said that about 200 might be profitably added to the cultivated land in the parish. The total yearly value of produce is about £10,090, of which £1620 are derived from grain, £2035 from potatoes and turnips, £2750 pasture, £585 hay, £3000 fisheries, and £100 incidentals. Considerable improvements have been made in agriculture, encouraged by the lengthening of the leases; but the land is, per-

haps, let at too high a rate generally to allow of extensive changes on the part of the tenant. The prevailing character of the strata is gneiss, intermixed with quartz, red sandstone, and limestone, the last of which is plentiful at Kishorn, and is used principally for agricultural purposes. The annual value of real property in the parish is £2889. Janetown village is nearly a mile in length, and has latterly become a thriving place, having a population exceeding 500; the hamlet of Strome is also in the parish. The houses of the poor, though built of stone and lime, are of an inferior description; they are covered with turf and heather, have mud floors, are without chimneys, and consist frequently of but one apartment with a temporary partition, in which are contained, also, the cattle belonging to the family. The people living on the coast, who are employed in the fisheries, and in husbandry only in part, are in a somewhat better condition than their inland neighbours, whose circumstances are far from comfortable. The fuel in use is dried moss, which is obtained without expense. The roads are in good order; and there is a regular communication by carriers with Inverness, whence supplies are obtained for domestic consumption. In Janetown is a post-office, where the mail arrives three times a week; and conveyances of all kinds visit the parish; there is one annual fair, held at New Kelso on the first Monday in June. A herring-fishery connected with the parish employs many hands; and the salmon and sea-trout which in June, July, and August may be obtained in the river Carron in large numbers, return a considerable sum to the fishermen. Ecclesiastically Lochcarron is in the presbytery of Lochcarron, synod of Glenelg; and the patronage is vested in the Crown. The stipend of the minister is £158, of which nearly a third is paid from the exchequer; and there are a manse, and a glebe of seven arable acres valued at £7 a year, with pasturage for six cows and 150 sheep. The church is a plain but substantial building, erected in 1836, and capable of accommodating between 700 and 800 persons. The members of the Free Church have a place of worship. There is a parochial school, in which the classics and all the ordinary branches of education are taught; the salary is £34. 4., with about £12 fees. A few chalybeate springs are to be found. The only relic of antiquity of any note is the ruin of Strome Castle.

LOCHEARNHEAD, a village, in the parish of BALQUHIDDER, county of PERTH, $3\frac{1}{2}$ miles (N. E. by E.) from the village of Balquhiddier; containing 46 inhabitants. This place stands at the western extremity of Loch Earn, on the great military road from Stirling to Fort-William; and is a beautiful little village, having a well-known inn, and a post-office; but deriving its chief interest and attraction from its situation at the head of the loch from which it has its name. The loch is one of the most delightful of the many lakes in Perthshire, and has justly been described as a miniature and model of the most splendid and varied scenery. It is in length about nine miles, and in breadth one; its depth is said to be about 100 fathoms, a circumstance to which is attributed its never freezing. The banks on both sides are clothed in luxuriant verdure; and the mountains that surround it rise in majestic simplicity to an immense height, terminating in bold and rocky outlines, and having their sides diversified with precipices, and deep hollows and ravines. Wild woods ascend in many places

along the surface of these heights; and innumerable torrents pour from above, and, as they descend become shrouded in trees, until they lose themselves in the waters of the lake. On the south is Ben-Voirlich, or "the Great Mountain of the Loch", which attains an altitude of 3300 feet, and from whose summit is a magnificent prospect over the south of Scotland, stretching to the eastern and western seas, and to the mountains on the English borders. In the vicinity of the village, the beauty and grandeur of the scenery seem condensed and combined. On the north side of the lake is the modern village of St. Fillan's; and in the eastern extremity of it, is a small but charming island, said to be artificial, and which was once the rendezvous of desperate banditti, who were surprised one night by the clan Macnab, whom they had plundered of provisions, and all put to the sword. At Lochearnhead is a place of worship for members of the Free Church.

LOCHEE, a manufacturing village, and for a time a quoad sacra parish, partly in the parish of DUNDEE, and partly in the parish of LIFF and BENVIE, county of FORFAR, $1\frac{1}{4}$ mile (N. W. by W.) from Dundee; containing 3693 inhabitants, of whom 2439 are in the parish of Liff and Benvie. This village, which forms a populous suburb of the town of Dundee, is pleasantly situated on the turnpike-road to Newtyle. It is neatly built, and principally inhabited by persons engaged in the manufacture of the coarser kinds of linen-cloth, chiefly for exportation. The weaving of these goods is carried on to a very great extent, affording employment to nearly 2000 people; and many of the inhabitants are occupied in the spinning of flax, for which three mills have been erected in the village within the last few years. In connexion with these works is an extensive establishment at Bullion, near Invergowrie, for bleaching and dyeing yarn and cloth, and in which are a water-wheel of fourteen, and a steam-engine of six, horse power. A post-office under that of Dundee has been established in the village; and facility of communication with Dundee and the principal towns in the district is maintained by good roads. Lochee was separated, for ecclesiastical purposes only, under act of the General Assembly in 1834, and the parish thus formed was nearly two miles in length and a mile and a half in breadth. The church, originally erected as a chapel of ease, in 1829, at a cost of £2000, raised by subscription of the inhabitants, is a neat structure containing 1144 sittings, of which 100 are free. The minister is appointed by the male communicants, and derives a stipend of £155 from the seat-rents and collections. There are places of worship for members of the Free Church and the United Presbyterian Church. A parochial school was erected in 1837, at an expense of £300, a portion of which was granted by government, and the remainder raised by subscription: it is partly supported by the Education Committee of the General Assembly, who pay a salary of £12. 10. to the master; and partly by the fees.

LOCHFOOT, a village, in the parish of LOCHRUTTON, stewartry of KIRKCUDBRIGHT, 5 miles (W. by S.) from Dumfries; containing 130 inhabitants. This place has its name from its situation at the foot of Loch Rutton. It is of very small extent, and chiefly inhabited by persons of the agricultural class, whose number has lately increased owing to the system of feuing. This is the only village in the parish.

LOCHGELLY, a village, in the parish of AUCHTERDERRAN, district of KIRKCALDY, county of FIFE, $2\frac{1}{4}$ miles (E. N. E.) from Beath; containing 612 inhabitants. This village is pleasantly situated in the south-west part of the parish, and near the loch from which it takes its name; the high grounds have an elevation of more than 300 feet above the level of the sea, and are cultivated to the very summit. A subscription library is supported, and a savings' bank has been long established here. Some of the inhabitants are employed in the neighbouring collieries on the lands of Lord Minto, and in quarries; there are also some tile-works. The road from Beath to Auchterderran passes close by the village, and the Dunfermline branch of the Edinburgh, Perth, and Dundee railway affords great facilities of communication. There is a place of worship for members of the United Presbyterian Church; also two schools attended by about seventy children each, and the masters of which are exclusively supported by the fees. Near Lochgelly was born Dr. James Brown, at one time professor of natural philosophy in the university of Glasgow, who died at Edinburgh in 1838: among the distinguished persons who cultivated his acquaintance were Thomas Brown, John Leyden, Dr. Chalmers, James Ivory, and Henry Brougham.—See AUCHTERDERRAN.

LOCHGILPHEAD, a quoad sacra parish, partly in the parish of SOUTH KNAPDALE, but chiefly in that of KILMICHAEL-GLASSARY, district and county of ARGYLL, 24 miles (S. W.) from Inverary; containing 2748 inhabitants, of whom 2072 are in Kilmichael-Glassary. The town of Lochgilphead derives its name from its situation at the head of Loch Gilp, a branch of Loch Fine; and at the end of the eighteenth century comprised only a few fishermen's huts, since which time it has rapidly increased in extent and importance. It now consists of several well-formed streets of substantial houses, of handsome appearance; and is paved. The scenery is richly diversified, and abounds with interesting and romantic features, including some good seats, the demesnes of which are tastefully laid out, and embellished with plantations. Its fine scenery, central position, and ready communication with all parts, render Lochgilphead daily more and more a place of resort. The inhabitants are principally employed in the herring-fishery, which is carried on to a very considerable extent; cod, ling, and other white-fish are also taken here in abundance. About forty boats are engaged in the herring-fishery, each having a crew of three men; and more than 100 persons are occupied in preparing, curing, and packing: the herring-fishery commences in June, and continues till December. Lochgilphead harbour affords good anchorage, but little shelter from the south winds; and the small bays of Silvercraigs give protection to the boats employed in the fishery. The principal port, however, is Ardris/aig, in the parish of South Knapdale, about two miles to the south of Lochgilphead, at the extremity of the Crinan canal, and where an excellent pier has been constructed, on which is a lighthouse. The canal affords a direct communication between Loch Fine and the Western Ocean, avoiding the circuitous and dangerous navigation round the Mull of Cantyre. This important work was commenced in 1793, and completed in 1801, at a cost of £180,000; it is nine miles in length, and ten feet in depth, admitting vessels of 160 tons' burthen, and has thirteen locks varying from ninety-six to 108

feet in length, and from twenty-four to twenty-seven in breadth. The revenue of the canal, however, is scarcely sufficient to defray the cost of maintaining it.

From its situation on the high road from Inverary to Campbelltown, the town derives a considerable degree of inland trade; and a distillery has been established, in which on an average 76,000 gallons of whisky are produced yearly. Here are likewise a rope-work and a gas-work. In front of the principal street, an area has been inclosed for the cattle-markets and fairs that are held annually in the village, and for the prize-shows for cattle and sheep and the most approved specimens of husbandry, which take place towards the end of September. There are branches of the Union Bank of Scotland and Western Bank of Scotland, a prison and courthouse, and other public buildings. The post-office has a daily delivery from Inverary, Glasgow, and Campbelltown, and a delivery three times a week from Kilmartin. Facility of communication is maintained by good roads and bridges, kept in excellent repair, and by the steamers that frequent Loch Fine and the canal. The parish of Lochgilphead is about five miles in length and three miles in breadth, comprising an area of 9500 acres, of which the far greater portion is hilly moorland, affording only pasturage for sheep and cattle. Its internal economy is in every respect similar to that of the parish of Kilmichael-Glassary. The principal mansions are, Achindarroch, a modern residence beautifully situated on an eminence overlooking the Crinan canal; Kilmory House; and Achnaba. The church, built at a cost of £750, by parliamentary grant, in 1828, and enlarged by the addition of galleries in 1834, is a neat plain structure containing 506 sittings. The minister has a stipend of £120, paid from the exchequer, with a manse, and a small glebe; patron, the Crown. There are places of worship for members of the Free Church and others, a female school under the patronage of the Orde family, and other schools.—See ARDRIS/AIG.

LOCHGOILHEAD and KILMORICH, a parish, in the district of COWAL, county of ARGYLL, $10\frac{1}{2}$ miles (S. E. by E.) from Inverary; containing 1018 inhabitants, of whom 445 are in Kilmorich. This place, whose original name of *Kil-nam-Brathairankill*, signifying in the Gaelic language "the church of the brotherhood", was probably taken from some religious establishment here of which there are no authentic records, derives its present appellation of Lochgoilhead from the position of its church at the head of Loch Goil. The parish anciently included not only Kilmorich, which is still comprised in it, but also the greater portion of the parish of Kilmarglass, now Strachur; and prior to the Reformation it was an archdeanery, the revenues of which were very considerable. It is bounded on the east by Loch Long, and on the west by Loch Fine, and is about thirty-five miles in length, varying from six to twenty miles in breadth, and comprising a vast tract of which the exact extent has not been ascertained, but of which it is certain that little more than the fiftieth part is arable. The surface is boldly diversified with hills or mountains of various elevation, forming the western extremity of the Grampian range. These mountains, the height of which has not been precisely computed, though few are supposed to be less, and some are probably more, than 2000 feet, are interspersed with rugged rocks and lofty precipices of dreary aspect; but as they have been

grazed by sheep, some of them are clothed with verdure almost to their summit. The rocks are perforated with numerous natural caverns of singular appearance, in one of which a laird of Ardkinglass, who had been defeated by a powerful neighbour, concealed himself with some of his followers for a whole year, during which time he was supplied with provisions by his vassals. Among the hills are some small valleys under cultivation; and along the coasts are also tracts of arable land, where the soil is tolerably fertile. There are two inland lakes containing trout of excellent flavour; in the rivers Goil, Fine, and Long, also, are found trout of various kinds, and, near the coast, sea-trout and salmon. The three lochs contain fish of different descriptions, of which the most common are haddock, whiting, cod of small size, and, during the season, herrings. The herring-fishery is the only fishery of any importance.

In the hills the soil is generally light and thin; in the high glens, wet and spongy; and in some other parts, a deep moss. The crops are oats, bear, and potatoes; but the parish is principally adapted to the pasture of sheep and black-cattle, particularly the former, which are of the black-faced breed. The black-cattle are the Argyllshire; but, from the mountainous character of the country, only a few are reared: they are usually disposed of when three or four years old. The greater part of the wool is sent to the Liverpool market. The district appears to have formerly abounded with wood, and in the mosses are found numerous trunks of trees of various kinds: the remainder of the woods that flourished here consist chiefly of ash, alder, hazel, birch, and oak, and are preserved with due care and attention. The plantations, which on the lands of Ardkinglass are extensive, are principally elm, beech, plane, lime, larch, and Scotch and silver firs. Limestone is obtained, but, from the scarcity of fuel for burning it, is little used; it is found more advantageous to import Irish lime, and a good deal has been imported of late years with very satisfactory results. Near the head of Loch Fine is a mine of lead, the ore of which was found to contain a larger proportion of silver than any other in the Western Highlands; but it has not been wrought. The annual value of real property in the parish is £5602. The seats are Ardgartain House, a modern structure; and Drimsynie House, also a modern mansion: Ardkinglass Lodge, a handsome edifice on the site of the ancient castle, the remains of which were converted into offices for the mansion, was destroyed by fire a few years ago, as the tradesmen were just finishing some extensive repairs. In this parish are, the village of Lochgoilhead, in which the parish church is situated, and that of Cairndow, in which is the church of Kilmorich, and where a post-office has been established, as well as an excellent inn for the accommodation of travellers. Facility of communication is afforded by the great military road from Dumbarton to the West Highlands, which passes for sixteen miles through the parish; by the Loch Goil steamer, in summer plying daily, and in winter three times a week, between Glasgow and the head of Loch Goil; and by the ferry from St. Catherine's, across Loch Fine, to Inverary, on which is a steam-boat for the conveyance of passengers.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Dunoon, synod of Argyll. The minister's stipend is £167. 9. 9., of which one-fourth

is paid from the exchequer; with a manse, and a glebe valued at £37. 10. per. annum: patron, Jas. H. Callendar, Esq., of Craigforth and Ardkinglass. The church, situated at the head of Loch Goil, is an ancient structure in good repair, containing 305 sittings; the church of Kilmorich, on the shore of Loch Fine, is a modern structure, having been erected in 1816, and contains 258 sittings. The minister officiates two Sundays at Lochgoilhead, and on the third Sunday at Kilmorich. The parochial school, at Lochgoilhead, is well attended; the master has a salary of £30, with a house and garden, and the fees average £5 per annum. A school at Kilmorich is supported by the Society for Propagating Christian Knowledge; and other schools for the instruction of poor children are maintained during the winter by benevolent associations. There are some remains of the ancient castle of Dunduranh, a strong but irregular fortress in a low situation, accessible chiefly by sea; also of the castle of Carrick, a fortress of great strength, built upon a rock entirely surrounded by the sea, and accessible from the land only by a drawbridge. The time of the foundation of this castle is not known; but during the feud between the houses of Argyll and Atholl, it was burnt by the vassals of the latter: it was a royal fortress, and the Duke of Argyll is still hereditary keeper.

LOCHINVER, a village, in the parish of ASSYNT, county of SUTHERLAND, 14 miles (W.) from Assynt; containing 75 inhabitants. It is situated on the western coast of the county, at the head of the loch from which it takes its name, and has some good houses and a few shops. In its vicinity is an establishment for preserving fish, meat, and vegetables fresh for sea use, and for exportation. The loch serves as a good harbour, and has the convenience of a pier: several creeks, also, afford shelter and anchorage. An excellent road from the loch, passing through the village of Assynt, intersects the parish; and there are various local roads within its limits. At the mouth of Loch Inver is the small island of Soya. There is a preaching-station in the village.

LOCHLEE, a parish, in the county of FORFAR, 92 miles (N. W.) from Brechin; containing, with the hamlet of Tarfside, 692 inhabitants. This place derives its name from the river *Lee*, which passes through a *loch* of considerable size near its centre. The lands formerly belonged to the Lindesay family, one of whom erected a strong castle here in 1526, which continued for many ages to be the residence of his descendants, and of which the walls are still entire: Lord Panmure is the present proprietor. In its full extent the parish is about fifteen miles in length and seven in average breadth; but the portion of it which is inhabited comprises an area of little more than half that compass. It is situated among the Grampian hills, and is separated by the most elevated part of that chain from the county of Aberdeen. About 1000 acres of land are arable, fifty natural wood, and the whole of the large remainder rough moorland, heath, and waste. The surface is rocky and mountainous, interspersed with spreading valleys and deep glens. The loch already referred to lies in a cavity between the rocks and mountains which almost encircle the waters; it is nearly a mile and a half in length, and about half a mile broad, and from its peculiar situation has a strikingly romantic appearance. Of the mountains that separate the parish from Aberdeenshire, the

highest are Mount Keen and Mount Battoch; the former, on the west, has an elevation of 4000, and the latter, on the north-east, an elevation of nearly 3500, feet above the level of the sea. The height of the mountains on the south and north-west varies from 2000 to 3000 feet. The river Lee receives the tributary streams of the Mark and the Brany near the parish church, and then forms the North Esk, which, augmented by various other rivulets, falls into the German Ocean.

The SOIL generally is thin and light, and encumbered with large boulders, but by the use of lime is in many parts rendered fertile and productive; the mountain tracts, and parts of the valleys, are covered with heath and peat-moss, affording the principal fuel of the parish. The crops are oats, bear, potatoes, and turnips; the rotation system of husbandry is practised, and considerable improvements have been made. A few of the lands have been inclosed, and draining has been carried on to some extent; the farm-buildings are usually substantial, and kept in good repair by the tenants. The declivities of the hills afford pasturage for sheep, of which about 16,000 are on the average fed: 3000 lambs are annually reared. The sheep are mostly of the black-faced breed; and in order to encourage the rearing of sheep, and the improvement of the stock by importations from the south, an annual show has been established at Millden by Lord Panmure, at which prizes are awarded by his lordship to such of his tenants as produce the finest specimens. The cattle and horses are both of the Angusshire breed: of the former, the average number is less than 400, and they are generally small; of the latter, few more are kept than are necessary for agriculture. In this parish the woods consist exclusively of birch, with the exception of a few ash and alder trees. The substrata here are chiefly of primitive rock, interspersed with trap stone, mica-slate, and limestone; and, towards the summits of the higher mountains, of granite. Lead-ore is also found; a vein was worked in 1728, but the produce was not sufficient to pay the expense, and it has since that time been discontinued. The annual value of real property in Lochlee is £1331. Facility of communication is maintained by a good road that passes through the parish: there are many wooden bridges, two of which cross the North Esk, and three stone bridges, one of which was built in 1830.

Ecclesiastically the parish is in the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Crown; the minister's stipend is £158. 6. 7., with a manse, and a glebe valued at £20 per annum. Lochlee church, built in 1803, and enlarged in 1824, is adapted for a congregation of nearly 300 persons. There is an episcopal chapel. The parochial school affords ample instruction; the master has a salary of £34, and receives also, as catechist, an appropriation of funds to that purpose about a century since, producing 100 merks, six bolls of meal, and ten acres of land, of which eight are arable. Another school is endowed with £15 per annum by the Society for Propagating Christian Knowledge; the master has likewise a house, garden, and six acres of land, given to him rent free by Lord Panmure, and the school fees, amounting to about £12 per annum. There is also a parochial library, containing a small but well-chosen collection of religious publications. Alexander Ross, parochial schoolmaster of Lochlee, was the author of a pastoral poem of some merit, entitled *The Fortunate*

Shepherdess. In the parish are numerous tumuli, in one of which was found the head of an ancient battle-axe. Nearly opposite to the manse are the remains of the old castle of Invermark, the residence of the Lindesay family.

LOCHMABEN, a royal burgh, the seat of a presbytery, and a parish, in the county of DUMFRIES, $8\frac{1}{2}$ miles (E. N. E.) from Dumfries, and 68 (S. by W.) from Edinburgh; the parish containing, with the hamlets of Greenhill, Heck, and Smallholm, and the villages of Hightae and Templand, 2809 inhabitants, of whom 1289 are in the burgh, which contains also

Burgh Seal.

forty-one persons in the adjoining parishes of Tinwald and Torthorwald. This place is supposed to have derived its name from the numerous lakes in the parish. It is of very remote antiquity, and at an early period formed part of the possessions of the ancient lords of Annandale, whose baronial castle stood on an eminence close to the town, called Castle hill, and surrounded by a deep moat and fosse. The castle thus situated continued to be the residence of the Bruces, lords of Annandale, till the end of the thirteenth century, and was the birthplace of Robert Bruce, subsequently King of Scotland, who, after his accession to the throne, erected a much larger fortress on a peninsula south-east of Castle Loch, and in the completion of which the stones of the former castle were used. This second castle was by far the largest and the strongest of the border fortresses. Including the outworks, it occupied an area of sixteen acres. It consisted of three courts, inclosed with massive walls twelve feet thick, and was surrounded by a triple fosse, in which was a spacious basin defended by walls of hewn stone, affording to the boats belonging to the garrison and the town secure shelter, either from the weather, or the attacks of any enemy.

The town, which had arisen near the site of the castle, is supposed to have been first erected into a royal burgh by Robert Bruce, soon after his elevation to the throne; but from the inroads of the English, by whom the town was often plundered and burnt during the border warfare, all its ancient records were either lost or destroyed. In 1463, an army led by the Earl of Warwick plundered and burnt the town; and in 1479, the Duke of Albany, lord of Annandale, being accused of treason, was publicly cited at the castle of Lochmaben, and at the market-cross of the burgh, to appear and answer to the charge. In 1592, a sanguinary feud took place at Dryfe-sands, in an adjoining parish, between the Maxwells of Nithsdale and the Johnstones of Annandale, the former of whom were defeated with great slaughter: a number of the Maxwells, in their flight from the field of battle, sought refuge in the church of Lochmaben, which the Johnstones on that occasion burnt to the ground. The castle, which had been annexed to the crown in 1487, was maintained as one of the strongest frontier garrisons, under the superintendence of the lords of Annandale, till the union of the English and Scottish crowns in the reign of James VI., after which time it was suffered to fall into decay. The only remains are the shapeless

walls, from the surface of which the hewn stone has been taken for building materials, leaving merely the internal rubble, which is firmly cemented into a solid mass. Lochmaben Castle is still ranked among the royal palaces, and Mr. Hope Johnstone of Annandale is hereditary keeper. In 1612, James VI. granted to the inhabitants a charter embodying all the privileges they had previously enjoyed under the charters that had been destroyed; and in the same year, that monarch bestowed the barony of the Four Towns of Lochmaben, with the tithes and advowson of the church, upon John Murray, whom in 1625 he created Earl of Annandale and Lord of Lochmaben, and whose descendant, the Earl of Mansfield, is the present proprietor of the barony.

The town is situated between the Castle loch on the south and the Kirk loch on the south-west. It consists chiefly of one spacious street, in which are the church, the town-house, and the market-cross; of a street extending nearly at right angles with this, on the road to Dumfries; and of two narrow streets leading from the principal street. A public library is supported by subscription, and forms a valuable and well-assorted collection of literary and historical volumes. Neither any manufacture nor trade is carried on, with the exception of a few stocking-looms; there are three good inns, and some shops for the supply of the neighbourhood, but so little traffic takes place that the town has all the appearance of a large rural village. The government is vested in a provost, three bailies, a dean of guild, a treasurer, and nine councillors: there are several incorporated guilds, into which the fees of admission are, for strangers £1. 10., and for sons of burgesses 10s. 6d.; but they are very little regarded. The jurisdiction of the magistrates is the same as in other royal burghs, and the provost is *ex officio* a justice of the peace for the county. Lochmaben is associated with Dumfries, Annan, Kirkcudbright, and Sanquhar, in returning a member to the imperial parliament; the number of qualified voters being forty. The town-hall, erected in 1745, is a good building with a tower and spire; and underneath it is the place formerly used as a gaol, consisting of two rooms. In front of the town-hall is an arched weigh-house and a market-cross. A market is held every alternate week during winter for the sale of pork; it is very well attended, and the quantity disposed of during a season is about 27,000 stones, which would sell for about £6000; all other produce is sent to the markets of Annan or Dumfries. There is neither river nor canal navigation. A road from Dumfries to Lockerbie passes through the town, and there are excellent roads to Annan, Moffat, Ecclesfechan, and Langholm: the Caledonian railway, and the roads from Carlisle to Glasgow, and from Dumfries to Edinburgh, pass within a few miles of the town, and good roads lead from Lochmaben to these great thoroughfares. The post-office in the town has a tolerable delivery.

The PARISH is bounded on the east by the river Annan, and on the north and north-west by the water of Ae. It is about ten miles in length and three in breadth, comprising an area of 10,750 acres, of which 5500 are arable, ninety woodland and plantations, and the remainder, with the exception of 400 acres of waste, good meadow and pasture. The surface is generally level, with a considerable ascent towards the west, and is diversified by numerous lakes, of which the largest are the

Castle loch, 200 acres in extent; the Broomhill loch, eighty acres; the Mill loch, seventy; the Kirk loch, sixty; and the Lightac loch, fifty-two acres in extent. Their average depth is about fifty feet; the water is peculiarly soft, and they all abound with various kinds of fish, among which are pike, perch, two species of trout, one weighing from two to five pounds each, and the other from twelve to fourteen pounds, roach, chub, eels, loach, and minnow. In the Castle loch are found also bream and greenback; and in the Castle loch, Mill loch, and Broomhill loch, a fish called the vendace, resembling a small herring, but of more delicate flavour, and which is not found in any other water in Scotland, is very abundant. The vendace is remarkable for a thin membrane on the top of the head, in the form of a heart, of a brownish hue, and perfectly transparent, under which the brain is distinctly visible; it is from four to six inches in length, of a bright silvery colour, inclining to blue along the back, and dies immediately on its being taken out of the water. This delicate fish has hitherto defied all attempts at transportation from its native waters: several of the landed proprietors in the neighbourhood have with great care had some of them transferred into their pleasure-ponds, but they very soon died. The fish are caught solely by the net, scarcely ever having been known to take bait or fly. A club called the Vendace Club, composed of the gentlemen of the county, meets annually at Lochmaben in July or August, for the purpose of enjoying a day's recreation in taking these fish from the Castle loch, and dining in the evening: at dinner the vendace forms the principal dish. The loch is peculiarly adapted for a regatta, being free from those currents which occur in rivers or estuaries: a regatta club was formed in 1843, and has been attended with considerable success, the novelty of such races in the interior, and the beautiful wood and water scenery around the town, attracting strangers from all parts of the county. The chief rivers are, the Annan; the water of Ae, which, after bounding the north-western part of the parish, unites with the Kinnel, and flows into the Annan; and the Dryfe, which separates a portion of the parish from that of Dryfesdale, and runs into the Annan at Halleaths.

Along the banks of the rivers the SOIL is a rich alluvial loam, producing luxuriant crops of every kind, and in many parts nine feet in depth; to the west, or in the upland portion, it is light, gravelly, and cold. The only uncultivated portions are some tracts of peat-moss, which afford fuel for the inhabitants. Of late years the system of agriculture has been gradually advancing, and all the more recent improvements in husbandry have been adopted; the lands have been drained and inclosed; bone-dust has been introduced for manure, and the farm-buildings and offices are now generally substantial. The dairies here are well managed, and great attention is paid to the rearing of live-stock. Except on the dairy-lands, where the cows are chiefly the Ayrshire, the cattle are of the Galloway breed; they are usually sold to dealers when two years old, and fattened in the English pastures for the London market, where they obtain a ready sale. A considerable number of horses are reared in the parish; they are of good size, and by many judges are preferred to the Clydesdale breed. Great numbers of swine are fed on the different farms, and almost every cottager feeds a couple of pigs. Few sheep are bred;

such as *are* reared are fed chiefly on turnips. The plantations, which are mostly on the demesnes of the resident landed proprietors, consist of oak, ash, plane, and horse-chestnut, of which there are many stately specimens. In this parish the substrata are principally red sandstone, and whinstone; the sandstone occurs in thin layers easily separated, and is quarried for the roofing of farm-buildings. The annual value of real property in the parish is £7708.

The residences are, *Elshieshields*, a handsome castellated mansion; *Halleaths*; and *Newmains*. Besides the burgh, there are several villages in the parish, of which the principal are *Hightae*, containing 436, *Greenhill* eighty-nine, *Smallholm* eighty-two, and *Heck* fifty-seven, inhabitants. These villages, and the lands attached to them, form the barony of the Four Towns of Lochmaben, of which the Earl of Mansfield and his predecessors have been superiors and proprietors since 1612. The lands were portioned out by Robert Bruce to his retainers, and are held by Udal tenure, under the proprietors, against whose encroachments on their peculiar privileges the "tenants" have at times appealed to the sovereign, and obtained redress. They are transferable by any of the possessors, by enrolment in the rental-book of the proprietor of the barony; and neither charter nor seisin is necessary to vest the owners in their right to perpetual possession of their lands. A large tract of common in which the tenants of the barony had an interest, with the inhabitants of the burgh, was by mutual agreement divided many years since; and several portions have been purchased by different proprietors, and greatly improved: the largest portion was purchased by Mr. Bell of Rammerseales. There is a handsome bridge across the Annan, along which the Dumfries and Lockerbie road passes.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lochmaben, synod of Dumfries. The minister's stipend is £264. 19. 2., with a manse, and a glebe valued at £10 per annum; patron, the Earl of Mansfield. Lochmaben church, which is at the south extremity of the burgh, is a handsome and substantial structure; it was erected in 1819, at a cost of £3000, and contains 1200 sittings. There are places of worship for members of the Free Church, Burghers, and Cameronians. The parochial school, situated in the burgh, is well attended: the master has a salary of £34. 4. 4., with a house and garden, and the fees, averaging about £25; also the interest of a bequest of £200 by Mr. Richardson, of Hightae, for teaching ten poor children gratuitously. There is likewise a school at Hightae, the master of which has a salary of £17. 2. 2., with a house and garden, and fees averaging £21; he also receives the interest of £150 bequeathed by Mr. Richardson. Other schools in the parish are supported exclusively by the fees. There are some remains of Roman encampments, and part of the Roman road to Bodotria may be traced. Rochall Mount, situated on the side of a ridge of hills which overhangs the castle, is supposed to have been anciently a station for administering justice, and also a beacon for signals in times of danger; it is perfectly circular at the base, and terminates in a sharp point. On the north of the parish are the remains of Spedlin's Tower, once the residence of the Jardines of Applegarth; a massive quadrangular structure with circular turrets at the angles. Its walls are of immense

thickness; the entrance is on the north side; and over the circular gateway, near the summit of the tower, is the date 1605, thought to be the time when it was last repaired. In the Castle loch, ancient relics have been found at various times, spear heads, pieces of armour, and a gold ring without inscription; and in a tract of moss near the town, several silver groats of Alexander I. of Scotland and Edward I. of England, and other coins, have been discovered.

LOCHRUTTON, a parish, in the stewartry of KIRK-CUNDRIGHT, 4 miles (W. S. W.) from Dumfries; containing 659 inhabitants, of whom 130 are in the village of Lochfoot. This parish, which is situated in the eastern portion of the stewartry, takes its name from a lake on what was formerly the great road to Ireland, called in the Gaelic language *Rutton*, or "the straight road." The district is four miles and a half in length and three miles in breadth, and comprises nearly 8000 acres, of which about 6500 are arable, meadow, and pasture; 250 woodland and plantations, and the remainder moss, moorland, and waste. Its surface is boldly undulated to the south, east, and west, rising towards the boundaries in those directions into considerable elevation, but subsiding towards the north into a rich and pleasant vale. The lake from which the parish takes its name is about a mile in length, more than half a mile in breadth, and abounds with pike, perch, and eels; in the centre is a small circular island, partly artificial. The only river is the Cargen Water, a small stream issuing from the lake, and which, after receiving various tributaries in its course for nearly two miles through the parish, falls into the broad stream of the Nith below Dumfries.

In this parish the SOIL is generally a light shallow loam, and the arable lands are under good cultivation; the crops are oats, barley, potatoes, and turnips, with the various grasses. The farm-buildings are substantial and commodious, and the various improvements in husbandry have been adopted. A considerable number of cattle and sheep are fed on the pastures, and sent to the English markets; and large quantities of oats and barley are forwarded to Dumfries for sale. The principal substrata are whinstone and granite: limestone is found, but of very indifferent quality; and a bed of shell-marl has been discovered, which is used as a substitute for lime. The Markland Well, a chalybeate spring supposed to be efficacious in diseases of the stomach, is resorted to during the summer and autumnal months. Lochfoot is a small village, inhabited chiefly by persons engaged in rural pursuits. There are a mill for oats and barley, and one for dressing flax, both of which are driven by the stream from the lake; and to the latter mill is attached machinery for carding wool and for sawing timber. The great military road from Dumfries to Portpatrick passes through the whole length of the parish. The annual value of real property in Lochrutton is £3836. For ECCLESIASTICAL purposes this place is within the bounds of the presbytery and synod of Dumfries: the minister's stipend is £182. 6. 4. with a manse, and a glebe valued at £15 per annum; patron, the Duke of Buccleuch. Lochrutton church, a neat plain structure erected in 1819, contains 300 sittings. The parochial school is attended by about seventy children: the master has a salary of £30, with a house and garden, and the fees, averaging £15 per annum; also the interest of a bequest of £62. A small school situated at the extremity of the parish is

partly supported by a bequest from the Rev. George Duncan, formerly minister. On a hill in the eastern extremity of the parish are the remains of a Druidical temple; and near the lake is still, tolerably entire, one of the towers of the ancient castle of The Hills, a stronghold of the Douglas family when lords of Galloway: in this fortress Edward I. is said to have passed a night, on his route from Caerlaverock to Kirkcudbright.

LOCHS, a parish, in the island of LEWIS, county of Ross and CROMARTY, 12 miles (S. by W.) from Stornoway; containing 3653 inhabitants. This parish derives its name from the great number of lochs by which it is distinguished. Its history is involved in much obscurity; but some indications of its ancient state may be obtained from the traditions of the old Shenachies, or bards, who resided in Uig and Barvas, and whose tales have been in many cases so faithfully transmitted as to entitle them to the credit of authentic history, especially when, as in the present instance, they are supported by the evidence of several interesting antiquities. The strong fort of Dun-Charloway, in the parish, is one of those circular fortifications that are generally allowed to be Danish. A tradition of the Highlanders states that this fort, which was a place of abode as well as defence, was once captured by the famous Donald Caum M'Cuil, well known in the stories of Lewis; and there is a portion of the parish which still goes by the name of "Donald Caum's shealing". He is reported, indeed, to have dwelt here. A very large part of the parish was formerly uninhabited, and used, as several islands are at present, for shealings, or summer pasturage for cattle; and the portion above mentioned, being appropriated to such a purpose by this far-famed robber and chief, came thus to be called by his name. On the island of St. Colm, at the entrance of Loch Erisort, is still the ruin of an ancient religious edifice, the ground surrounding which is the only cemetery in the parish: it is uncertain what the nature of this establishment was, but it furnishes evidence of the early occupation of the island by a religious fraternity.

The extent of the PARISH is variously stated; the lowest estimate makes it eighteen miles long and about nine miles broad, but its irregular form renders a correct calculation extremely difficult. It is bounded on the north by the parish of Stornoway and the river Creed; on the south by Loch Seaforth; on the east by the channel which separates Lewis from the main land of Ross-shire; and on the west by the hills of Harris and of Uig. The surface is intersected by numerous maritime firths or inlets; and a large part of it forms a peninsula called Park, or the Forest of Lewis, from the appropriation of the ground to red deer by the first Earl of Seaforth, who constructed a large stone dyke across the neck of the isthmus, for the security of the property. The arms of the sea by which the peninsula is formed are Loch Seaforth and Loch Erisort. The coast is bold and rugged, rising considerably in the vicinity of the headlands called Kilbag-head and Rhu-Rairnish; the other parts of the shore are much more equal, and abound in sea-weed, the material for the manufacture of kelp. In the interior the parish is almost a continued flat covered with heath and coarse grass, but relieved towards the south by a boundary ridge of lofty mountains, interspersed with several fruitful valleys. The climate is damp and rainy, and though not unfavourable

to health, by no means beneficial to agricultural interests. The chief rivers are the Creed and the Laxay. There are also several fresh-water lakes; the principal is Loch Trialivall, which is distinguished for its sandy bottom and its transparent water, the other lakes being usually much discoloured by their mossy bed. Of the salt-water lochs the chief are Seaforth, Erisort, Grimshadir, and Shell, the first of which is famous for its scenery: it is about twelve miles in length, and is intersected by numerous bays, surrounded on all sides by thick, and sometimes gloomy foliage.

The SOIL throughout is mossy, being composed of decayed vegetable matter, with gravel or sand, and is almost incapable of profitable cultivation. Even in the best parts it is poor; in general it is a moss eight or ten feet deep, producing nothing but the worst heath: there are between 2000 and 3000 acres cultivated, or occasionally in tillage; and about 100,000 acres, or more, are waste. A small copse of birch at Swordle is the only wood. There are a few cultivated tracts, but none strictly speaking arable, as no plough is used: the crooked spade, the unscientific implement so well known in the Highlands, is employed for turning the soil; and all the produce is not sufficient for the support of the inhabitants. The live stock consists of black-cattle, sheep, and horses, all of which are small in size, being supported only on the heath of the moors. The annual value of real property in the parish amounts to £2514. The cottages in which the people live form detached hamlets, each containing from ten to forty families; the houses are built chiefly of moss, and consist of but one apartment for the family and the cattle, without any division. There are, indeed, only three or four good houses: these are of stone and clay, and occupied by respectable farmers. The labour of the main part of the population is distributed in husbandry, fishing, kelp-making, and pasturing. Cod and ling are the fish that chiefly visit the waters; about sixty tons are taken annually. The herring-fishery, formerly so prosperous, has long failed, the fish having forsaken the shores since the prevailing manufacture of kelp, through the loss, as is supposed, of the beds of weed which afforded them shelter. A few salmon, and considerable quantities of small trout are taken in the rivers and fresh-water lochs. The whole population are engaged in the season in the manufacture of kelp, which is exported to Liverpool; and the females spin yarn, and make many articles of wearing apparel. Mills are so numerous in the parish, that one is to be seen on nearly every stream; they are constructed in the most simple and rude manner. No roads have been made in any part, and all communication with the market-town of Stornoway is therefore over the moors or by sea. There are several good harbours, the chief of which are, Cromore, at the entrance of Loch Erisort; Loch Shell; and Mareg, in Loch Seaforth: these have a depth of fifty feet, and afford protection to ships of the largest burthen.

Ecclesiastically the parish is within the bounds of the presbytery of Lewis and synod of Glenelg, and the patronage is in the Crown: the stipend of the minister is £158, of which about a fifth is received from the exchequer; and there is a commodious manse, built about forty or fifty years ago, on the north side of Loch Erisort. The church, occupying a small peninsula on the farm of Krose, was rebuilt in 1831, and is a plain struc-

ture containing 716 sittings. At Carloway is a preaching-station, where the clergyman of the parish officiates once a month from April to September; but the communication with it is much impeded by morasses and rivers, and the want of roads and bridges. The members of the Free Church have a place of worship. There is a parochial school, the master of which has a salary of £28, with a slated dwelling; no fees are charged, owing to the poverty of the inhabitants. Of several other schools, one is supported by Stewart Mackenzie, Esq., of Seaforth; the teachers of two are allowed £20 per annum each by the Gaelic School Society, and the teacher of a fourth £15 by the Society for Propagating Christian Knowledge. The late Angus Nicolson, of Stornoway, bequeathed £100, the interest of which is distributed among twelve of his poorest relatives. The chief relic of antiquity is the circular fortification in the district of Carloway, supposed to have been built by the Danes. Its lower part was a place of residence, having communication by a subterraneous passage with a neighbouring hill; and the height of the whole building, when complete, was about twenty feet.

LOCHSIDE, a hamlet, in the parish of St. CYRUS, county of KINCARDINE; containing 66 inhabitants. It consists of a small group of cottages, of which the occupants are farmers and crofters.

LOCHTHORN, a village, in the OLD CHURCH parish of DUMFRIES, county of DUMFRIES; containing 64 inhabitants. This is one of a number of small villages, or rather hamlets, in the parish, of no particular interest or importance.

LOCHWINNOCH, a parish, in the Upper ward of the county of RENFREW, 4 miles (N.) from Beith, and 12 (S. by E.) from Port-Glasgow, containing, with the village of Howwood, 4716 inhabitants, of whom 2681 are in the village of Lochwinnoch. In the Gaelic language, which, previously to the introduction of various manufactures, was exclusively spoken throughout the whole district, the name of this place signifies "the island of the lake". It is derived from a very extensive lake situated near the village of Lochwinnoch, and where, during the internal hostilities that prevailed in the fifteenth and sixteenth centuries, the proprietor of the barony, Lord Sempill, erected on an island a strong peel or castle, of which there are still some remains. The Sempill family were vassals of the Stuarts of Renfrew, afterwards Kings of Scotland, to whose fortunes they steadfastly adhered. Robert Sempill was created a baron by Alexander II., and his three sons zealously maintained the interests of Bruce during the disputed succession to the throne. John, the seventh lord, was one of the commissioners for procuring the liberation of James I., then a prisoner at the English court. On the separation of Renfrew from the county of Lanark, in 1406, Sir William Sempill was made sheriff of the former, which was erected into an independent county; and he obtained from James III. a grant of the barony of Castletown, now Castle-Semple. This barony passed from his descendants, the last of whom, Lord Hew, distinguished himself at the battle of Culloden in 1745, to the Macdowalls, of Garthland, by purchase; and from them to its present proprietor, Colonel Harvey.

The PARISH is about twelve miles in length from east to west, and nine miles at its greatest breadth, comprising 19,219 acres, of which about 9000 are arable, 700

woodland and plantations, 300 water, 100 garden and orchards, and 9119 hilly moorland, pasture, and waste. Its surface is extremely uneven, and towards the western extremity rises into hills of great elevation, forming part of the lofty range that extends along the coast from Greenock to Ardrrossan. Misty Law, which is within the limits of the parish, rises to the height of 1240 feet above the level of the sea, and its summit commands a most magnificent prospect over twelve counties, embracing the Firth of Clyde, and the isles of Arran, Bute, Ailsa, and others, with a richly-diversified view of the surrounding country. The hill of Staik, which is a portion of the western boundary of the parish, has an elevation rather greater than that of Misty Law; and in the east of the parish is part of a tract of elevated tableland stretching from Paisley to the western coast. There are several beautiful valleys among the hills; and in a large valley which intersects the parish, and is most extensive and romantic, were formerly the three lakes of Castle-Semple, Barr, and Kilbirnie, which in rainy seasons frequently united their waters, and spread for miles over the valley. The lake of Castle-Semple, and the site of that of Barr, are within this parish; and though the first is so much contracted as to leave the castle, which was erected on an island in its centre, now almost upon its margin, yet it forms a large sheet of water, between which and Kilbirnie is a large area of richly-cultivated land. The Barr loch, situated near that of Castle-Semple, has been drained to a considerable extent, and, except in rainy seasons, when it still preserves the appearance of a lake, produces luxuriant crops of oats and meadow-grass. Throughout its whole length the vale affords a rich combination of beautiful scenery and romantic objects: as seen from the west, the venerable remains of Barr Castle, for many generations the seat of the proprietors of the neighbouring lands; Garthland, formerly called Barr House, the residence of the Macdowalls of Garthland, the present proprietors; the agreeable village of Lochwinnoch; the lake of Castle-Semple, with the ruins of the ancient castle belonging formerly to the Sempill family; and the woods and pleasure-grounds of the mansion of Colonel Harvey, present themselves in succession, and, with the flourishing plantations and wooded eminences in the immediate vicinity, and the lofty hills in the distance, contribute to render this interesting valley one of the most pleasing and picturesque in the country. The chief river in the parish is the Calder, which has its source in the high lands on the borders of Ayrshire, and flowing in a south-eastern direction, after making a variety of cascades in its progress, winds round the village, and falls into Castle-Semple loch. On its issuing from the lake, it takes the name of the Black Cart, and forming a boundary between Lochwinnoch and the parish of Kilbarchan, pursues a north-eastern course, and, uniting with the White Cart at Inchinnan, falls into the Clyde near Renfrew. The banks of this river, as it approaches the village, are richly clothed with natural wood and thriving plantations; and throughout the remainder of its progress, it adds greatly to the interest of the valley. The small river Dubbs issues from the north of the loch of Kilbirnie, and flowing through a level tract of rich meadow land, falls into the lake of Castle-Semple.

The SOIL is generally light, but in some parts luxuriantly fertile; in others, clay, which has been drained,

but not sufficiently; and in some parts, sandy. The principal crops are oats, barley, and potatoes, with a small portion of wheat, which has been lately introduced, but with no great success; and the meadows and pastures produce good rye-grass and clover. Numbers of sheep and cattle are reared for the neighbouring markets of Paisley and Glasgow; the cattle are chiefly of the Ayrshire breed, and the cows on the dairy-lands are fine specimens of that kind. The farm-buildings are usually substantial and commodious, and roofed with slate. Great improvements have been made in draining and inclosing the lands; the fences are generally of thorn, though some of the old stone dykes are still to be seen. The plantations are thriving; and where there is sufficient depth of soil, forest-trees of every kind attain a stately growth. On the lands of Castle-Semple are numerous ancient oaks, with beech, Scotch and English elms, and plane-trees of large dimensions; larch and silver fir of extraordinary size; and some of the largest cedars of Libanus to be found in the country. Upon the Garthland estate are some very fine plantations of similar trees, but of more modern growth. The rocks are of secondary trap, alternated with greenstone, basalt, amygdaloid, porphyry, and, in some instances, greenstone stratified with clay-slate, and crystallized free-stone, in which petrifications of arborescent fern are embedded. The hills of Misty Law and Staik are chiefly of porphyry, intersected towards their summit with dykes of greenstone. Carbonate of copper in small quantities is found in the whinstone. Sulphate of barytes is prevalent in the trap rocks, varying from six to sixteen feet in thickness; and trap-tuffa is occasionally to be seen embedded in the porphyry. Coal is found in the parish; the thickest bed, at Hallhill, is from six to ten feet, and the others vary from two to three feet in thickness. It has been wrought at Hallhill, but not to much profit, producing only to the proprietors a gain of about £300 annually after all expenses are paid: there is a smaller work at the western extremity of the parish, which has been lately discontinued. Limestone is found, but not to any great extent; it is quarried at Howwood, and abounds with organic remains, consisting mainly of bivalves, coralloids, entrochi, and encrini. Similar quarries were opened at Midtown and Garpel, but they have been completely exhausted. Minerals of various kinds occur throughout the district, chiefly of the zeolite species; many of them are very beautiful. Freestone of excellent quality for building is quarried in several places, chiefly for the use of the parish; but the quarries are only occasionally in operation. The annual value of real property in Lochwinnoch is £17,888.

Among the principal seats is *Castle-Semple'House*, the residence of Colonel Harvey, a handsome mansion, on the north side of the loch, erected in 1735, but by no means upon a scale corresponding to the splendid demesne in which it is seated. The grounds attached to it comprise more than 900 acres, and abound with diversity of character, and with every variety of natural and artificial embellishment. The eminences which intersect the demesne are richly crowned with wood to their summits; and in several directions are noble avenues of trees, and detached clusters scattered over the verdant lawns: in every part, indeed, the greatest skill and the most cultivated taste have been displayed in the improvement of the grounds. To the north of the house are spa-

cious gardens, laid out with great beauty, and containing long ranges of conservatories for plants, hot-houses for the choicest fruits, a large pinery, and every requisite for horticultural purposes. In front of the house is an extensive flower-garden, surrounded with shrubberies of rare plants; and encircling a fish-pond is a border of fragments of various rocks, where there is every variety of rock plants. The gardens are said to be among the finest in Scotland. *Garthland*, the residence of Colonel Macdowall, is beautifully situated near the remains of the ancient castle of Barr, and surrounded by grounds richly planted, and embracing much pleasing scenery. *Lochsyde House* is in a demesne forming an interesting feature in the scenery, and commanding extensive views. *Glenlora*, erected in 1840, and *Muirshiel*, in 1843, are also handsome mansions.

The VILLAGE consists of one principal street about half a mile in length, and of one shorter street crossing it at right angles. The houses, generally two stories in height, and roofed with slate, are neatly built; and there are several houses of superior order, belonging to the proprietors of the various works which have been established in the parish, and to the introduction of which is to be attributed the very rapid and progressive increase of the population within the last fifty years. To the north-west of the village is a bridge over the river Calder, which is noticed in many ancient records; it is of great antiquity, and of elegant design, and was widened and repaired in 1814. The linen manufacture established at Paisley in 1707 induced the farmers of this parish to cultivate the growth of flax for its supply; and many of their female domestics were employed in spinning yarn for the weavers of that place, till, in 1740, a company from that town built a factory here, and subsequently one of greater extent, which afforded employment to many of the inhabitants. The making of thread was introduced here in 1722, and about twenty mills were erected for the purpose; but, in process of time, that trade began to decline, and at present it is nearly discontinued. A bleachfield belonging to the company of Paisley was established here, into which the use of sulphuric acid was introduced by Dr. Home, of Edinburgh: at Lonehead, a second bleachfield was soon after begun; and another, at Burnfoot, was established by Mr. Hamilton Adams. Bleachfields, also, were commenced by Mr. Wilson, of Bowfield, and are still carried on with spirit; and at Midtown are similar works, constructed by Mr. Cameron, in connexion with which a beetling-mill has been built on the river Calder, for finishing goods for the market. About fifteen weavers are employed in making goods for home consumption; and more than 200 are engaged in weaving for the manufacturers of Paisley and Glasgow: the principal articles were formerly muslins of different kinds; but these have given place to the weaving of China crapes, Angola shawls, silk cypresses, and various stuffs of silk and cotton mixed. There is also a mill belonging to Messrs. Crawford, partly used for carding and spinning wool, which is carried on in the upper part of the premises; in the lower part is a very spacious and complete mill for grinding corn: this building, which is substantial and handsome, was erected in 1814.

The cotton manufacture, however, at present constitutes the staple trade of the place. The old mill, erected by Messrs. Houston, Burns, and Co., in the year 1788, is situated on the north-west of the village, and the ma-

chinery is put in motion by the waters of the Calder ; the building is very extensive, five stories in height, and contains 8140 spindles for yarn and water twist of various sizes, affording constant employment to about 180 persons. The new mills, built by Messrs. Fulton and Co., form a spacious and handsome building, not far from the end of the high street ; and the works are driven by the stream of the river Calder, together with a steam-engine, added to the original building in 1825. In this establishment 25,224 spindles are constantly at work, which make on an average about 6000 pounds of cotton-yarn every week, and give occupation to 350 persons. A mill upon a smaller scale, employing eighty persons, was built by Messrs. Caldwell and Co., at Boghead, near the village ; but it was burnt down by an accidental fire in 1813, and has not been rebuilt.

A post-office, and a branch of the Western Bank of Scotland, are established in the village ; and excellent roads to every part of the parish, and public turnpike-roads kept in good repair, afford a facility of intercourse with the neighbourhood. A canal from Glasgow to Ardrossan was begun about the commencement of the present century, intended to pass along the side of Castle-Semple loch, and was completed as far as Johnstone ; but it was then discontinued, and has not been since resumed. There is, however, a railway from Glasgow to Ardrossan, Kilmarnock, and Ayr, which runs through the parish. Numerous shops in the village supply the district with all kinds of provisions and articles of merchandise ; and three fairs are held in the course of the year, of which the Hill fair, so called from its being held on the market hill, is chiefly for cattle, on the first Tuesday in November, O. S. The May fair is on the second Tuesday in May, O. S., and was formerly celebrated by a procession of the trades ; but a few cattle only are sold. On the first Tuesday in July a fair is held, at which the farmers on the north side of Castle-Semple loch assemble and parade the village, mounted on their best horses, which are showily caparisoned, and their riders also decorated with ribbons, sashes, and other ornaments : after the parade, races frequently take place. The numbers attending upon these occasions, however, are gradually diminishing ; and the practice will probably be soon discontinued. A few cattle are still sent to this fair.

ECCLESIASTICALLY the parish is in the presbytery of Paisley, synod of Glasgow and Ayr, and in the patronage of the heritors: the minister's stipend is £277. 1. 6., with a manse, and a glebe valued at £19. 10. per annum. Lochwinnoch old church, which was collegiate, was built by Sir John Sempill, who was created Lord Sempill by James IV., and was killed at the battle of Flodden Field in 1513; it was amply endowed. The walls are still remaining; and the chancel, which was separated from the nave by a screen, and subsequently inclosed, contains the ashes of many members of the ancient family of Sempill, and is still used as a place of sepulture for the existing proprietors of the Castle-Semple estate. The present parish church, a handsome edifice, was erected in the year 1806, and has a fine portico surmounted by a neat spire. It is situated near the western lodge of the grounds of Castle-Semple, surrounded on three sides by a high wall, and on the fourth inclosed by a parapet wall with an iron palisade. It is adapted for a congregation of 1250 persons; and the ground in which it stands

is well planted, and embellished with flowering shrubs and evergreens. There are places of worship for the Free Church and United Presbyterian Synod. At Beltrees is a preaching station in connexion with the Established Church ; the number of sittings is 200. The parochial school is well regulated ; the master has a salary of £34, with £32 fees, and a house and garden. There is a school at Beltrees, to the master of which £5 per annum are paid by the parochial schoolmaster ; and a school is held at Howwood, the master of which has a house and garden rent-free, and occasionally receives a sum of money raised by subscription. A school has also been established in the village of Lochwinnoch by the proprietors of the new mill, who pay the master a salary of £36 per annum for instructing the children employed in their works, for which purpose they have provided an excellent schoolroom. A parochial library was established in the parish in 1823 ; and in 1833 another was opened, exclusively for religious purposes : there is also a small library of religious books for circulation among the children of the Sabbath schools. William Brown, Esq., of Antigua, who died in 1835, bequeathed to the Kirk Session the sum of £3300, to be invested on heritable security, and the interest appropriated to the relief of the poor. There are five friendly societies in the village of Lochwinnoch, and one in the village of Howwood ; also a female provident society and a female benefit society, the ladies connected with which visit all the poor in their neighbourhoods, and distribute clothing and fuel to such as are in need of assistance.

The walls of the ancient peel erected on the island in Castle-Semple loch, but the site of which, from the partial draining of the lake, is now upon its margin, are still remaining, and show the fortress to have been an impregnable stronghold, well calculated for security during the turbulent times in which it was raised. On the opposite side of the loch are the remains of *Elliston Castle*, the residence of the Sempill family previously to the fifteenth century. It is a quadrilateral building, about forty-two feet in length, thirty-three in breadth, and about thirty feet high ; the side walls are six feet and a half, and the end walls about nine feet, in thickness. Upon a headland westward of the village are the remains of *Barr Castle*, which, with the exception of its roof, is still entire. It is a tower of oblong form and of great height, crowned with battlements, and strengthened with angular turrets ; the walls are pierced with loop-holes for arrows, and also with port-holes for cannon. It consists of four stories: the lowest, which has an arched roof, appears to have been used for the security of horses and cattle in case of hostile irruptions ; the story immediately above it contains the banqueting-hall ; and the others, various apartments for the use of the family. On the public road to Dunlop are the remains of *Auchinbathie Castle*, said to have been the residence of the ancestors of the brave Sir William Wallace ; an opinion confirmed by the name of the small barony in which it is situated, still called *Auchinbathie-Wallace*. From the ruins, it is difficult to ascertain its original dimensions ; but the walls still standing, and which are in good preservation, inclose an area about thirty feet in length and twelve feet in breadth. Near the castle is a small eminence in the midst of a morass, called *Wallace's Knowe*: here Sir

William Wallace is said to have defended himself against a strong party of the English, and in the neighbourhood he performed many memorable exploits. In the eastern part of the parish was fought the battle of *Muirdykes*, on the farm of Muirdykes, in the year 1685. The Duke of Argyll, who had assembled in Holland a force of 1500 of his countrymen, refugees, being on his arrival in Scotland surprised and captured at Inchinnan, the remnant of his troops was placed under the command of Sir John Cochrane, and attacked here by the forces of James VII., which, after an obstinate engagement, called the battle of Muirdykes, were repulsed with considerable loss. Remaining masters of the field, Argyll's followers intrenched themselves behind a natural defence till it was dark, when, fearing a reinforcement on James's side, they retreated towards Beith. The camp of *Castle-waws*, not far from Muirdykes, is situated on the summit of one of the highest hills on the south side of the loch, and, on that part which is least precipitous, is defended by a rampart of stones and turf. Within the intrenchment is a circular wall of the same materials, about sixty yards in diameter. It was probably one of the hill forts of the ancient Britons, of which there are several in this part of the country, though by some it is supposed to have been a stronghold thrown up by Sir William Wallace in his wars with the English. Many canoes have at various times been found in the loch: between the peel and the north side of the lake, twenty have been found buried in the mud, within the last half century. Among the eminent persons connected with the parish was Alexander Wilson, the poet, a native of Paisley, who followed the occupation of a weaver in the factories of Lochwinnoch. Many of his poems have reference to incidents which happened in this parish. Having, however, incurred a fine for a satirical poem, he emigrated to America; and, living in Philadelphia, devoted himself to the study of natural history, and published a work entitled *American Ornithology*. James Latta, a native of this place, was the author of a *Practical System of Surgery*.

LOCKERBIE, a thriving town, in the parish of DRYFESDALE, district of ANNANDALE, county of DUMFRIES, 11 miles (N. N. W.) from Annan, and 12 (E. N. E.) from Dumfries; containing 1315 inhabitants. This place derives both its origin and its name from an ancient castle situated on a hill between two lakes, and which was the baronial residence of the Johnstones, a branch of the family of Johnstone of Lochwood, ancestors of the present Marquess of Queensberry. The small hamlet that arose round the castle gradually increased under the liberal patronage of its proprietors, who granted lands for building upon long and favourable leases; and its situation in the centre of an extensive pastoral and agricultural district has contributed to render Lockerbie a prosperous and flourishing town. It stands on the turnpike-road from Glasgow to Carlisle, and part of it is intersected by the Caledonian railway. The town principally consists of one spacious and regularly-formed street, extending more than half a mile from north to south, and from the northern extremity of which a similar street, of half that length, branches off at right angles to the east. The houses are well built, and of handsome appearance. No manufactures have hitherto been established; but all the handicraft trades requisite for the wants of the adjacent district

are carried on to a great extent; and there are numerous shops, abundantly stored with merchandise of every kind for the supply of the vicinity. Branches of the Edinburgh and Glasgow Bank and the Western Bank of Scotland have been opened in the town. The post-office has a tolerable delivery; and there are some excellent inns for the accommodation of the visitors who attend the fairs and cattle-markets for which this place is celebrated.

Fairs for lambs and wool, which are largely resorted to by persons from many miles' distance, are held at Lammass and Michaelmas. The former is on the 2nd of August, O. S., except it happen on Saturday, Sunday, or Monday, in which case it is postponed to the following Tuesday. At this fair, which was formerly held at the base of Lockerbie hill, from 70,000 to 80,000 lambs are frequently sold to various dealers; and so much has the business of late years increased, that the whole of that hill, the superiority of which was purchased from the corporation of Glasgow by Lady Douglas, of Lockerbie House, is now appropriated to the purpose. The Michaelmas fair is held, with the same restrictions, on the 2nd of October, and is also numerously attended. There are markets for cattle, sheep, and horses on the second Thursdays, O. S., of January, February, March, April, May, July, September, October, November, and December, all of which are free of toll. Markets are also held fortnightly during the winter for the sale of pork, in the purchase of which £1000 are often expended in one day; and fairs for hiring servants take place in April and at Michaelmas. At the northern extremity of the town is the parish church, which, after having been twice removed to a new situation, to protect it from encroachments of the river Dryfe, was finally built on its present site, which is well adapted for the convenience of the parishioners. There are also places of worship in the town for members of the Free Church and Anti-burghers. The old tower of Lockerbie has been assigned for the custody of prisoners previously to their commitment to Dumfries; but it is scarcely ever occupied.

LOGIE, a parish, in the district of CUPAR, county of FIFE; containing, with the village of Lucklawhill-Feus, 419 inhabitants, of whom 30 are in the village of Logie, 4 miles (N. N. E.) from Cupar. This parish derives its name from the situation of its church in a hollow surrounded by hills, of which the term Logie in the Gaelic language is descriptive. It is about four miles in length and little more than one mile in breadth, and comprises 3343 acres, of which 2700 are arable, 300 acres meadow and pasture, and about an equal number woodland and plantations. The surface rises into irregular hills, the highest of which, called Lucklaw hill, has an elevation of about 600 feet above the level of the sea; the general appearance of the parish is greatly diversified, and the scenery enriched by plantations of comparatively modern growth. In some parts, the soil is little better than moorland; and in others, especially on the sides of the hills, a rich loam which, under proper management, produces abundant crops. The system of agriculture is in a very improved state, and the rotation plan of husbandry prevalent; the crops are oats, barley, wheat, potatoes, peas, beans, and turnips. Cattle of the Fifeshire breed are reared, with a cross of the Teeswater occasionally; and the sheep, few of which are reared, are of the Cheviot and Leicestershire breeds. The plan-

tations are larch and Scotch fir, with some mixtures of hard-wood. The farm-buildings, though commodious, are inferior to some others in the county; those of modern erection are upon an improved plan. Considerable progress has been made in inclosing the lands. The substratum is chiefly whinstone, of which the hills consist; and in some parts of the parish porphyry is found, of a reddish colour, principally among the hills. The annual value of real property is £4013.

Ecclesiastically the parish is within the limits of the presbytery of Cupar, synod of Fife; patron, the Crown. The minister's stipend is about £170, with a manse, and a glebe valued at £12 per annum. Logie church, built in 1826, and situated nearly in the centre of the parish, is a neat and substantial edifice adapted for a congregation of about 300 persons. The members of the Free Church have a place of worship. The parochial school affords a useful course of instruction; the master has a salary of £34, with £9 fees, a house and garden, and also fifty merks Scotch per annum, the proceeds of a sum bequeathed by an ancient heritor. There is a Sabbath school for the young, regularly taught under the superintendence of the clergyman. In the parish are the remains of a square tower, apparently erected as a fortified residence; but nothing either of its founder, or its date, is recorded. John West, author of a *Treatise on Mathematics*, and of several valuable papers on the same subject, was the son of an incumbent of this parish: he died a few years ago, an episcopal clergyman in the island of Jamaica.

LOGIE, a village, in the parish of LOGIE-PERT, county of FORFAR, 4 miles (N. by W.) from Montrose; containing 332 inhabitants. This place is situated in the extreme east of the parish, on the south side of the North Esk, and but a short distance from that river. It is the seat of a large manufacturing establishment, comprising a flax-spinning mill and a bleachfield, the property of a company at Montrose; and about a mile distant from these works, at the village of Craigo, are others of a similar description, comprising also some cloth-finishing machinery and an alkali manufacture. Both employ nearly the whole of the population in their respective vicinities. The old church of Logie stands close by the village, where are also a school, and a good library containing suitable volumes for the working-classes.

LOGIE, a parish, in the counties of CLACKMANNAN, PERTH, and STIRLING, 2 miles (N. E. by N.) from Stirling; containing, with the villages of Craigmill, Menstrie, Blairlogie, Bridge-of-Allan, and Causewayhead or Causeyhead, 2200 inhabitants. Logie derives its name from the Gaelic word *lag* or *laggie*, denoting "low or flat ground", the lands consisting principally of an extensive tract of perfectly level country. The parish is situated on the northern bank of the Forth, which separates it from the parishes of Stirling and St. Ninian's; and has a very irregular outline in this direction, on account of the many bends of the river. Its extreme length from north to south is about six and a half or seven miles, and the greatest breadth six miles, comprising an area of about 12,600 acres, of which 5000 are arable, and 1260 occupied by wood. The Devon bounds the parish on the east, and after a beautifully-winding course of about thirty miles through a great variety of romantic scenery, falls into the Forth at Cambus, in the parish of

Alloa, nearly due south of the spot where it rises, only a few miles off, on the north side of the Ochil hills. The Ochil range, stretching along the northern boundary of the parish, ascends abruptly from the plain to the height of 2500 feet, and from Demyat peak commands extensive and richly-diversified prospects. These embrace the Forth almost from its source in Loch Ard to the German Ocean; also the city of Edinburgh; with views of the adjacent lands, the romantic stream of the Devon, the ruins of Cambuskenneth Abbey, and the castle of Airthrey shrouded in sylvan beauty: on the north and west, the bold outline of the Grampians bounds the view, and forms a striking contrast to the widespread tracts below. From the foot of the Ochils, which have little wood, but are well clothed with pasture, the land is a rich, well-cultivated, and fertile plain entirely to the southern boundary of the parish; and besides many mountain streams and excellent springs, the lands are watered by the Allan, which, as well as the Devon and all the burns, contains a good supply of fine trout.

The soil of the carse land, which comprehends three-fourths of the arable portion of the parish, is a deep, rich, alluvial earth, occasionally mixed with gravel, but for the most part formed solely of a strong tenacious clay, varying in depth from three to six feet, and incumbent on a dark blue silt with sand, plentifully interspersed with the shells of oysters, mussels, cockles, and many other fish. On the Ochils the soil consists principally of loam, gravel, and sand, and rocky deposits, among which large boulders are sometimes found. All kinds of grain and of green crops are raised; the husbandry is excellent, and nearly the same on the dry-field portion as on the carse land, except that wheat is not sown upon the former. The pasture on the hills comprises about 5000 acres, and is grazed by upwards of 4000 sheep, chiefly of the black-faced and the Cheviot breeds; the latter has been lately introduced, and the wool of the former has been greatly improved by a cross with the Leicester breed. Much attention is shown to the live stock; and the cows, which are the Ayrshire, are of a good description. The strata vary considerably according to the nature of the ground. The Ochil hills consist of trap rock, comprising a large proportion of amygdaloid, with agates, calc-spar, and many other minerals peculiar to the trap formation. The substratum immediately south of the Ochils is a continuation of the Clackmannanshire coalfield; but no works have been formed, as it is concluded that in this part the seams are too thin to be profitable. Ironstone also exists in the parish; and copper-ore has been wrought at the vein of the Mine-house. Logie derives much celebrity from its mineral spring, situated on the estate of Airthrey, near the village of Bridge-of-Allan, to which place large numbers of visitors resort every season for the benefit of the waters. The annual value of real property in the Clackmannanshire part of the parish is £6445, of that in the Perthshire part £3100, and the Stirlingshire £5292.

The wood in the parish consists chiefly of plantations of ash, elm, plane, beech, larch, oak, and fir, in the vicinity of Airthrey Castle, which stands on the brow of the Ochil hills, and is the seat of Lord Abercromby, grandson of the celebrated Sir Ralph Abercromby. A saw-mill has been built on the spot, for preparing the wood for transit to various parts of the country, where

it is used for palings, in farm houses and offices, and for many other purposes. Airthrey Castle is surrounded by a small but beautiful park, ornamented by an artificial lake, and is the only mansion of note, with the exception of Powis House, a neat and commodious modern structure. Independently of several small hamlets, the parish contains the villages of Menstrie, Blairlogie, Craigmill, Causewayhead, and Bridge-of-Allan. Craigmill is situated at the southern base of the Abbey-Craig, a remarkable rock of greenstone 500 feet high, in which there is an extensive quarry, affording a material employed for several purposes, but especially adapted, on account of its firm texture, and rough surface when broken, for grinding wheat. Upwards of 300 pairs of millstones have been made for preparing flour, and for the use of distilleries, at a cost of from £12 to £20 per pair; but they are not at present in much demand, those made in France being now sold for a low sum. The French millstones were originally the only ones employed, and, at the period of the war, rose so much in price as to induce the London Society for the Encouragement of Arts to offer 100 guineas for the discovery of any stone in Great Britain from which millstones could be manufactured, capable of being substituted for those from France. In consequence of this, Mr. James Brownhill, of the Alloa mills, presented specimens made from this rock; they were approved, and he received the premium. Afterwards, the stones from France still commanding from £45 to £60 per pair, the native stones continued in use till the peace, when the great reduction in the price of the former rendered those here prepared scarcely worth the cost of the labour. There is another village, called Abbey, situated where the celebrated abbey of Cambuskenneth once flourished; but this, with the barony of the same name, in which it stands, has been considered from time immemorial as belonging to the parish of Stirling, though it has been claimed by the parish of Logie. The commissary of Stirling and the commissary of Dunblane each exercise jurisdiction over it as belonging to their respective provinces. Great facility of intercourse is presented by the Scottish Central railway, which intersects the parish, and has stations at Bridge-of-Allan and Stirling. The turnpike-roads from Crieff, Alloa, Dollar, and Stirling all meet in the parish, at the village of Causewayhead; but the first has long been in a very bad condition, and the others are indifferent. The Forth also affords facility of communication, and is crossed by an elegant bridge lately constructed, in place of the old one, at Stirling, to which place the river is navigable for vessels of considerable size. There are regular steam-boats between Stirling and the city of Edinburgh.

Logie is ECCLESIASTICALLY in the presbytery of Dunblane, synod of Perth and Stirling, and in the patronage of the Earl of Dunmore: the minister's stipend is £263, with a manse, and a glebe valued at £24 per annum. The church, built in 1805, is a neat edifice containing sittings for 644 persons, and is beautifully situated at the foot of the Ochil mountains. The members of the Free Church have a place of worship. Logie parochial school affords instruction in Greek and Latin, and all the ordinary branches of education; the master has a salary of £30, with £33 fees, and about eighty children receive instruction in the school. On the Abbey-Craig hill, the Scottish army under Wallace was posted the

night before the celebrated engagement of Stirling, Sept. 13th, 1297: upon the summit were formerly the remains of a fort said to have been erected by Oliver Cromwell when he besieged Stirling Castle. Large stones, set up to commemorate battles, are to be seen in some parts; and spear-heads and other military relics have been found, some of which, from the skill displayed in the construction, are supposed to be of Roman origin. The entire skeleton of a whale, between sixty and seventy feet long, was discovered in 1819 in the alluvial subsoil, and is now in the museum of Edinburgh University. The first Earl of Stirling, born in 1580, an elegant scholar and poet, and a great favourite of James VI., was the sixth Baron of Menstrie in this parish; and General Sir Ralph Abercromby, the hero of Aboukir, was born at the family mansion at Menstrie, in 1734.—See CAMBUSKENNETH, BRIDGE-OF-ALLAN, &c.

LOGIE, in the county of FORFAR.—See the article on the parish of KIRRIEMUIR.

LOGIE-BUCHAN, a parish, in the district of ELLON, county of ABERDEEN, 2 miles (E. by S.) from Ellon; containing 713 inhabitants. The word Logie, expressive of "a low-lying spot", was given to this place on account of its applicability to the tract in which the church is situated; while the affix is descriptive of the position of the parish in that part of the county called Buchan. Logie-Buchan is separated on the east from the German Ocean by the parish of Slains, and is intersected by the river Ythan, which crosses it in the centre in an eastern direction, and after dividing it into two nearly equal parts, falls into the sea about three miles below the church. This river, the *Ituna* of ancient geographers, and at one time celebrated for its valuable pearls, has four small tributary streams here, two of which separate the parish on the north from Ellon, Cruden, and Slains, and two on the south from Ellon, Udny, and Foveran. The length of that portion of the parish in the northern quarter is three miles and three-quarters, and of that in the southern five and three-quarters; the breadth of the whole varies from three-quarters of a mile to three miles. The entire district comprises 6600 acres, the number of which under tillage is 5900, and in plantation sixty; the remainder is uncultivated. The surface is in general level, and the highest hills reach an elevation of only 130 or 140 feet above the sea. The principal feature in the scenery is the Ythan, which enters the locality through a range of rocks, where there is a fine echo, and an opening called the "Needle's Eye": beyond this point, at which its breadth is not more than fifty yards, it widens till it reaches the breadth of about 600 yards at high water, and forms a noble basin. The river abounds with various kinds of trout, also with salmon, eels, flounders, and mussels; and pearls are still occasionally found. It has a ferry opposite the parish church, where its breadth at low water is about sixty yards; and two boats are kept, one for general passengers, and the other, a larger boat, for the conveyance of the parishioners to church from the northern side. A tradition has long prevailed that the largest pearl in the crown of Scotland was obtained in the Ythan; and it appears that, about the middle of the last century, £100 were paid by a London jeweller to a gentleman in Aberdeen, for pearls found in the river. The pearl-fishery was formerly confined by patent, but this privilege was withdrawn by an act of parliament of the reign of Charles I.

The SOIL, which in some parts is clayey, produces oats, bear, turnips, potatoes, and grass for pasture and hay. Many improvements in agriculture have been introduced within the present century, including the rotation of crops and other approved usages; the scythe has taken the place of the sickle in reaping, and most of the old farm-houses with thatched roofs have been succeeded by others, two stories high, built of stone and lime, and covered with slate. Oats and turnips are the principal crops: the former are of excellent quality, chiefly in consequence of the great care taken in the choice of seed; the latter are much indebted to the plentiful application of bone-manure. The influence of steam-navigation on the interests of agriculture has been here most powerfully felt; and the facility of communication with the London market thus afforded has given a decided impulse to the breeding and fattening of cattle, which in general are crosses with the short-horned breed. The annual value of real property in the parish is £3178. A mansion has lately been built in the Elizabethan style, on the estate of Auchmacoy, the property of James Buchan, Esq., whose ancestors, from a very early period, have been located here, and were conspicuous in the political convulsions of several reigns, and, with the other chief proprietors of the parish, advocated the cause of the crown in opposition to the Covenanters. Most of the inhabitants of the district are employed in agricultural pursuits, a small brick-work recently established being the only exception. The great north road from Aberdeen passes through the parish, and the mail and other public coaches travel to and fro daily. On another road, leading to the shipping-port of Newburgh, the tenantry have a considerable traffic in grain, lime, and coal, the last procured from England, and being the chief fuel. The river Ythan is navigable for lighters of ten or twelve tons' burthen at high water. The marketable produce of the parish is sent to Aberdeen. Logie-Buchan is ecclesiastically in the presbytery of Ellon, synod of Aberdeen, and in the patronage of Mr. Buchan: the minister's stipend is about £192, with a manse, and a glebe of six acres, valued at £12. 10. per annum. The church was built in 1787, and contains 400 sittings. The parochial school affords instruction in the ordinary branches: the master has a salary of £25. 13., with a house, and £9. 7. fees; he also partakes in the Dick bequest.

LOGIE-COLDSTONE, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, 9 miles (W.) from Kincardine O'Neil; containing 936 inhabitants. This place comprises the ancient parishes of Logie and Coldstone, united in 1618, and the former of which derives its name from a Gaelic term signifying a "hollow" or "low situation", which is faithfully descriptive of its character. Of the name Coldstone, formerly *Colstane*, the derivation is altogether uncertain. The parish occupies a district between the rivers Don and Dec, from both of which it is nearly equidistant; it is bounded partly on the west by the river Deskry, separating it from the parish of Strathdon, and is about six miles in length and three miles and a half in breadth. Logie-Coldstone is of very irregular form, inclosing within its boundaries a detached portion of the parish of Migvy; and its superficial contents have never been duly ascertained. About 3000 acres are arable, 900 woodland and plantations, and the remainder hill pasture, moor-

land, and waste. The surface is diversified with numerous hills, a range of which of precipitous height extends along the western boundary; the most conspicuous is the hill of Morven, commanding from its summit an unbounded prospect towards the east. On the north the hills are less elevated, of more gradual ascent, and partly under cultivation. Neither of the two great rivers above mentioned intersects or bounds the parish: the river Deskry, after forming a boundary for some distance, flows into the Don; and there are some small rivulets, which, after intersecting various lands here, flow into the Dec. At the south-western extremity of the parish, and partly within its limits, is Loch Dawan, a considerable lake, nearly three miles in circumference. Lochan Uaine, which takes its name from the green colour of its water, is a small pond, on the farm of Nether Ruthven; and though apparently impure, the cattle drink of its water in preference to any other. Of the numerous springs, several of which possess mineral properties, the most distinguished is a powerful chalybeate near the church, called the *Poll Dubh*, signifying in the Gaelic the "black mire", and which is still resorted to by many persons for its efficacy in the cure of scorbutic complaints.

The SOIL is various; in some parts, a deep rich loam; in others, light and sandy; and on the slopes of the high grounds, generally fertile; producing favourable crops of grain, potatoes, and turnips, with the usual grasses. Of late years the system of husbandry has been greatly improved, and considerable tracts of moor and waste have been brought into profitable cultivation. The lands have been inclosed; the houses and offices are usually substantial and well arranged; threshing-mills have been erected on most of the farms, and all the more recent improvements in the construction of agricultural implements have been adopted. The moors abound with grouse, snipes, woodcocks, partridges, hares, and game of every other variety; ptarmigan and white hares are found in abundance on the hill of Morven, and great numbers of wild ducks and geese frequent the lower grounds. There are some small remains of ancient wood, consisting chiefly of dwarf alder; and roots of oak, fir, and hazel of large growth, are often dug up in the mosses. The plantations are principally fir and larch, for which the soil seems well adapted, and which are both in a thriving state. The rocks in the parish are of the granite formation; but there are no quarries. The annual value of real property in Logie-Coldstone is £6258, the amount for the district of Logie being £3178, and for the district of Coldstone £3080. The seats are Corrachree and Bleack, both of them neat modern mansions. Ecclesiastically the parish is within the bounds of the presbytery of Kincardine O'Neil, synod of Aberdeen. The minister's stipend is about £217, with a manse, and a glebe valued at £15 per annum; alternate patrons, the Crown, and the Farquharson family of Invercauld. Logie-Coldstone church, rebuilt in 1780, is a neat plain structure, and well adapted to the accommodation of the parishioners. The parochial school is attended by about 100 children: the master has a salary of £34, with a house and garden, and the fees average £25 per annum; he has also a portion of the Dick bequest. There are several cairns in the parish, two of which, of large dimensions, have given the name of Cairnmore to the farms on which

they are respectively situated. In the gable of one of the offices on the farm of Mill of Newton is a sculptured stone, originally erected on some ground in the vicinity which is still called *Tomachar*, or the "Hillock of the Chair". Within the last few years, part of a paved road was discovered below the surface of a ploughed field, on the lands of Belack; and near the spot is a hollow called the Picts' Howe. On removing some of the stones, layers of charred wood were found beneath them.

LOGIE-DURNO, ABERDEENSHIRE.—See GARTOCH, CHAPEL of.

LOGIE EASTER, a parish, in the county of Ross and CROMARTY, 5 miles (S. S. W.) from Tain; containing 1015 inhabitants. The name of Logie, so frequently applied to designate Scottish parishes, is derived from the Gaelic word *laggie*, which signifies a "hollow", and is used in the present instance in reference to the site of the first church, the ruins of which are still to be seen. The place is not remarkable for any events of historical importance; but there are many cairns remaining, the ancient and ordinary memorials of bloodshed, and said to have originated from a battle fought between the Danes and the Scots, in which the latter were conquerors. This parish is seven miles long and about three broad, and is bounded on the north by Tain parish; on the south by Kilmuir Easter; on the east by Nigg; and on the west by Eddertoun. The climate is usually mild, but intensely cold when the wind sets in from the east, which is, however, but seldom, as westerly winds are most prevalent. The soil varies considerably in different parts, consisting in some places of a light, sandy, unproductive earth; in others, of deep clay; and in some tracts, of a rich black mould. Wheat is the principal grain raised, and it is of a very superior quality. The most approved system of agriculture has become general since the breaking up of the small farms; the lands are now let in large allotments, and exhibit the natural effects of good cultivation. The population, however, has been greatly diminished by the change.

The whole land belongs to four families, two of whom are resident: the annual value of real property in the parish is £3297. There are several quarries of freestone; and a manufactory for tiles employs about thirty hands. A cattle-market is held at Blackhill in the month of May, at which large numbers of cows are sold. The mail-coach runs daily through the parish; but the roads, with the exception of a line of about three miles, are in bad condition. Calrossie, the seat of the Ross family, and Shandwick and Scotsburn, are very handsome mansions. Ecclesiastically the parish is within the limits of the presbytery of Tain, synod of Ross, and the patronage belongs to the Marchioness of Stafford: the stipend of the minister is £237, with a glebe of twenty-two acres. Logie Easter church, which is an excellent and commodious building, capable of accommodating 700 persons with sittings, is situated on Chapel hill, and was erected about thirty years since. Near it is the manse, built about fifty or sixty years ago, and commanding an extensive view of rich and beautiful scenery. The members of the Free Church have a place of worship. There is a parochial school, the master of which has a salary of £35, with a good school-house and about £6 fees. Another school, in the district of Scotsburn, is called the Assembly school; the master receives

£20 per annum and some fees, and connected with it is a small library. The language generally spoken in the parish is Gaelic; but the younger part of the population can all speak English. Besides the funds periodically raised for their relief, the poor have the interest of about £100, the aggregate of various bequests.

LOGIE-PERT, a parish, in the county of FORFAR, about 5 miles (N. W.) from Montrose; containing, with the villages of Craigo, Logie, and Muirside, 1560 inhabitants. This parish was formerly called Logie-Montrose; but, upon the annexation to it of the parish of Pert about the year 1610 or 1615, it assumed its present name of Logie-Pert. The word *Logie*, so frequently used in Scotland, is of Gaelic origin, signifying a "flat or low situation", and is strikingly applicable to the situation of the old church of Logie, in a hollow or piece of low ground close by the North Esk river. The name *Pert* is very old, and of uncertain derivation: the ancient church of Pert, like that of Logie, is still standing, but both have fallen into disuse since the erection of a central church for the accommodation of the united parish in the year 1775. The PARISH is about five miles in length and three in breadth, and is bounded on the north by the North Esk, which separates it from Kincardineshire; on the south by the parish of Dun, on the east by the parish of Montrose, and on the west by the parish of Strickathrow. The lower part lies along the banks of the river, which here makes a beautiful curve; the upper part is tolerably high, and generally with a gentle declivity to the river, though a considerable portion of it has a southern exposure. The North Esk, sometimes called the North Water, gives the title of Earl to the noble family of Carnegie, Earls of Northesk, who formerly held a large tract of land in Pert and its vicinity, on both sides of the stream: this property now belongs to the Earl of Kintore and others. The river takes its rise, like the South Esk, from the Grampian torrents, and falls into the sea about three miles north of Montrose; it abounds with excellent trout and salmon, and the fisheries yield a considerable revenue to the different proprietors.

The SOIL in the lower part of the district is a fine deep loam, and in the upper part generally a black earth resting upon a subsoil of clay. About 3795 acres are under cultivation; 300 are waste, and 1100 are occupied by wood, consisting mainly of larch, spruce, and Scotch fir. Oats and barley are the grain chiefly grown, the amount of wheat being small; and potatoes and turnips are produced in considerable quantities, with other green crops. A good revenue is also derived from the dairy produce, the greater part of which is disposed of at the Montrose market. The system of husbandry here followed is of the best kind; and the crops, especially the grain, are of excellent quality: the cattle are of the Angus breed, and a few sheep are kept for the purpose of consuming the turnips in the winter. The farm houses and offices are in general in superior condition, and some of them built even in a handsome manner. There are but few thorn hedges, and scarcely any stone fences, the inclosures being mostly formed of a strong and moveable paling. The chief improvement recently carried out has been extensive and effectual draining; hardly any other improvement is required. Some lime-works formerly in operation are now given up; but there is an excellent freestone-quarry on the estate of

Craig: the expense, however, of working it is so considerable that few stones are sent out of the parish.

There are two large manufacturing establishments at Logie and Craig respectively, situated on the banks of the North Esk, about a mile distant from each other. The Logie works belong to a company at Montrose, and comprise a bleachfield and flax-spinning mill, the former of which has existed nearly eighty or ninety years, and is at present employed in bleaching linen-yarns, to be afterwards manufactured into different kinds of cloth for the home and foreign markets: between forty and fifty persons are engaged in bleaching, and the mill occupies about 130 hands. The works at Craig, which belong to Messrs. Richards and Co., of London, comprise a flax-spinning mill, a bleachfield, some cloth-finishing machinery, and an alkali manufacture: about 280 hands are employed at these works. The annual value of real property in Logie-Pert is £6206. Brushwood, which abounds in the parish, is frequently used by the people as fuel; but the chief article of consumption is English coal, procured at Montrose. Two fairs are held every year for the sale of cattle and horses, one on the second Tuesday in May, and the other on the third Thursday in June. The Aberdeen railway, and two turnpike-roads, pass through the parish. There are two great bridges, one of which, the old North-Water bridge, consists of three arches, and was built above 300 years ago; the Marykirk bridge, a handsome structure of four arches, was built by means of shares, in 1814, at an expense of £7000, and has proved of great benefit in facilitating the intercourse between the counties of Forfar and Kincardine. The Aberdeen railway, also, has a bridge over the same river, which, like the two preceding bridges, connects the counties. Craig House, built about sixty years since, is a spacious and excellent mansion; and the house of Gallery, of older date, is romantically situated on the bank of the North Esk.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Breechin, synod of Angus and Mearns; patrons, the Crown, and St. Mary's College, St. Andrew's, alternately. The stipend of the minister averages £240, with a manse, and a glebe of nine acres, valued at about £2 per acre. The present church, which is situated in the centre of the parish, was built in 1840, and is a plain substantial structure, capable of accommodating about 700 persons with seats. There is a parochial school, where the usual branches of education are taught; the master has the maximum salary, with at least £15 fees, and a house and garden. Unendowed schools have been built at each of the mills, where the same instruction is given as at the parochial school; and there are two small parochial libraries, and two or three savings' banks, in the parish. The poor have the interest of £189, left by the late David Lyall, of Gallery. Among the antiquities are three tumuli, on three *laws* of Craig; in which human bones of an extraordinary size have been found, with several urns and other relics. The late James Mill, Esq., author of *British India*, was a native of the parish: he died in the year 1836.

LOGIERAIT, a parish, in the county of PERTH; containing, with the village of Ballenluig, part of that of Aberfeldy, and part of the quoad sacra district of Rannoch, 2959 inhabitants, of whom 168 are in the village of Logierait, 8 miles (N. N. W.) from Dunkeld. This

place, frequently called Laggan by the inhabitants, derives its name from the two words *Logie* and *Rait* or *Reite*, the first signifying a "hollow", and the latter "arbitration" or "settlement of differences", the Court of Regality under the jurisdiction of the house of Atholl having been formerly held in this village, where a large court-house stood, containing a judiciary hall upwards of seventy feet long, with galleries at the ends. King Robert III. is supposed to have resided occasionally at a hunting-seat, or castle, in the vicinity of the village, the ruins of which are still to be seen. The PARISH consists of several distinct portions, some of which are far distant from the main part. The principal lands of the main part lie between the rivers Tay and Tummel, the former running along their southern, and the latter marking their northern and eastern boundaries: the rest of the main part is east of the Tummel, and bounded by the parishes of Dunkeld, Kirkmichael, and Moulin, the first and last of which penetrate by narrow tracts to a considerable distance. On the south of the Tay, a detached portion of Logierait, stretching from the river, near Aberfeldy, for about a mile, runs between the parishes of Dull and Fortingal; and two other separate portions are situated towards the west, in the district of Rannoch, beyond the parishes of Weem, Dull, and Fortingal. On account of the very irregular boundary line of the main part, and especially on account of the detached portions, it is difficult to state the actual dimensions of the parish; but, supposing the whole to be compact and continuous, it has been estimated at twelve miles in length, and five in average breadth. It contains 27,411 acres, of which 5002 are under cultivation, 2899 occupied by wood, 15,533 moor, 768 common, and the remainder other kinds of waste. The scenery between the two rivers, which in one part are about seven miles distant, is richly varied and beautiful; and a sloping hilly ridge intersecting the district commands uninterrupted and picturesque views on each side, the bold and imposing features of the rocky and mountainous eminences in the adjacent parishes supplying a fine relief to the softer scenery of the immediate locality. The portion of the parish situated in Rannoch is skirted on the north by the considerable loch of the same name; but, with this exception, there are no waters of consequence besides the two rivers, and the stream which separates part of Logierait from Dull, and is ornamented near Aberfeldy with the celebrated falls of Moness.

The SOIL in the haughs and low grounds is partly alluvial, and partly gravelly; that of some of the slopes is deeper, and of a rich loamy quality: the portion east of the Tummel contains numerous springs, and is mostly wet, resting on a clayey impervious subsoil. The crops, which in general are fine, on account of the purity and dryness of the climate and the kindly nature of the soil, comprise wheat, barley, oats, and rye; the last, however, sown in only small quantities. Turnips and potatoes are also produced to some extent, with clover; and lint is still grown, though bearing but a small proportion to the amount formerly raised. The six-shift rotation is occasionally followed; but the five-shift prevails among the larger farmers, and the four-shift among the cottars. The breeds of horses, sheep, and cattle are comparatively inferior; improvements have, however, recently been made, and Leicester sheep and Ayrshire cattle are to be seen on some of the best farms. On

the whole the husbandry is upon a good footing; but the advances made in many other districts are here impeded to a considerable extent by the minute subdivision of the land, which, falling into the hands of inferior tenants, is deprived of the advantage of an outlay of capital, and often much exhausted in cropping. The recovery of waste land, and draining and embanking, have, nevertheless, been actively carried on; and much attention has been paid to the erection of superior farm houses and offices. The Duke of Atholl is superior, and principal heritor: the annual value of real property in the parish is £10,290. Veins of limestone cross the district in one or two places; but the substratum consists chiefly of common stone, quarries of which are numerous. The wood comprises several varieties of fir, with ash, elm, beech, oak, poplar, plane, and other trees; the largest plantations are those of larch-fir, belonging to the duke. There are several gentlemen's seats on the north of the Tay, and on each side of the Tummel, all of which are neat commodious structures.

The village of Logierait is ancient, and now almost ruinous: the old prison in it belonging to the Regality Court, where many of the rebels were confined after the battle of Culloden, was taken down about thirty years since. About 170 persons reside here; and 300 in that portion of the village of Aberfeldy attached to this parish. Lincen-yarn was formerly manufactured in the parish, returning nearly £3000 annually; but this branch of trade has quite disappeared. There are six distilleries, which produce yearly about 65,000 gallons of spirit from 32,500 bushels of malt, one-third of the barley employed being of native growth: there are also eight meal-mills, two mills for flax, two saw-mills, and a mill for potato-starch. A good turnpike-road traverses Strath-Tay, and is connected with the great road to Inverness on the north, and with that to Breadalbane from Dunkeld on the south, by two ferries, one on the Tay and the other on the Tummel; the passage on the latter being effected by a fly-bridge constructed with two boats and a platform, and adapted, by novel and ingenious machinery, to the nature of the stream. There are several other ferries; and a post every day except Tuesday. The chief trade consists in the exportation of whisky to the southern markets, and potatoes to Dundee for London; the meal obtained from the oats is sold in the surrounding districts. A fair is held on the first Tuesday after the 12th of May, for the sale of seeds, &c.; but it has nearly fallen into disuse in consequence of the farmers having discontinued the sowing of lint-seeds. A market, also, now in a declining state, is held on the 22nd of August, for the sale of horses and the hiring of shearers.

The parish is ECCLESIASTICALLY in the presbytery of Weem, synod of Perth and Stirling, and in the patronage of the Duke of Atholl. The minister's stipend is £232, with a manse, and a glebe of several acres, valued at £10 per annum. Logierait church was built in 1806, and is conveniently situated within half a mile of the junction of the Tay and the Tummel, and in the vicinity of the principal ferries; it affords accommodation for 1000 persons, and contains a monument to Major-General Sir Robert Henry Dick, who served with honour in the peninsula and at Waterloo, and was mortally wounded in the battle of Sobraon, in India, in 1846. There is an episcopal chapel; and a place of worship for Baptists has been erected. The parochial school

affords instruction in the usual branches: the master has a salary of £34, with a house and garden, and about £6 fees; also £5 per annum from the rents of the bishopric of Dunkeld. There is likewise a free school at Strath-Tay, affording a good education to nearly 200 children, endowed, under the will of the late Mr. D. Stewart, a native of the parish, with six acres of land, and the interest of £2500, for the support of a master and assistant, and the supply of stationery and prizes, besides an additional sum for the erection of school premises: the master has a salary of £40, and the assistant one of £20. The same benefactor left funds which are becoming available, for the endowment of an hospital at Edinburgh. There is a society called the Atholl Wrights' Brotherly Society, instituted in 1812; the Strath-Tay Farmers' Friendly Society was commenced in January 1826; and a savings' bank at Aberfeldy, instituted in 1833, is open for deposits to a small portion of this parish. The chief relic of antiquity is the ruin of the castle or hunting-seat supposed to have been occupied by King Robert. The Duke of Atholl takes his title of Earl of Strath-tay from this parish.

LOGIE-WESTER, in the counties of NAIRN, and ROSS and CROMARTY.—See URQUHART.

LONGFORGAN, a parish, in the county of PERTH; containing 1660 inhabitants, of whom 458 are in the village of Longforgan, 2 miles (E. N. E.) from Inchturre, and 5½ (W.) from Dundee. The name of this place, in a charter of Robert Bruce's in 1315, granting the lands and barony to Sir Andrew Gray, is written *Lonforgund*. It appears to have obtained its prefix to distinguish it from other places called Forgan in the neighbourhood. The parish forms the eastern extremity of the Carse of Gowrie, and is about nine miles in length, and of very irregular figure, varying from a mile and a half to four miles in breadth. It is bounded on the south by the river Tay, which washes its shores for nearly five miles; and comprises 8992 acres, whereof 7200 are arable, 1003 woodland and plantations, and 189 hill-pasture and waste. The surface is greatly diversified, rising in some parts into hills of considerable elevation, of which those of Ballo and Lochton, parts of the Sidlaw range, are the principal, the former being nearly 1000, and the latter nearly 1200, feet above the level of the sea. From the banks of the Tay the land rises gradually to the Snabs of Drimmie, from which is obtained a rich prospect of the luxuriant plains of the Carse of Gowrie. The lower lands form a broad, level, and fertile tract in the highest state of cultivation; and the scenery is embellished with extensive and thriving plantations, and with gentlemen's seats, round some of which is timber of ancient and stately growth. Numerous streamlets issue from copious springs of excellent water, affording an ample supply; and some of them are sufficiently powerful to turn mills.

The SOIL in the lower grounds is chiefly clay with a rich black loam; but, in some parts of them, clay intermixed with gravel of a reddish colour, which by good management is rendered very fertile. In the upper districts of the parish, the soil, though inferior in quality to that of the carse land, is dry, and well adapted for turnips, with the exception of some small portions which, resting on a more compact clay, are moist and less productive. The crops are wheat, barley, oats, peas, beans, potatoes, and turnips. The system of agriculture at-

tained a highly-advanced state under the auspices of the Carse of Gowrie Agricultural Society, which held its meetings for the promotion of improvements in husbandry in the village of Longforgan, but which has now merged into the Perthshire Agricultural Association. The lands are inclosed partly with stone dykes, and partly with hedges. Much benefit has been effected by draining, and embankments have been raised to a considerable extent for reclaiming land on the shores of the parish. The farm-buildings are substantial and commodious; and on most of the farms are threshing-mills, one of which is driven by steam. The cattle are chiefly a cross of the short-horned breed, but not many are reared, and very few sheep, as the lands are not well adapted, except in the upper parts, for the pasture of live stock: some horses are bred, but the greater number are brought from other places. In this parish the woods consist of oak, ash, elm, Spanish chesnut, beech, lime, and plane-trees, of which fine specimens are found on the lands of Castle-Huntly, Drimmie, Mylnefield, and Longforgan. There are quarries of freestone at Kingoodie, and in the higher district of the parish. The former, the property of Mr. Henderson, are near the Tay, and have been wrought from a remote period; the stone is of a bluish hue, very compact and durable, and susceptible of the finest polish. Great quantities of it are raised, and sent to Aberdeen, Perth, Dundee, London, and other places, about sixty persons being continually employed; and the lessees of the quarries have constructed docks, and provided other facilities for shipping the produce, in which three boats are always engaged. The stone of the other quarry, which is the property of Lord Kinnaird, is of similar quality to that of Kingoodie, though of a whiter colour. This quarry, however, from which the stone for the erection of Rossie Priory was raised, is not wrought to any very great extent, its situation precluding the facility for shipping off the produce. The salmon-fishery in the Tay, which was formerly very considerable, and afforded an abundant supply for the inhabitants, and also for distant markets, has since the prohibition of the use of the stake-net been discontinued. The annual value of real property in the parish is £13,588.

Drimmie House, the seat of the Kinnaird family, was destroyed by fire at the commencement of the last century; and Rossie Priory, the present residence of Lord Kinnaird, was erected in its stead, at some distance from the site of the old mansion, and within the parish of Inchtute, under which head it is described. *Castle-Huntly*, the seat of George Paterson, Esq., to whose ancestor it was sold in 1777, is an ancient and stately mansion, built of stone from the quarries of Kingoodie by the second Lord Gray of Fowls. Its walls are ten feet in thickness, and exhibit no marks of decay, though the building has stood for nearly five centuries. The round tower, which is nearly 120 feet high, commands a most extensive and rich view, comprising the entire Carse lands interspersed with handsome residences, the river Tay for nearly the whole of its course till it falls into the German Ocean, the opposite coast of Fife with the Lomonds, part of the vale of Strathearn, the Ochils, and the lofty range of Sidlaw. Considerable additions have been made to the castle; but uniformity of character has been preserved, and the whole forms one of the most magnificent seats in the country. *Mylnefield*, the

seat of Mr. Henderson, is a handsome mansion sheltered with stately timber; and *Lochton* is also a handsome house, pleasantly situated.

The village of Longforgan is neatly built and well inhabited: about 150 of its people are employed in the manufacture of coarse-linen for export, and a considerable number of women and children are engaged in spinning and winding the yarn. The nearest market-town is Dundee, with which, and with other towns, a facility of intercourse is maintained by good roads; that from Aberdeen passes through the parish, and from this principal road branch off two others, one leading to the quarries at Kingoodie, and the other to Cupar. The Dundee and Perth railway also affords great facilities of communication; it intersects the parish, and is carried, by stupendous works, over the immense freestone-quarries of Kingoodie. There is a small harbour at Kingoodie, where lime from Sunderland, and coal from Dundee, are landed. Fairs are held in Longforgan on the first Wednesday in the months of June and October (O. S.) and the last Monday in the month of April, for the sale of cattle, agricultural produce, and other merchandise. Ecclesiastically the parish is in the presbytery of Dundee, synod of Angus and Mearns, and in the patronage of the Crown: the minister's stipend is £268. 3. 4., with a manse, and a glebe valued at £13 per annum. Longforgan church is a spacious and substantial edifice, well situated for the convenience of the parishioners, and adapted for a congregation of 1000 persons. The members of the Free Church have a place of worship in the eastern angle of the parish. The parochial schoolmaster has a salary of £34, with £16 fees, and a house and garden; he receives also £6. 6. from Mr. Paterson, and £2. 10. from Lord Kinnaird, for the gratuitous instruction of poor children on their respective estates: an excellent schoolroom has been lately erected. A small library has been established, which consists chiefly of religious works; and a savings' bank was opened in 1824, but it has not been much encouraged. At Dron are the ruins of a chapel that belonged to the abbey of Cupar-Angus founded by Malcolm IV., in 1164, for monks of the Cistercian order; the remains consist chiefly of the east and west gables of the building, the latter containing a large window of elegant design, and are situated in a deep dell, on a rocky eminence, at the base of which is a small rivulet of beautifully limpid water. A silver coin of the reign of Robert II. or Robert III. was found on a farm here in the year 1826; the legend, *Robertus, Dei Gratia Scotorum Rex*, is still legible, but every other part is completely obliterated.

LONGFORMACUS and ELLIM, a parish, in the county of BERWICK, 7 miles (W. N. W.) from Dunse; containing 390 inhabitants. The name of Longformacus has been variously written at different periods, and its derivation is involved in much obscurity. In 1384, the place is called *Longfordmakehouse* in a charter by the Earl of Orkney to his cousin "James de Sancte Clair"; while in a charter of 1395, the lands of *Lochirmackehous* are conveyed by the Earl of March to James Sinclair. In 1505, the spelling had changed to *Lochirmacus*, which variation it kept till about 1556, when it assumed its present form of Longformacus. The name of Ellim has also been spelt differently, sometimes being written Ellim, and at other times *Elm* and *Ellem*: its derivation, too, is uncertain, like that of Longformacus. These two

parishes, on account of their proximity, were united on the 18th of February 1712, when the population of Longformacus was 200, and that of Ellim 100. There are no striking historical events recorded; but notice of one or two severe conflicts is handed down by tradition, having reference to this district, which, on account of its situation, was involved in the border warfare. The name of Main, or Man-slaughter, Law is given to a hill in the neighbourhood, where a bloody battle is said to have been fought in 1402, between the Earl of Dunbar and Hepburn of Hailes; and a large heap of stones at Byreclough, called the "Mutiny Stones", about 240 feet long, marks the spot or vicinity of some early encounter the particulars of which are unknown. There being a place here of the name of Otterburn, the supposition has been hazarded that this parish was the scene of the contest between Douglas and Hotspur, fought in the year 1388.

The PARISH is about twelve miles in length, from east to west, and eight miles in breadth, containing 21,350 acres, of which 2200 are cultivated, 18,800 uncultivated, and 350 under plantation. It lies at the extremity of the county, and is bounded on the north by the Lammermoor hills, which separate it from the parish of Whittingham, in Haddingtonshire: on the south it has the parishes of Langton, Grecolaw, and Westruther; on the east, those of Dunse and Abbey St. Bathan's; and on the west, the parish of Lauder. A part of the parish, about two miles long and one and a half broad, called Blaekerstone, which belonged to the old parish of Ellim, is locally situated in, and insulated by, the parish of Abbey St. Bathan's: this portion is eight miles distant from the church. The surface of the parish, in its general appearance, is hilly, being situated near the great Lammermoor ridge; it is mostly covered with heath, and traversed by large flocks of sheep. But though the hills are uncultivated, some of them are of great beauty, such as the two Dirrington Laws, which are conical in form, and one of which rises 1145 feet in height. The most elevated part of the parish is Meikle Cese, or Sayrs Law, in the line of division between Berwickshire and East Lothian; it is nearly 1500 feet high. The climate, on account of the peculiar situation, and in many parts lofty site, of the district, is cold and piercing, but by no means unhealthy. The lands are watered by the rivers Whitadder and Dye, the former of which cuts the northern boundary of the parish at Duddy Law: the Dye is a tributary to the Whitadder, and the Whitadder to the Tweed; and both are good trout streams.

Though the farm-houses are generally in indifferent repair, the system of husbandry is tolerably advanced; and the crops usually produced are barley, oats, turnips, potatoes, rye-grass, and clover. Some of the grain and of the potatoes is sent to the markets of Haddington, Dunbar, and Berwick. Near the village of Longformacus, plantations have been made to a considerable extent, especially in the immediate neighbourhood of the mansion-house, the seat of the principal heritor, John Home Home, Esq., where are some very fine elm and ash trees. On the lands of Blackerstone, also, at the Retreat, planting has been extensively carried on. The sheep pastured amount to about 9000 or 10,000, two-thirds of which are of the Cheviot breed; 100 scores are the black-faced, and fifty scores half-Leicesters. The cattle are the common breed of the county, but not

of so fine a description as those in the southern districts: many calves are fed. There is a vein of copper-ore in the place where the old church of Ellim stood; it has at different times been partially worked, but without success. An English company, not many years ago, renewed the attempt upon a larger scale; but it was shortly abandoned, the ore not being sufficiently rich and plentiful to cover the expenses. A vein of superior quality, however, is supposed to exist in the same neighbourhood. The annual value of real property in the parish is returned at £3788.

Longformacus is the only village. There are two main roads running through the parish, one from Haddington to Coldstream, and the other from East Lothian to Dunse; but both are very indifferent. The cross-roads, also, are in a bad state, as the money for their repair, which is levied upon twenty ploughs, the estimated number kept, is found altogether insufficient for the purpose. The Duke of Roxburghe has a shooting or fishing cottage here; as has Lord Somerville, on the Dye water; the Earl of Wemyss, at the Retreat; and Mr. Smith, at Rigfoot. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Dunse and synod of Merse and Teviotdale; patron, Mr. Home Home. The stipend of the minister is about £222 a year, with a manse, which stands three-quarters of a mile from the church, and was built about thirty years ago. The glebe consists of twelve acres of excellent land, and there is a right of pasturage for forty sheep on the farm adjoining the old church of Ellim, this right being in lieu of a glebe for that parish: the minister has, however, commuted the privilege for £11 per annum. The church, a plain, long, narrow structure, was built above a century and a half ago; it has lately been repaired, and is in good order, accommodating 200 persons with seats. The edifice is conveniently situated, although, from the angles and curvatures of the boundaries of the parishes in this portion of the county, which in many parts shoot into and intersect each other, the congregations of this and neighbouring churches are frequently composed of persons belonging to several different parishes. There is a parochial school, in which the usual branches of education are taught; the master has the maximum salary, with about £10 fees, and the legal allowance of house and garden. The poor receive the interest of £100. In the Lammermoor district are several heaps of stones, or cairns, the evidences of ancient conflicts; and on the sheep-farm of Byreclough, belonging to the Duke of Roxburghe, is one, already referred to, 240 feet long, of irregular breadth and height, but where broadest seventy-five feet, and where highest eighteen feet. The stones of this must have been brought from a crag at least half a mile distant.

LONG ISLAND. This name is given to that district of the Hebrides which extends from the island of Lewis, on the north, to Barra, on the south; and which comprehends Lewis, Harris, Benbecula, North and South Uist, Barra, and several smaller isles; being a space about 166 miles in length, and in average breadth eight, and containing 1202 square miles. The reason for so many islands being included under this appellation is, that the sounds between them are so shallow, the whole appear as if they had once been a continuous ridge of land; and several of them are, indeed, separated only by a channel which is dry at low water. The principal

passage from the east to the west side of the Long Island is by the south of Harris, in which there is a remarkable variation of the currents.—See LEWIS, HARRIS, &c.

LONGLEYS, a hamlet, in the parish of CUPAR-ANGUS, county of PERTH, 3 miles (N. E. by E.) from Cupar-Angus; containing 56 inhabitants. It is situated on the road from Cupar-Angus to Meigle, from which latter place it is about a mile and a half distant.

LONGNIDDRY, a village, in the parish of GLADSMUIR, county of HADDINGTON, 4 miles (W. by N.) from Haddington; containing 216 inhabitants. This village, which is irregularly built, is situated within half a mile of the Firth of Forth, and has a station on the line of the North-British railway. It appears to have been once of much greater extent than at present; a considerable portion of the site of ancient buildings is now in a state of cultivation, and in the memory of persons yet living there were several ranges of houses, the foundations of which have been obliterated by the plough. Part of the old mansion of the Douglasses, here, is still occupied by a tenant; and near it are the remains of the ancient chapel, called, from Knox's having preached in it, John Knox's Kirk.—See GLADSMUIR.

LONGO, an island, in the parish of GAIRLOCH, county of ROSS and CROMARTY; containing 35 inhabitants. This is a small island, of very irregular form, and with considerable indentations; lying at the mouth of Loch Gairloch, a short distance from the main land.

LONGRIDGE, or LANGRIGG, a village, in the parish of WHITBURN, county of LINLITHGOW, $1\frac{1}{2}$ mile (S. by E.) from Whitburn; containing 225 inhabitants. It lies on the high road from Wilsontown to Linlithgow. Between this village and that of Fauldhouse is a valuable field of blackband ironstone, called the Crofthead, lately discovered; it has led to great enterprise and industry in the district, the aspect of which has in consequence remarkably improved. In the neighbourhood of the village is a good stone-quarry. One of two libraries in the parish is at Longridge.

LONGSIDE, a parish, in the district of DEER, county of ABERDEEN, 6 miles (W. by N.) from Peterhead; containing 2612 inhabitants. This place was disjoined from Peterhead, and received a separate erection, in the year 1620, when a church was built on an estate called Longside, from which the parish was named. It is of an irregular four-sided figure, and covers between thirty and forty square miles, the length and breadth being each nearly six miles. The parish comprises 16,370 acres, of which 12,550 are cultivated, 370 planted, and the remainder pasture and waste, mostly capable of improvement. Its surface is either level, or rises in very gentle undulations, so that, during the overflowings of the river Ugie, which runs through the parish from west to east, large portions of the land are under water. The river Ugie affords good trout-angling; and after the union of its two branches here, which have flowed separately for ten or twelve miles from the west, it falls into the sea near Peterhead, about four miles from the junction. The soil is in general light and shallow, and is incumbent upon a ferruginous stratum here called *pan*, of hard consistence, and, when mixed at breaking up, detrimental to the superior soil. The peat-moss, of which only five tracts now remain, is disappearing by degrees through the progress of agricultural improvement. The usual

kinds of grain, with the exception of wheat, are raised, as well as the ordinary green crops; the whole amounting in annual value to £56,100, of which the oats return £31,200, and the turnips £10,500. The climate is humid, cold, and variable, and unsuited to the more delicate grain and vegetables; but the farming is good, and is carried on chiefly according to the five-shift course, though the seven-shift is sometimes followed. Bone-dust manure, bottomed with dung and light mould, is plentifully applied to the turnip soils; and among other improvements, extensive draining, subsoil and trench ploughing, and the formation of inclosures of stone dykes, are conspicuous. Great attention is also paid to the rearing of cattle, consisting of the native Buchan breed, with occasional crosses with the Teeswater. Most of the farmers belong to the Buchan Agricultural Association, the premiums of which, for superiority in every branch of husbandry, have excited a laudable spirit of emulation, and proved highly beneficial. The farm-buildings are in good condition, and each of them has generally a threshing-mill attached.

The prevailing rock is a fine grey-coloured granite, of firm texture, and capable of a high polish. Several quarries of it are worked, supplying a material extensively used for the more ornamental, as well as the substantial, parts of buildings. Of this stone, portions of the Duke of York's monument, in London, were constructed, and also portions of Covent-Garden market, and the walls of the new houses of parliament. Fragments of quartz and felspar are abundant. The land being chiefly under tillage, plantations are comparatively rare; the trees principally to be seen are Scotch fir, spruce, and larch, and though inconsiderable in extent, the plantations contribute to improve the scenery. The landowners are numerous; but two only are resident, occupying the mansions of Cairngall and Innerquhomry, which are modern edifices. The annual value of real property in the parish is £5443. It contains the villages of Longside and Mintlaw, two miles and a half distant from each other, and both founded in the early part of the present century; in the former are 384 persons, and in the latter 240. A flourishing manufactory of woollen-cloth was carried on for some time; but it was discontinued in the year 1828. A distillery has been at work about twenty years; six meal-mills are in operation in different places; and the parish is well supplied with the usual handicraft trades. There is a general post-office at Mintlaw, with a sub-office at Longside; and the parish is intersected by the high road from Aberdeen to Fraserburgh, which passes through Mintlaw, and on which the mail travels, and by that from Peterhead to Banff, running from east to west, and crossing the other road at Mintlaw. The farmers dispose of their dairy produce, grain, and cattle chiefly at Peterhead and Aberdeen, for exportation to London; the potatoes are mostly exported to Hull. Coal is obtained from Peterhead, and is now used to a considerable extent, the chief peat-mosses here having been reclaimed by the operations of the plough. Eleven fairs are held for cattle, sheep, and horses, as follows: viz., two at Longside on the Wednesday after the 12th of May, and the Tuesday after the 7th of November; three at Lenabo on the Wednesdays after the 25th of March, the 26th of June, and the 26th of November; and six at Mintlaw on the Tuesdays after the 25th of February, the 14th of April, the 14th of June,

the 25th of August, the 7th of October, and the 14th of December. The two fairs at Longside are also for the hiring of servants.

Ecclesiastically the parish is in the presbytery of Deer, synod of Aberdeen, and in the patronage of the Crown : the minister's stipend is £217, with a manse, and a glebe of several acres, valued at £17 per annum. The old church having been found insufficient for the accommodation of the parishioners, the present edifice, a plain and commodious building, was erected in 1836 ; it contains sittings for 1000 persons, which are apportioned among the heritors, and used by the tenants rent-free. There is also an episcopal chapel containing 551 sittings, erected in 1800 by subscription, at a cost of £429, for a congregation formed at the time of the Revolution, of which the Rev. John Skinner, well known as the author of some theological works and several popular Scottish songs, was minister for sixty-four years. The parochial school affords instruction in Latin and mathematics, in addition to the ordinary branches ; the master has a salary of £31. 6., with a house, and £30 fees. There are also parochial schools at Mintlaw and Rora, endowed in 1829 by the heritors, from whom the master of each receives £10 per annum ; and the fees of each are about £16. The master at Mintlaw has likewise a free house, given by the late Mr. James Mitchell, who left funds for the support of a female school at Mintlaw, and of another at Rora, and for the endowment of others in different parishes.

LONGSTONE, a village, in the parish of COLINTON, county of EDINBURGH, $1\frac{1}{4}$ mile (N. N. W.) from the village of Colinton ; containing 86 inhabitants. This is a small place, situated in the extreme north of the parish, and a short distance south of the high road from Edinburgh to East Calder. The Water of Leith passes close by the village, and very shortly enters the suburban parish of St. Cuthbert.

LONMAY, a parish, in the district of DEER, county of ABERDEEN, 6 miles (S. E. by S.) from Fraserburgh ; containing, with the village of St. Combs, 1919 inhabitants. The name is supposed to have been derived from a word in the Celtic language descriptive of the flat marshy nature of the ground, now drained. The parish is about nine miles and a half long, and varies in breadth from half a mile to three miles and a half, containing an area of 11,045 acres. It is bounded on the north-east by the German Ocean ; on the north-west by the parish of Rathen ; on the west by Strichen ; on the south by the parishes of Deer and Longside ; and on the east by Crimond. The sea-shore is flat and sandy, without bay or headland ; and with the exception of two or three moderate ridges, the interior of the parish consists of two extensive plains, of which the northern contains the estates of Cairness, Craigellie, Lonmay, Blairmormond, and part of Inveralochy and Crimonmogate. The chief portion of this division is well cultivated, and ornamented with flourishing plantations of various kinds of trees : the waters of Strathbeg loch cover several hundred acres in the division. The southern plain, the surface of which is higher and more unequal, comprehends part of Crimonmogate, and the estates of Park and Kinninmonth. Two very extensive peat-mosses are situated in this district, belonging to the properties of Kinninmonth and Crimonmogate, and connected with other large mosses in the parishes of Strichen and Crimond.

A branch of the river Ugie runs between Lonmay and the parishes of Deer and Longside ; and the estuary of the Moray Firth is considered as commencing at the north-eastern boundary of the parish. The lake of Strathbeg has nine-tenths of its extent within Lonmay, and the other tenth in the parish of Crimond ; its average depth is three feet and a half, and its greatest depth about six feet and a half. The waters have sunk considerably during the last thirty years, having been in 1817 four feet higher than at the present time. Upwards of forty years ago, an attempt was made to drain the loch ; but after great expense had been incurred, it was rendered abortive by the open canals cut for the purpose being blocked up by drifting sand. There are a few small islands in the loch ; but its scenery is in general barren and uninteresting. It contains, however, numerous kinds of fish, among which are red and yellow trout, perch, flounders, and very fine eels. In the sea are found red and white cod, ling, haddock, soles, John-dories, abundance of the finest turbot, also shell-fish, sea-trout, shoals of dog-fish, and coal-fish ; the whales called Finners are also occasional visitors, and there are large quantities of herrings during the season.

The SOIL is generally light and sandy, of a dark hue, and resting upon a hard bed of red sand with a large admixture of iron-ore ; in some parts, however, the land is clayey, and in a few places partakes of the nature of loam. The number of acres cultivated or in pasture is 8175 ; in wood 280 ; and in waste, moss, moor, and stony land, 2590 ; making the total of 11,045 : nearly 900 acres of the land now waste are thought capable of cultivation. Grain is raised to a considerable extent, but the soil is best suited to raising grass and turnips. A regular rotation of cropping has long prevailed ; that which is most approved of is the seven-years' shift. Much benefit has also been derived from the extensive use of bone-dust manure, which answers for surface-dressing the pasture and for sown grasses, but chiefly for green crops. Near the coast, sea-weed is mixed with compost, and employed for fallow ground. Large tracts of land have been reclaimed from waste ; good stone inclosures have been raised in the parish, and roads have been constructed for local convenience. But the most prominent feature in the improvements is the introduction of trench-ploughing. The farm-steadings, also, once very indifferent, have in some instances been placed on a much better footing. The cattle were originally the celebrated Buchan breed, with a kind produced by crossing the Highland small-horned bull with the larger native cow. These, however, were displaced by the polled-cattle, which prevailed during the present century till within the last twenty years, and always fetched the first price in the London market. Crosses of the short-horned are now preferred, numbers of which are sent to London. The sheep, which are a mixed breed, carry a tolerably fine flecce, and their mutton is well flavoured, but not equal to that of the black or the white faced Highland sheep, many of which are imported here, and fattened for sale. On the estate of Crimonmogate are some South-Downs and Lincolns, and a number of half-bred English sheep. The small draught-horses formerly in use, six or eight of which were joined to the plough, have yielded to a very superior race, distinguished for bulk and symmetry, and a pair of which are sufficient to turn the soil. The horses for the saddle are also much

improved in their character, great pains having been taken by some of the resident gentry to effect this object. Considerable numbers of pigs are reared, some of which are a cross of the Bedford and Westphalia, and the Orkney and Chinese : pork and eggs are sent largely to London. The annual value of real property in the parish is £5443.

Among the mansion-houses, that on the estate of Cairness holds a prominent place. The porch, supported by four Ionic pillars, and the carved cornices, are of granite obtained from the parish of Longside : the body of the fabric is built of greenstone dug on the estate. It was finished in 1799, at an expense of about £25,000. Another elegant mansion, on the Crimonmogate property, was erected a few years ago at a cost of upwards of £10,000. The only village is St. Combs, situated at the north-eastern extremity of Lonmay, by the sea-side, and principally inhabited by fishermen : the main part of the population are scattered over the parish. The manufacture of kelp, formerly carried on to some extent, is now at a very low ebb, in consequence of the free importation of barilla ; about twenty tons were annually made, and the rent of the kelp-shore averaged £50 per annum. There are two annual fairs, one in spring and the other in autumn, for cattle and sheep and for hiring farm-servants. Thirteen boats are employed in the herring-fishery, and about the same number for ordinary white-fishing. The turnpike-road from Peterhead to Banff, by Fraserburgh, traverses Lonmay for about a mile and a half ; and that from Fraserburgh to Aberdeen, by Mintlaw, runs from north to south for nearly six miles through the parish. A mail-coach passes daily to the south ; and there are two stage-coaches, one from Peterhead to Banff, by Mintlaw, and the other between Peterhead and Fraserburgh.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Deer and synod of Aberdeen ; patron, Gordon of Buthlaw. The stipend of the minister averages £226, with a manse, erected in 1824, and a glebe valued at £18. 15. per annum. The church, which was built in 1787 upon a new site, is pretty conveniently situated, though more than seven miles from the southern boundary of the parish ; it contains 680 sittings, and is in good repair. Originally the church stood by the sea-side, near the village of St. Combs ; in 1607 it was removed to the spot which is now occupied as a burying-ground, where it remained till the present edifice was erected. There is an additional parochial church at Kinninmonth, in the south of the parish, built by voluntary contributions, and through the aid afforded by the Church-extension committee of the General Assembly, in consequence of an application made in March, 1836, to the presbytery of Deer for another place of worship on account of the great distance of many parishioners from the parish church. It accommodates about 400 persons, and a preacher is appointed, who has a cottage near the church ; divine worship is regularly performed, and the services are well attended. There is also an episcopal chapel, built in 1797, the minister of which is paid from the seat-rents ; it contains 342 sittings. Three parochial schools are maintained, in all of which the usual branches of education are taught ; and in the chief school, in addition to these, instruction is given in mathematics, navigation, and Latin. The salaries are £28, £13, and £10 a year, respectively ; each of the

masters has in addition his fees, and a share in the Dick bequest. At Crimonmogate is a Druidical circle : the materials of Lonmay Castle, which was situated near the sea, have been used in building farm-houses. There are several chalybeate springs.

LOSSIEMOUTH, a village and sea-port, in the parish of DRAINIE, county of ELGIN, 3 miles (N. N. E.) from Elgin ; containing 902 inhabitants. This place is situated at the mouth of the river Lossie, which, after a course of about twenty-six miles from its source in the hills of Dallas, empties itself into the Moray Firth, and gives the name to this thriving little village. There has been a large increase in the traffic and the population since the introduction of steam-navigation. The portion adjoining the sea is called Seatown or Fishertown of Lossiemouth, and is peopled principally by fishermen and seafaring persons, the former of whom, in connexion with the fishermen of the adjacent village of Stotfield, consisting together of about seventy men and twenty-five boys, carry on the herring and white fisheries, employing in both forty-five boats. In a late year the exports were, 4243 quarters of grain, 2000 barrels of herrings, 200 barrels of cod-fish, and three cargoes of plantation timber ; and the imports, 4500 tons of English coal, 1000 tons of Scotch coal, 400 tons of bones and bone-dust, 140 tons of bark, and 150 tons of salt, besides various other articles. The number of vessels that entered in the same period was 106, registering 4816 tons ; and the number outward-bound was forty-four, registering 1918 tons. Steam-vessels, plying between London and the Moray Firth, used regularly to call here in summer for the conveyance of passengers, and for general traffic, bringing various articles of merchandise, but chiefly foreign and colonial produce, and taking away live stock, agricultural produce, fresh provisions, salmon, and pickled cod and herrings. They now call, it is presumed, at Stotfield, in consequence of the formation there of the new harbour mentioned below. The English coal imported is carried to Elgin and the neighbouring country, chiefly for family use ; the Scotch coal is for breweries, distilleries, and other public works. The grain exported is sent to different ports in the kingdom ; and the herrings to the London, Liverpool, and Irish markets, and occasionally to Hamburgh and Stettin. The vessels frequenting this port, which is within the jurisdiction of the custom-house of Iverness, are of the smaller class, seldom amounting to above seventy tons' register, on account of the shallowness of the water, which rises only to about nine feet at stream tides. A new and more commodious harbour has, however, been constructed at Stotfield, with outer and inner basins excavated from the solid rock ; and this, at ordinary tides, will admit vessels drawing fifteen feet of water. Considerable business is nevertheless still transacted at Lossiemouth harbour. An excellent turnpike-road, on which there is a daily post, runs from the village southwards to Elgin, and another in a western course, through Duffus and Kinloss, to Forres. A place of worship is supported, in connexion with the United Presbyterian Synod ; and there is a school maintained by the General Assembly.

LOTH, a parish, in the county of SUTHERLAND, 11 miles (N. E. by N.) from Golspie ; containing, with the villages of Helmsdale and Port-Gower, 2526 inhabitants, of whom 1764 are in the rural districts. The name *Loth* seems to be of Danish origin, like the names of most

parishes in the county of Caithness. In 1198, King William the Lion, on his march into Caithness to retaliate upon Harold, Earl of Orkney, the cruel death he had inflicted upon the Bishop of Caithness, passed through this parish, which afterwards, from its situation on the border of the county, participated largely in the frequent hostilities that took place between the inhabitants of the adjacent districts. During the turbulent period that preceded the final establishment of legitimate government, the place also suffered much from the depredations of lawless fugitives, for whose concealment it afforded ample facilities in the solitary recesses of the Ord of Caithness, which here separates the counties of Sutherland and Caithness. In 1513, the Earl of Caithness marched through the parish, with a band of his retainers, to the battle of Flodden-Field; and in 1679, a body of Highland troops passed on their route to Caithness, to support the claims of Campbell of Glenorchy to the earldom. During the rebellions of 1715 and 1745, the inhabitants took up arms in support of the government; and in 1746, the Earl of Cromarty, with a considerable force, advancing to Caithness for the purpose of raising recruits for the rebel army, burnt the mansion-houses of Kintradwell and Crakaig, in this parish.

The PARISH is bounded on the south by the Moray Firth, which is here forty miles in width, and on the north by a ridge of hills. It is about eleven miles in length, and varies from three-quarters of a mile to nearly three miles in breadth. The surface towards the coast is level, but rises by a gradual acclivity towards the hills which form its northern boundary, and of which the highest, Ben-Veallich, has an elevation of 1888 feet above the level of the Firth. The principal rivers are, the Helmsdale, which runs through the eastern portion of the parish into the Moray Firth at the village of Helmsdale; and the Loth, a rapid stream flowing through Glen Loth into the Moray Firth near the western boundary of the parish. Both the rivers are subject to sudden swells; but since the parliamentary roads were made in the Highlands, no danger can arise to passengers in crossing these rivers, as they have bridges erected over them. The Helmsdale abounds with salmon of a superior description; and near its influx into the Firth is a very lucrative herring-fishery. From the western extremity of the parish to Port-Gower, the coast is a level sandy beach, merely interrupted occasionally by low rocks which are covered with the tide; but from that point to the Ord, at the eastern extremity, is one continued chain of rugged limestone rocks. Of the lands in the parish, about 1200 acres are arable; and there are extensive tracts of meadow and pasture of excellent quality, and also of hill-pasture. The soil on the arable lands is luxuriantly fertile, producing abundant crops of wheat, barley, oats, potatoes, and turnips; the system of husbandry is improved. The farms are conveniently divided, and under excellent management, and the smaller holdings are also cultivated with industry and skill; the farm-houses and cottages are substantial and commodious, and much of the waste land has been reclaimed. The horses, cattle, and sheep reared are very superior, and frequently obtain the highest prizes when exhibited at the cattle-shows. Limestone is found in abundance, but the distance of fuel renders the burning of it more expensive than the importation of lime from England. The annual value of real property is £2380.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dornoch, synod of Sutherland and Caithness: the minister's stipend is £162. 8. 7., with a manse, and a glebe of moderate extent; patron, the Duke of Sutherland. Loth church, recently erected, is a very handsome structure, situated nearly in the centre of the parish. At Helmsdale, also, is a church of recent erection, in which divine service is now performed by the incumbent of Kildonan parish. In the same village is a place of worship for members of the Free Church. The parochial school, situated at Port-Gower, is tolerably attended; the master has a salary of £34, with a house, and an allowance of £2. 2. in lieu of garden, and the fees average about £10 per annum. There are some remains of the ancient castle of Helmsdale, once a hunting-seat of the Sutherland family; it is apparently of the fourteenth century, and is memorable for the death of John, the eleventh Earl of Sutherland, and his countess, who were poisoned in 1567. The remains of several Pictish towers have disappeared within the last century; and there were also formerly chapels dedicated respectively to St. Ninian, St. John the Baptist, and others, of which only the sites are left. There are numerous barrows and cairns, in some of which latter have been found battle-axes of stone, and other military weapons.—See HELMSDALE, &c.

LOTHIAN, EAST.—See HADDINGTONSHIRE.

LOTHIAN, MID.—See EDINBURGHSHIRE.

LOTHIAN, WEST.—See LINLITHGOWSHIRE.

LOUDOUN, or LOUDON, a parish, in the district of CUNNINGHAME, county of AYR, 8 miles (E.) from Kilmarnock; containing, with the village of Darvel, and the burgh of barony of Newmilns, about 5550 inhabitants. This place is supposed by some to take its name, the first syllable of which signifies a "fire", and the second a "hill", from a hill in the extremity of the parish, which, on account of its commanding height, is conjectured to have been used as a station for signal-fires. Others, however, derive the name from the Gaelic term *Lod-dan*, signifying "marshy ground", the land in the vicinity of the river Irvine, on the south, having formerly possessed this character. The parish approaches in figure to a right-angled triangle, the greatest length being about eight or nine miles, and the average breadth three. It stretches on the east to the county of Lanark, and comprises 19,169 acres, of which 10,720 are in tillage, 3153 bent and moor pasture, 882 in plantations, and the rest moss. The Irvine, rising in the north-eastern corner, flows in a direction nearly south for about two miles, separating Loudoun from Avondale parish in Lanarkshire; after which, sweeping round the towering hill of Loudoun, it pursues its picturesque course to the west, dividing the parish from that of Galston. The system of agriculture is advanced, and the crops are of excellent quality. Great improvements have been made within the last few years on the Loudoun property, comprising chiefly the erection of very superior farm-houses and the construction of roads. Large tile-works have been in operation some years; and other works of the same kind have lately been erected near the village of Darvel, which are intended to supply tiles for public sale. The coal formation is to be seen in almost every part of the parish; but it is so much disturbed by the trap rock as to be in some places incapable of being worked: the trap, of which the columnar trap composing Loudoun

hill is a portion, forms part of a large trap-dyke running through the whole Ayrshire coalfield in a north-west and south-east direction. There are also several seams of ironstone, some of them of considerable thickness; and these, as well as the coal, are expected shortly to be wrought. Limestone is abundant, and is extensively quarried; a bed at Howlet burn, about six feet thick, is wrought by mining, and is at present let to the Cessnock Iron Company for smelting purposes. The annual value of real property in the parish is £9679.

Loudoun Castle was the seat of the ancient family of Campbell, Earls of Loudoun, a title now merged in that of the Marquess of Hastings, the present proprietor of Loudoun. This fine baronial residence, which was mostly rebuilt after its destruction by fire about the beginning of the sixteenth century, has some old portions; but the larger and more splendid part of the structure was completed in 1811. One of the square towers, with its battlements of unknown antiquity, was destroyed when the castle was besieged by General Monk; but another tower, larger and higher, built in the fifteenth century, still remains in good condition. There is an excellent library containing upwards of 11,000 volumes. The plantations around the castle comprise a great variety of trees, some of them brought from America by John, fourth Earl of Loudoun, who was governor of Virginia in 1756, and who, during his military services in various parts of the world, sent home every valuable kind of tree he met with. He formed an extensive collection of willows, selected from England, Ireland, Holland, Flanders, Germany, Portugal, and America; and a laurel, brought from Portugal, covers with its branches a space 140 feet in circumference. In the grounds of the mansion is also a yew-tree of great antiquity, still fresh and vigorous, and under the shade of which, one of the family charters, it is said, was signed in the time of William the Lion; as also one of the articles of the Union by Hugh, third earl. The parish contains the villages of Newmilns and Darvel, and the hamlets of Auldton and Loudoun-Kirk; the first of which is a burgh of barony, and, as well as Darvel, has a large population, a great proportion of whom are weavers. Another branch of manufacture is wool-spinning, at a mill established in 1804, and belonging to a company of carpet manufacturers in Kilmarnock: about twenty-five hands are at work. The agricultural produce is sent for sale to Kilmarnock, and coal is generally brought from pits three miles distant. In 1847 an act of parliament was passed authorising the Glasgow and Ayrshire railway company to make a branch of nearly three miles and a half to Loudoun-Kirk.

Ecclesiastically the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of the Marquess of Hastings; the minister's stipend is £191, with a manse, and a glebe of sixteen acres, valued at £35 per annum. The church, situated in the village of Newmilns, is a splendid structure erected in 1844, with sittings for 1200 persons, and ornamented with a beautiful steeple 133 feet in height. There is a place of worship at Newmilns belonging to the United Presbyterian Synod, and another at Darvel for Reformed Presbyterians. The parochial school, also at Newmilns, affords instruction in the usual branches; the master has a salary of £34. 4., with a house and garden, £40 fees, and £10, the interest of a bequest of £200. There are schools at Darvel and Auldton, the schoolrooms and dwelling-

houses being provided by the Loudoun family; and at Newmilns are two female schools, one of them supported partly by subscription. The parish has three libraries, a masonic society, and two or three other friendly societies; also three charities, one, amounting to £60 per annum, for decayed burgesses of Newmilns, left by Mr. James Smith, a native of that place; another, a bequest of £16 per annum for four old people, by Mrs. Crawford; and the third, a legacy by Mr. Brown, of Waterhaughs, for the education and clothing of twelve children. The principal remains of antiquity are, the foundations of a Druidical temple, on the top of a hill the highest in the parish except that of Loudoun; the ruins of a castle burnt by the Kennedys, probably in the time of James VI.; and a small ancient castle at Newmilns. In the east of the parish is Wallace's Cairn, marking out the scene of a conflict between Wallace and a party of English whom he surprised on their way to Ayr with provisions; and at a pass, which is traversed by the road, the battle of Loudoun Hill was fought in 1307, between Bruce and a body of English troops under the Earl of Pembroke. The parish is, however, chiefly remarkable for its connexion with the ancient family of Campbell, long resident here, and of whom Lambrinus, father of James de Loudoun, possessed the barony in the reign of David I. The first earl, who was buried in the church of Loudoun, was chancellor of Scotland in 1641, and acted a prominent part in the transactions of that eventful period. His grandson, the third earl, was also of some consideration, enjoying the confidence of William III., and holding the office of an extraordinary lord of session. Flora, Countess of Loudoun, only child of James, fifth earl, in 1804 married the Earl of Moira, who was raised to the dignity of Marquess of Hastings in 1816, in acknowledgment of his highly distinguished services. This lady, who was the mother of the lamented Lady Flora Hastings, died in 1840, and was succeeded by her only son, George, sixth Earl of Loudoun and second Marquess of Hastings, whose decease occurred in the year 1844, when his only son, born in 1832, succeeded to the titles and estates. Lady Flora Hastings, whose sufferings and wrongs excited so deep a sympathy throughout the whole nation, was buried in the family crypt at the hamlet of Loudoun-Kirk, near Loudoun.—See DARVEL, and NEWMILNS.

LOUISBURGH, a village, in the parish of WICK, county of CAITHNESS; adjoining the burgh of Wick, and containing 360 inhabitants. This village, which is situated on the north bank of the river Wick, was built on land leased for that purpose by the proprietor, and received its appellation in compliment to Lady Dunbar, whose Christian name was Louisa. It consists chiefly of cottages inhabited by persons employed in the fisheries.

LOWTHERTOWN, a village, in the parish of DORNNOCK, county of DUMFRIES; containing 195 inhabitants. This is an improving village, which has sprung up within the last few years, and has its name from the proprietor, named Lowther, by whom the land on which it is built is feued. It is situated in the eastern part of the parish, and consists of a large group of cottages inhabited chiefly by persons engaged in agricultural pursuits.

LUCE, NEW, a village and parish, in the county of WIGTOWN; containing 652 inhabitants, of whom 278 are in the village, 9 miles (E. N. E.) from Stranraer. This place formed part of the ancient parish of Glenluce, but

was separated from it in the year 1646, since which time the original parish has in contradistinction been generally designated Old Luce. New Luce, the northern portion, is bounded on the east by the river Tarf, which divides it from the parish of Kirkowan, and on the west by the river Luce, which separates it from the parish of Inch. It is about ten miles in length, and varies from five to six miles in breadth; but from the great irregularity of the ground, the number of acres cannot be ascertained with any degree of accuracy. The surface, for some breadth along the banks of the Luce, is tolerably level, but rises abruptly towards the east into highlands, interspersed with rocks, or covered with heath and moss. The principal rivers are the Luce, the Tarf, and the Crosswater. Of these, the Luce has its source in the hills on the confines of Ayrshire, and running southward along the borders of the parish, and through Glen Luce, falls into the bay of Luce. The Tarf rises in the hills at the northern extremity of the parish, and after flowing in a winding manner along the boundary of the parish, bends to the east, and joins the river Bladenoch. The Crosswater has its source on the confines of Ayrshire, and passing southward with a very devious current through the northern portion of the parish, changes its course to the west, and flows into the Luce near the church. Salmon, par, and fresh-water trout are found in the Luce and the Crosswater in tolerable plenty; the fishery on the former river produces a considerable rental to the proprietor, but that on the latter is not appropriated.

Along the banks of the rivers the soil is pretty fertile, and the arable lands are chiefly to be found there. These however bear a very small proportion to the other lands in the parish, scarcely producing grain in sufficient quantity for the supply of the inhabitants; and the farmers place their chief dependence on the rearing of black-cattle and sheep, for which the hills afford pasture. The system of husbandry has, nevertheless, been much improved within the last few years; many of the farms have been inclosed; and buildings of more substantial character, and better adapted for the comfort of the tenants, have been erected. The black-cattle, though generally small, are of a good description, and, when removed to richer pastures, soon fatten; considerable numbers are sent for sale to the Glenluce and Stranraer cattle-markets. The sheep are chiefly purchased by dealers for Glasgow and Liverpool. There are but a few small patches of land under plantation; though the soil is well adapted for the purpose, and such trees as have been planted are all in a thriving condition. The rocks in the parish are of the transition class: lead-ore was many years since wrought; and it is in contemplation to renew the search under the auspices of the Earl of Stair, the principal landed proprietor. The annual value of real property in New Luce is £3050. The village is pleasantly situated near the influx of the Crosswater into the Luce; it is neatly built, and contains three good inns, and several shops well stored with various kinds of wares for the supply of the neighbourhood. The inhabitants of the village are chiefly employed in handicraft trades. Facility of communication is afforded by the road leading from Glenluce to Curloch in the parish of Ballantrae, by other good roads which intersect the parish, and by bridges over the streams. Ecclesiastically this place is within the limits of the presbytery of Stranraer and synod of Galloway. The minister's stipend, including an allow-

ance for communion elements, is £158. 6. 8., of which £88 are paid from the exchequer; with a manse and glebe valued together at £40 per annum: patron, the Crown. New Luce church, which is situated in the village, is a neat plain structure erected in 1816, and containing 400 sittings, without galleries. The parochial school is attended by about fifty children: the master has a salary of £25. 13. 4., with a small dwelling-house, and the fees average £5 per annum; he also receives the interest of a bequest of £50 for the gratuitous instruction of poor children. A late Earl of Stair bequeathed £300, the interest of which is annually divided among the poor. There are several cairns in the parish, in the removal of some of which sepulchral urns were found; and on a small eminence near its north-eastern extremity are two upright stones, upon one of which is the figure of a cross, rudely sculptured.

LUCE, OLD, or GLENLUCE, a village and parish, in the county of WIGTOWN; containing 2448 inhabitants, of whom 890 are in the village, 10 miles (E. by S.) from Stranraer. This parish anciently included New Luce, the two places together forming the parish of Leuce or Glenluce, which was divided in 1646 into two parts, one called New, and the other Old. The abbey of Glenluce, situated in the deep valley of the river Luce, was founded in 1190 by Roland Macdonald, Lord of Galloway, and Constable of Scotland, and was the abode of Cistercian monks who came from Melrose. It was converted in 1602, by James VI., into a temporal barony, in favour of Lawrence Gordon, abbot of the place; and on the death of Lawrence, it was bestowed by royal charter on his elder brother John, Dean of Salisbury, who, dying in 1619, was succeeded in the barony by his son-in-law Sir Robert Gordon, the historian. Subsequently it was annexed to the see of Galloway; and at the close of the seventeenth century, being again made a barony, it conferred the title of Lord Glenluce upon Sir James Dalrymple of Carrick, whose son became Lord Glenluce and Earl of Stair. Thomas Hay had been appointed commendator of the abbey, in 1560, by a bull from the Pope; and from him Sir James Dalrymple Hay of Park, the present proprietor of the abbey, is descended.

The PARISH is ten miles long and eight miles broad, and contains 40,350 acres. It is bounded on the north by New Luce; on the south by the bay of Luce; on the east by Mochrum and Kirkowan; and on the west by Inch and Stonykirk. Except in the immediate neighbourhood of the bay, the surface is irregular and hilly. Besides a considerable number of perennial springs, the water of which, issuing from rock, is unusually clear and cold, there are several small lakes, and the two rivers Luce and Pooltantou, the former of which is here about thirty feet wide. It runs for twenty-one miles from its source in Ayrshire, and empties itself into the bay almost at the same place as the stream of Pooltantou. In each of these rivers salmon and sea-trout are taken. The soil varies to a considerable extent, but that which most prevails is of a gravelly or sandy nature, and is light and dry; the best land is found in the southern parts, and in the vicinity of the river Luce. In some places the soil contains large mixtures of moss, clay, or loam, and runs to the depth of two or three feet. The annual crops are as follows: 400 acres of wheat, 1350 of oats, 454 rye-grass, 259 meadow-hay, 60 of peas and beans, 467 of potatoes, and 160 of turnips. About 10,000

acres are uncultivated, and between 300 and 400 are occupied by wood. Within the last thirty or forty years the agricultural appearance of the parish has undergone a total change. Large quantities of waste land have been brought into cultivation; and the increase of dairies, supplying plenty of manure, together with the prevalence of the green-cropping system, has produced the most beneficial effect. In those parts which are suited for pasture, especially among the moors, cattle of the Galloway breed are preferred; the sheep most esteemed are of the black-faced breed, with horns, and producing long coarse wool. In the south are some superior dairy-farms, where more than 6000 stone of cheese are made every year. The farm-buildings are in general commodious, and in good condition. The subsoil of the parish is gravelly or sandy, except in the heavier soils, and extends to a very considerable depth. The rocks are the ordinary greywacke, intermixed with quartz, and granite is found in almost every direction. A greywacke quarry in the vicinity of the village has been wrought for some years, to the great advantage of the parish. The annual value of real property in Old Luce is £10,232.

In the parish are three castles, viz., the castle of Park, the former residence of the Hays; Castle Synniness; and Carsecreuch, once the residence of the Earls of Stair: but of these seats one only is entire. Genoch and Balkail are modern mansions. The village is situated upon the road leading from Newton-Stewart to Stranraer. There are two corn-mills, two carding-mills, a dye-mill, and a flax-mill. Cattle-markets are held near the village, from April to December, on the first Friday in each month; and a fair in the month of May: there is a regular post in the village, and the mail from Dumfries to Portpatrick runs through the place every day. Within two miles of it is a harbour in the bay, suited to receive small craft bringing coal and lime; but no larger vessels can approach this part of the shore. Ecclesiastically the parish is within the bounds of the presbytery of Stranraer, synod of Galloway, and the patronage is vested in the Crown: the stipend of the minister is £158, of which nearly half is received from the exchequer; with a manse, and a glebe valued at £30 per annum. Old Luce church, erected in 1814, is a commodious edifice, and situated close to the village. The members of the United Presbyterian Church have a place of worship. The master of the parochial school has a salary of £25. 13., with a house and garden; and his fees average between £30 and £40. There are several other schools, of which two are connected with dissenters, and one is supported by the Hay family. The chief remains of antiquity are the abbey ruins; the chapter-house is still in good condition, and its arches are distinguished by antique figures of white freestone. The celebrated characters connected with the parish have been, John Gordon, Dean of Salisbury, eminent for numerous literary works; Sir Robert Gordon, the historian; and the Rev. Robert Mc Ward, a theological and controversial writer in the reigns of Charles I. and Charles II.

LUCKENSFORD, a hamlet, in the parish of INCHINNAN, Upper ward of the county of RENFREW, $2\frac{1}{2}$ miles (W. N. W.) from Renfrew; containing 58 inhabitants. It lies on the high road from Renfrew to Port-Glasgow.

LUCKLAWHILL-FEUS, a hamlet, in the parish of LOGIE, district of CUPAR, county of FIFE, 1 mile (E. by N.) from Logie; containing 79 inhabitants. This is a small place situated in the neighbourhood of the Luck-law hill, which rises to a considerable height, and from which is an extensive prospect of the counties of Fife, Perth, Angus, and Mearns.

LUGTON, a village, in the parish of DALKEITH, county of EDINBURGH, $\frac{1}{2}$ a mile (N. W.) from Dalkeith; containing 230 inhabitants. The barony of Lugton was taken, in 1633, from the old parish of Melville, and annexed to Dalkeith parish. The village is situated on the high road from Dalkeith to Edinburgh, and on the banks of the North Esk, over which river is a bridge, built in 1765, and widened in 1816, when, also, the approaches to it were improved. The inhabitants of the place are chiefly colliers, and a school has been established for their children.

LUMPHANAN, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, $2\frac{3}{4}$ miles (N. by W.) from Kincardine O'Neil; containing 964 inhabitants. This place is celebrated as the scene of the death of the famous Macbeth, who, after reigning for seventeen years, was killed here by Macduff on the 5th of December, 1056. Memorials of the event still remain in "Macbeth's Stone", standing on the brae of Strettum, upon the farm of Carnbady, where the usurper was wounded; and in the cairn forming the place of his sepulture on the Perk hill, about a mile from the church. Lumphanan once formed a part of the barony of O'Neil, which belonged in the thirteenth century to the Durwards, of whom Allan de Lundin, named Doorward or Durward from his office in the king's court, erected an hospital at Kincardine O'Neil dedicated to God and the Blessed Virgin, and conferred upon it the patronage of Lumphanan church, with other rights. The hospital was in 1330 incorporated with the cathedral establishment of Aberdeen. In 1296, Edward I., having received the homage of many persons of distinction after the battle of Dunbar, advanced from Aberdeen on the 21st of July to this place, with an illustrious retinue, and received the written submission of Sir John de Malevill, a copy of which is preserved in Her Majesty's exchequer. The wooden castle named the Peel-Bog is said to have been the place where the business was transacted.

THE PARISH is situated between the rivers Dee and Don, and is six miles in length from north to south, and four miles from east to west, comprising 7620 acres, of which 2770 are arable, 550 wood, and the remainder uncultivated. Its surface is varied with high and low grounds, in the latter of which the soil is loamy, deep, and fertile, but on the sides of the hills thin and sandy. There are large tracts of moor and moss, and some marshy lands: the shallow loch of Auchlossan covers 250 acres. The produce of the parish comprises several kinds of grain and various green crops, cultivated in a superior manner, in some places under the seven, and in others under the six, shift course. The cattle are of the pure Aberdeenshire breed, unchanged by the admixtures and crosses adopted in so many other parts. Within the last thirty or forty years the improvements in agriculture have been numerous, consisting chiefly in the recovery of waste land, the draining of marshes, the inclosure of farms by fences, and the erection of substantial and commodious farm-steadings. The climate

is early, and the crops of oats, bear, and barley are in general heavy. The average rent of arable land is about £1 per acre, and the annual value of real property in the parish amounts to £2741. The rocks consist principally of granite. The woods are chiefly larch and Scotch fir. There are five seats of proprietors, all of them modern buildings, namely, Auchinhove, Findrack, Glenmillan, Pitmurehie, and Camphill. The turnpike-road from Aberdeen to Tarland runs through the parish from east to west; and the military road formed about the year 1746, and the road formed from Alford to Kincardine O'Neil by the parliamentary commissioners for Highland roads and bridges, traverse it from north to south. The produce is usually sent for sale to Aberdeen; but corn and cattle markets are held at Camphill, in the parish, on the second Monday of each of the winter and spring months.

Lumphanan is ecclesiastically in the presbytery of Kincardine O'Neil and synod of Aberdeen, and in the patronage of Sir John Forbes, of Craigievar, Bart.: the minister's stipend is £154, with a manse, and a glebe of seven acres and a half, valued at £10 per annum. The church was erected in 1762, and contains 383 sittings. The parochial school, in addition to the ordinary branches, affords instruction in Greek, Latin, and mathematics; the master has a salary of £27, with a house, and £12. 12. fees, and participates in the benefit of the Dick bequest. There is also a school at Camphill, the master of which receives the interest of £150, left by James Hunter, Esq., of Darrahill. A parochial library at Tillyching, established in 1814, contains upwards of 400 volumes. Among the remains of antiquity is the Peel-Bog, a circular earthen mound, situated in a marshy hollow near the church, and measuring forty-six yards in diameter, rising about twelve feet above the level of the ground, and surrounded by a moat. It is supposed to have been formed in the thirteenth century; and the wooden castle on its summit was a residence of the Durwards, who possessed a large extent of territory in this county. The wooden fort was succeeded by one of stone, called Haa-ton House, the residence of the proprietor of the neighbouring estates; but this, in the march of agricultural improvement, was razed to the ground about the year 1780. Remains of a strong building called the Houff are still visible; it was once a stronghold of considerable antiquity, but afterwards converted into a burial-place for the family of Duguid, of Auchinhove.

LUNAN, a parish, in the county of FORFAR, $7\frac{1}{2}$ miles (N. by E.) from Arbroath; containing 272 inhabitants. The name of this place is derived from two Gaelic words signifying "the river of the lakes", supposed to have been applied from the circumstance of the river Lunan rising in a lake near Forfar, and running through two other lakes in its course to the bay of Lunan, in the German Ocean, here. In ancient times the parish was called Lōnan, Lōunan, and Inverlunan. The names of several places in the district render it probable that King William the Lion had frequent intercourse with Lunan. He is said to have built the structure called Redcastle, situated in an adjoining parish, near the influx of the Lunan into the sea, and which he is thought to have used as a hunting-seat; while in the parish of Lunan are places styled Hawkshill, where he may have kept his hawks; Courthill, where he may

have kept his court; Cothill, where his cattle were; and the Castle Knap, which was his prison. The roof and part of the walls of Redcastle were taken down in 1749; a statue of King William was then removed from its pedestal, and owing to the inattention or unskillfulness of the workmen it fell to the ground, and was broken to pieces. Some lands in the parish of Lunan were formerly called the Kirklands of Inverlunan, and were appended to the abbey of Arbroath. They were conveyed in 1544 to Lord John Innermeath and Elizabeth Beaton, his wife, by the commendator and chapter of Arbroath, upon the payment of an annual feu-duty; and in 1587 they passed to the crown by the annexation act. The feu-duties were subsequently, with other estates belonging to the abbey, erected into a temporal barony in favour of James, Marquess of Hamilton, from whom they passed to the Earls of Panmure. Being forfeited in 1715, they were bought by the York Buildings' Company; not long afterwards repurchased by the Earl of Panmure; and sold at length, in 1767, to the ancestor of the present owner. It also appears, from the chartulary of Arbroath, that the whole lands in the parish were abbey lands, the rental of which, or, perhaps, the feu-duties payable to the abbey, amounted in the fifteenth century to fourteen bolls of wheat, 102 bolls of bear, and 134 of meal.

The PARISH, which is of oblong form, is one of the smallest in the county, being only two miles in length, and averaging but one mile in breadth. It contains 1950 acres, and is bounded on the north by Marytown and Craig parishes, on the south by the river Lunan, on the east by the ocean, and on the west by the parish of Kinnell. At the extreme northern boundary it reaches an elevation of about 400 feet above the level of the sea, to which height the surface rises from the shore, at first abruptly, but afterwards more equably. The aspect of the parish from the south is interesting, and somewhat imposing; but upon a nearer approach, the want of trees, and of verdant fences on the cultivated lands, produces considerable disappointment. There is a mile and a half of coast, formed by Lunan bay, which measures altogether about five miles in its margin, and is considered one of the most beautiful in Scotland. At each extremity of the bay, rugged and precipitous cliffs rise to a perpendicular height of between 100 and 150 feet; and after a storm or a high spring-tide, numbers of fine shells, and sometimes pieces of pebble, onyx, and jasper, are found on its yellow sands. In a northern direction, near the boundary of the parish, is Buckie Den, commencing from the shore with a wide opening, but narrowing for about half a mile into the land; it is a romantic spot, watered by a rivulet, and almost covered with wild shrubs, interspersed with cowslip and polyanthus.

Near the coast the soil is sandy, and upon the high grounds shallow and moist, but in other parts rich and fertile: the number of acres under cultivation is 1345; about 400 are waste, ninety acres common, and fifteen planted with Scotch fir. The yearly value of the grain raised is estimated at £4160, of the potatoes and turnips at £824, and of the hay and pasture at £910. The system of husbandry is advanced, and the crops produced are excellent; the improvements have been numerous; the crops have been doubled since the adoption of the modern method of agriculture, and the farm

buildings and offices, though still needing improvement, have been much bettered. The cattle are the Angus, the black-polled, and a cross of the Angus with the Teeswater, which last breed is found very profitable. The annual value of real property in the parish now amounts to £1964. The means of communication are considerable; Lunan is intersected by the coast-road between Edinburgh and Aberdeen, which is kept in good repair, and there are other convenient roads in tolerable repair. The bay is deep and well bottomed, and forms a safe shelter for vessels, except with east winds, to which it is entirely exposed. A salmon-fishery at the mouth of the river is estimated to produce £420 per annum. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Arbroath, synod of Angus and Mearns; and the patronage is vested in the Crown: the stipend is £158, of which a third is received from the exchequer. Lunan church, which was very ancient, was taken down, and a new church erected upon its site in the year 1844; it is situated in the south-eastern portion of the parish. The manse, built in the year 1783, and enlarged in 1827, stands on high ground about a mile from the church, to the north-east; the glebe consists of eight acres, valued at £15 per annum. There is a parochial school, where the classics, mathematics, and ordinary branches of education are taught; the master's salary is £31, with about £25 fees, and a bequest of fifty merks for teaching six poor children. In the south-western part of the parish is the mound of Arbikie, with a ridge of land seven yards in breadth and about 120 yards in length, and a parallel range of tumuli extending 800 yards in length; the ridge and mound are supposed to have formed sepulchres of the conquered, and the tumuli, sepulchres of the dead of the conquerors, in some great battle fought in the neighbourhood. The venerable Walter Mill, the last of Scotland's martyrs in the cause of the Reformation, for upwards of forty years discharged the pastoral duties of the parish.

LUNANHEAD, a village, in the parish and county of FORFAR, $1\frac{1}{2}$ mile (E. N. E.) from Forfar; containing 191 inhabitants. It is situated in the northern part of the parish, and near the chief source of the river Lunan, whence the name of the place. The loch of Restenneth, in the neighbourhood of the village, was drained about the commencement of the present century; but the powerful springs conducted by the drain through the moss, still form the principal head of the Lunan. This stream flows with a clear current eastward for about twelve or fourteen miles, and falls into the sea at Redcastle, giving name to a fine bay.

LUNASTING, county SHETLAND.—See NESTING.

LUNDIE and FOWLIS, two districts, constituting a parish, the former in the county of FORFAR, and the latter in the county of PERTH; containing 734 inhabitants, of whom 286 are in Fowlis or Foulis, and 448 in Lundie, 6 miles (N. W.) from Dundee. Of these two ancient parishes, united by a decree of the High Commissioners in 1618, Lundie derives its name, in the Gaelic *Linn-De*, signifying "the pool of God," from a very extensive lake which formed its chief feature: the other district, which is often distinguished by the adjunct Easter from the parish of Fowlis Wester, in the same county, is said to have derived its name from the family of Fowlis, who came over from France and settled in

this country. Lundie is bounded on the north by the Sidlaw hills; it is about three miles in length and two in breadth, and comprises 4000 acres, of which 2500 are arable, 140 water, and the remainder meadow and hill pasture. Fowlis is bounded on the north by Lundie, and is about three miles in extreme length, and rather more than one mile in average breadth, comprising an area of 2400 acres, of which nearly 1500 are arable, 160 woodland and plantations, 260 meadow and pasture, and the remainder moor and waste. The surface of Lundie is gently undulated in the central parts, and bounded on the west, north, and east by hills of considerable elevation, of which the Sidlaws rise to the height of 800 feet above the level of the sea. At the base of these hills are four lakes, from which, though much diminished in their extent by draining, the river Dighty issues in two streams, flowing through the valley to which it gives name. Of these lakes, that of Lundie, formerly covering 100 acres, is now reduced to little more than eight; the Long loch is about half a mile in length and one-quarter of a mile broad, and the Pitlyal and Balshandie lakes are of small size. There was formerly a lake of some extent in Fowlis; but it was drained long since for the sake of the marl, and little more of it remains than a reedy marsh frequented by various kinds of aquatic fowl. The other lakes abound with perch, pike, and eels. The higher grounds command extensive and interesting views of the surrounding country; and from the summit of Blacklaw, the only hill of any eminence in Fowlis, is obtained a richly-diversified and beautiful prospect. The glen of this district, a thickly-wooded and deep ravine extending southward from the church, contains much romantic scenery.

The SOIL is generally a deep black loam, well adapted for all sorts of grain; but on the higher grounds is thin and sharp. In the lower parts are considerable tracts of marshy land, the greater portion of which has, however, been reclaimed by draining, and is now under profitable cultivation. The chief crops are oats and barley, with a moderate quantity of wheat, and the usual green crops; the system of agriculture is greatly improved. The lands are partly inclosed with fences of thorn, but in general with stone walls; the farm-buildings and offices are substantial and well arranged, and all the more recent improvements in the construction of implements have been adopted. The pastures are rich, and much attention is paid to the management of the dairy-farms, and to the breed of live stock; the cattle are of the Angus breed, occasionally crossed with the Teeswater, and the sheep of the Cheviot and Leicestershire breed, with a few of the black-faced kind: the produce of the dairies finds a ready sale in the market of Dundee. In the lower parts of the parish the substratum is chiefly common grey freestone; the hills are mostly of trap. The annual value of real property in Lundie is £3261, and in Fowlis £3270. There is no regular village, the population being exclusively agricultural, with the exception of a small number who are employed in the several trades requisite for the supply of the parish. Facility of communication with the neighbouring towns is afforded by the Dundee and Cupar-Angus turnpike-road, which intersects the parish; and by the Carse of Gowrie road, from which Fowlis is not more than a mile distant. Fairs are held at Lundie in June and August, for the sale of cattle.

Ecclesiastically the parish is within the bounds of the presbytery of Dundee, synod of Angus and Mearns: the minister's stipend is £201, with a manse, and a glebe valued at £9 per annum; patron, the Earl of Camperdown. Lundie church is a plain neat structure in good repair, and contains 330 sittings. The church of Fowlis is a very ancient structure, having been erected about the year 1142, in fulfilment of a vow, as is traditionally said, for the safe return of her husband from the crusades, by a lady of the Mortimer family; it is a remarkably fine specimen of the richest style of Norman architecture, in the most perfect state of preservation, and abounding in interesting details: there are about 300 sittings. A parochial school is supported in each district; the masters have each a salary of £30, with a house and garden, and fees averaging about £25 per annum. A subscription library, of which the schoolmaster has the superintendence, is established at Fowlis, and contains about 600 volumes. Admiral Viscount Duncan, who signalised himself by his intrepidity during the mutiny of the *Nore*, and by his brilliant victory over the Dutch fleet off Camperdown, was a native of Dundee, and one of the chief proprietors of this parish; he died in 1804, and was interred in the churchyard of Lundie. In a handsome mausoleum adjoining Lundie church are the remains of Sir William Duncan, Bart., M. D., and his lady, daughter of Sackville, Earl of Thanet. The Earl of Camperdown, son of the gallant admiral, and proprietor of Lundie, was promoted from being Viscount Duncan of Camperdown to be Earl of Camperdown, of Lundie and of Gleneagles, at the coronation of his late Majesty, William IV.: he also bears the inferior title of Baron Duncan of Lundie, conferred on his father with the viscounty. In the church of Fowlis are the remains of Lord Gray, of whose ancestors and family it has been the burial-place for many generations.

LUNDINMILL, a village, in the parish of LARGO, district of ST. ANDREW'S, county of FIFE; containing 499 inhabitants. This place takes its name from an ancient family who were its proprietors from the reign of David I. till it passed by marriage to Robert, son of William the Lion, King of Scotland. A tower of their castle is still preserved in the modern mansion of Capt. Erskine Wemyss, the present proprietor. The village, which adjoins that of Largo, lies on the high road from Kilconquhar to Leven; and south and east of it are the "Standing Stones of Lundin", three huge coarse stones of a triangular form, measuring six yards high above, and probably as much below the ground. They are supposed to be Druidical remains, or of Roman origin, or to indicate the sepulchres of Danish chiefs.

LUNGA, an island, in the parish of JURA and COLONSAY, district of ISLAY, county of ARGYLL. This island, which is separated from Scarba, on the north, by the small firth of Bealach-a-Chumhain-Glais, is about three square miles in extent, of rugged surface, and abounding in slate.

LUSS, a village and parish, in the county of DUM-BARTON; containing 1052 inhabitants, of whom 309 are in the village, 9 miles (N. N. E.) from Helensburgh. The name of this parish is derived from a Gaelic word signifying a "plant" or "herb," and probably applied from the circumstance of the river of Luss, or rather the valley through which it flows, being once overspread with shrubs. The most remote historical facts connected with the place

relate to St. Mackessog, a native of Lennox, who was a bishop and confessor, and suffered martyrdom here in the year 520: he was buried in the church, which was dedicated to him; and from him, also, a cairn in the southern part of Luss was afterwards called *Carn-ma-Cheasog*. In the thirteenth century, when Haco of Norway made a descent upon Scotland, he conducted part of his fleet up Loch Long to Arrochar. From this spot the boats were dragged across an isthmus; and being floated on Loch Lomond at Tarbet, they sailed to Luss, and carried devastation and slaughter through the parish and its neighbouring islands. The estate of Luss fell, about the fourteenth century, into the possession of the family who have ever since retained it. In the beginning of the twelfth century, Alwyn, second Earl of Lennox, had made the lands over, by charter, to Malduin, Dean of Lennox; and his descendants, who were styled *de Luss*, had held them till the fourteenth century, when they came into the hands of Colquhoun, of Colquhoun, through his marriage with the sole heiress. The descendants of this union kept the property till about the beginning of the last century, when it came, by the marriage of the heiress, to Grant of Grant, ancestor of the present proprietor, Sir James Colquhoun, Bart. Robert, the younger brother of Sir Humphrey Colquhoun, in 1395 obtained the lands of Camstraddan and Achingalan by charter, and thus was ancestor of the family of Camstraddan; but the father of the present proprietor purchased the estate of Camstraddan, and by re-annexing it to the estate of Luss, became owner of the whole parish.

The PARISH is about eight miles and a half long, and varies in breadth from two and a half to five miles. It is bounded on the north by the parish of Arrochar; on the south and south-west by the parishes of Bonhill and Row; on the east by Loch Lomond; and on the west by Row, and, for a very short distance, Loch Long. The parish was formerly of larger extent, comprehending in its boundaries Arrochar, the lands of Auchindennan, Cameron, Stuckroger, Tullichewen, and the lands of Buchanan. The last-named district was separated in 1621, and Arrochar in 1658; the others were joined to the parish of Bonhill about the year 1650. The lands, however, of Caldanach, Conglens, and Prestelloch, once belonging to Inch-Cailloch parish, are now annexed to Luss. With few exceptions, the surface throughout is hilly and mountainous. The least elevated land lies along the Loch Lomond from the southern extremity of Luss to Ross-Dhu; some of this is perfectly level, and the rest is a continuous tract of slopes and acclivities gradually rising till they merge in the ascent of the abrupt and lofty mountains. Among the chief mountains are Ben-Cornachantian, Aich, Dhu, and Corafuar, which rise nearly 3000 feet above the level of the sea, and are broken in every direction by fissures and glens of the wildest and most romantic kind. Of the numerous streams, the Froon runs into Loch Lomond nearly opposite the southern extremity of Inch-Murin, the largest of its islands: this river takes its name from, or gives it to, Glen-Froon, through which it runs, and which was the scene of a sanguinary battle fought in the year 1603 between the clans of Colquhoun and Mac Gregor. The rivers Luss and Finlass rise at a small distance from Glen-Finlass, which is parallel with Glen-Froon, and separated from it by a range of mountains: these two streams, diverging from

their source, fall into the loch about three miles from each other. On the extreme northern boundary of the parish is Glen-Duglass, at the opening of which to the lake is the ferry of Ruardinnan. All these glens run in an eastern line; and their several rivulets flow into the same great reservoir, Loch Lomond, which is twenty-four miles long. The eastern boundary of the parish embraces about eight miles of its shore. Its extreme breadth is in the part near Ross-Dhu, which is almost eight miles wide; and the islands contained in it that belong to Luss are, Inch-Tavanach, Inch-Conagan, Inch-Lonaig, Inch-Moan, Inch-Galbraith, and Inch-Friechlan. Some of these islands are naked rocks; others are covered with wood, or supply peat to the poor; and one, converted into a park for about 150 deer belonging to the proprietor of the parish, is celebrated for its vast number of ancient yew-trees. This loch, so famous for its unrivalled scenery, exhibits the finest views from the top of Inch-Tavanach, Inch-Murin, and the northern point of Benbui. Loch Long, already referred to, is a large estuary of the sea, extending from the Firth of Clyde northward between the counties of Dumbarton and Argyll.

The SOIL of the parish is light and gravelly, mixed in some places with rich loam; a great portion of the land is waste, and many hundreds of acres are covered with wood. The average rent of good arable land is £2 per acre. Agriculture has not made very rapid advances, and the farm-buildings are still in rather an inferior condition; but much encouragement has been lately given by the formation of a society in the parish, which distributes prizes annually for improvements in husbandry and the breeding of cattle. The sheep are the black-faced and the Cheviots; Highland cattle are pastured on the hilly grounds, and the cows are in some parts the Ayrshire, and in others a cross-breed between these and the Highland. With regard to the geological features of the parish, the rocks in the south-east are the conglomerate or red sandstone; the mountains comprise clay-slate with all its varieties, and quartz is often found in the vicinity of the clay-slate, as well as crystals of cubical iron pyrites. There is a free-stone-quarry, the produce of which is used in the parish; and at Luss and Camstraddan are extensive slate-quarries, from which superior roofing-slates are obtained, and sent to the neighbouring parishes, and, by the river Leven, to Dumbarton, Paisley, Glasgow, Port-Glasgow, and Greenock. About fifty men are employed in the works, which yield two varieties, viz., the light and the dark blue, the latter bringing the highest price in the market. The annual value of real property in the parish is £4215. Ross-Dhu House, the seat of Sir James Colquhoun, built about seventy or eighty years ago, stands on the promontory of the same name. It is surrounded by several hundreds of acres of the best land in the parish, beautifully laid out in pasture and plantations, the scenery of which derives variety from the ruins of part of the old family mansion, and a roofless chapel still used as a cemetery for the family.

The village of Luss, romantically situated about thirteen miles from Dumbarton, on the margin of the lake, is a central spot from which much of the beautiful scenery in this part of the county can be visited; it is crowded with pleasure parties during summer, and there is an excellent inn. A good turnpike-road leads to

Helensburgh, and the post-road from Dumbarton along Loch Lomond to the Highlands traverses the whole length of the parish. Several branch roads supply further facilities of communication; and a post-office is established in the village, with a daily delivery from Dumbarton and Inverary. There are three bridges across the Froom, on three respective lines of road; also a bridge over each of the rivers Finlass, Luss, and Duglass. Water communication is afforded by Loch Lomond, by which access may be had to every part in the vicinity of its shores. A fair is held at the village on the third Tuesday in August, for the sale of sheep and lambs.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dumbarton, synod of Glasgow and Ayr, and the patronage is vested in Sir James Colquhoun; the stipend of the minister is £234, and he has a manse, and a glebe of nine arable acres, with two or three occupied by wood. Luss church, built in 1771, is a plain building in good repair, containing 500 sittings. The members of the Free Church have a place of worship. There is a parochial school in the village, the master of which receives a salary of £34. 4.; he has a house, and his fees average £12. Another school is situated at Moorland, four miles south of the village, the master of which has £15, with fees, and a house lately built by the proprietor of the parish. A girls' school-mistress receives a similar amount for teaching in another part of the parish. There are two libraries, one of which has been long in existence, and contains about 100 old volumes, mostly in Greek and Latin; the other, a circulating library, containing eighty volumes, chiefly of practical divinity, was instituted a few years ago by the incumbent. The chief relic of antiquity is the cairn of St. Mackessog, called *Carn-ma-Cheasog*; and traces exist of an old fortification at Dumfyn, traditionally represented as a stronghold of the celebrated Fingal.

LUTHERMUIR, a manufacturing village, in the parish of MARYKIRK, county of KINCARDINE, $6\frac{1}{2}$ miles (N. N. E.) from Brechin; containing 967 inhabitants. This place, formerly a barren tract of uncultivated moorland on the banks of the river Luther, has within the last few years risen into importance through the introduction of the linen manufacture into this part of the country, and is now become an extensive and populous village. At present, however, only about 200 persons are employed in this manufacture, which was till lately carried on to a much greater extent, but has experienced considerable depression: the branch pursued is hand-loom weaving for the houses of Montrose and Brechin, who supply the yarn. The remainder of the population are occupied in agriculture; the neighbouring lands have been brought into cultivation, and the district is progressively improving. A handsome school-house, with a dwelling for the master, has been erected by Sir John Forbes, Bart., and the heritors, and is supported by the Society for Propagating Christian Knowledge, who allow the master a salary of £15 per annum; the fees average about £22, and the master has also three acres of land rent free, given by Sir J. Forbes.

LUTHRIE, a village, in the parish of CRECH, district of CUPAR, county of FIFE, 3 miles (N. W. by N.) from Cupar; containing 163 inhabitants. This village is pleasantly situated within a mile of Brunton. The inhabitants are mostly employed in hand-loom weaving

for the manufacturers of Cupar and Newburgh; the articles woven are Osnaburghs, brown and white sheetings, dowlas, &c., of which the quantity annually produced here, and at Brunton, averages about 177,200 yards. An agent of one of the principal houses resides in the village, and supplies the greater part of the materials. Forty persons are employed in weaving, of whom twelve are females; and about twenty females are engaged in winding. There are likewise in the village a brewery, a bakehouse, and mills for meal and barley; several persons are occupied in the various handicraft trades requisite for the supply of the district, and there is a small inn. The river Motray flows through the village; and on an eminence in the immediate vicinity is the parish church.

LYBSTER, a village, and for a time a quoad sacra parish, in the parish of LATHERON, county of CAITHNESS, 13 miles (S. W.) from Wick; containing 2699 inhabitants, of whom about 460 are in the village. This village, which is situated near Amherst bay, on the eastern coast, was originally planned by Lieut.-Gen. Sinclair, of Lybster House, who in 1802 granted certain portions of his lands on building-leases; and within the last twenty or thirty years it has rapidly increased in extent. It contains many well-built houses, and, from the improvements which have been made by the present proprietor, Temple Frederick Sinclair, Esq., promises to become a place of importance. The inhabitants are principally employed in the herring-fishery; and for the protection of the numerous boats, a harbour has been provided at the cost of the proprietor, affording shelter for more than 100 boats, and capable of receiving vessels of 100 tons' burthen. This was effected by a stone pier 300 feet in length being carried along the bank of a small river that flows into the sea at this place; and within the last few years a number of vessels of 100 tons have landed, and taken in, their cargoes here during the summer and harvest months. An excellent county road leads to the harbour; and a bridge sixty feet high, with a deep ravine behind, gives the scene an air of the picturesque. A post-office is established in the village of Lybster. Facility of communication is afforded by the great north road, which extends along the coast, and by steam-boats plying weekly from Wick to Aberdeen and Leith. The former ecclesiastical parish was separated from Latheron, under act of the General Assembly, after the erection of a church here in 1836: the church was built by subscription, at an expense of £830, and is a neat and substantial structure containing 800 sittings, but is now closed. There is a place of worship for members of the Free Church, commenced in the summer of the year 1845.

LYNCHAT, a village, in the parish of ALVIE, county of INVERNESS; containing 73 inhabitants. This is a very inconsiderable place, consisting only of a group of cottages built on the Belleville property, and inhabited by persons engaged in agriculture.

LYNE and MEGGET, a parish, in the county of PEEBLES, 5 miles (W.) from Peebles; containing 175 inhabitants. The district of Lyne, though consisting only of two farms, is, from being the site of the parochial church and manse, regarded as the head of this extensive parish, which comprehends also the suppressed parish of Megget. This latter is nearly fifteen miles distant from Lyne, and locally separated by the intervening

lands of Manor and the river Tweed, but notwithstanding annexed to it under an act of the presbytery, both for ecclesiastical and for civil purposes. Lyne is about three miles and a half in length, and almost three in breadth; while that portion of the parish which was formerly the parish of Megget, situated at the southern extremity of the county, is about six miles in length, and more than five in breadth. The whole comprises 17,850 acres, of which 910 are arable, about thirty in woodland and plantation, and the remainder chiefly affording pasturage for sheep and cattle.

The surface of the lands of *Lyne* is for the most part gently acclivous, but in some places diversified with a range of hills of considerable elevation, extending in a direction nearly parallel to the river Lyne, from which the hills recede towards the north, leaving at the eastern extremity a wide tract, very fertile, between them and the stream. The river has its source near the confines of Tweeddale, and after watering the district, and dividing it from Stobo, falls into the Tweed a little below its limits. There is also a small rivulet, which for some distance forms a boundary between Lyne and Peebles parish. The scenery is generally pleasing, the hills being covered with verdure; but there is a deficiency of timber, and few plantations have been made. In this district the soil is gravelly; it produces fair crops, and the lower grounds are exceedingly fertile. The surface of the lands in the *Megget* district is almost all hill, with very little intervening level. The hills extend in two parallel ranges from east to west, having between them a vale about a quarter of a mile in breadth, watered by the Megget. This stream rises near the western extremity of the district, and, after receiving numerous tributaries from the hills in its progress, flows into a beautiful sheet of water at the eastern extremity of the district, called *St. Mary's Loch*, which abounds with fish, and is much frequented by anglers. Even the vale, though in some places producing good crops, has for the most part a soil but ill adapted for arable operations: the hills have a soil in some portions shallow and dry, but in general deep and wet, affording excellent pasturage for sheep.

The crops raised in the parish are oats, barley, wheat, peas, potatoes, and turnips. The system of agriculture is much improved, and most of the tenants are connected with local associations formed for the purpose of distributing rewards for the promotion of husbandry among the successful competitors. Draining has been generally practised where requisite; much waste land has been reclaimed and brought into cultivation, and embankments have been constructed to preserve the lower lands from inundation. The principal farm houses and offices are substantially built and commodiously arranged; the lands are inclosed chiefly with stone dykes, but there are some few fences of thorn: six good cottages of stone, roofed with slate, have been built in the *Megget* district for the use of the shepherds. Great attention is paid to the rearing of sheep and young cattle. About 9000 sheep are pastured, and about 150 head of cattle; the former are of the Cheviot and black-faced breeds in nearly equal numbers, and the latter are usually a mixture of the Ayrshire and short-horned breeds. The sheep are in very high repute, and the pastures are considered superior to any in this part of the country. The substrata of the parish are chiefly whinstone and slate;

but little of either is quarried, except for the supply of the lands on which they are found. Facility of intercourse with Glasgow, Hawick, and other places is maintained by roads kept in excellent order, and by good bridges, two of which cross the stream that separates the district of Lyne from the parish of Stobo. The annual value of real property in Lyne and Megget is £3021.

Ecclesiastically the parish is in the presbytery of Peebles, synod of Lothian and Tweeddale, and in the patronage of the Earl of Wemyss and March; the minister's stipend is £153. 9. 1., with a manse, and a glebe valued at £25 per annum. The church is an ancient and venerable edifice of the later English style of architecture, and a portion of the original building has been parted off, and adapted for a congregation of 100 persons; it was thoroughly repaired in 1830, without any deviation from its original character. A chapel of ease has been erected in the Megget district of the parish, to which a good school-room is attached; but the distance of the chapel from the manse, which is at least fourteen miles, and, when the Tweed is flooded, and a circuitous route through Peebles becomes necessary, twenty miles, is a serious inconvenience to the incumbent. The parochial school, situated at Lyne, is well conducted, and is amply sufficient for the children of the district; the master has a salary of £25. 12, with from £10 to £15 fees, and a house and garden. There is also a school at Megget, which, however, on account of the difficulty of access to it, is kept open only during the summer half-year; the master receives a salary of £7 from the heritors, with the interest of Mr. Mitchelson's bequest, mentioned below, and is supplied with board and lodging by the parents of the scholars in succession. At Megget are the remains of two ancient towers, probably places of security in case of sudden incursions of the English, to which this place, situated so near the border, was peculiarly exposed; or they might be watch-towers, from which signals of approaching hostilities were displayed for the purpose of raising the country. At Henderland are the remains of a chapel and burying-ground; and about a quarter of a mile westward of the church at Lyne are distinct traces of a Roman camp, the form of which is clearly marked out; and also of a road that led to it. The area has been frequently cultivated, and various Roman coins are said to have been discovered by the plough. The Rev. Mr. Mitchelson, minister of Lyne and Megget about a century since, bequeathed £50, the interest to be appropriated to the promotion of literary and religious knowledge among the parishioners.

M

MACDUFF, a royal burgh of barony, and a seaport, in the parish of GAMRIE, county of BANFF, 1 mile (E.) from Banff; containing 2228 inhabitants. This place, which is situated on the eastern bank of the river Doveron, at its influx into the Moray Firth, and nearly opposite to the town of Banff, was in the early part of last century an inconsiderable fishing-village called Down. It derived its present appellation from its proprietor, James, second Earl of Fife, by whom it was

greatly extended and improved, and who, in 1783, obtained from George III. a charter erecting it into a royal burgh of barony, upon which he conferred the family surname. The town is neatly built on the acclivity of a hill rising gently from the shore; it consists of numerous streets, and towards Banff is an elegant bridge of seven arches: the streets are lighted with gas. A public library is supported by subscription; and in the immediate neighbourhood is a mineral spring, called the Well of Tarlain, which is much resorted to, and with which are connected facilities for sea-bathing. A bathing-house has been lately built, on a scale commensurate with the wants of the increasing number of summer visitors: it contains vapour, tepid, and cold and warm plunge baths, fitted up with much comfort and convenience. The surrounding scenery is enriched with the plantations in the grounds of Duff House, of which the town commands an interesting view. The manufacture of ropes, sails, and twine, which last is made into nets, is carried on to a considerable extent; and the curing of herrings and other fish affords employment to many of the inhabitants. There is also an establishment at which the grinding of flour, meal, and bones, and the sawing of timber, are prosecuted on an extensive scale, by steam power. The North of Scotland Bank has a branch here.

The trade of the port consists largely in the exportation of cattle, grain, and fish, and the importation of lime, coal, timber, and bones for manure. The number of vessels belonging to the port is fifteen, of 1036 tons' aggregate burthen, and mostly engaged in trading to Leith, London, and the Baltic. The number of vessels that annually enter the port is 200, averaging an aggregate burthen of 11,000 tons; and the yearly amount of shore dues averages £300. Macduff harbour, which is the private property of the Earl of Fife, by whom it was constructed at a great expense, is easy of access, and one of the best in the Moray Firth; it affords safe anchorage for vessels of any burthen, and good shelter for the numerous boats engaged in the herring-fishery, of which this place is a principal station. An act for improving the harbour was passed in 1847. A market for provisions of all kinds is held on Tuesday; and the inhabitants have also facility of access to the market at Banff, held on Friday. The burgh, under its charter, is governed by a provost, two bailies, and four councillors, triennially elected by the resident burgesses, whose qualification is the tenure of lands within the burgh. The magistrates hold haillie-courts for the trial of civil causes to a trifling amount, and of petty offences; they act without an assessor, and their jurisdiction is exercised in but few instances. Macduff is included within the parliamentary boundaries of Banff. The town-hall is a plain building, to which a small gaol is attached. A penny-post has been established here under that of Banff; and facility of intercourse is maintained by good roads, and, for the conveyance of produce, by the harbour. There is a church, situated on an eminence, a neat structure with a spire, and containing 858 sittings: the minister is appointed by the Earl of Fife, and has a stipend of £120, and a manse and glebe. The members of the Free Church have also a place of worship; and one of the parochial schools is here.

MACHAR, NEW, a parish, in the district and county of ABERDEEN, 10 miles (N. W. by N.) from Aber-

deen; containing 1262 inhabitants. This parish, which derives its appellation from its having been disjoined from Old Machar, comprehends certain lands named Straloch, in the county of Banff, though entirely surrounded by the county of Aberdeen. These lands are separated from the main portion of the parish by a branch of the parish of Udny, uniting itself to that of Fintray; this division of Udny has for several years been annexed quoad sacra to New Machar, and the lands of Straloch are now rated and politically attached to the county of Aberdeen. The PARISH measures ten miles in length from north-west to south-east, and its average breadth is two miles and a half; comprising 8390 acres, of which 5570 are arable, 958 pasture, and 810 occupied by plantations, chiefly of larch and fir, with an intermixture of hard-wood. It is bounded on the south by the river Don, and is for the most part situated between hills of moderate elevation, gently sloping, and inclining from north-west to south-east; while the intermediate surface is agreeably diversified by little hills, some of which are cultivated, and the others under wood. A rivulet, crossing the parish in a southern direction, and turning several corn-mills in its course, falls into the Don near the bridge of Dyce; and in the south-east end of the parish are two lochs. Of these, one is situated in a rugged and uninviting district; but the other, anciently called Loch Goul, and now the Bishop's loch from some of the bishops of Aberdeen having resided in a humble dwelling on a small island here, is stretched out in the midst of beautiful scenery, and is extensive and well-wooded.

The soil, near the river Don is a loam, resting on gravel; and in the middle portion the land is of the same kind, but of far inferior quality. In the northern tract are some parts capable of good cultivation, lately reclaimed by draining; but the soil in this quarter is mostly indifferent, interspersed occasionally with loam, and resting on clay. The produce consists chiefly of barley, bear, oats, and the usual green crops, grown generally under the five or seven shift rotation. Within the last twenty years the improvements carried on here have been very considerable, comprising principally draining and liming; and not only much waste land has been reclaimed, but that in tillage also has been greatly improved. The farms vary in size from forty-five to 200 acres, and the rent of land is averaged at £1 per acre: the annual value of real property in the parish is £5227. The cattle are the Aberdeenshire horned and doddled, or crosses with the short-horned and Hereford breeds. In this parish the rocks principally found are granite and limestone; the former is especially abundant in the southern part. The mansion of Parkhill is a spacious modern residence, surrounded by ornamental plantations, with a rich lawn beautifully diversified with wood and water, and commanding a fine view up the valley of the Don, bounded by the noble elevation of Bennochie. Straloch, also a superior structure finely situated, was once the property and residence of the geographer Gordon; and the mansion of Elrick is a neat and comfortable residence, skirted by thriving wood.

A post-office has been established; and the Aberdeen and Banff turnpike-road runs through the parish from north to south, and joins the Peterhead turnpike-road not far from the old bridge of Don. The Aberdeenshire

canal passes within half a mile of the southern boundary of the parish. The produce of the district is sold at Aberdeen, whence coal is brought to this place, for the use of those able to purchase it; but turf and peat are burnt by the labouring classes, procured from an extensive range of moss lying between this parish and Belhelvie, and called "Red moss". A cattle-fair has been established, at which, however, but little business is done. Ecclesiastically the parish is in the presbytery and synod of Aberdeen, and in the patronage of the Earl of Fife; the minister's stipend is £217, with a manse, and a glebe of nearly twenty acres, valued at £17 per annum. New Machar church was built in 1791, and contains between 600 and 700 sittings. The members of the Free Church have a place of worship. The parochial school affords instruction in the usual branches; the master has a salary of £30, with a house, and £5 fees. There are two parochial libraries, one confined to religious works, and the other comprising nearly 500 volumes in miscellaneous literature. A savings' bank, also, has been some years established, in which the deposits are not less than £1200. Remains exist of several ancient chapels; and the ground of one, called St. Colm's, is still used as a burying-place. A portion of land in the parish is designated King's-Seat, from the circumstance, according to tradition, of King Malcolm Canmore having sat down to rest upon a stone still remaining on the property, near which is a well called Betteral well. Robert Gordon, the eminent geographer and antiquary, was born in the parish in 1580: at the earnest request of King Charles, he constructed an atlas of Scotland, which was published in 1648, and went through several editions. Dr. Thomas Reid, the well-known metaphysician, was minister here from 1737 till 1752.

MACHAR, OLD.—See ABERDEEN, OLD.

MADDERTY, a parish in the county of PERTH, 6 miles (E.) from the town of Crieff; containing, with the hamlet of Bellyclone, the burgh-of-barony of Craigh-of-Madderty, and the village of St. David's, 634 inhabitants. A religious house was founded here in the year 1200 by Gilbert, Earl of Strathearn, and his countess Matilda, and dedicated to the honour of God, the Virgin Mary, and St. John the Apostle and Evangelist. It was called Inch-Effray, and took its name from its situation on an eminence surrounded, or nearly so, by the river Pow, and from the nature of the institution; the Latin appellation was *insula missarum*, or "the island of masses". David I. and Alexander III. conferred upon it many valuable privileges and immunities, and it was esteemed one of the richest abbeys in the kingdom. The abbot Mauritius was present with Robert Bruce at the battle of Bannockburn, and is reported to have had with him the arm of St. Fillan, to which relic much importance was attached as to the issue of the conflict. James Drummond, son of David, Lord Drummond, having become possessed of this monastery by favour of the commendator Alexander Gordon, Bishop of Galloway, was styled Lord Incheffray, and afterwards, in 1607, was created Lord Madderty by King James VI., who erected the estate into a temporal lordship. The title, however, was forfeited in 1715. The extensive buildings of the establishment have at different times supplied stones for various purposes; but there are still a few remains, which, with six or seven acres of land in the vicinity,

belong to the Earl of Kinnoull, who, in consequence of this property, possesses the right of patronage to twelve parishes formerly attached to the abbey.

The PARISH comprises 3430 acres, of which 2820 are under cultivation, 450 in plantations, and the remainder waste. The climate is wet and cold; and much of the land is still marsh and moor, requiring thorough draining, which has been carried on to a considerable extent in some parts for several years. The Pow, which rises in the Red moss, about a mile eastward, runs through the parish in a canal or cut about twenty-four feet wide and six deep, dug about a century ago in order to straighten its course. A part of the stream takes an eastern direction, and falls into the river Almond, while another part travels westward, and empties itself into the Erne at Innerpefferay. The latter portion has the appearance almost of stagnant water, from the gentleness of the declivity; and on account of the adjacent lands lying so low, they occasionally suffer much from inundations. In 1846 an act was passed, for repealing "an act" of 1696 "in favour of the heritors adjacent to the Pow of Inchaffray"; and for more effectually draining and improving lands near the said stream. The mansion-houses are Dollerie and Woodend. The village of Craig has become nearly extinct; and in its place has sprung up the village of St. David's, consisting of about fourteen feus. At this village a school has been erected within the last few years, by the proprietor, Lady Preston Baird, consisting of commodious and ornamental premises. It is intended for the instruction of children in sewing and knitting, and in the first rudiments of education, preparatory to admission (of some of the scholars) into the parochial school; the teacher receives a salary of £10 per annum, a free house, and other perquisites. In the parish is also the hamlet of Bellyclone. A turnpike road runs through the district; the inhabitants communicate principally with Crieff, but the dairy produce is generally sent to Perth. The annual value of real property in Madderty is £3500. It is ecclesiastically in the presbytery of Auchterarder, synod of Perth and Stirling, and in the patronage of the Earl of Kinnoull: the minister's stipend is about £225, with a manse, and a glebe of nine acres valued at £11 per annum. The church is a plain edifice erected in 1668. Madderty parochial school affords instruction in the usual branches; the master has a salary of £34. 4., with a house and garden, and £12 fees.

MADDISTON, a village, in the parish of MUIR-
AVONSIDE, county of STIRLING, 2 miles (W. by S.) from Linlithgow-Bridge; containing 164 inhabitants. This is the principal village in the parish, and is picturesquely seated on the slope of a hill, and on each side of a stream, over which is a bridge. In the adjoining lands considerable quantities of iron have been wrought, and the Carron Company have still works in the vicinity; the iron is of fine quality, but dispersed over a great bulk of ore. The facilities of communication are ample; the Edinburgh and Stirling road, the Union canal, and the Edinburgh and Glasgow and the Slamannan railways, pass conveniently to the village.

MADOES, ST., a parish, in the county of PERTH, 6 miles (E. by S.) from Perth; containing, with the villages of Cot-Town and Hawkstone, 327 inhabitants. This parish is supposed to have derived its name from St. Madoch. The relics of antiquity calculated to throw

light on its early history are few. One of the several Druidical temples, however, to be seen in this part of the country, stands here; and there is yet remaining in the churchyard a pillar of grey sandstone, after the model of those pillars termed Runic, which are supposed to be of Danish origin, but which many are rather inclined to think were raised at the first introduction of Christianity, to commemorate that event. It is considered highly probable that St. Madoch, a Gallic missionary to Scotland in the third or fourth century, visited this parish, and that, having made converts, a church dedicated to him was built in the place where the present church stands. In the village of Hawkstone is a large stone upon which it is believed the hawk of the peasant Hay alighted, after it had traversed in its flight the land to be consequently assigned to him, as a reward for the services he is said to have performed at the battle of Luncarty. This relic is always called "the hawk's stone", and stands upon the verge of what is known to have been the original property of the Hays of Errol.

The PARISH, which is among the smallest in Scotland, contains 1152 acres. It is situated in that division of the county called the Carse of Gowrie, and is bounded on the north by Kinfauns parish, on the south by the river Tay, on the east by the parish of Errol, and on the west by that of Kinnoull. The surface principally consists of three successive level tracts, each rising a little above the other: the first, commencing at the margin of the river, has all been recovered within the last half century, and some of it very lately; and is four or five feet below high-water mark. The second level is six or seven feet higher; the third is elevated about fourteen feet above the second, and is much more extensive than either of the others. After this the ground ascends gradually to its highest elevation, sixty-two feet above the high-water mark of the river, and then gently slopes northward till it becomes level with the large flat upon the southern side of the ridge, and with the rest of the rich and fertile tract called the Carse of Gowrie. The scenery, which from some points is comparatively uninteresting, changes its character if viewed from the elevated parts of the neighbourhood, especially from the summit of Inehyra hill, a variety of objects appearing in different directions to grace and beautify the prospect. The ample stream of the Tay, receiving into its basin on the opposite side the waters of the Earn; the spreading buildings of Newburgh on one side, and on the other the town of Abernethy, the ancient capital of the Picts, resting on the slope of a range of rugged hills; Pitfour Castle, with its lands and plantations; and the church spire of St. Madoes, almost concealed by venerable foliage, combine to form a scene of no ordinary interest. The Tay is in this part about one mile broad, and at high water seventeen feet deep. In the winter of 1838 it was visited by the wild swan, a circumstance which had not occurred before for forty years.

The SOIL varies considerably in different parts. On the higher grounds it is a dark loam, incumbent on light sand or clay, and running sometimes to a depth of three feet. The flat land bordering on the higher grounds is in some parts a rich alluvial loam, of a clayey nature, and producing all kinds of crops in abundance; other parts are a strong clay. The level in the immediate vicinity of the Tay consists of eighty acres of land mostly reclaimed since 1826, and is a rich loam, yielding the

heaviest crops without manure. Of the whole lands about 1059 acres are under tillage, sixty in pasture, and thirty-three occupied by wood; the crops comprise wheat, oats, barley, beans, potatoes, turnips, and hay, the grain being chiefly sent to Perth, and the potatoes to London. Wedge or furrow draining, introduced into these parts within the last five-and-twenty years, has been practised to a considerable extent and with great success, especially in those soils distinguished by a tenacious clay. Among the materials used for the construction of the drains have been turf, wood, and broken stones, each tried separately; but nothing has been found to answer so well as tiles, which are now coming into general use, through the ample supply of them provided at the extensive kilns built by Sir John Stuart Richardson, Bart., the proprietor of the parish. About eighty-five acres of land have been at different times reclaimed from the Tay by embankments; and it is supposed that many acres more may be converted into productive fields. A considerable quantity was recovered in 1826, by an enterprising farmer, at a cost of £1530. In 1833, eighteen acres were gained at an expense of £1200, by the proprietor. The plantations consist of every species of wood, among which are some very fine planes and elms; the trees are in a flourishing condition, and vary in age from about twenty to seventy or eighty years. The annual value of real property in the parish is £4182.

The prevailing substratum throughout the district is the old red sandstone formation. In all the more level grounds it is covered with an alluvium so thick that the rock is scarcely to be reached; but in the higher parts, where the strata have been accidentally disturbed and thrown up, its character is distinctly seen. It lies in beds varying in thickness from one to three feet, with thin layers of clay between them; and a quarry has been opened in the parish, in which numerous highly interesting organic remains have been discovered, consisting of various species and parts of fishes. These prevail most in the deeper beds, and in those of a brecciated character. The great number of scales and dis-severed parts which have been found in the quarries here and in the neighbourhood, have been proved by the discovery of a very beautiful and complete fossil specimen in 1836, to belong to the genus *Holoptychius*: the specimen is now in the British Museum, and the species is called *Holoptychius Nobilissimus*, after the discoverer, the Rev. Mr. Noble, then minister of the parish. Pitfour Castle is the residence of the proprietor of the parish; it is a spacious mansion of quadrangular form, and surrounded by rich and extensive lands, plantations, and gardens, all tastefully disposed and in excellent condition. There are two villages, Hawkstone and Cot-Town, each having a small population. Facilities of communication are afforded by the railway from Perth to Dundee, which passes through the northern parts of the parish. Roads for local convenience intersect the parish in every direction; the road from Perth by Dundee to Aberdeen traverses its northern boundary, and the road from Perth to Errol also runs through the parish. A pier and harbour, constructed a few years ago by the proprietor, opposite the junction of the Tay and the Earn, have proved of great advantage; here coal, lime, and manure are received, and large quantities of potatoes exported. There is a valuable salmon-fishery,

the rent of which, paid to the proprietor of the parish, is £1000: the hands employed in it are during the winter months engaged in the manufacture of flax and hemp, which they receive from the Dundee merchants.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Perth and synod of Perth and Stirling; patron, Sir John Stuart Richardson. The stipend of the minister is about £208; with a manse, built in 1804, and repaired in 1829; and a glebe of twenty-seven acres, and about two acres of garden, valued at £80 per annum. St. Madoes church, a plain but comfortable building erected in 1798, contains 410 sittings. There is a parochial school, in which the usual branches of education are taught, with Latin and Greek if required; the master has a salary of £34, with a house and garden, and about £10 fees. The children receiving instruction in this school belong principally to the neighbouring parishes of Errol, Kinfauns, and Kinnoull. There is also a subscription library of 200 volumes, the terms of which are 4½d. per quarter; and the poor have the interest of £500, arising from a bequest, made two centuries ago, of only 200 merks, which by good management accumulated. The chief relic of antiquity is the stone monument in the churchyard, seven feet in length and about three in width; it is a great curiosity, and beautifully carved with numerous emblematical devices on both sides, in a state of high preservation. From the sign of a cross on one side, it is supposed, as already observed, to be connected with the introduction of Christianity into the parish. The Rev. Archibald Stevenson, one of the leading men of the Church in the last century, was minister of St. Madoes.

MAIDEN-SKERRY, an isle, in the parish of NORTH-MAVINE, county of SHETLAND. It consists of a high rock, the upper part of which has never been trodden by man. In the summer season it is occupied by the largest kind of gulls, called the black-backed, which nestle upon it in vast numbers, undisturbed.

MAINLAND ISLE, county of SHETLAND: containing 16,141 inhabitants. This is the largest island of the district, about sixty miles in length, and in some places sixteen in breadth, projecting into the sea in many irregular promontories, and indented by numerous bays and harbours. The interior or middle part is hilly and mountainous, and full of bogs and mosses; but the greater part of the coast is arable, producing chiefly oats sown in April, and barley about the middle of May. The hills are mostly covered with heath, and afford pasturage for cattle and sheep. The island is almost bare of trees, and hardly any shrubs are to be seen, except juniper and small roan trees and willows in the more sheltered valleys. It would, however, appear to have been formerly covered with wood, as trees of considerable size are occasionally dug up in the mosses, some of which are at a great depth beneath the surface; and it is generally observed that their tops lie towards the west, as if they had been overthrown by a storm or inundation from the east. There are appearances of various kinds of metallic ores: at Sandlodge a copper-mine was wrought for some time; and iron-ore is in considerable quantity. The island is divided into the eight parishes of Delting, Dunrossness, Lerwick, Nesting, Northmavine, Sandsting and Aithsting, Tingwall, and Walls and Sandness, all of which are described under their respective heads.

MAINS and STRATHMARTINE, a parish, in the county of FORFAR; containing, with the villages of Baldovan and Kirkton, 2110 inhabitants, of whom 1295 are in the Mains district, 2 miles (N. N. W.) from Dundee. The original name of the old parish of Mains was Strath-dighty, descriptive of it as a valley watered by the river Dighty. The name of the other parish, which is a continuation of the same valley, is said to have been derived from a stone erected on the north side of it, in commemoration of some valorous exploit performed by a hero of the name of Martine in the ancient days of chivalry. These parishes were joined in the year 1799. The united parish is six miles in length, varying from one mile to three miles in breadth, and comprising 7063 acres, of which 6150 are arable, 450 woodland and plantations, and the remainder moor and waste. Its surface is one continued vale of pleasing appearance, bounded on each side by rising grounds, whose highest point is not more than 400 feet above the level of the sea. The only river is the Dighty, which has its source in two lakes in the parish of Lundie, and flows with equable stream through the whole of the vale into the sea near the mouth of the Tay, in the parish of Monifieth. On the banks of this river, the largest river in the immediate vicinity of Dundee, are numerous works connected with the manufactures of that town; and thus, not only the adjacent scenery has been deprived of much of its natural beauty, but the fishing has been greatly injured, and the quality of the water rendered unfit for domestic use. Several small rivulets intersect the parish, forming tributaries to the Dighty; but they are usually dry in the summer months. Near the castle of Mains, a spring of excellent water issues from a crevice in a rock, and flows with undiminishing abundance even in the driest times, affording a valuable supply for the inhabitants of that portion of the parish.

In general the soil is a black loam, and very fertile; the crops are extremely favourable, and with the exception only of a few patches of moor, and some rocky elevations, the whole is in a state of profitable cultivation. The produce consists of oats, barley, wheat, potatoes, and turnips. The system of agriculture is greatly improved; the lands are well drained, and inclosed with stone dykes and hedges of thorn; and the farm houses and offices, though inferior to those in some other parishes, are still commodious and in decent repair. A very large extent of waste land has been reclaimed and brought into cultivation, and the appearance of the parish has been improved by the flourishing plantations formed on the higher grounds. The wood consists partly of oak, beech, and other kinds of forest-trees, of which the beech seems best adapted to the soil; and there are several trees of venerable growth, especially one near the castle of Mains, of very stately dimensions, supposed to be about two centuries old. A portion of the wood is larch, and there is a good deal of thriving fir in the parish. The easterly winds seem rather adverse to the growth of the forest-trees that have been planted. The principal substrata are grey-slate and trap rock, of which the higher grounds mainly consist, and which are quarried to a considerable extent for the roads and inclosures, the stone being of good quality for every purpose. Baldovan House and Strathmartine are both handsome modern mansions. From its proximity to Dundee, and the facilities afforded for the manufactures

of that place by the Dighty, a great proportion of the inhabitants of this parish are employed in works established by the Dundee proprietors on the banks of the river; on which, within the limits of Mains and Strathmartine, are four bleachfields, two of which are very extensive, and six mills for washing yarn and preparing it for the loom. There are likewise three flour-mills, five mills for meal, a saw-mill, and several threshing-mills, all put in motion by the water of the river, with the exception of one of the flour-mills, partly worked by steam. The annual value of real property in Mains is £7770, and in Strathmartine £4686. The agricultural and other produce is sent to the market of Dundee, with which frequent intercourse is kept up; and facility of communication is afforded with other places in the vicinity by three turnpike-roads, which pass for more than eight miles through the parish, and by a railway from Dundee to Newtyle. There are not less than nine bridges over the Dighty. Fairs are held on the first Tuesday after July 11th, on the 26th of August, and the 15th of September, for cattle, sheep, and horses, and for hiring farm servants.

Ecclesiastically the parish is in the presbytery of Dundee, synod of Angus and Mearns, and in the patronage of the Crown: the minister's stipend is £217. 8. 4., with a manse, and a glebe valued at £35 per annum. The church, erected in 1800, is conveniently situated, and is adapted for a congregation of 900 persons. The parochial schools of both the old parishes are continued, and afford a good course of education; the masters have each a salary of £34, with a good house and garden, and the fees average annually at Mains £40, and Strathmartine £30. A school for females is supported by an endowment assigned by the Dowager Lady Ogilvy; and there are two others in the parish, chiefly for teaching children to sew. The poor have the interest of accumulated capital realizing £20 per annum, and are eligible for admission in case of sickness into the Dundee infirmary, for the benefit of which a yearly collection is made at the church of this place. The principal remains of antiquity within the limits of the parish are some vestiges of a Roman camp in the Strathmartine district, supposed to have been occupied by a portion of Agricola's army, and which, probably, was afterwards a stronghold of Sir William Wallace. This latter opinion is corroborated by a tradition, that that gallant defender of his country's honour pitched his tent on Clatto hill, from which the moor in this place takes its name. There are also two obelisks in the parish; but the history of their erection is not clearly ascertained. Claverhouse, the residence of the well-known Dundee, was situated here; and near the site of the old mansion, an edifice in the form of an ancient ruin has been erected by his descendant, Mr. Webster.

MAINS of ERROL, a hamlet, in the parish of ERROL, county of PERTH; an inconsiderable place, containing 62 inhabitants.

MAKERSTOUN, a parish and village, in the district of KELSO, county of ROXBURGH; containing 355 inhabitants, of whom 79 are in the village, 5 miles (W. S. W.) from Kelso. This place is supposed to have derived its name from its original proprietor, Maehar, or Machir. The parish is beautifully situated on the river Tweed, which forms its southern boundary, dividing it from Roxburgh. It is nearly four miles in length from east

to west, varies from two to three miles in breadth from north to south, and comprises 2892 acres, of which 2574 are arable and pasture, and 318 woodland, plantations, and roads. The surface has a considerable rise towards the north, where it attains an elevation of 471 feet above the level of the sea; and the lands are agreeably diversified with thriving trees. In the southern part the soil is a dry loam, exceedingly fertile; but it is less productive towards the north, being chiefly a thin clay. The substratum is generally gravel and sandstone. The crops are wheat, barley, oats, peas, turnips, and potatoes, of which two last there are on the average 400 acres; the plantations include the different kinds of trees usually grown in this part of the country, and there are some good meadows and rich pastures. Nearly all the land is the property of Sir Thomas and Lady Makdougall Brisbane: the remainder belongs to the Duke of Roxburgh. The farms are tolerably extensive, the farm-buildings commodious, and the system of agriculture greatly improved. Coal is obtained for fuel at a moderate cost. The turnpike-road from Kelso to Edinburgh passes through the eastern part of the parish. The annual value of real property in Makerstoun is £3729. On the north bank of the Tweed is the seat of General Sir Thomas M. Brisbane, an ancient mansion with additions of modern date, beautifully situated in a richly-wooded demesne embellished with timber of venerable growth: Sir Thomas has here an extensive observatory, furnished with astronomical instruments of the first order. Ecclesiastically the parish is in the presbytery of Kelso, synod of Merse and Teviotdale, and in the patronage of the Duke of Roxburgh: the minister's stipend is £219. 14. 7., with a manse, and a glebe valued at £25 per annum. Makerstoun church, built on a new site in 1807, is nearly in the centre of the parish, and affords accommodation to 200 persons. The parochial school is well attended, and affords a useful education; the master has a salary of £34, with £28 fees, and a house and garden. A sum of £27 has been bequeathed for poor women above seventy years of age, the interest of which is annually distributed among them; and the interest of a legacy of £20 is also appropriated to the relief of the poor.

MANOR, a parish, in the county of PEEBLES, $2\frac{1}{2}$ miles (S. W.) from Peebles; containing about 240 inhabitants. This parish, the name of which is of very uncertain derivation, is nine miles in length from north-east to south-west, and about three miles in average breadth. It is bounded for nearly two miles by the river Tweed, and comprises 17,030 acres, of which 14,800 are hilly moorland affording tolerable pasture for sheep, 1630 arable and in cultivation, 400 woodland and plantations, and the remainder waste. The surface is varied, consisting chiefly of one continued valley, inclosed on either side by a lofty range of hills, and broken by two detached hills of considerable elevation, one of which is wholly, and the other only partly, within the limits of the parish. The hills on both sides of the vale are of steep ascent, and in some places project boldly towards the margin of the stream called the Manor Water, which flows through the whole extent of the parish. Dollar Law, the highest point in these ranges, is 2840 feet above the level of the sea, and commands an extensive prospect over the Lothians, the county of Berwick, and the English border; the other hills vary from 1500 to

2000 feet in height. The Water has its source in the mountains towards the south boundary of the parish, and, after a winding course, flows into the Tweed about two miles above Peebles. Salmon ascend the stream about October to deposit their spawn, and considerable numbers are destroyed by poachers during the winter. Formerly it abounded with yellow and dark-coloured trout of excellent quality, and was much frequented by anglers; a few salmon and sea-trout are still taken in the autumn, and par are found in great abundance.

The soil in the plains, and lower portions of the hills, is a rich loam and clay, but of no great depth, and in other parts light and thin, intermixed with sand and clay, with some alternations of loam resting on gravel. In the higher lands is a considerable portion of moss, with which, also, most of the pastures are slightly interspersed. The crops are oats, barley, wheat, peas, potatoes, and turnips. The system of agriculture is in an advanced state: the lower lands have been drained, and considerable portions of waste made fertile; the farm-buildings are substantial and conveniently arranged, and the lands are well inclosed. In this parish the average number of sheep pastured is 7400; they are of the black-faced breed, with a cross of the Cheviot: the cattle, of which about 300 are pastured, are chiefly of the short-horned breed. The plantations have been very much improved and extended of late; they are well managed, and in a thriving condition. The substrata are principally greywacke and clay-slate; the former has been quarried to a small extent, and a few minerals have been found embedded in the seams. Rich specimens of galena have been met with, in boulders, in the channel of the Manor Water; and in one part of the parish a vein has been discovered: an attempt to work the galena was made some years since, but was abandoned. Barns is a handsome modern mansion, finely situated on the banks of the Tweed; and Hallyards is an ancient mansion, pleasantly seated in the valley. The nearest market-town is Peebles, with which, and with other towns in the neighbourhood, facility of intercourse is afforded by good roads.

Ecclesiastically the parish is in the presbytery of Peebles, synod of Lothian and Tweeddale, and in the patronage of the Earl of Wemyss: the minister's stipend averages about £155, with a manse, and a glebe valued at above £30 per annum. Manor church, an ancient edifice, and inconveniently situated, is in good repair, and is adapted for a congregation of at least 200 persons. The parochial school affords a good course of instruction, and is well attended; the master has a salary of £34 per annum, with £14 fees, and a house. Near the farm of Cademuir are the remains of an ancient circular camp, supposed to be of British or Danish origin. It appears to have been surrounded with four intrenchments, between which are regular intervals of about twelve paces. The ramparts are fifteen feet in breadth at the base, and about the same height, and are intersected by a road fifteen feet wide, leading to the interior circle; one half only of the lines is remaining, and there are no traces of the corresponding semicircles. In a commanding situation upon a hill called Chester Hill are the remains of a camp with a double intrenchment of loose stones, the outer one of oval form; the area of the inner inclosure is circular, and has a regular descent towards the centre. Several intrenchments on a smaller

scale are to be seen in the parish. There are likewise remains existing of strongholds belonging to various chieftains, which appear to have formed a continued chain of fortifications extending from one extremity of the barony to the other; the first of the series was at Manorhead, and the last at Barns, which communicated with Needpath Castle, on the Tweed. Dr. Adam Ferguson, author of the *History of the Roman Republic*, lived for many years at Hallyards. In 1845, Messrs. Chambers, of Edinburgh, who are natives of the neighbouring parish of Peebles, erected a gravestone in the churchyard here over the remains of David Ritchie, the original of the "Black Dwarf" of Sir Walter Scott; the misanthrope spent the greater part of his life in Manor parish, and his hut is still in good preservation, and an object of curiosity to tourists. Sir Walter used to pay frequent visits at Hallyards, and thus became acquainted with Davie.

MANSFIELD, a village, in the parish of NEW CUMNOCK, district of KYLE, county of AYR, 1 mile (N. E. by E.) from New Cumnock; containing 122 inhabitants. This village is situated a short distance north of the river Nith, and of the high road from New Cumnock to Kirkconnel, and is the seat of a considerable colliery. The coal formation here is an isolated basin, in which six seams of coal have been ascertained, in the whole about forty feet in thickness; the uppermost seam is a fine cannel coal, two feet and a half thick, and is much in demand for making gas. Lime-kilns, on an excellent plan, have been erected by Sir Charles G. S. Menteach, Bart. A railway, nearly three miles in length, has been laid down to the boundary of the counties of Dumfries and Ayr, to facilitate the transport of the coal and lime to suitable markets. A mill for carding wool was erected some time since by Mr. Hunter, at which most of the home-spun wool is carded. The meadow-lands around the village have latterly been much improved; in its neighbourhood is Mansfield Hall, the property of Sir Charles Menteach.

MARCH OF LUNANBANK, a hamlet, in the parish of INVERKEILLOR, county of FORFAR, 5 miles (N.) from Arbroath; containing 65 inhabitants. It lies on the south side of the Lunan water, a very short distance from its banks, and on the road from Redcastle to Dunnichen. There are stone-quarries in the vicinity.

MARCHFARM, a hamlet, in the parish of KIRKINNER, county of WIGTOWN; with 61 inhabitants.

MARESTONE, a hamlet, in the parishes of ABERLEMNO and RESCOTIE, county of FORFAR, $2\frac{1}{2}$ miles (N. E.) from Forfar; containing 26 inhabitants. The hamlet is an inconsiderable place, on the high road from Aberlemno to Forfar.

MARGARET'S (ST.) HOPE, a village, in the parish of ST. PETER, island of SOUTH RONALDSHAY, South Isles of ORKNEY; containing 260 inhabitants. This is a considerable place in the north of the island, having a safe and pleasant roadstead opening into Water sound, which separates the island from that of Burray. It is an excellent fishing-station, and the inhabitants are chiefly engaged in taking and curing cod, ling, and herrings. There are a post-office, and several inns, in the village; and in the neighbourhood of it is the parochial school, built about 1815.

MARKINCH, a parish, in the district of KIRKCALDY, county of FIFE; containing, with the villages of Coal-

town of Balgonie, Dobbieside, Balcurvie, Burns, Haugh-Mill, Milton, Thornton, and Windygates, and part of Starquoad sacra and Woodside, 5965 inhabitants, of whom 1315 are in the village of Markinch, 7 miles (N.) from Kirkcaldy. This place is supposed to have derived its name, signifying in the Celtic language "the island of the forest", from the site having been at a remote period surrounded by water, of which there are still evident traces, notwithstanding that the land has been drained, and partly covered with buildings. The parish is about six miles in length, and varies from two to five miles in breadth, comprising an area of sixteen square miles, or 10,200 acres, of which nearly 8500 are arable, 800 woodland and plantations, and the remainder meadow, pasture, and waste. The surface is pleasingly diversified, sloping gradually towards the south and east from the Lomond hills, by which the parish is skirted on the north. It is divided into four distinct valleys, inclosed by ranges of low hills, and watered by as many streams, which unite towards the east; the principal rivers are the Leven and the Orr.

The SOIL is various. On the north bank of the Leven is a gravelly and clayey loam, dry and fertile; but a wet loam, sand, and clay prevail in the district between the Leven and the Orr, and also in the southern and eastern portions of the parish. The crops are wheat, oats, barley, potatoes, and turnips, with a small portion of peas, beans, and flax. The system of agriculture is in an improved state; the lands are well drained, chiefly by means of furrow drains; and the farm-buildings are generally substantial and commodiously arranged. Bone-dust has been introduced for manure, and lime is used upon most of the lands. The hills afford good pasture for the cattle, usually of the Fifeshire breed. In this parish the plantations are chiefly around the seats of the several proprietors, and are of the more ornamental character; they are in a thriving state, and add greatly to the beauty of the scenery. The substrata are mainly sandstone of every variety, abounding with organic remains. Ironstone is found in different parts, but though containing eighty per cent of ore, the working of it has long been discontinued. Coal is abundant on the lands of Balbirnie and Balgonie, and is extensively wrought at both places. The coal in the former lies at a depth of twenty-five fathoms, and occurs in three seams, of which the uppermost is eighteen inches in thickness, the middle seam fifty-four, and the lowest twenty-four inches; the coal on the lands of Balgonie occurs in two seams, at a depth varying from twenty-five to thirty-five fathoms, the upper seam nine feet six inches, and the lower seven feet, in thickness. The mines at the village of Thornton were discontinued in 1743, but re-commenced in 1785, when powerful steam-engines were erected; they are still in extensive operation. The annual value of real property in the parish is £16,081. *Balfour Castle*, once the family seat of the Balfours, situated near the confluence of the Orr and the Leven, has been the property of the Bethunes for nearly five centuries. To the west of it is the ancient castle of *Balgonie*, now falling to decay. The oldest portion is the keep, a square tower eighty feet in height, crowned with battlements, and having circular projecting turrets at the angles; and communicating with it is a house of three stories, erected by the first Earl of Leven, to which a wing was added by one of his successors. The estate was purchased in 1823, for the

sum of £104,000, by the late James Balfour, Esq., brother of the late General Balfour of Balbirnie; and the former gentleman's second son, to whom the property has been bequeathed, purposes to restore the castle. *Balbirnie House*, about a mile westward of the church, is a handsome modern structure, erected by General Balfour; it is ornamented in the principal front with a noble Ionic portico, and situated in a park of 200 acres, richly wooded. *Kirkforthar*, the seat of George Johnstone Lindsay, Esq., is an ancient mansion. There were formerly other resident proprietors of note in the parish, of whose houses scarcely any traces are now left.

The village of Markinch is built partly on the southern acclivity of the hill of that name, which has a height of about 100 feet, extending in a ridge from east to west for 300 yards. On the northern side, the precipitous ascent is cut into terraces twenty feet in breadth, rising above each other to an elevation of ten or twelve feet, and supposed to have been formed by the Romans under Agricola. The water-power afforded by the Leven and the Orr, the abundance of coal and freestone in the neighbourhood, and the facilities of communication, have greatly encouraged the establishment of MANUFACTURES in the parish. Among these are the Rothes paper-mills, erected in 1806 by Mr. William Keith, and now the property of Messrs. Tullis and Company: the chief articles manufactured here are brown and grey wrapping-papers, and twenty men and ten women are engaged. The Auchmuty mills, belonging to the same firm, for the making of cartridge, coloured, printing, and writing papers, afford occupation to about 100 persons, one-half women, and produce about 500 tons of paper annually. The Balbirnie mills, established in 1816 by Messrs. J. Grieve and Company, for coarse and fine wrapping-papers, give employment to thirty persons, of whom fourteen are women; and the quantity annually produced averages 250 tons. The woollen-manufactory at Balbirnie-Bridge was erected in 1835, by Mr. Drysdale, for the weaving of plaidings, blankets, and shawls, principally for the Glasgow merchants: in this factory are ten power-looms employing twenty-seven persons, and four hand-looms employing ten persons, of whom a considerable proportion are females. The linen-manufacture (of silesias, and holland for window-blinds) was till 1810 confined to about fifty persons, who sold their webs to the merchants of Auchtermuchty and Kettle; but since that time the weaving of dowlas, sheetings, and towellings has been introduced by Mr. Robert Inglis, and the number of persons employed has increased to nearly 900, who work in their own houses, and of whom many live in the adjoining parishes. The spinning of flax and tow is extensively carried on at Milton of Balgonie, and in the village of Haugh, *which see*. There are also bleachfields at Rothes and Lochty; the former affording occupation to 110 persons, of whom eighty are women and children; and the latter employing about 100 persons. At Cameron-Bridge is a very extensive distillery; and at Thornton are some vitriol-works, connected with a similar establishment at Glasgow. There are stations at Markinch and Thornton of the Edinburgh, Perth, and Dundee railway; and an act was passed in 1846 for the construction of a railway from Markinch to Anstruther Easter, to be called the East of Fife railway.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kirkcaldy, synod of Fife.

The minister's stipend is £267. 17., with a manse, and a glebe valued at £30 per annum; patron, the Crown. Markinch church, a very ancient structure with a lofty tower and spire, situated on an eminence in the village, was partly rebuilt, and enlarged, in 1806, and contains 1360 sittings. Churches have been built at Milton and Thornton, and there are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school is numerously attended; the master has a salary of £34, with a good house and garden, and the fees average about £70 per annum. There are nine other schools, two of which, on the Balgonie estate, have endowments, one of £10 per annum, with a house and garden, and the other of £5 only; a school at Balbirnie has simply a house and garden for the master, and a female school in the village is supported chiefly by a subscription of some ladies. About two miles from the mouth of the Leven are the remains of some ancient fortifications, the origin of which is not distinctly known; and in the westward portion of the parish have been found, at various times, Roman relics consisting of military weapons and other antiquities. On the highest point of the ridge near the village, at an elevation of eighty feet, are the remains of Maiden Castle, a quadrilateral intrenchment, supposed to have been one of the strongholds of Macduff, Thane of Fife; and to the east of the village is Dalginch, another of his castles, from which there is said to have been a subterraneous communication with the former. The latter, now called Barnslee, is the residence of Mrs. Paston.

MARNOCH, a parish, in the county of BANFF, $8\frac{1}{2}$ miles (S. W. by S.) from Banff; containing, with the village of Aberchirder, 2691 inhabitants. This parish was originally called Aberchirder, a name taken, as is supposed, from the estate of Sir David Aberkerder, Thane of Aberkerder, who lived about the year 1400, and was proprietor of a large part of the parish; he paid revenue to the see of Moray, and eventually his daughter was married to Sir Robert Innes, brother to Sir John Innes, the latter of whom was bishop of Moray for seven years previously to 1414. The village is still called by the ancient name of Aberchirder, which is said to signify "the head or opening of the moss", and to have been used on account of the situation of the estate at the edge of an extensive moss. The term now applied to the parish is derived from Saint Marnoch. The PARISH is situated on the northern bank of the river Doveron, along which it extends for about six miles, some of the extreme points, however, being eight miles apart. In breadth it extends from the stream five or six miles, with a fine southern exposure; the whole comprising thirty-four square miles. On the borders of the river are some fine haughs; its banks are distinguished for their richly-diversified and beautifully-picturesque scenery, and include a variety of objects that invest the landscape with the highest interest.

The estate of *Ardmellie*, ornamented with a number of large trees, and the mansion-house, situated in the midst of well-cultivated grounds, and commanding an extensive view of the valley of the Doveron, commence the series of varied spots receiving from, and communicating to, the winding course of the stream a pleasing and impressive effect. In this part abruptly rises the well-wooded hill of Ardmellie, the highest ground in the parish; at whose foot, on the bank of the river, which here

receives the burn of Crombie, stands the manse. The church occupies an eminence at a little distance; it was once surrounded by a Druidical circle, now only marked by two remaining stones. The churchyard, at the margin of the stream, is rendered especially interesting by the ruin of the old church, and several superior monuments. Among these, one, conspicuous for its richly-carved ornaments, is to the memory of "Reverendus et pius Geo. Meldrum de Crombie et quondam de Glass præco"; he was minister of Glass, and laird of Crombie in this parish, and died in 1692, aged seventy-six. Attached to the monument is a finely-executed half-length figure of him in stone, represented wearing a cap, and in his full canonicals, with a book in his hand. At a short distance from this spot, the river displays several windings; and a little further is a bridge of two arches, built in 1806, below which the scenery derives interest from the ancient mansion of *Kinairdy*. This is a structure of very singular appearance, somewhat similar to a tower, situated on a promontory at the confluence of the burn of Kinairdy with the Doveron, and once the property, with a large portion of land in the vicinity, of the Crichtons of Fren draught. The property of Kinairdy subsequently passed into the hands of David Gregory, Esq., one of whose sons was the inventor of the telescope that bears his name. The river afterwards pursues its beautiful course towards the church, manse, and village of Inverkeithny, on the opposite bank, about two miles distant. Here is Chapelton, on the Marnoch side, where it is thought a place of worship once stood. At a little distance appears the handsome modern mansion of *Netherdale*, with gardens and grounds finely laid out, and flourishing beech hedges: this property completes the striking line of the course of the Doveron in this locality. The surface in the centre of the parish, from east to west, consists of several hills and undulations, mostly crowned with thriving plantations, and having intervening straths well cultivated, and watered by small rivulets.

The SOIL is in general damp and mossy; in some parts it is dry, and in the southern portion it generally produces early crops. On the hill of Crombie are extensive mosses, supplying plenty of peat. Agriculture has made considerable advances during the last quarter of a century; in which period, by draining, by the cultivation of waste land, and other improvements, the rental of the parish has been increased to the extent of one-third: the annual value of real property is now £7898. Improvements have also taken place in the breeds of cattle, through crosses with superior stock. Granite of excellent quality occurs in two localities; it is extensively quarried, and blue limestone is found on the estate of Ardmellie. In addition to the mansions already noticed, there is an old building at *Crombie*, the property of the Earl of Seafield, situated in the western quarter of the parish; it consists at present of only three stories, but it was formerly much higher, and appears to have been a place of some strength. The house of *Auchintoul*, on the largest property in Marnoch, and situated near the middle of the parish, was once the residence of General Alexander Gordon. He entered the Russian service as a cadet, under Peter the Great, and for his valour in the wars carried on against Charles XII., King of Sweden, was raised by the emperor to the rank of major-general: after his return to his native country, he wrote the history of his patron. Being involved, however, in the

troubles of 1715, by taking part with the Highland clans at Sheriffmuir, and by other acts, he was attainted for treason and compelled to escape to France; but having remained there for several years, he returned, and died here at the age of eighty-two. The mansion consists of three sides of a square, one of which was built by the general; and is a large plain building, much improved by the present proprietor. It has a handsome quadrilateral range of offices, with hot-houses and a conservatory, as also fine gardens, and grounds ornamented with belts of plantations; and is much indebted for its pleasantness to its commanding situation. The mansion-house of *Chuny*, on the east, is an elegant edifice built of granite, to the grounds of which is attached some thriving wood.

The only village is Aberchirder, *which see*. There are regular markets for hiring servants at Whitsuntide and Martinmas; a weekly grain-market on Mondays during the winter; and an annual market for cattle and horses, called Marnoch fair, on the second Tuesday in March. Ecclesiastically the parish is in the presbytery of Strathbogie, synod of Moray, and in the patronage of the Earl of Fife: the minister's stipend is £220, with a manse, and a glebe of seven acres and a half, valued at £21 per annum. Marnoch church is a very plain building, erected in the earlier part of the present century. There are places of worship for members of the Free Church, Episcopalians, Baptists, the United Presbyterian Church, and Roman Catholics. The parochial school affords instruction in the usual branches: the master has a salary of £34, with a house, and from £15 to £25 fees; also about £53 from Dick's bequest, Bruce's legacy, and his office of session-clerk. There is an extensive library for parochial use.

MARTIN, an island, in the parish of LOCHBROOM, county of Ross and CROMARTY; containing 45 inhabitants. This is a small island, situated in Loch Broom, on the western coast of the county, and close to the main land of the parish, from which it is separated by a narrow channel. It is about five miles north-north-west from the village of Ullapool.

MARTIN'S, ST., a parish, in the county of PERTH, 5 miles (N. N. E.) from Perth; containing, with the villages of Caroline-Place and Guildtown, and the hamlet of Cairnbeddie, 1071 inhabitants, of whom 750 are in the rural districts. It comprises the ancient parishes of St. Martin and Cambus-Michael, which were united soon after the time of the Reformation; and is celebrated as having been the residence of the usurper Macbeth, of whose castle of Cairnbeddie there are still some vestiges remaining. The site of this stronghold was a circular mound nearly in the centre of the parish, about eighty yards in diameter, and surrounded by a moat thirty feet wide; and on levelling the surface during the process of agricultural improvements, within the last thirty or forty years, great numbers of horse-shoes of small size, and fragments of swords and other arms, were discovered. Not thinking himself sufficiently secure in the castle of Cairnbeddie against the insurrections of that troublesome period, Macbeth afterwards removed his residence to the castle of Dunsinnan Hill, in the adjoining parish of Collace, in which he fortified himself against the assaults of Malcolm III. He was at length killed at Lumphanan in Aberdeenshire, after the battle of Dunsinnan, in 1057. About a mile from the castle of

Cairnbeddic is a spot still called the "Witches' stone", where the usurper, as recorded by the dramatist, is said to have held an interview with the witches, who assured him of safety "till Birnam forest come to Dunsinane".

The PARISH is bounded on the west by the river Tay, and is of irregular form, varying greatly in breadth, and comprising about 7000 acres, of which, with the exception of about 1000 acres in plantations, the greater portion is arable and the remainder meadow and pasture. Its surface is boldly undulated, without rising into hills of any striking elevation; and most of the acclivities are ornamented with plantations of fir, which, together with the coppices of wood along the banks of the Tay, add much to the pleasing appearance of the scenery. The river Tay is navigable to Perth for vessels of considerable burthen; it abounds with salmon and trout, and the fisheries are very valuable. There are several rivulets; the largest is the burn of St. Martin's, which intersects the parish from west to east, giving motion in its course to some corn and lint mills, and receiving the waters of a tributary stream near the church. Trout are found in most of the smaller streams. In general the soil is a black mould lying on a tilly bottom, but along the banks of the Tay of richer quality, resting on a substratum of gravel; the crops are, grain of every kind, with potatoes and turnips, and the usual grasses. The system of husbandry has been greatly advanced under the auspices of an agricultural society established here some years ago, and there is now scarcely an acre of waste land in the parish. Several small hamlets, indeed, which existed in different parts, have been altogether razed by the plough, and their sites brought into cultivation. The lands have been well drained, and inclosed with fences kept in good order; the farm-buildings have been rendered substantial and commodious, and all the more recent improvements in the construction of agricultural implements are adopted. The plantations are generally under careful management, and in a thriving state; and there are some considerable remains of natural wood. Limestone is found in the north of the parish, near the Tay, but it is not extensively worked; whinstone and freestone are every where abundant, and the latter is of excellent quality, and largely wrought for building. The annual value of real property in the parish is £5805. St. Martin's House, a handsome modern structure, is situated in a richly-planted demesne.

Many of the inhabitants are employed in the manufacture of coarse linen cloths, chiefly for exportation; and several are engaged in the various handicraft trades requisite for the supply of the surrounding district. A savings' bank was lately established, under that of Perth; and a library, also founded within the last few years, is supported by subscription. Facility of communication is maintained by the great turnpike-road from Edinburgh to Aberdeen, which passes through the eastern portion of the parish, and by other good roads that intersect it in various directions. The villages are, Guildtown, in the west, built in 1819; and Caroline-Place, in the northern district, founded in 1825, and named in honour of Caroline, Queen of George IV.: they consist of well-built houses to each of which is attached a portion of garden-ground. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Perth, synod of Perth and Stirling. The minister's stipend is £192. 7. 8., with a manse, and also

a glebe, including the old glebe of Cambus-Michael, and valued at £28 per annum; patron, the Crown. The old church, built in 1773, and which was both inconvenient and unsafe, was taken down, and a handsome and substantial structure erected in 1842, which is well adapted to the accommodation of the parishioners. It contains an elegant monument of marble to the memory of William Macdonald, Esq., of St. Martin's, one of the original members and secretary of the Highland Society of Scotland, whose representative, William Macdonald Farquharson Macdonald, Esq., is now proprietor of more than half the parish. St. Martin's parochial school, for which a handsome building has been erected at a cost of £300, is well attended; the master has a salary of £34, with a house and garden, and the fees average about £25 per annum. There is also a private school at Guildtown, the master of which is provided with a house and garden rent free by the Guildry of Perth. Very distinct vestiges exist of the Roman road leading from Bertha, through the northern part of the parish, towards the neighbouring parish of Cargill, in which it appears in its primitive state. At Friarton, in the parish, was a monastic settlement, connected with the abbey of Scone.

MARY, ST., ORKNEY—See RONALDSHAY, SOUTH.

MARY'S ST., a hamlet, in the parish of HOLM, county of ORKNEY; containing 34 inhabitants.

MARYBURGH, in the county of INVERNESS.—See FORT-WILLIAM.

MARYBURGH, a hamlet, in the parish of CLEISH, county of KINROSS, 3 miles (N. N. W.) from Kinross; containing 39 inhabitants. It is situated in the south-eastern part of the parish, and on the high road from North Queensferry to Kinross. The Kely water flows at a short distance south of the hamlet; and in the neighbourhood is a bridge which crosses that stream, called Kely bridge. A school is supported by Sir Charles Adam, who supplies the master with a house and garden rent free, and pays him a salary of £15, in addition to the fees, which average £30. A school for teaching girls to sew is also kept, by the wife of the master, to whom Miss Adam pays £5 per annum.

MARYBURGH, a village, in the parish of FODDERTY, county of ROSS and CROMARTY; containing 403 inhabitants. This village is of very recent formation, and improving in population and extent. To its erection, and to that of the village of Keithtown, may be ascribed the late increase in the inhabitants of the parish. There is a place of worship for members of the Free Church.

MARYCULTER, a parish, in the county of KINCARDINE, $7\frac{1}{2}$ miles (S. W. by W.) from Aberdeen; containing 991 inhabitants. The name of this place has been derived from the Latin words *Maria Cultura*, on account of the dedication of the church to the Virgin Mary; but some Gaelic scholars are of opinion that the latter part of the name may be traced more correctly to the compound word *cul-tira*, in the Gaelic signifying "the back of the land". The parish was a settlement of the Knights Templars; but very little of its ancient history is now known. It is of an oblong form, six miles in length and two in breadth, extending from the river Dee to the Grampian mountains, and containing between 8000 and 9000 acres. Maryculter is bounded on the south by the parish of Fetteresso, on the east by that of Banchory-Devenick, and on the west by the parish of Durris. In general the surface is rocky and stony,

with much hilly and mossy ground; and the rushy moors and heath, with only here and there a green hill, give to the district an appearance of wildness and sterility. An exception, however, may be made of that part in the vicinity of the river, where some small haughs and dales are to be seen. In the parish are many good springs. The river Dee flows on the north side of the parish, and has an ancient ford opposite the manse. There is no mill upon it throughout its entire course, it being subject to great and sudden floods, of which a remarkable instance happened on the 17th of September, 1768, and another on the 4th of August, 1829.

The SOIL near the river is sometimes thin and sandy: in the midland grounds it is deeper and blacker, resting in parts on a subsoil of clay; while in the southern quarter it is swampy, turfy, and mossy. About 3300 acres are under cultivation, 4200 in waste, and 850 in plantations: some hundreds of acres of the waste land are considered capable of profitable tillage. No wheat is raised, but other white crops are grown; and of the green crops, turnips form a prominent part, and are produced of excellent quality by the application of bone-dust and of guano. Improvements in agriculture have been carried on to a considerable extent, and, notwithstanding the untoward nature of the soil, are still in progress: the manure in general use is dung, much of which is obtained from Aberdeen. The native cattle are small, but good, and are almost all black, without horns: the rest of the cattle are a cross with the Teeswater. The horses are poor, though improving in breed; and few sheep are reared. A considerable number of swine, of the Chinese and Berkshire cross breed, are exported to London, and hams are also forwarded. The rocks in the parish consist chiefly of granite, and masses of gneiss are to be seen in different parts; the granite is quarried, but to a very small extent. The annual value of real property in Maryculter is £4513. The mansion-houses are Maryculter, Kingcausie, Heathcote, and Auchlunies. They are all pleasantly situated, and ornamented with gardens and with wood; the two first are in the immediate vicinity of the Dee, and their scenery is much improved by their contiguity to this stream. The mansion of Heathcote is built in the villa style, and is of recent date; Auchlunies is an ancient edifice, much adorned by its elegant grounds. The parish has good roads, several miles of which run parallel with, and sometimes nearly touch, the river. There are five salmon-fisheries; but they have been for some time in a very declining state.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery and synod of Aberdeen; patron, the Crown. The stipend of the minister is £172, with a manse and suitable offices, and a glebe of about ten acres, worth £2. 8. per acre. Maryculter church was built in 1787, and is in good repair; it will accommodate about 460 persons with sittings, and is conveniently situated. There is a Roman Catholic chapel, forming a distinct portion of a building used as a seminary for the education of youth for the priesthood; the average number of scholars is thirty. This institution is on the property of Blairs, given not many years ago to the Church of Rome by Mr. Menzies of Pitfoddels. A parochial school is supported, in which the usual branches of education are taught; the master has a salary of £30, with a house, and about £10 fees. There are also two or

three private schools, on a small scale, entirely supported by the fees; and a savings' bank, instituted in 1823. Numerous cairns still remain in the parish, in which human teeth and bones have been found; but they are not entitled to notice.

MARYHILL, for a time a quoad sacra parish, in the parish of BARONY, suburbs of the city of GLASGOW, county of LANARK; containing 3233 inhabitants, of whom 2552 are in the village of Maryhill. This district was for all ecclesiastical purposes separated in 1834 from the Barony parish, within which, however, it is now again included; it is about three miles in length and two in breadth, and consists of a large village and a rural district. Part of the population are employed in power-loom weaving and calico-printing, for which latter there is a printfield in the village, and another established in the immediate neighbourhood, the two concerns being separated merely by the river Kelvin. A large foundry has also been established in the village, and there are ship-carpenters, colliers, and other operatives. The place has a post-office with a delivery twice a day, and contains an excellent public library. Its natural beauties are also considerable: Maryhill is divided from the adjoining parish of East Kilpatrick by the beautiful stream of the Kelvin, and is skirted in the same direction by the grounds of Garscube, the seat of Sir Archibald Campbell, Bart., whose family, particularly the late Lady Campbell, have proved liberal patrons of the poor of Maryhill. As it flows past the village, the river passes under a stupendous aqueduct erected for the Forth and Clyde canal. The village was named Maryhill in memory of her mother by the late Miss Graham, of Gairbraid, from whose ground it was feued, and who during her long life proved a great benefactor to it. Ecclesiastically the place is in the presbytery of Glasgow and synod of Glasgow and Ayr: the minister is appointed by the managers and subscribers. The church was erected in 1826, at an expense of £1455, partly by subscription, towards which Lady Grace Douglas contributed £500; it originally contained only 542 sittings, to which, by the erection of a gallery, 400 were added in 1837. A parochial school is maintained; the master has a salary of £12. 16. 8., with a large schoolroom and comfortable dwelling-house, and fees amounting to £70 or £80. There is an infants' school, supported by J. C. Colquhoun, Esq., of Killermont; and the various schools in the district altogether afford instruction to more than 300 children.

MARYKIRK, a parish, in the county of KINCARDINE; including the village of Luthermuir, and containing 2387 inhabitants, of whom 147 are in the village of Marykirk, 6 miles (N. N. W.) from Montrose. This parish, of which the ancient name, *Aberluthnott*, or as in some documents *Aberluthnet*, was in use till the beginning of the last century, is about seven miles in extreme length from east to west, and varies greatly in breadth. It is bounded on the south by the river North Esk, which separates it from the county of Forfar; and comprises 9320 acres, whereof nearly 7000 are arable, 570 meadow and pasture, 1530 woodland and plantations, and the remainder water and waste. The surface, which slopes gently to the borders of the North Esk, is tolerably level; and the only hills are the almost parallel ridges of Kirkton hill and Balmaleddie, which extend for nearly two miles in a north-eastern direction, but

attain no considerable degree of elevation. The river Luther, rising in the Grampian hills, intersects the parish for about five miles; and there are numerous excellent springs affording an ample supply of water.

In some parts the soil is light and sandy; along the banks of the Luther, a deep rich mould; and in other places, a wet and retentive clay, which has been greatly improved by good management, and rendered fertile. The crops are oats, barley, turnips, and potatoes, with a few acres of wheat. The rotation system of husbandry is prevalent; and the lands have been drained, and inclosed partly with hedges of thorn and partly with stone fences: the farm-buildings, erected of stone and roofed with slate, are substantial and commodious; and on most of the farms are threshing-mills. Considerable attention is paid to the improvement of the live stock, consisting mainly of cattle of the polled or Angus breed, of which several hundred head are annually reared. From 300 to 400 pigs, also, are generally fattened every year. The woods comprise the usual kinds of timber, but there are few trees of ancient growth except on the lands of Inglismaldie, where are some more than a century old; in general the wood is not above seventy years of age: the trees are in a thriving condition. Salmon, grilse, sea-trout, common trout, and eels are contained in the streams, but not in any great quantity; the salmon and grilse are found chiefly in the North Esk. The substratum is mostly sandstone of the old red formation; a bed of limestone of coarse quality traverses the parish from east to west, and on the higher grounds are trap and conglomerate rocks. The quarries are not extensive, the expense of working, and of draining off the water, rendering them scarcely of any advantage to the owners. The annual value of real property in the parish is £7988.

Kirkton Hill is a handsome house, built on the site of the former ancient structure; it is finely situated, commanding some interesting views, and the grounds are embellished with flourishing plantations. Balmakewan, which has also been rebuilt, is a good mansion on rising ground near the North Esk, of which it has a pleasing prospect; and is surrounded with a well-planted demesne. Inglismaldie is an ancient mansion at present unoccupied, but in good repair; the lands attached to it are embellished with some timber of thriving growth. Thornton Castle is a castellated building, part of which was erected in 1530; it fell into a state of dilapidation, but has been restored with a strict regard to the original design. Hatton, the property of the Honourable General Arbutnott, is now a farm-house. The prevailing scenery and general aspect of the parish are of pleasing character. There are two handsome bridges over the North Esk; one of them of great antiquity, on the road from Aberdeen to Edinburgh, and which has been repaired and beautified; and the other near the village, of four circular arches of equal span, erected in 1813. The village of Marykirk is neatly built and pleasantly situated: a post-office is established, which has a daily delivery. At Caldharn, on the river Luther, is a mill for the spinning of flax, in which about 100 persons are employed; and the weaving of linen is carried on upon a large scale in the village of Luthermuir, about four miles distant, which is described under its own head. There are also several corn-mills, and mills for sawing timber for agricultural uses. Salmon-fishing is pursued

to a small extent, employing five or six men, and the aggregate rent is £40 per annum. An annual fair for cattle, horses, sheep, and wool is held on Balmakelly moor, on the last Friday in July. Facility of communication is afforded by the Aberdeen railway, and by roads kept in good repair. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun and synod of Angus and Mearns; the minister's stipend is £231. 13., with a manse, and a glebe valued at £8 per annum; patron, Alexander Crombie, Esq. Marykirk church, situated in the village, is a neat structure erected in 1806, and containing 638 sittings. There are places of worship for dissenters. The parochial school is generally attended by about fifty children; the master has a salary of £30, with a house and garden, and nearly four acres of land, and the fees average £20 per annum. There is also a school at Luthermuir. The parochial library, consisting of about 200 volumes, chiefly on religious subjects, was presented by Patrick Taylor, Esq.

MARYTOWN, a village, in the parish of FORGAN, district of ST. ANDREW'S, county of FIFE; containing 232 inhabitants. This is a small place, which has latterly increased in population from its contiguity to Dundee.

MARYTOWN, a parish, in the county of FORFAR, $2\frac{1}{4}$ miles (W. S. W.) from MONTROSE; containing about 400 inhabitants. This place is supposed to have derived its name from the dedication of its church to the Virgin Mary, or from the existence here, at some ancient period, of a religious establishment in honour of that saint: on the confines of the parish is a spring which still retains the appellation of Marywell. The parish consists of the estates of Old Montrose and Dysart, distant from each other about half a mile, and divided by an intervening portion of the parish of Craig. It is three miles in length from north to south, and one mile and a half in average breadth. Marytown is bounded on the north by the river South Esk, and the basin of Montrose, commonly designated the Back Sands, and on the south-east by the sea; comprising 2180 acres, of which 2080 are arable, about seventy woodland and plantations, and thirty in natural pasture. Its surface is broken by a small ridge of hills, of which the highest point, Marytown Law, has an elevation of nearly 400 feet above the level of the sea. The summit of this eminence seems to be of artificial structure, and is supposed to have been raised as a beacon, or to have been the spot where the great family of Montrose in feudal times dispensed justice to their vassals. One of the most extensive and beautiful views in this part of the kingdom is to be obtained from the summit of Marytown Law, embracing to the north the richly-fertile vale extending from Montrose to Brechin, enlivened by the picturesque windings of the South Esk, and thickly studded with elegant seats and pleasing villas. The basin and harbour of Montrose, with the town, are seen at one extremity of the vale, and to the west the town of Brechin; while in the back ground appear the Grampian hills, with part of the county of Kincardine, and to the east the view terminates with a prospect of the sea. The South Esk abounds with salmon and sea-trout; and in the month of May great numbers of smaller trout, called smouts, are found in its stream. Vast numbers of aquatic fowl frequent the Back Sands of Montrose during the winter; among these are wild geese, ducks, sea-gulls, curlews, and he-

rons. In the parish generally are partridges and hares in abundance, and pheasants in moderate numbers.

On the lands of Old Montrose the soil is a strong loamy clay, of great depth, and admirably adapted for the growth of wheat; on the lands of Dysart the soil is of much thinner and lighter quality, but rendered fertile by the improvements that have been made of late years. The system of agriculture is in the most advanced state, and the six-shift course generally prevalent; the crops are oats, barley, wheat, peas, beans, potatoes, and turnips. The lands are well drained, and inclosed in the higher parts with stone dykes, and in the lower with hedges of thorn; the farm-buildings, also, are substantial and commodious. A considerable portion of land has been recovered from the Back Sands, and brought into profitable cultivation; and all the more recent improvements in implements of husbandry are in use. A great number of cattle are fed during the winter for the butcher; and a tolerable number of horses are reared, chiefly for agricultural purposes: the breed of these, and also of the cattle that are reared, has been much improved through the encouragement afforded by the agricultural association in the county. The principal substratum is trap rock of a coarse quality; and several quarries are worked, mostly for dykes for inclosures, or to furnish materials for the roads. A fishery is carried on in the South Esk, the produce of which is estimated at about £100 a year. The annual value of real property in Marytown is £4438. The nearest market-town is Montrose, where a ready sale is found for the agricultural and other produce of the parish, and from which place every requisite supply of articles necessary either for the farm or for domestic use can be procured. Facility of communication with the neighbouring towns is maintained by the Aberdeen railway, and the turnpike-road from Montrose to Forfar; and lime and coal may be easily obtained by the river.

Ecclesiastically the parish is in the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Crown. The minister's stipend is £198. 6. 9., with a manse, and a glebe valued at £18 per annum. Marytown church, erected in 1791, and repaired within the last twenty or thirty years, is a neat plain structure adapted for a congregation of 300 persons. The members of the Free Church have a place of worship. The parochial school affords a good course of instruction; the master has a salary of £30 per annum, with £10 fees, and a house and garden. There are also two Sabbath schools, and a parochial library in which are more than 200 volumes of standard works, chiefly on religious subjects, and about 100 pamphlets. Bonnytown, now forming part of the estate of Old Montrose, was formerly the property of the Wood family; and the foundations of the ancient castle where they resided, and of the moat by which it was surrounded, are still traceable.

MARYTOWN, a village, in that part of the parish of KIRRIEMUIR which formed the quoad sacra parish of LOGIE, county of FORFAR; containing 202 inhabitants. The village is chiefly inhabited by persons employed in the linen manufacture, and in agriculture.

MARYWELL, a village, in the parish of ST. VIGEAN'S, county of FORFAR; containing 138 inhabitants. The village is of small extent, and mostly inhabited by persons employed in manufactures connected with the coarse-linen trade.

MASTERTOWN, a village, in the parish and district of DUNFERMLINE, county of FIFE, $1\frac{1}{2}$ mile (N.) from Inverkeithing; containing 145 inhabitants. This village, which is but of small extent, is situated on an eminence in the south part of the parish, commanding a view of the Firth of Forth and the adjacent country; and is neatly built, on the lands of Pitreavie. An hospital was founded here in 1675, by Sir Henry Wardlaw, proprietor of the estate, who endowed it for four poor widows, each of whom has an allowance of six bolls of oatmeal, and 40s. in money, annually.

MAUCLINE, a manufacturing town and a parish, in the county of AYR, $8\frac{1}{2}$ miles, (S. E. by S.) from Kilmarnock, and 11 (E. N. E.) from Ayr; containing, with the villages of Haugh and Auchmillan, 2156 inhabitants, of whom 1336 are in the town, 90 in the village of Haugh, 35 in that of Auchmillan, and the rest in the rural districts of the parish. This place derives its name from the Gaelic *magh*, a meadow, and *linn*, a lake, which together are descriptive of its most prominent features. The town is situated on the south side of a hill that intersects the parish, and at no great distance from the river Ayr. It was formerly a burgh of barony, and still retains something of its original character, being governed by a baron-bailie in conjunction with the county magistrates. Mauchline is neatly built and well inhabited. A public library is supported by subscription, and a certain portion of the funds is annually appropriated to the augmentation of the collection.

The inhabitants are principally engaged in weaving, and in the manufacture of shoes, and snuff-boxes of wood. The manufacture of snuff-boxes affords employment to about 140 persons, and the articles produced are of admirable workmanship and of a great variety of elegant patterns; the weavers work at their own dwellings for the manufacturers of Glasgow and Paisley, and many of the inhabitants are occupied in the various trades requisite for the supply of the neighbourhood. A woollen manufacture is carried on in the village of Haugh, where is a mill for that purpose, which gives employment to thirty persons, chiefly in spinning yarn for the carpet manufactory of Kilmarnock. There are also a corn-mill, a lint-mill, a saw-mill, and a mill for grinding reaping-hooks, all set in motion by the Ayr. A post-office is established; and facility of communication is afforded by excellent roads, of which the turnpike-road from Ayr to Edinburgh, and that from Glasgow to London, intersect each other in the town. At Barskimming is an elegant bridge over the river, consisting of one arch a hundred feet in span and ninety feet high. There is a station at Mauchline of the Glasgow, Dumfries, and Carlisle railway: at Ballochmyle is a grand viaduct on the line. Fairs are held on the first Thursday after the 4th of February, for cows and horses and for hiring servants; on the second Thursday in April, for cows, and general business; the first Wednesday after the 18th of May, and the third Wednesday in June, for cows and horses; the first Wednesday in August, for cows and horses and the hiring of shearers; the first Thursday after the 26th of September, or on that day if it be Thursday, for cows, horses, ewes, and lambs; the first Thursday after the 4th of November, and on the fourth Wednesday in December, for cows and horses. A horse-race takes place on the last Thursday in April. There is a small prison for the temporary confinement of petty offenders.

The PARISH has been reduced in extent by the separation from it of the parishes of Sorn and Muirkirk, and part of Tarbolton. It is situated nearly in the centre of the county, and is about eight miles in length and from two to four miles broad, comprising 7206 acres, of which 500 are woodland and plantations, and the remainder arable in good cultivation, with a moderate portion of meadow and pasture. The surface is level, with the exception of a lofty ridge which intersects it in part from east to west, and terminates in a hill in the parish of Tarbolton. The river Ayr, in part of its course, flows between precipitous banks of red freestone about fifty feet in height. Along it are numerous caverns cut out of the rock, and in other parts its sides are richly wooded, presenting some pleasingly-picturesque features. Near Barskimming it receives the waters of the Lugar; and after a course of ten miles further, it falls into the Firth of Clyde at Ayr. Loch Brown is a fine sheet of water, covering about sixty acres of ground, and frequented by aquatic fowl; it was long in contemplation to drain this lake, but it has been preserved for the supply of the mills to which it gives motion. There are numerous springs affording an abundant supply of water; some of them are supposed to possess mineral qualities, but they have not been yet analysed.

The soil is various, but chiefly of a clayey nature interspersed with light sand, and in some parts a rich loam. It is well adapted to the culture of trees, several of which have attained a luxuriant growth. The crops are, grain of all kinds, potatoes, turnips, and carrots; the system of agriculture is improved, and the rotation plan of husbandry generally adopted. Furrow-draining has been practised to a considerable extent, and the lands are inclosed with hedges of thorn kept in excellent order; the farm-houses are roofed with slate, and the offices well arranged and commodious. The plantations are of larch and other fir, ash, oak, beech, &c.; they are carefully managed, and in a thriving state. On the lands of Barskimming are some larch-trees of remarkably fine growth; and in the churchyard is a stately ash, fifteen feet in girth, and apparently of great age. The substrata are chiefly limestone, ironstone, coal, and white and red freestone; the three first appear in beds of inconsiderable thickness, and are not wrought. Of the red freestone the strata are more than forty feet in depth, and are extensively quarried for building purposes; the white freestone is exceedingly compact and durable, and is employed chiefly for paving and similar uses. The annual value of real property in the parish is £7572. Ballochmyle is a handsome mansion in the Grecian style, and chiefly of the Ionic order; Netherplace is a spacious castellated mansion in the Elizabethan style, pleasantly situated in a well-wooded demesne; and Kinginleugh Cottage is also a good residence.

Mauchline is ecclesiastically in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Marquess of Hastings: the minister's stipend is £230. 19. 11., with a manse, and a glebe valued at £20 per annum. The church is a handsome and spacious edifice in the later English style, with a square embattled tower crowned by angular turrets. It was erected in 1829, to replace the old church, which, being much dilapidated, was taken down; the interior is elegantly arranged and well lighted, and is adapted for a congregation of 1100 persons. There is a place of worship for the United

Presbyterian Church. The parochial school affords a useful education; the master receives a salary of £34, with £40 fees, and a house and garden. There is also a school at Crosshands; the master has a house and garden given by the Duke of Portland. Eight friendly societies are maintained in the town, two of which have been established many years, and possess considerable funds; and all of them have contributed to keep down the number of applications for parochial relief. A savings' bank was founded in 1815. A skirmish took place at Mauchline Muir, between the King's forces and the Covenanters, in 1647, when the former were defeated; and their military chest is said to have been many years afterwards discovered, hidden in the ground. The only remains of an ancient monastery that existed here, subordinate to the abbey of Melrose, consist of a tower in the village, to which has been attached a building converting it into a residence called Mauchline Castle, for some time the abode of Gavin Hamilton, Esq., the friend of Burns. The poet for nearly nine years occupied the farm of Mossziel, in this parish, and while here published the first edition of his works, by the advice and under the patronage of Mr. Hamilton. Mauchline in part confers the title of Baron on the Marquess of Hastings: the dignity was created in the year 1633.

MAUL, ELAN AN, isles, in the parish of ASSYNT, county of SUTHERLAND. These are two very small islands situated on the western coast of the county, and attached to the farm of Culkin-Drumbaig; the shores are bold and rocky, and dangerous of approach except in fine weather.

MAXTON, a rural parish, in the district of MELROSE, county of ROXBURGH; containing, with the village of Rutherford, 459 inhabitants, of whom 110 are in the village of Maxton: the centre of the parish is about seven miles distant from each of the three market-towns of Melrose, Jedburgh, and Kelso. This place appears to have derived its name from its proprietor, Maccus, who in the early part of the twelfth century possessed the manor, which in ancient records is called Maccuston and Mackiston. A carucate of land in the parish was granted to Melrose abbey, about the beginning of the thirteenth century, by Robert de Berkely, whose daughter Alice was married to Hugh de Normanville; but the barony, being subsequently forfeited by William de Soulis, was granted by Robert I. to Walter, Lord Steward of Scotland, who gave the patronage of the church, with some contiguous lands, to the abbey of Dryburgh, to which the church seems to have been an appendage till the Reformation. The ancient village of Maxton is said by some to have been very populous, and to have been able to furnish many armed men; but with greater probability it is supposed to have been only the occasional rendezvous of the numerous troops which subsisted on the borders by continual depredations on their southern neighbours. That it was, however, of much more importance than it is at present, is evident from the foundations of buildings which are frequently discovered in the progress of cultivation; and the shaft of the ancient cross still marks the site of what was perhaps the principal street, though now containing only a few miserable cabins.

The PARISH is pleasantly situated on the banks of the river Tweed, which forms its northern boundary for more than three miles. It is four miles in length, and

nearly three in breadth in the broadest part, diminishing in other parts to about one half; and comprises 4514 acres, of which 3836 are arable, 668 woodland and plantations, and ten acres an irreclaimable bog. The surface is undulated, and rises in a gentle acclivity from the river; it is diversified with numerous flourishing trees, and the country around embraces much interesting scenery. In the southern and higher parts the soil is thin and wet, but in the north of better quality, consisting of a light and dry earth resting on freestone and gravel, and a rich loam on a substratum of clay, and bearing heavy crops of wheat, barley, and oats, with peas, beans, turnips, and clover. The bed of the Tweed is a reddish sandstone, which is quarried, also, in the steepest of its banks, and is of good quality for building. Masses of whinstone are likewise found on the banks of the river, and in other parts of the parish, of great hardness, and well adapted to the formation and repair of roads. The four, five, and six shift courses of husbandry prevail, according to the several qualities of the soil; and agriculture in general is in a very improved state. The plantations consist principally of ash, elm, larch, and oak, which thrive exceedingly well, and Scotch fir, which thrives for a short time, but seldom forms profitable timber. Great improvements have taken place in draining, inclosing, and fencing the lands; lime and bone-dust are much used, and considerable facilities for obtaining the former have been afforded by the improvement of the roads. The farm houses and offices, also, are substantially built and commodious. Considerable advantage is derived to Maxton from its proximity to the several markets of Jedburgh, Kelso, and Melrose, and from the facility of intercourse which it enjoys. The cattle are chiefly the short-horned breed; and the sheep the Leicestershire, with a few of the Cheviot, and a cross between both: much attention is paid to their management, and to the improvement of the stock. The annual value of real property in the parish is £4256.

Maxton is ecclesiastically in the presbytery of Selkirk, synod of Merse and Teviotdale, and in the patronage of Sir W. H. Don, Bart.: the minister's stipend is £211. 15. 10., with a manse, and a glebe valued at £10 per annum. The church, romantically overhanging the Tweed, is part of a very ancient structure dedicated to St. Cuthbert; the time of its original foundation is unknown, but it was modernised and repaired in 1812, and gives accommodation to a congregation of 150 persons. The parochial school affords a useful education, but the children of the peasantry, from the early age at which they are employed in agriculture, derive but partial benefit from it; the master has a salary of £30 a year, with a house and garden. The poor receive the interest of a sum bequeathed for charitable uses, amounting to about 32s. per annum. In the north-east of the parish are the remains of an ancient fortification of semicircular form, nearly 160 feet in diameter, and situated on the summit of a cliff impending over the Tweed, by which it is defended on that side, being secured on the others by deep trenches and ramparts. It is called Ringly Hall, but the origin of the name is unknown, neither has it been ascertained by whom the fortification was made. On its east side was an entrance; and at no great distance, but in the parish of Roxburgh, is a tumulus with which it appears to have been connected.

The English, in one of the border skirmishes, are said to have occupied this station, while the Scots took up their position in a deep ravine on the other side of the Tweed; and the former, having forded the river to attack the latter, sustained a signal defeat, and many of them were slain. The spot where they were buried was the cemetery of the church of Rutherford, a small parish which, after the dissolution of its church, was annexed to Maxton. There was an hospital connected with the church of Rutherford, for the reception of strangers and the maintenance of infirm poor. It was dedicated to St. Mary Magdalene, and was granted by Robert I. to the canons of Jedburgh, which grant was confirmed to that body by Robert II. No remains exist of any of the buildings; the site has been ploughed up, and the gravestones in the cemetery have been broken, and used as materials in the construction of drains. Vestiges of a Roman camp, on the west side of which are the remains of a Roman road, are still to be traced on the declivity of a hill near Lilliards Edge: the road, in some parts tolerably perfect, passes by the western boundary of the parish, and crosses the river Teviot near the mouth of the Jed, and the river Tweed near Melrose. About a mile westward of the site of the ancient village of Rutherford are the ruins of Littledean Tower, once a place of great strength, and the residence of the Kerrs, of Littledean, by whom it was finally deserted during the last century; they occupy an elevated site on the bank of the Tweed, but are rapidly disappearing.

MAXWELLHEUGH, a village, in the parish and district of KELSO, county of ROXBURGH; containing 90 inhabitants. This place, which is of very great antiquity, and now a suburb of the town of Kelso, formed part of the parish of Maxwell, long since united to that of Kelso. There anciently stood here, south of the river Teviot, and nearly opposite to Roxburgh Castle, a Maison Dieu for the reception of pilgrims and of the diseased and indigent; and its site is chiefly the ground on which the present village is built. David I. granted to the establishment a carucate of land in Ravendene; and it appears that in 1296 Nichol de Chapelyn, the guardian of the house, did homage to Edward I. It belonged to the monks of Kelso, together with the chapel of Harlow, which stood at a farm called Chapel, about a mile from Maxwell. In 1389, Richard II. of England granted to Allan Horsle and his heirs the villis of Maxwell and Softlaw; and Robert II. bestowed on John de Maxwell the lands of Softlaw, in the barony of Maxwell. The church of Maxwell was a rectory, and, when the monks were in possession, was valued at £11. 16. 8. per annum. The village is charmingly situated on the south bank of the Tweed, opposite to the eastern extremity of the town of Kelso, and on a gently-rising eminence; hence the affix of "heugh" to the name. It is surrounded with wood; and the prospect from the village, and from the ascent to it, is very beautiful, embracing almost every description of scenery. In the neighbourhood are excellent bridges across the Tweed and Teviot. The Earl of Morton had a residence in this suburb in the time of Elizabeth.

MAXWELLTON, a village in the parish of EAST KILBRIDE, Middle ward of the county of LANARK, $2\frac{1}{2}$ miles (W. S. W.) from Blantyre; containing 334 inhabitants. It is situated in the north-eastern part of the parish, about a quarter of a mile from the church at Kirk-

ton village, and not much more than half a mile eastward of the village of Kilbride. A school here is supported by Sir William Maxwell, Bart.

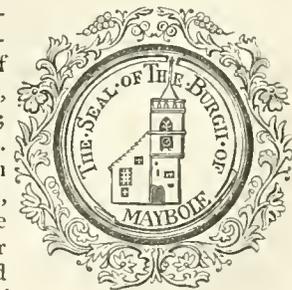

MAXWELLTOWN, a burgh of barony, in the parish of TROQUEER, stewartry of KIRKCUDBRIGHT; adjoining the town of Dumfries, and containing 3230 inhabitants. This place, originally the small village of Bridge-End, was erected into a burgh of barony in 1810, in favour of its superior, Marmaduke Constable Maxwell, Esq., of Nithsdale, in honour of whom, upon the occasion, it assumed its present name. The town, which since that time has greatly increased in extent and population, is pleasantly situated on an eminence on the western bank of the Nith, opposite to the royal burgh of Dumfries, to which it forms an interesting suburb, and with which it is connected by two bridges over the river. It is included in the parliamentary boundaries of that burgh. The more ancient portion of the town is irregularly built, consisting of indifferently-formed and narrow streets, the houses of which possess neither uniformity of character nor pretension to neatness; but the more modern portion is handsome, its streets regular and spacious, and the houses of very superior appearance. In the year 1833 the inhabitants adopted the general police act, for paving, lighting, and cleansing the streets, &c.; and the aspect of the town has thus been much improved, and the comfort of the population enhanced. In the environs, which are very pleasant, are four nurseries, two of them having hot-houses for raising grapes and other fruits, which are produced in great perfection.

A manufactory for damask which is celebrated for the beauty of its texture, and the elegance of its patterns, gives employment to several of the inhabitants; and a waulk-mill, a dye-house, a brewery, and two rope-walks, have long been established. Two iron-foundries, also, have been lately erected; but though both are in full operation, they scarcely afford a supply of articles adequate to the demand. The market for butchers' meat is amply supplied, and for some time it took precedence of that of Dumfries. A branch post-office under that of Dumfries has been established; and facility of communication is maintained by the public road from London to Portpatrick, and that to Glasgow and Edinburgh by Thornhill and Elvanfoot, both of which pass through the town. The government is vested in a provost, two bailies, and four councillors, elected annually by the proprietors of subjects in the burgh of the yearly rental of £5 or upwards. The magistrates hold courts for the determination of civil actions to a limited extent, and for criminal cases as occasion may require, in both of which they are assisted by the town-clerk, who acts as assessor: their civil jurisdiction is, however, much lessened by the small-debt courts held here by the sheriff; and their criminal jurisdiction is confined to the smaller offences. The court-house is a plain building, but has sufficient accommodation for transacting the public business of the burgh, and for holding the several courts; and below it is a gaol for the confinement of delinquents till their committal to the gaol of Kirkeudbright. A chapel, to which an ecclesiastical district having a population of 1932 was for a time annexed, was erected here within the last few years; it is a neat building containing about 1000 sittings. The members of the Free Church have a place of worship with 800 sittings. A school has been erected, the master of which has a salary

of £9. 12. from an endowment by the heritors, and £4 the interest of a bequest, in addition to the fees; and there are two other schools, supported wholly by the fees. In these three schools about 250 children are taught.

MAY, an island, in the parish of ANSTRUTHER EASTER, county of FIFE; containing 22 inhabitants. It is a small isle, lying at the mouth of the Firth of Forth, about six miles south-east-by-south from Crail, the nearest part of the coast; and is a mile in length and three-quarters of a mile in breadth. The island was formerly the property of General Scott, of Balcomie, and afterwards of his daughter, the Duchess of Portland, from whom it was purchased, with the right to the duties, by the Commissioners of Northern Lights, for the sum of £60,000. It has had a lighthouse at least since the year 1635; but a more commodious edifice was erected in 1816, and the light, which is fixed, is seen at the distance of twenty-one nautical miles. There was at one time a village, at which divine service was performed once a month; but at present the only inhabitants are the lighthouse-keepers and their families. The pasturage for sheep here is of the finest kind, and a well supplies excellent water; the island, however, is much exposed to cold bleak winds: it is visited by immense numbers of various kinds of sea-fowl. There are ruins of a religious house that belonged to the priory of Pittenweem; and in the chapel of it, which was dedicated to St. Adrian, who is said to have been killed upon the island by the Danes in 870, or 872, that saint is supposed to be buried. In January 1791, a melancholy accident occurred at this place. For two evenings no light was exhibited, and the weather was so tempestuous that no boat could be put off from the shore to ascertain the cause. On the third day the storm abated, and a boat was manned from Crail, the crew of which upon landing were assailed by a strong sulphureous smell; and on proceeding directly to the lighthouse, they found the door closed, and that no one answered to their call. Forcing an entrance, they discovered the keeper, his wife, and five children all suffocated to death, and a sixth child, an infant, sucking the dead mother. In another room were two men almost expiring, who were providentially recovered by the timely assistance rendered to them; two cows in a byre under the building were dead. It was supposed that this lamentable disaster was caused by burning coal having been blown among some refuse which lay at the bottom of the lighthouse.

MAYBOLE, a market-town and parish, in the district of CARRICK, county of Ayr, 9 miles (S.) from Ayr, and 12 (N. E.) from Girvan; containing 7027 inhabitants. This place, the name of which is of very doubtful origin, appears to have been the chief seat of judicature for the district of Carrick, and to have been the residence of the Earls of Cassilis, in those times denominated Kings of Carrick, and of the principal families of the district: the town still retains many vestiges of its former importance. It was erected into a burgh of barony in 1516 by charter of James V..

Burgh Seal.

which conferred on the inhabitants the privilege of a weekly market, the right of election of bailies and other officers for the due administration of affairs, and all other liberties and immunities appertaining to a free burgh. There are several streets of neat houses, and the town is paved, lighted, and supplied with water by the corporation; the approaches have been improved by the formation of good roads in different directions, and some of the streets have been widened: the adjacent scenery is interesting. A public library is supported by subscription, and there is also a circulating library. An agricultural association called the Carrick Farmers' Society has been long established, and holds meetings in the town to award premiums for improvements, and for the exhibition of stock, when, among other prizes, are voted two pieces of plate annually given by the Marquess of Ailsa and Sir Charles D. Fergusson of Kilkerran.

The inhabitants are principally employed in weaving for the manufacturers of Glasgow and Paisley, which is not confined to the town, but is practised in every small hamlet throughout the parish; and it is calculated that, on an average, from £500 to £700 are weekly paid to the weavers by the agents of the manufacturers who supply them with work. There are some good shops for the sale of merchandise; and the various trades connected with an extensive agricultural and manufacturing district are carried on here. At Dunure is a small fishing harbour, where cargoes of lime and bone-dust are landed in vessels from Ireland; but the fisheries have their chief market at Ayr. The post-office has a delivery twice a day. The market is on Thursday, chiefly for butter, eggs, and fowls, the grain raised in the parish being generally sent to Ayr; and four fairs are annually held, called the Candlemas, Beltane, Lammas, and Hallow E'en fairs: they were formerly amply furnished with stores of all kinds, but are now mostly limited to the hiring of servants. Under the charter of James V. the burgh is governed by two bailies, and a council of burghesses seventeen in number, who supply vacancies, as they occur by death or resignation, from their own body; the bailies and the subordinate officers of the corporation are elected annually. The magistrates exercise jurisdiction within the burgh, and hold weekly courts for the determination of civil suits to any amount and the trial of petty misdemeanors, in which the town-clerk acts as assessor; they also exercise a summary jurisdiction in a court for the recovery of debts not exceeding six shillings and eight pence. The town-house is an old building, ill adapted to its purpose; and attached to it is a small prison, equally unsuitable, used for the confinement of prisoners previously to their committal to the gaol of Ayr.

The PARISH is nine miles in length and about five in extreme breadth. It is bounded on the north, and partly on the east, by the river Doon, which separates it from the parishes of Ayr and Dalrymple; on the east by the parish of Kirkmichael; on the south by the river Girvan; and on the west by the parish of Kirkoswald and the Firth of Clyde. The surface, in general undulating, is towards the north-east intersected by a lofty ridge called Brown-Carrick Hill, which commands an extensive and richly-varied prospect over the river Doon, the sea, and the spacious tracts of fertile country around, including the districts of Kyle and Carrick, the town of

Ayr, and other interesting objects. The rivers are the Doon and the Girvan; the former appears to have changed its ancient course, and to have made for itself a shorter and more direct channel previously to its influx into the sea. There are various springs of pure water, affording generally a good supply, one of which, called the Well Trees Spout, discharges about 1000 imperial gallons per hour; there are also some chalybeate springs, formerly in repute, but not at present much regarded. The soil is various: that of the arable lands is of a light dry quality, and abundantly fertile; in other places there is a strong clay, and in some parts moss and moorland. In this parish the number of acres is estimated at 20,681, of which 16,684 are arable, 955 in woods and plantations, about 600 meadow, and 2400 hilly pasture and moor. The crops are wheat, oats, beans, barley, potatoes, and turnips; the system of agriculture is advanced, and a considerable portion of the moorland has been lately reclaimed and brought into cultivation. Great progress has been made in draining the land. The farm houses and offices on the larger farms are in general substantial and commodious, but on the smaller many of the buildings are inferior; the lands are inclosed chiefly with hedges of thorn, and various improvements in agricultural implements have been rapidly growing into common adoption. Considerable numbers of young cattle are fed on the hills; they are now almost exclusively the Ayrshire, which have been found to answer better than the Galloway, formerly fed in the parish. There are also a few sheep; they are chiefly of the Cheviot and black-faced kinds, but on some farms the Leicestershire have been lately introduced. The substrata are mainly sandstone, limestone, ironstone, and shale; the sandstone is of a reddish colour, and in some instances passes into conglomerate. The annual value of real property in the parish is £20,742.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Ayr, synod of Glasgow and Ayr; and the patronage is in the Crown. The stipend of the incumbent averages about £300, with a manse built in 1806, a small but comfortable residence; and a glebe comprising several acres, valued at £30 per annum. The church, erected in 1808, is a substantial edifice adapted for a congregation of about 1300 persons; and its distance from many parts of the parish rendering additional accommodation necessary, two other churches of the Establishment have been erected, one at Fisherton, on the coast, and the other at the west end of Maybole, affording together sittings for 1100 persons. There are places of worship for the Free Church and United Presbyterian Church; also a small place of worship for Wesleyan Methodists, seldom or never used. The parochial school affords a good course of instruction, and the master, who has an assistant, receives a salary of £34, with a money equivalent for a house and garden, and an allowance of £5 to be distributed in prizes among the scholars; the fees average about £100. There are various other schools in the parish, of which one is supported by subscription, and two have each a free school-room. A savings' bank has also been established. There are still some remains of the ancient collegiate church of this place, which was endowed for a rector and three prebendaries, and of which the revenue at the dissolution of the chapter was granted to the Earl of Cassilis, by whose family, and by others who contributed

to the preservation of its remains, it is used as a place of sepulture. A portion of some conventual buildings is likewise remaining, and the orchards attached to them are yet to be traced. These relics have been lately surrounded with walls, and the inclosure tastefully planted by subscription of the inhabitants. Remains also exist of various ancient castles scattered throughout the parish. Of the castle of Maybole, the ancient baronial residence of the Earls of Cassilis, the principal part is still in good preservation; and there are considerable portions left of those of Newark, Greenan, Dunduff, Dunure, and Kilhenzie. Of the others, there remain only slight fragments of the dilapidated walls. On the farm of Trees are the vestiges of an encampment; and several more are to be seen in different parts, one of which, near the castle of Dunduff, is in very tolerable preservation. In the Provost's house, now the Red Lion inn, a meeting for discussing the Roman Catholic and the Reformed doctrines took place between Quintin Kennedy, Abbot of Crossraguel, who had in his chapel of Kirkoswald proclaimed himself ready to defend the mass against all objectors, and the celebrated Reformer, John Knox: it was continued for three days. Dr. Macknight, author of the *Harmony*, and the *Truth of the Gospel Histories*, was for some time incumbent of this parish.

MEADOWMILL, a village, in that portion of the parish of TRANENT which formed part of the quoad sacra parish of COCKENZIE, county of HADDINGTON; containing 120 inhabitants. This village, of recent origin, occupies a site memorable as the scene of the battle of Prestonpans, and as the spot where Col. Gardiner was killed, while endeavouring to rally a body of infantry that had been engaged in the conflict. It is inhabited chiefly by persons employed in agricultural pursuits; and the children of the village receive instruction in the free school attached to Stiel's Hospital, which is situated a little to the south. The hospital, a handsome and capacious building, was erected in 1821, at an expense of £3000, and contains arrangements for the maintenance and education of a limited number of boys and girls.

MEARNS, THE.—See KINCARDINESHIRE.

MEARNS, a parish, in the Upper ward of the county of RENFREW, 7 miles (S. W. by S.) from Glasgow; containing, with the village of Newton and part of Busby, 3077 inhabitants. This place, in ancient records called *Meirnes*, *Morness*, and *Mearnis*, appears to have derived its name from the appellation common to all districts inhabited chiefly by herdsmen: from a remote period the lands have been principally pasture, and distinguished for the abundance and excellence of the produce of the dairy. The barony is said to have been the property of the Maxwells prior to the year 1245; but no authentic notice of that family occurs previously to the time of James II., when, on the downfall of the Douglasses in 1455, they acquired considerable possessions in this part of the country. In the reign of James VI., one of the Maxwells, being ordered by that monarch to confine himself within the limits of Clydesdale, was for disobedience to that injunction attainted in parliament, and the barony transferred to the Maxwells of Pollock. There are still some remains of the ancient castle of Mearns, the seat of the Maxwell family, but now the property of Sir Michael Robert Shaw Stewart, consisting

chiefly of a square tower, lately covered with a roof, the summit of which is within the battlements.

The PARISH is nearly seven miles in length and about three miles and a quarter in breadth. It is bounded on the north by Eastwood; on the south-east by the parishes of Eaglesham and Carnunnock, the latter in the county of Lanark; on the south-west by the parishes of Fenwick and Stewarton, in Ayrshire; and on the north-west by Neilston. The surface is elevated, and broken by numerous bold undulations; but there are no hills of any considerable height. The soil is light, dry, and warm, incumbent on a stratum of decomposed rock, except in some few tracts where the substratum is clay, chiefly in the lower lands: by far the greater portion is in pasture. Of the land in cultivation, the fertility has been much increased by the facility of obtaining an abundant supply of manure; the crops are oats, barley, wheat, beans, and peas, with potatoes and turnips. The pastures are rich, and the dairy-farms are managed with skill and success; the cows are of the best species of the Ayrshire breed, and the butter produced here obtains a decided preference in the markets of Paisley and Glasgow. The scenery is generally of pleasing character, in some parts highly picturesque and romantic. It is enriched with thriving plantations, chiefly of Scotch fir, spruce, and larch, for which the soil seems well adapted. In the south are several lakes; the principal are Brother loch, Little loch, Black loch, and Long loch, the last on the confines of the parish of Neilston.

There are numerous houses belonging to resident proprietors, some of which are on the highest eminences, and others in the deep valleys that intersect the hills. Upper Pollock, the seat of Sir Robert C. Pollock, is an ancient mansion, situated on rising ground, commanding a richly-diversified prospect; and attached to it was formerly a chapel, which since the Reformation has fallen into ruins. Southfield is a handsome residence, beautifully seated in a demesne enriched with woods and plantations. Caplerig was once a preceptory of Knights Templars. The chief villages are Newton and Busby, both of which are described under their own heads; the former is within half a mile of the church, and the latter on the eastern confines of the parish. The printing of calico, for which there are spacious establishments at Wellmeadow and Hazelden, affords employment to about 300 persons; there is an extensive cotton-factory at Busby, and a bleachfield at Netherplace. A fair is held at Newton, but it is very inconsiderable, chiefly a pleasure-fair. A branch post has been established under the office at Glasgow; and the road from Glasgow to Kilmarnock, passing through the parish, affords every facility of intercourse with neighbouring parts. The annual value of real property in Mearns is £16,559. It is ecclesiastically within the bounds of the presbytery of Paisley, synod of Glasgow and Ayr: the minister's stipend is £262. 18. 4., with a manse, and a glebe valued at £20 per annum; patron, Sir Michael Robert Shaw Stewart. The church, a very ancient structure, was repaired and enlarged in 1813, and contains 705 sittings. There are two places of worship for members of the United Presbyterian Church, one in the village of Newton and one at Busby. The parochial school is attended by about 100 scholars; the master has a salary of £34, with a house and garden, and the fees average £63. There are also schools at Busby and other places.

MECKPHIN, a hamlet, in the parish of **METHVEN**, county of **PERTH**, 1 mile (S.) from Methven; containing 56 inhabitants. This is a very small place lying in the south part of the parish.

MEGGET, county of **PEEBLES**.—See **LYNE**.

MEIGLE, a parish, and the seat of a presbytery, in the county of **PERTH**; containing 728 inhabitants, of whom 271 are in the village or town of Meigle, 5 miles (N. E. by E.) from Cupar-Angus. The etymology of the name is doubtful: it has been conjectured that, the church and manse being built on a plain between two marshes or "gills", the whole district took the appellation of Mid-gills, gradually changed into Meigle. The only historical memorial of any interest connected with the place is the monument of Vanora, the reputed wife of the renowned King Arthur, who lived in the sixth century. She was captured in a battle which he fought with the Picts and Scots, and sent as prisoner to a strong place at Barry-hill, about two miles and a half from this parish: having there formed an illicit connexion with Mordred, a Pictish king, she was ordered by Arthur, when he received her again, to be torn in pieces by wild beasts. The **PARISH** is four miles and a half long and from one to two broad, and contains above 3000 acres. It lies in the centre of the great level of Strathmore Proper, which reaches from near Perth to Brechin, a distance of forty miles; and the parish is even throughout, with the exception of a gentle eminence on which Belmont Castle is situated. On the north and north-west rise the Grampians, and on the south and south-east the Sidlaw hills. The river Isla and the Dean water unite about half a mile north-west from the town: in the former, common white trout, pike, and a few salmon are taken; in the Dean are perch and pike, and its red trout are much esteemed for their excellent flavour.

The **SOIL** in general is a fine black mould; but in some parts the ground partakes of the nature of sand and clay. There are 2726 arable acres; 100 acres in pasture, a small part of it in its natural state; and 178 acres occupied by wood, consisting of most of the trees usually grown, and which are regularly thinned and pruned. The best system of husbandry is followed; and being well cultivated, the land bears excellent green and white crops of every description. Since the period of the commencement of agricultural improvements in Scotland, the appearance of the parish has undergone an entire change, the barren and rough ground having been all reclaimed, and fenced with hedge-rows. The chief disadvantage is the deficiency of roads. In this parish the rocks are mostly red sandstone, of which two quarries are wrought for building: marl has been obtained in considerable quantities. The annual value of real property in Meigle is £5442. Belmont House, a seat of Lord Wharncliffe's, built upwards of seventy or eighty years ago, on the site of the old mansion of Kirkhill, is a quadrangular edifice, retaining part of the ancient tower; the interior is handsomely fitted up, and contains a superior library: there is a fine park, with excellent lawns and gardens, and an observatory. The other mansions are Meigle House, Drumkilbo, Potento, and Caerdean.

Meigle is an ancient, but inconsiderable and meanly-built, town, pleasantly situated on a rivulet of the same name, in the centre of the parish, at the intersection of

two turnpike-roads. The regular weekly market has for some time been discontinued, but there is a tryst every fortnight for the sale of cattle; and two fairs are held, one on the last Wednesday in June, the other on the last Wednesday in October, for cattle, horses, and for general traffic; both which are well attended. A few persons in the parish are employed in weaving coarse linen, and there is a mill for dyeing and dressing cotton-cloth for umbrellas. The fuel chiefly used is coal brought from Dundee. There is a post-office here, and about six miles of turnpike-road run through the parish. A bridge has been erected by subscription over the Isla, connecting Meigle with Alyth; and there is a very ancient bridge over the Dean, connecting it with Airlic, in the county of Forfar: the bridges and roads are generally in good repair. The railway from Perth to Forfar passes at a short distance from the town, and has a station called the Meigle station, where the line is joined by the Dundee and Newtyle railway.

For **ECCLESIASTICAL** purposes the parish is within the bounds of the presbytery of Meigle and synod of Angus and Mearns; patron, the Crown. The stipend of the minister is £238, including about £3. 8., vicarage-tithe on yarn; and there is a manse, built in 1809-10, with a glebe of about five acres and a half, worth £17 a year. The church, a plain structure, erected about the year 1780, comprises two aisles of the former edifice; it is in tolerable repair, and seats 700 persons. This benefice was formerly annexed to the see of Dunkeld; several of the bishops resided here, and two of them were buried in the church: the greater part of the stipend of Dunkeld is still paid out of this parish. There is an episcopal chapel, and the members of the Free Church have a place of worship. The parochial schoolmaster receives a salary of £36. 7. 2., including £2. 2. 9½, in lieu of a garden, and has a house; his fees amount to about £16. The ruin of the famous sepulchral monument of Vanora is distinguished by a variety of sculptured figures, consisting of a centaur, a huge serpent fastened to a bull's mouth, and wild beasts tearing human bodies to pieces. There is a tumulus in Belmont park called Belliduff, which tradition asserts to be the spot where Macduff slew Macbeth; and about a mile distant is a block of whinstone, twenty tons in weight, called Macbeth's Stone. The correct opinion, however, is that Macbeth was slain at Lumphanan, in Aberdeenshire.

MEIKLEOUR, a village, in the parish of **CAPUTH**, county of **PERTH**, 2½ miles (W. by S.) from Cupar-Angus; containing 110 inhabitants. It lies in the eastern extremity of the parish, a short distance north of the river Isla, and about five miles eastward of the church. Meikleour is a small place, the property of Lady Keith. On an adjoining moor are vestiges of a Roman station.

MEIKLEWARTHILL, a hamlet, in the parish of **RAYNE**, district of **GARIOCH**, county of **ABERDEEN**, 3 miles (N. E. by E.) from Old Rain; containing 156 inhabitants. This village is situated in the eastern part of the parish, and though small, is the largest in Rayne, consisting of about forty dwellings. A cattle market is held annually. There is an unendowed school at Meiklewarthill.

MELDRUM, a burgh of barony and a parish, in the district of **GARIOCH**, county of **ABERDEEN**; containing 1873 inhabitants, of whom 1102 are in the burgh, 17

miles (S. S. E.) from Turriff, and $17\frac{3}{4}$ (N. N. W.) from Aberdeen. This place was anciently called Bethelnie, and is supposed to have derived that appellation, signifying in the Hebrew language "the House of God", from the early erection of a church, which at that time was the only religious edifice within a very extensive district. Its modern name, which is of Celtic origin, implying "the ridge of a hill", appears obviously to have been derived from the general acclivity of the surface, which towards its northern extremity attains a considerable degree of elevation. The town is situated on the turnpike-road from Aberdeen to Banff, and consists of several irregularly-formed streets; the houses are mostly well built, and many of them of handsome appearance. The cotton manufacture is pursued to some extent, there being two establishments belonging to the manufacturers of Aberdeen, in which a number of persons of both sexes are employed in hand-loom weaving, under the superintendence of agents residing in the town. The knitting of worsted stockings also affords occupation to many of the females, and there are a distillery and a brewery; the different handicraft trades requisite for the supply of the neighbourhood are carried on here, and there are shops for the sale of various wares. Meldrum was erected into a burgh of barony by charter of Charles II., in 1672, in favour of James Urquhart, Esq., and continued for some time to be governed by two baron-bailies nominated by the superior; but there is at present neither any public magistrate nor any regular police. The town-hall is a handsome building surmounted with a spire. A weekly market, which is abundantly supplied with provisions of every kind, is held on Saturday: a market for cattle and grain is held every alternate week during the winter and spring; and there are fairs for hiring farm-servants in May and November. The post-office has four deliveries daily; and facility of communication is afforded by the turnpike-road from Aberdeen and Banff, which passes through the town, and for five miles and a quarter through the parish.

The PARISH is about seven miles and a half in extreme length, varying in breadth from two to five miles, and comprising an area of 7474 acres, of which 5774 are arable, 500 woodland and plantations, and the remainder moor and waste. Its surface is diversified with hills of no great elevation, of which a range extends across the parish from the north to the north-west. Several small rivulets flow in various directions, and give motion to some corn-mills. In the southern portion of the lands the soil is a strong rich loam, superincumbent on a bed of clay, and in the northern parts of a thinner and lighter quality. The crops are oats, bear, and a small proportion of wheat, with potatoes and turnips. The system of husbandry is improved; the lands have been drained, and inclosed partly with stone dykes and partly with fences of thorn. The farm-buildings are substantial and commodious, and well adapted to the extent of the farms. Such has been the progress of improvement that the prize of the Aberdeenshire Agricultural Society, for the best cultivated farm in the county, was awarded to the tenant of Bethelnie, in this parish. The cattle reared in the pastures are of the Old Aberdeenshire breed, with a few of the Teeswater; the sheep are of the South-Down, the Leicester, and the native breeds. In this parish the plantations are chiefly ash, elm, oak,

plane, beech, and the various kinds of fir, all of which are in a thriving state. The substrata are mostly whinstone, limestone, and horublende-rock, of which last detached masses are occasionally found: the limestone was formerly wrought, but the workings have been discontinued. The annual value of real property in the parish is £4999. Meldrum House, the seat of B. C. Urquhart, Esq., superior of the burgh, is a spacious and elegant mansion, completed in 1840, and beautifully situated in a demesne enriched with ancient timber and with thriving plantations of modern growth.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Garioch and synod of Aberdeen. The minister's stipend is about £224, with a manse, and a glebe valued at £28 per annum; patron, Mr. Urquhart. Meldrum church, an ancient structure erected in 1684, and repaired and reseat in 1810, is centrally situated, and contains 700 sittings. There are places of worship for members of the Free Church and United Presbyterian Church, and an episcopal chapel. The parochial school is well attended: the master has a salary of £28, with an allowance of £6 in lieu of a dwelling-house, and the fees average about £14 per annum; he has also the interest of a bequest of £200 for the gratuitous instruction of poor children. The ground-floor of the town-hall has within the last few years been set apart as a schoolroom, for the instruction of females in the usual branches of a religious, moral, and industrial education. On the lands of Bethelnie were some vestiges of a Roman camp, which have been levelled by the plough; and on the site of the original church is a burying-ground, in which is the sepulchral vault of the Meldrum family. There are some remains of an ancient chapel on the farm thence called Chapel-house, with a well inclosed by masonry. Near it was found within the last few years a rudely-formed stone coffin containing an urn, with a human skull and some bones; and on the same farm were discovered two similar urns, placed under a kind of pavement.

MELLERSTAIN, a village, in the parish of EARLSTOWN, county of BERWICK, $4\frac{1}{2}$ miles (E.) from Earlstown; containing 173 inhabitants. It is situated in the eastern part of the parish, on the west side of the river Eden; and in the vicinity is Mellerstain House, a large modern mansion beautifully situated, the seat of the Baillie family. A school is chiefly supported by George Baillie, Esq., who allows the master a school-house and dwelling-house, and pays him the interest of a bequest.

MELROSE, a market-town and parish, and anciently a burgh of barony, in the district of MELROSE, county of ROXBURGH; including the villages of Darnick, Eildon, Gattonside, Newstead, Newtown, the Blainslies, and more than half the town of Galashiels; and containing 5331 inhabitants, of whom 893 are in the town of Melrose, 13 miles (N. W. by N.) from Jedburgh, and 37 (S. E. by S.) from Edinburgh. This place derived its ancient name, Mullross, of which its present is only a slight modification, from the Gaelic words *Mull* or *Moel*, bare, and *Ross*, a promontory, descriptive of its position on a peninsula formed by the river Tweed, and which at that remote period was literally a barren and rugged rock. In the beginning of the seventh century, a society of Culdees established themselves here from Iona, and a monastery was founded on a commodious site,

which is now, in contradistinction to the present town, called Old Melrose. A monastery of greater extent was built five centuries after in a more convenient part of the parish, to which were transferred the remains of the former establishment, and where are yet preserved the ruins of the venerable abbey, so remarkable for their beauty. During the seventh century, Oswald, the Saxon King of Northumbria, at that time an exile among the Piets, who occupied the district to the north of the river Forth, was converted to Christianity by the Culdees of this place, and on his restoration to his kingdom prevailed upon certain of the monks to visit his dominions for the conversion of his subjects; he appointed Aidan to the bishopric of Lindisfarne, and built churches and planted missionaries in this parish and various other parts of his territories. The church at Old Melrose, over which was placed one of Aidan's disciples, flourished in peace and security for more than two centuries, and produced many eminent characters, of whom St. Cuthbert, who was afterwards Bishop of Lindisfarne, and St. Boswell, who gave his name to a neighbouring parish, were the chief. In 839, the peninsula of Old Melrose was taken by Kenneth II., who laid waste the country as far south as the river Tweed; and the monastery, which was then destroyed, was never afterwards restored. It became the temporary residence of a few monks from Girwy, and ultimately was only a chapel dedicated to St. Cuthbert, having attached to it the privileges of a sanctuary, the road to which, called the Girthgate, may be traced over the moorlands. During the interval between the decay of the Old and the foundation of the New Melrose, a religious establishment was formed on a site nearly central to both: this, from the colour of the stone with which the church was built, was termed the Red Abbey, and the field where it stood is still called the Red Abbey stead.

In 1136, the magnificent ABBEY referred to above, and of which the ruins are so celebrated, was founded by David I. in honour of the Virgin, for monks of the Cistercian order brought from Rivaulx, and then first introduced into Scotland. It appears to have been progressively enriched, and the character of the buildings to have been improved to a height of elegance and magnificence to which, at the time of its foundation, it had no pretensions; but there are no records of its history to show by what means, or under whose auspices, it attained that perfection in its architectural character which has rendered it conspicuous as one of the most splendid ecclesiastical remains in the kingdom. Notwithstanding, however, that it made this progress during the whole period in which it flourished, it suffered very severely at different times. The English army, in its retreat under Edward II. in 1322, plundered and despoiled it to so great an extent that Robert Bruce felt compelled, four years afterwards, to grant the sum of £2000 sterling for restoring it and rebuilding those parts which had been destroyed. In 1384 it was burnt by the English under Richard II. Sir Ralph Evers and Sir Bryan Layton sacked it in 1545; and again, in the same year, the structure fell a prey to the Earl of Hertford, while Queen Mary was an infant. It was sadly defaced in 1560, at the period of the Reformation; and lastly, it was ruthlessly bombarded by Cromwell from the Gattonside hills. On its dissolution at the introduction of the Reformed religion, the abbey was annexed to the crown by a sta-

tute which provided that the sovereign should not have power to alienate it; but this was rendered nugatory by subsequent acts of parliament, and grants of different portions of the property were made to individuals favoured by the court. The whole is now the property of the Duke of Buccleuch. The revenue of the establishment was stated in 1561 at £1758 Scots, and nearly 200 chalders of wheat, barley, oats, and meal, besides payments in capons, poultry, butter, salt, peat, and other articles. The monks received annually for their own consumption sixty bolls of wheat and 300 casks of ale; while for the service of the mass eighteen casks of wine were allotted; for the entertainment of strangers, thirty bolls of wheat, forty casks of ale, and twenty casks of wine; and a considerable sum was set aside for the nourishment of the sick and infirm. The number of monks seems latterly to have varied from sixty to 100, with an equal number of lay brethren: in 1520 there were eighty monks; in 1540, seventy, and sixty lay brethren; and in 1542 the number of monks was 100.

The REMAINS of Melrose Abbey are situated about three miles westward of the peninsula on which the old church was built, and in the most picturesque part of the vale between the Eildon hills and the heights of Gattonside, a quarter of a mile to the south of the river Tweed. They consist chiefly of the ruins of the church, a stately cruciform structure 258 feet in length and 130 feet in breadth, with part of a central tower eighty-four feet high. The nave, choir, and transepts, with part of the cloisters, are still remaining, and exhibit a gradation of style from early to later (or perpendicular) English, but are principally decorated English; the conventual buildings have totally disappeared, and slight traces only of their extent and situation are to be perceived. The nave is separated from the aisles by elegant ranges of pillars, supporting deeply-moulded and richly-sculptured arches in the most finished style; and the transepts and choir are of the same character, elaborately embellished, and lighted by windows enriched with tracery, the principal of which are of lofty dimensions. The grand east window has been particularly admired for its surpassing elegance, and is in the later English style, measuring fifty-seven feet in extreme height, and twenty-eight in breadth; the south transept window is also remarkable, but is characterised rather by majesty than by the light elegance of the east window, than which it is rather loftier, though rather narrower. The principal buttresses terminate with pinnacles of the finest tabernacle work, and these, as well as the windows ranged along the sides of the edifice, are ornamented with figures admirably carved, and with niches highly sculptured; but the statues placed in the niches were demolished in the year 1649. In the interior are some good ancient monuments. Under the east window stood the high altar, beneath which Alexander II., who died at Kerrera, upon an expedition to the Western Isles, in 1249, was buried; and a large marble stone is pointed out as the monarch's tomb, though some suppose it to be that of St. Waldave, the second abbot of Melrose, whose death occurred in 1158. Here, also, according to the best historians, was deposited the heart of the great king Robert Bruce, after an unsuccessful attempt to carry it to the Holy Land; the body having been interred in the abbey of Dunfermline. Michael Scott, who flourished in the thirteenth century, and whose dis-

coveries in chemistry and other sciences led to the belief that he was a wizard, was buried in this monastery; as were, too, many of the renowned family of Douglas, after they became lords of Liddesdale. Among these may be named William Douglas, knight of Liddesdale, for his valour called the "Flower of Chivalry," who barbarously murdered the gallant Sir Alexander Ramsay, and was himself killed while hunting in Ettrick Forest, in 1353; William, first Earl of Douglas, who was wounded at the battle of Poitiers in 1356, and who died in 1384; and James, second Earl of Douglas, who fell at the battle of Otterburn. Their tombs, occupying two crypts near the high altar, were defaced by Sir Ralph Evers and Sir Bryan Layton, when they made their incursion into this part of the country, which has been already referred to; but the sixth Earl of Angus, descendant of the Douglasses, amply revenged this insult at the battle of Ancrum-Moor, in which both the English leaders were slain, and their forces were totally routed. In conclusion, the remarkable fact may be mentioned, with regard to these far-famed remains, that they were but little known as an object of interest to the tourist until the publication of the *Lay of the Last Minstrel*, which caused numbers to resort to them; while the prominent figure they occupy in *The Monastery* and *The Abbot*, in which the abbey is designated "St. Mary's" and the town of Melrose "Kennaquhair", gave additional charms to the district, previously described by Scott only in poetry.

The town is pleasantly situated on the banks of the Tweed, over which is a handsome suspension-bridge for foot-passengers and single horses; but the place is not remarkable for any peculiarity of character distinguishing it from a large rural village. It is in the form of a triangle, with small streets leading out at the corners, and contains several elegant modern houses; many of the houses are of early date, and evidently built in part of materials from the abbey. The bridge leads to the antique and rustic village of Gattonside, surrounded by gardens and orchards; and the scenery near the town is generally of the most beautiful description, attracting numberless visitors during summer. Melrose has a station of the Edinburgh and Hawick railway. The inhabitants are principally employed in trades requisite for the supply of the district, and in agricultural pursuits: the manufacture of linen formerly occupied a considerable number of persons in connexion with the commercial establishments of Galashiels, but it has long since declined. In the centre of the town, near the south entrance to the abbey, is an ancient cross, for the maintenance of which half an acre of land is appropriated; but the chief object of attraction is, of course, the ruin of the monastery. A subscription library, containing a good selection, is supported, and there are smaller libraries in the adjacent villages; also two branch banks established in the town, some friendly or benefit societies, and two excellent inns. The market-day is Saturday. Three fairs are annually held, one in the beginning of June, called, from the old style, the May fair, one at Lammas, and one at Martinmas; they are all great cattle-markets, and are numerously attended, and the Lammas fair has attained such celebrity for its sheep as to rival the celebrated fair of St. Boswell's, in the adjoining parish. The regality of the burgh is vested in the ducal family of Buccleuch, whose bailie is the prin-

cipal officer, and exercises jurisdiction in matters originating in the fairs of Melrose and St. Boswell's, over both which parishes his jurisdiction as bailie of the barony extends. No record of criminal cases has been preserved; the only delinquencies cognizable by the bailie or his deputy have been such as subject the offender to a fine of five shillings. Melrose is the head of the district, and has a fiscal, acting under the justices of the peace, who hold a court here on the first Saturday in the month.

The PARISH, which is one of the largest in the county, extends ten miles in length, from the summit of the central of the Eildon hills to Upper Blainslie, and four miles and a half in breadth, from the river Gala to the Leader; comprising an area of forty-five square miles. It is bounded on the north by the parish of Lauder, on the east by the parishes of Mertoun and Earlstoun, on the south by those of St. Boswell's and Bowden, and on the west by Galashiels and Stow. The Tweed, which enters the parish from the south-west, forms a boundary between it and the parish of Galashiels for some distance, and then flows through Melrose parish. In its course it receives the streams of the Gala, the Allan, and the Leader: the Allan, a beautiful stream, issues from an opening in the Langlee hills, and flows for five miles through the parish, in many parts concealed by overhanging woods. The surface is boldly diversified by the Eildon hills, which are partly within the parish, and by the heights of Gattonside, which, with the Langlee and Ladhope hills, form a ridge extending from the Leader to the Gala river. Of these elevations, the Eildon hills are seen from the north with peculiar effect; the two highest summits alone are then visible, and appear with majestic grandeur, towering above the level of the adjacent country. The view from the Eildon hills is magnificent, commanding the windings of the Tweed through the vale of Melrose, with its banks thickly studded with villas, and the south front of the venerable abbey embosomed in woods: to the south is seen the whole of Teviotdale, bounded by the range of the Cheviot mountains, at the eastern extremity of which are Flodden hill and two other eminences of conical form. The valley of Melrose is supposed at some remote period to have been a lake, and the substratum of water-sand is still found by digging a few feet below the surface. The climate of the vale, sheltered by surrounding heights, is extremely mild, but the upland parts of the parish are exposed to severe northern gales.

The SOIL is various. In the south, a strong clay adapted to the growth of wheat is prevalent. On the banks of the river the land is light and dry, favourable to all kinds of grain. In the northern parts it is generally mixed with sand, resting on a substratum of gravel, but in some places clayey and wet, and in others a moss, under which marl is found. Fogs are very prevalent, and frequently assume a variety of picturesque forms: from the south of the Eildon hills, the vale of Teviot sometimes appears a continuous sheet of mist, above which are seen only the summit of Ruberslaw and the shaft of the Waterloo pillar. Of the land, about 11,500 acres on the north side of the Tweed are in tillage, and 7600 in pasture; while on the south side of the river the lands, consisting of one-third of the parish, are wholly under cultivation. About 1200 acres are in plantations; the only natural wood is a few scattered trees, chiefly

birch, on the banks of the river Allan. The system of agriculture is improved, and the crops in general are favourable; the farm-buildings are substantial, commodious, and in good repair, and the inclosures and fences are kept in proper order. Considerable advances have been made in draining and planting, and a large portion of waste land has been reclaimed and brought under profitable cultivation. The principal breeds of sheep are the Leicestershire, the Cheviot, the half-bred, and the black-faced; the common breeds of cattle are the Teeswater, the Ayrshire, and the Highland breeds, with an occasional admixture of other kinds. The salmon-fisheries of the Tweed, formerly very lucrative, are much reduced; the fish appear to be intercepted by the fishermen of Berwick, and few are taken in this parish. The chief fuel is, coal, the thinnings of the plantations, and peat from the mossy districts. The annual value of real property in Melrose is £90,671.

The parish is divided amongst numerous proprietors, of whom fifty hold lands each to the annual value of £50 and above; and within its boundaries, and chiefly near the Tweed, are numerous villas and handsome mansion-houses, among which is Abbotsford, the seat of the gifted Sir Walter Scott, Bart., whose memory will ever be cherished by his country, and by the admirers of literary genius throughout the civilized world. These residences are principally built of sandstone, of coarse pudding-stone from the neighbouring quarry-hill, and of grey-wacke, which abounds in the parish. The far-famed mansion of ABBOTSFORD, "a romance in stone and lime," occupies a slip of level ground at the foot of an overhanging bank on the right side of the river, and looks out upon a beautiful haugh on the opposite bank, backed with the green hills of Ettrick Forest. It is in the south-western part of the parish, and about two miles distant from the town of Galashiels. The house, the garden, pleasure-grounds, and woods, were all the creation of the late proprietor; and thousands of the trees which adorn the demesne, and appear in beautiful clusters around the mansion, were planted by his own hands: the name, also, is recent, having been adopted by Sir Walter from an adjoining ford over the river. Resembling no other building in the kingdom, the house has a peculiar but picturesque and imposing appearance; and its walls have been enriched with many an antique carved stone, procured from old churches, castles, and seats in different parts of Scotland, in the course of their demolition or decay. The interior contains the innumerable curiosities in the collection of which Sir Walter Scott displayed so refined a taste; and even were Abbotsford destitute of attractions in respect of scenery, there would be sufficient in the relics here arranged, the armour, the paintings, the books, and the furniture, to ensure the prolonged visit of the tourist. But the rarities and the architecture of the mansion are not more worthy of the stranger's notice than are the beautiful features of nature which the spot presents to his view. The sweeping amphitheatre of wood in which the house is seated, the banks of the meandering Tweed graced for miles with ranges of forest-trees, the numberless serpentine walks through the woods, and the ravines, bowers, waterfalls, and mountain lakes, that enrich the vicinity, all unite to form a scene of surpassing loveliness. Nor does Abbotsford possess slight interest for those who can regard with feelings akin to veneration the abode of

one of the master-spirits of our literature. In addition to the town of Melrose, there are several villages within the limits of the parish, of which Darnick, Gattonside, and Newstead are less than a mile from the town, Eildon about two miles east-south-east, Newtown about three miles to the south-east, the Blainslies seven miles to the north, and the newer and larger part of the very flourishing town of Galashiels four miles to the west.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Selkirk, and synod of Merse and Teviotdale. The stipend of the incumbent averages about £250: the manse was built in 1813, and is in good repair, and the glebe comprises four acres of land, worth about £11 per annum. Melrose church, erected in 1810, is situated on Wear hill, a little westward of the town. John Knox, nephew of the celebrated reformer, was the second incumbent after the Reformation. The episcopal chapel of the Holy Trinity, at Melrose, was built by the munificence of the Duke of Buccleuch, and consecrated on St. Bartholomew's day (August 24th), 1849, by the Bishop of Glasgow, assisted by the Bishop of Edinburgh. It is in the early English style, and combines simplicity and beauty; the seats are all open, and will contain about 200 worshippers. There are a Free church at Melrose, and two places of worship for the United Presbyterian Church, one of them in the town, and the other in a romantic dell through which the Bowden rivulet flows into the Tweed. In the district of Ladhope is a church belonging to the Establishment, and another belonging to the Free Church. The parochial school affords an excellent education to nearly eighty children; the salary of the master is £30 per annum, with a house and garden, and the fees amount to about £44. The school-house was built with money arising from funds bequeathed by Bishop Fletcher, to whose memory there is a tablet in the wall of the edifice. At Langshaw is a small school with an endowment of £3 per annum; and there are six schools in the villages, for each of which a comfortable school-house has been built by the villagers. On the side of the Eildon hills is a tumulus of artificial construction and of large dimensions, supposed to have been the site of a pagan altar; the road leading to it, through a ravine named the Haxalgate heugh, is called the Haxalgate. A stone appearing to be part of a Roman altar was dug up lately in the parish, and is now in the possession of the Drygrange family; it is inscribed to the god "Silvanus", by Curius Domitianus, of the XX. legion, "*pro salute sua et suorum*". In the walls of several houses in the town are inserted stones sculptured with religious devices, and the letters J. H. S., thought to have been removed from the ruins of the old abbey.

MELVICH, a village, in that part of the parish of REAY which is in the county of SUTHERLAND; containing 253 inhabitants. This village is pleasantly situated on the western bank of the river Halladale, near its influx into the bay of Bighouse, and on the turnpike-road from Thurso to Tongue. It is principally inhabited by persons engaged in the fisheries, which are carried on here to a considerable extent. The place is neatly built, and the surrounding scenery is pleasingly varied, and at many points boldly romantic; the hills command extensive prospects, embracing nearly the whole of the valley of Strath-Halladale, and the beautiful windings of the river from which it takes its name. The fish taken off

this part of the coast are herrings, cod, ling, turbot, haddock, skate, whiting, flounders, mackrel, sand-eels, and smelts; and in the river, salmon are caught in large numbers. Bighouse bay affords secure shelter to the boats employed in the fisheries. In the village is a commodious inn. A branch office under the post-office of Thurso has been established, at which the mail calls daily; and a school, to which a small library is attached, has been founded under the patronage of the General Assembly.

MENMUIR, a parish, in the county of FORFAR, $4\frac{1}{2}$ miles (N. W. by W.) from Brechin; containing, with the hamlet of Tigerton, 732 inhabitants, of whom 641 are in the rural districts. This place is of remote antiquity, and derives its name, signifying in the Celtic language "the great moss", from the marshy nature of the lands, which appear to have been originally one extensive tract of bog. The ancient Caledonians, previously to their battle with Agricola at the foot of the Grampians, are supposed to have been encamped at this place; and extensive remains are still to be seen in the parish of the rudely-formed but strong fortress which on this occasion they may have occupied. There are two nearly contiguous hills called Caterthun on the south side of the river Westwater, forming the eastern extremity of a range of heights parallel with, and nearly at the foot of, the Grampians; one is termed the White, and the other the Brown, Caterthun. The White Caterthun is crowned with the fortress thought to have been occupied by the Caledonians, consisting of an immense pile of loose stones, inclosing an elliptical and level area 150 yards in length, and seventy yards in transverse diameter. On the eastern side of the area are the remains of a quadrilateral building, surrounded with a stone dyke and a fosse that may be distinctly traced. Around the external base of this intrenchment is a deep ditch, below which, at the distance of 100 yards, are traces of another, encircling the hill. On the summit of the Brown Caterthun is a fortification of round form, consisting of concentric ramparts of earth, from the colour of which the hill takes its name; and on the declivity of the hill, which is inferior in elevation to the other, is a rampart extending to the White Caterthun, with which it appears to have been connected as a place of retreat. A church was founded at Menmuir in the early part of the seventh century, by St. Aidan, to whom Oswald, King of Northumbria, whose subjects he had been powerfully instrumental in converting to Christianity, granted the Holy island of Lindisfarn, of which he became bishop, and where he laid the foundation of a see that was subsequently removed to Durham. In the reign of James II., the proprietor of the lands of Balnamoon, in this parish, joined the Earl of Crawford at the battle of Brechin, to revenge the death of Douglas; but, a misunderstanding arising between him and the earl, he drew off a large portion of the forces, and, joining the loyalists under the Earl of Huntly, decided the contest in favour of the monarch.

The parish lies in the north-eastern portion of the county, and is about five miles in length and nearly three in average breadth, forming in the southern part of it a section of the fertile vale of Strathmore. Towards the south and east the surface is generally level, but in the north hilly and almost mountainous; to the north-east are the Caterthuns, from which the range of heights

already mentioned, called the Menmuir hills, extends for nearly three miles towards the west. The principal streams are, the Cruick, which flows in gentle windings through the whole of the southern district into the Westwater in the parish of Strickathrow; the Westwater, part of the northern boundary of the parish; and the Pelphrie burn, which, having its source in the parish of Fearn, flows eastward along the remainder of the northern boundary of Menmuir, and falls into the Westwater. The soil along the banks of the Cruick is rich and fertile, and in the lower grounds generally it is productive; the prevailing quality is a sandy clay, alternated with gravel and loam. On the higher grounds and hills is much heathy moor. The crops are chiefly oats, barley, peas, potatoes, and turnips, of which the lands produce sufficient for the supply of the district. The system of husbandry is improved, and much of the waste land has been drained and brought into profitable cultivation. Great attention is paid to the management of the dairy-lands, and large quantities of butter and cheese are sent to Brechin and other markets. The annual value of real property in the parish is £5615.

The only seat is Balnamoon House, a handsome mansion, erected by James Carnegy Arbuthnott, Esq., the principal landed proprietor; and the hamlet or village of Tigerton, of recent origin, is the only village. The weaving of linen is carried on; the articles chiefly manufactured are sailcloth and duck, coarse plaidings, and some linen of finer quality for domestic use. There are several corn-mills on the Cruick, in one of which large quantities of pot-barley are prepared for the London market. Facility of communication is maintained by the great road to Brechin, and other roads, and by bridges over the river Cruick and the Westwater. Ecclesiastically the parish is within the bounds of the presbytery of Brechin and synod of Angus and Mearns. The minister's stipend averages about £180, of which a small part is paid from the exchequer; with a manse, and glebe: patron, Alexander Erskine, Esq., of Balhall. The church built in 1767 was taken down, and a handsome and substantial structure erected in 1842, containing ample accommodation for the parishioners. The members of the Free Church have a place of worship on the borders of the parish. Menmuir parochial school affords instruction to about 100 children; the master has a salary of £34. 4. 4., with a house and garden, and the fees average £16 per annum. On the removal of the wall of the old churchyard, two sculptured stones were found, on one of which were two equestrian figures in coats of mail with spears and round shields, having behind them a man on foot bearing a crook; and in another part of the same stone were figures of a deer and an eagle. Upon the other stone was an equestrian figure only. About a mile northward of the church is a cluster of barrows, supposed to have been raised over the remains of those who were slain in a battle between the Picts and the Danes.

MENSTRIE, a village, in the parish of LOGIE, county of CLACKMANNAN, 5 miles (E. N. E.) from Stirling; containing 518 inhabitants. This place lies on the road from Logie to Alva, and at the foot of the Ochils; it is the largest village in the parish, and in a flourishing condition. Menstrie has a woollen-manufactory employing about fifty hands, in which, among other articles, serges and blankets are made; and at Dolls, in the

vicinity, is a distillery. There is an excellent supply of water, affording an inducement for the establishment of works; and a good trade is already carried on. Menstrie House was formerly the patrimonial property of the family of Alexander, Earls of Stirling. The church is situated about two miles from the village. A school is partly supported by an allowance from Lord Abercromby.

† MERRYSTON, a village, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, $2\frac{1}{2}$ miles (W. by S.) from Airdie; containing 676 inhabitants. It is situated a short distance north of the high road from Airdrie to Glasgow, and on the banks of the Monkland canal; and is one of the numerous villages whose increasing population is engaged in the mines and manufactures of this rich mineral district. The place is also called Marystown.

† MERRYSTON, WEST, a village, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, $1\frac{1}{4}$ mile (N. E.) from Baillieston; containing 493 inhabitants. This village, like the preceding, is situated on the banks of the Monkland canal, and owes its late increase in extent, and in the number of its inhabitants, to the flourishing condition of the mines and manufactures in its vicinity.

MERTOUN, a parish, in the county of BERWICK, $4\frac{1}{2}$ miles (E. S. E.) from Melrose; containing 722 inhabitants. This parish is about six miles long and between two and three broad, and comprises 7000 acres. It is situated in the south-western extremity of the county, and bounded on the south and west by the river Tweed, on the north by Earlstoun parish, and on the east by Smailholm and Makerstoun. The surface embraces several fine slopes and undulations, especially in the western quarter, where the scenery is very beautiful: the prospect from Bemersyde hill, over which one of the public roads passes, is striking and magnificent, comprising wood and water, hills, and fertile fields. In the south, also, the lands are diversified by good inclosures, verdant hedge-rows, and flourishing plantations: the venerable ruin of the abbey of Dryburgh, viewed from the opposite side of the Tweed, whose banks are of red earth and unusually steep, is a fine object in the scenery; and a suspension-bridge here, a colossal statue of Sir William Wallace on a neighbouring hill, and the Temple of the Muses, a circular building erected by the Earl of Buchan on an eminence near the end of the bridge, enliven and beautify the district in a very interesting manner. The windings of the Tweed add peculiar force to the general impression of the scenery. There are scarcely any springs in the parish, and the farmers are occasionally much inconvenienced from a want of water for their cattle.

The SOIL bordering on the Tweed is a sharp loam, resting upon gravel; in the other parts of the parish, with few exceptions, it is a stiff clay, having a cold tilly subsoil. About 500 acres are occupied by wood, and 3460 are sown with wheat, oats, barley, and peas, of which the barley is the most considerable in quantity; turnips are also produced, and, since the introduction of bone-dust manure, have been of very fine growth. There is no common land; and it is supposed that of what is in pasture 300 acres might be cultivated with a profitable application of capital. Improvements to some extent have been made within the last few years, consisting

principally in draining and liming; but the surface-water is not so regularly and completely removed as good husbandry requires, some of the farmers neglecting to cleanse the ditches and to keep them in a fit state to receive the drainage. The farm houses and offices are generally convenient buildings; and a corn-mill upon an extensive scale has been erected, the machinery of which is of a superior kind, and suited to every description of grain. In this parish the sheep are the best Leicesters; the cattle are the short-horned breed, and great attention is paid to their improvement by annual purchases from the breeders in the south. The rocks on the banks of the Tweed consist of freestone of a reddish colour, very durable, and taking a fine polish; but although the quality is so choice and the supply inexhaustible, no quarry has been wrought for many years, owing to the great expense necessary for this purpose. The annual value of real property in Mertoun is £6429.

The chief mansions of this delightful parish are, Mertoun House, an elegant residence near the church, the seat of Lord Polwarth; Dryburgh House, the seat of Sir David Erskine, a plain old mansion in the immediate vicinity of the abbey, and having excellent orchards and woods; and Bemersyde, an ancient but pleasant house belonging to the Haig family, three-quarters of a mile to the south of Old Melrose in the adjoining parish. There are two small villages, Bemersyde and Dryburgh; but the parish is not intersected by any turnpike-road. The parish roads are for the most part good, and adapted for local convenience. Over the Tweed is the suspension-bridge already referred to, from which there is a direct road to the village of Lessudden, south of the river, where a post-office has been established; but this bridge is only constructed for foot passengers and single horses, and there is still a great want of a bridge for carriages in the southern part of the parish. For ECCLESIASTICAL purposes Mertoun is within the bounds of the presbytery of Lauder and synod of Merse and Teviotdale; patron, Hugh Scott, Esq., of Harden. The stipend of the minister is £252, with a manse, built in 1767, and a glebe of fourteen acres, valued at £14 per annum. The church belonged to the canons of Dryburgh till the Reformation. The present building was erected in 1658, and repaired in 1820. It is pleasantly situated in the midst of a grove, but stands inconveniently both for the minister and the parishioners, being a mile distant from the manse and about the same distance from the centre of the parish. The edifice is in good repair and well fitted up, with a pew assigned to every tenant. There is a parochial school, in which the classics, the mathematics, and the usual branches of education are taught; the master has a salary of £30, with about £9 fees, and the allowance of house and garden. The chief relic of antiquity is the abbey; but the remains, though deeply interesting, are not extensive. The nave of its church is nearly demolished, nothing being left but the foundations of the pillars; the most considerable part is the north transept, attached to one of the pillars that supported the tower. The refectory has fallen down, and the gable ends alone are now to be seen: in one of these is a curious radiated window, almost enveloped and obscured by ivy. The statue of Wallace, though not an antiquity, is yet worthy of notice on account of its being the workmanship of a common stone-mason who had never learned sculpture.—See DRYBURGH.

METHELNIE, in the county of ABERDEEN.—See MELDRUM.

METHILL, for a time a quoad sacra parish, comprising the villages of Methill and Kirkland, in the parish of WEMYSS, and Dubbieside, or Innerleven, in the parish of MARKINCII, district of KIRKCALDY, county of FIFE; the whole containing 1513 inhabitants, of whom about 500 are in the village of Methill, 1 mile (W. by S.) from Leven. This village, situated on the northern shore of the Firth of Forth, was formerly noted for the manufacture of salt, which was carried on here to a very great extent, but since the removal of the duty has been altogether discontinued. The harbour is safe and commodious, and was much frequented; but the pier was greatly damaged by a violent storm, and upon the abolition of the duty on salt, lay for some time neglected. It has, however, been restored of late at an expense of nearly £2000; the village has much improved, and from its pleasant situation, and the facility of intercourse which it possesses with the neighbouring markets, it is likely to recover its former prosperity. The church, erected at an expense of £1030, and adapted for a congregation of more than 800 persons, was closed on the Disruption of the Church of Scotland.

METHLICK, a parish, in the county of ABERDEEN, 4 miles (N. by W.) from Tarves; containing 1737 inhabitants. This parish is said to derive its name from two Gaelic words signifying "the vale of honey". The church was anciently dedicated to St. Devenick, who flourished about the latter end of the ninth century, and in honour of whom an altar was founded in the cathedral of Aberdeen, of which see the church of Methlick was made a prebend in the year 1362, the rector residing at Aberdeen and officiating in the cathedral, and his place here being supplied by a vicar. The parish is intersected by the river Ythan; two-thirds of it are situated on the northern side, in the district of Buchan, and the remaining portion on the south side of the river, in the district of Formartine. A detached part on the east, of small extent, is separated by a tongue of land belonging to Tarves parish, and is called Little Drumquhindle, or Inverebrie, the latter term from its situation at the junction of the brook Ebrie with the Ythan. It is also sometimes named the Six Ploughs, on account of its measurement in ancient times by so many ploughs. The length of the parish is about eight miles, from north to south, and its breadth, exclusive of the detached portion, five miles; comprising between 14,000 and 15,000 acres, of which more than 2500 are in plantations, and the remainder arable and pasture, with a large proportion of moss and moor. The lands north of the river Ythan, which flows from west to east between well-wooded banks, are mostly cultivated, with the exception of the hills of Balquhindachy, Belnagoak, and Skilmoney; the southern portion is particularly picturesque and beautiful, the lands in this quarter, which are finely undulated, comprehending the ornamental grounds of Haddo House. The river is not navigable; but it constitutes an important feature in the scenery, and affords not only good salmon and trout fishing, but much amusement to the young in seeking for pearls, for the abundance and value of which the Ythan was once so celebrated. The brook of Ebrie divides Methlick on the east from the parish of Ellon; besides which the lands are enlivened by the burn of Kelly, and by that of Gight, called also the Black water

and the Little water, running along the western boundary. Upon a point of the latter stream the parishes of Methlick, Fyvie, and Monquhitter all meet; and at the distance of not more than a mile and a half, on the same water, the parishes of New Deer, Monquhitter, and Methlick also form a union.

The soil of the land stretching for about a mile and a half from each side of the river is the best in the parish, being a yellow loamy earth on a gravelly or rocky bottom. In the other parts it is poorer, light, and moorish, of dark hue, and not so capable, from the peculiar character of its subsoil, of profitable cultivation. There is a great extent of peat-moss, which, though gradually yielding to the plough, still affords an ample supply of fuel. The grain raised comprises chiefly various kinds of oats; and some small quantities of bear are grown; sown grasses, turnips, and a few potatoes, form the remainder of the produce. The five, six, and seven shift courses are all in operation, but the first of these principally on the small farms and crofts, which are numerous; the land is in general under good cultivation, and partly inclosed with stone dykes. The farm-houses are mostly slated buildings of one floor; the tenements of the crofters are roofed with thatch. There are upwards of 200 tenants, all of them under the Earl of Aberdeen, who is the sole proprietor of the parish; the best land averages in value from 16s. to £1. 5. per acre, and the total annual value of real property in Methlick is returned at £4233. The sheep reared by the farmers are very few in number, but in the grounds of the earl upwards of 1000 are generally kept, chiefly the black-faced and Cheviots: the cattle are numerous, and consist, in about equal numbers, of the Aberdeenshire breed and of a cross between that and the Teeswater. The prevailing rocks are gneiss and sienite, and a quarry of limestone was formerly in operation at Inverebrie, but the working of it has been discontinued.

Besides the extent of land brought under the plough within the present century, amounting to more than 2000 acres, great additions have been made to the plantations, nearly an equal number of acres having been covered, within the same period, chiefly with larch and Scotch fir. A very large portion of the wood is in the grounds of Haddo House, which comprise an extensive area. This mansion, the seat of the Earl of Aberdeen, is comparatively a modern structure; the old edifice was besieged for three days in 1644 by the Marquess of Argyre, at the head of the Covenanters, and was taken on the 8th of May, and reduced to ruins. The park is ornamented with two lakes, a portion of one, however, being in the parish of Tarves; they are beautifully embosomed in wood, and enlivened by swans and a variety of choice water-fowl. Near the mansion runs the water of Kelly, which, at its junction with the Ythan in this parish, is said to have produced some pearls of great value; one of the crown jewels is reported to have been found here, and presented to King James VI. in 1620, by Sir Thomas Menzies, of Cults. In the grounds is an obelisk erected by the present earl to the memory of his brother, Sir Alexander Gordon, who fell at Waterloo acting as aide-de-camp to the Duke of Wellington. The noble proprietor derives the title of Baron Haddo, Methlick, Tarves, and Kellie, chiefly from this parish; the first property of the family was the barony of Methlick, of which Haddo was a part.

The facilities of communication are pretty good : there are commutation roads leading to New Deer, Fyvie, Ellon, Meldrum, and Tarves ; and a mail-gig runs daily between Methlick and Aberdeen. To the latter place the dairy-produce is sent for sale ; grain is also forwarded thither, and to Inverury and Newburgh. From the two last-mentioned towns, bones and English lime are brought for manure ; and Scotch lime from the kilns of Udney, Aquhorthies, and Barrack. Two annual fairs are held, for cattle, and as feeing-markets for servants ; one early in May, and the other, called Dennick's fair, which is of great antiquity, at the end of November. Ecclesiastically the parish is in the presbytery of Ellon, synod of Aberdeen, and in the patronage of the Earl of Aberdeen ; the minister's stipend is £160, with a manse, and a glebe of six acres of arable and grass land. Methlick church, situated on the southern bank of the Ythan, was rebuilt in 1780, and repaired in 1840 ; it contains 600 sittings, and adjoining the edifice is the burial-place of the Gordon family. The parochial school affords instruction in Latin, Greek, and mathematics, in addition to the usual branches : the master has a salary of £28, with a house, and £23 fees ; he also shares in the Dick bequest, and receives a few pounds a year from Moir's bequest for teaching ten poor children, and an annual gift of £5 from the earl. The poor are entitled to the interest of £653. 6. 8. bequeathed for their benefit. Dr. George Cheyne, an eminent physician, was born in this parish in 1671 ; and Dr. Charles Maitland, who largely promoted the practice of inoculation in Great Britain, and who was sent to Hanover by George II. to inoculate Frederick, Prince of Wales, was also a native, and was buried here in 1748.

METHVEN, a parish, in the county of PERTH ; containing, with the village of Almond-Bank, and the hamlets of Balwherne, Bellstown, Bragrum, Gibbiestown, Glack, Meckphin, Scrogiehill, and Wood-end, 2446 inhabitants, of whom 935 are in the village of Methven, 6 miles (W. by N.) from Perth. The name of this parish is derived from the Gaelic word *Meodhan*, signifying "middle", and has reference to the situation of Methven in the middle of Strathmore, which extends from Stonehaven on the east to Dumbarton on the west, and is here bounded on the north by the Grampians, and on the south by the ridge of the Ochil hills. The historical notices of the parish reach back to the year 970, when Colenus, reputed the seventy-ninth king of Scotland, is said to have been killed in this neighbourhood by Rohard, Thane of Methven, for violating his daughter. The lands, before 1323, belonged to the Mowbrays, whose ancestor, Roger Mowbray, a Norman, came over to England with William the Conqueror. To one of this family, Sir Roger Mowbray, belonged the baronies of Kelly, Eckford, Dalmeny, and Methven, lying severally in the shires of Forfar, Roxburgh, Linlithgow, and Perth. These lands, however, were confiscated by Robert I., for the adherence of Mowbray to Baliol and the English interest ; and Eckford, Kelly, and Methven were given to the king's son-in-law, Walter, eighth hereditary lord high steward of Scotland, whose son, Robert, was afterwards king (the second of the name) in right of his mother, Margery Bruce, daughter of Robert I.

The lordship of Methven was granted by Robert II. to Walter Stuart, Earl of Atholl, his second son, after whose forfeiture it remained in the crown for a considerable

time. It was part of the dowry lands usually assigned for the maintenance of the queen dowager of Scotland, and, together with the lordship and castle of Stirling, and the lands of Balquhidder, was settled on Margaret, eldest daughter of Henry VII. of England, and queen dowager of James IV. In the year 1524 she married Henry Stewart, for whom she procured a peerage from her son, James V., in 1528. On this occasion the barony of Methven was separated from the crown, and erected into a lordship in favour of Henry Stuart and his heirs male, the queen resigning her jointure of the lordship of Stirling. The Stewarts, Lords Methven, however, very shortly became extinct. It was in the right of Margaret, as eldest daughter of Henry VII., that James VI. of Scotland, her great-grandson, succeeded to the English crown on the death of Queen Elizabeth in 1603 ; she died at the castle of Methven in 1540, and was buried at Perth, beside the body of King James I. In 1584, the lordship of Methven and Balquhidder was conferred on Lodowick, Duke of Lennox ; but it was purchased from Charles, the last duke, in 1664, by Patrick Smythe of Braco, great-grandfather of the late Lord Methven : the duke dying without issue in 1672, his honours fell to Charles II., as nearest male heir, the king's great-grandfather and the duke's being brothers. While the estate was in the crown, various lands were granted in feu to different persons ; and the feu-duties are now paid to Robert Smythe, Esq., successor to the late Lord Methven, as proprietor of the lordship. Among the other events connected with the parish is the defeat in this part of Robert Bruce, soon after his coronation in 1306, by the English army under the command of Aylmer de Valence, Earl of Pembroke. The first religious establishment here was a collegiate church founded in 1433, by Walter Stewart, Earl of Atholl, who largely endowed it with lands and tithes ; it consisted of a provost and five prebendaries. An aisle that was connected with it is now the burial-place of the ancient family of Smythe.

The mean length of the PARISH is five miles, and its breadth between three and four ; containing 10,700 acres. It is bounded on the north and east chiefly by the river Almond ; on the south by a small stream called the Pow, which separates it from the parishes of Madderty, Findogask, and Tibbermore ; and on the west by the parish of Fowlis Wester. The surface consists of hollows and rising grounds, and from the good cultivation it receives, and the several flourishing plantations, presents a pleasing, and in some parts a picturesque appearance. The Almond, the only river, crosses a small portion merely of the parish, but runs for a considerable distance along the boundary ; it receives numerous streams from the steep and rugged mountains near which it passes, and after a bold and rapid course joins the Tay two miles and a half above Perth. About 260 acres of natural wood ornament the vicinity of this river ; it consists chiefly of oak, and is regularly cut and thinned as a coppice. The prevailing SOIL is clay ; there are also considerable tracts of loamy and gravelly earth, with moorish soil resting upon till. About 8600 acres are cultivated or occasionally in tillage : the natural wood and the plantations cover 1750 acres ; 250 acres are moorland, and 100 moss. All kinds of grain and of green crops are produced ; the land is in general of tolerable quality, and subjected to the most improved system of husbandry. Bone-dust and guano are employed as manure for turnips ; but lime is

the manure principally in use, and, as it is liberally applied, great advantages are derived from it. Potatoes, especially the Perthshire-red sort, are extensively cultivated for the London market; and mangel-wurzel is raised in considerable quantities. Improvements have been for some time gradually advancing. Towards the north, a tract of 1000 acres, which fifty or sixty years ago was a common, is now divided and fenced, and in a high state of cultivation; and the extensive drainage that has been carried on, and the plantations that have been formed, within the present century, have much improved the appearance of the parish, increased its productive powers, and ameliorated the severity or insalubrity of the climate. The annual value of real property in Methven now amounts to £10,600.

The rocks belong to the old red sandstone or trap groups. In the line of the river Almond they are generally of a bright red colour, spotted with grey, but too soft and friable for building purposes, containing large proportions of clay and lime. At the bridge of Lynedoch, however, they are of a pale grey colour, thick-bedded and fine-grained, remarkably hard, and well suited for architectural use. Several trap-dykes, of the greenstone class, cross the country, and the stone is quarried for roads and causeways. Among the seats in the parish is *Balgowan*, a residence of the late venerable Lord Lynedoch's; and near the river is *Lynedoch House*, another mansion of his lordship's, romantically situated, and celebrated for the beautiful scenery by which it is surrounded. The chief seat, however, is *Methven Castle*, standing upon an eminence in the midst of a park, where it is said that Bruce was defeated by the Earl of Pembroke. It is an ancient baronial building, finished in 1680, and subsequently improved and enlarged by several proprietors. In the adjacent grounds is an oak of gigantic stature and great beauty, called the Pepperwell Oak; the trunk measures seventeen feet and a half in girth at three feet above the ground, and the solid contents of the tree amount to 700 cubic feet. The chief villages are *Methven* and *Almond-Bank*, near the latter of which, at Wood-end, is a weaving establishment fitted up with power-looms, and employing a considerable number of persons. The population of the village of Methven are chiefly occupied in hand-loom weaving, the work being supplied by resident agents employed by Perth and Glasgow houses. The north road from Perth to Glasgow, *via* Crieff, passes through Methven. There is a sub-post, connected with the post-office at Perth; and markets are held on the first Thursday in May, and fourth Thursday in October, chiefly for the sale of cattle.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Perth and synod of Perth and Stirling; patron, Robert Smythe, Esq., of Methven Castle. The stipend of the minister is £274, with a manse, an elegant edifice built in 1830, and a glebe of fifteen acres of good land, valued at £30 per annum, besides ten acres of moor. Methven church, built in 1782, is a large, substantial, and convenient edifice, containing 1100 sittings: an aisle was built at the expense of the patron in 1825, when there was also added a beautiful spire, nearly 100 feet high, with a public clock. Here are places of worship for the United Presbyterian Synod and the Free Church. A parochial school is maintained, in which Latin and practical mathematics, with all the ordinary branches of education, are taught;

the master has the maximum salary, with a house, and fees amounting to about £25 or £30 a year. There is a school at Almond-Bank, supported by Mr. Smythe; also a school in the village of Methven supported by the United Presbyterian congregation. A public subscription library here is in a flourishing condition. As a curiosity, may be mentioned a noble and venerable ash known by the name of the Bell-tree, which stands in the church-yard, and is supposed to be coeval with the first religious establishment in the parish. It measures twenty feet in circumference at three feet and a half from the ground, and a few years ago exhibited much magnificent foliage, which, however, has latterly manifested symptoms of the withering hand of time. From the estate of Lynedoch, General Sir Thomas Graham took his title of Baron Lynedoch in the peerage of the United Kingdom, to which dignity he was raised on the 3rd of May, 1814, in reward of his eminent services in the peninsular war, and particularly his brilliant victory at Barrosa, March 6, 1811. His lordship died on the 18th of December, 1843, in the ninety-fourth year of his age.

MEY, EAST and WEST, townships, in the parish of CANISBAY, county of CAITHNESS; one containing 262, and the other 149, inhabitants. These places lie in the northern part of the parish, partly on the shore of the Pentland Firth, and derive their name from the early and luxuriant verdure on what is called the Bank-Head, in the spring months. The bay here abounds with lobsters, and a few boats are engaged in that species of fishery. On the coast are some curious rocks known as the Men of Mey, near which is one of two ferries in the parish to the Orkney Islands, the other being at Huna Inn. The loch of Mey, situated a little eastward of the Ratter burn, is a fine sheet of water, about three miles in circumference. The village lies on the main road from Huna to Castletown; it is about eighteen miles north-north-west of Wick, and has a post-office. The population of both townships are chiefly fishermen.

MID or MIDDLE CALDER.—See CALDER, MID.—*And all places having a similar distinguishing prefix, will be found under the proper name.*

MIDDLEBIE, a parish, in the district of ANNANDALE, county of DUMFRIES, $2\frac{1}{2}$ miles (N. E. by E.) from Ecclesfechan; containing, with the villages of Eaglesfield, Kirtlebridge, and Waterbeck, 2150 inhabitants, of whom 1482 are in the rural districts. This place, which consists of the united parishes of Middlebie, Penner-saugh, and Carruthers, derives its name from a Roman station in the old parish of Middlebie, which formed the central post between the stations of Overbie or Upperbie in the parish of Eskdalemuir, and Netherbie in the county of Cumberland. The station, situated at Birrens, is considered one of the most perfect and interesting remnants of Roman antiquity in Britain, and is identified with the *Blatum Bulgium* of Antonine. It occupies an eminence on the north bank of the Mein near its confluence with a smaller stream, and is of quadrilateral form, surrounded by five ramparts of earth and four fosses. Parts of it have been damaged by the inundations of the river, but the prætorium is still in good preservation. Within the area have been found a statue of the goddess of the Brigantes, and also of Mercury, with a votive altar dedicated to the latter, numerous inscribed stones, and various other relics of Roman antiquity. Nearly adjoining was a less important camp,

which, being situated on the lands of a small proprietor, has been completely destroyed.

The PARISH is partly bounded on the south-east by the Kirtle Water, and is about nine miles in length and four and a half in breadth; comprising an area of 30,000 acres, whereof nearly 7000 are arable, 350 woodland and plantations, and the remainder (of which 2000 might be made arable) pasture, moor, and waste. Its surface, though generally level, is diversified with gently-rising hills of moderate height, which, towards the eastern and north-eastern boundaries, attain almost mountainous elevation, and are finely contrasted with intervening valleys of great fertility and in a high state of cultivation. The Kirtle has its source among the hills near the north-eastern boundary of Middlebie, and, flowing southward, intersects it in part of its course for some distance, and then forms its boundary for the remainder of its progress in connexion with the parish, running through much romantic scenery. After passing through the parish of Kirkpatrick-Fleming, it falls into the Solway Firth at Kirtle-foot, in the parish of Graitney. The river Mein has its source within the parish, and after constituting a portion of its western boundary, joins the Annan at Mein-foot, in the adjoining parish of Hoddam. There are also several small rivulets, which, as well as the larger streams, abound with trout; and the parish contains numerous springs of excellent water.

The SOIL is various, but generally fertile; in most places, clay alternated with loam and gravel; and in the higher districts, of inferior quality, but well adapted for pasture. The crops are oats, barley, wheat, potatoes, and turnips, with the usual variety of grasses. The system of husbandry is in a very advanced state, having been greatly accelerated in its progress by the encouragement of the landed proprietors. Much waste land has been improved by draining, and brought into profitable cultivation by a liberal use of lime, of which abundance is burnt in the parish. The lands have been inclosed; and the farm-buildings, formerly of inferior order, have been generally bettered: they are now substantial and well arranged, more especially on the lands of the Duke of Buccleuch, the principal landed proprietor. On the hills there is excellent pasture for cattle and sheep, of which considerable numbers are reared. The cattle are mostly of the Galloway breed, but the cows on the dairy-lands of the Ayrshire; the sheep are usually the white-faced. Large numbers of sheep are bought in the autumn, and, when fattened in the pastures, sold in the following spring to dealers for the English markets; whither, also, many young oxen are sent. Swine are fed by the cottagers, and great quantities of bacon are forwarded to Newcastle; it finds a ready sale, and returns a considerable profit. The plantations consist chiefly of the various kinds of fir, interspersed with the other usual trees; they are mostly well managed and in a thriving state, and though not extensive, add much to the beauty of the scenery. The principal substrata are sandstone and limestone. It is supposed that coal, also, may be found at a considerable depth below the surface; and though some attempts have been made without success, they have tended rather to increase the probability of its being eventually wrought. The limestone is of excellent quality, and is extensively quarried for use in farming, and also for building purposes; it has contributed greatly to promote the improvement of the

lands not only in this parish, but in the surrounding districts, to which much of it is sent. The annual value of real property in Middlebie is £8192.

There are some seats here, the residence of the smaller landholders, the principal of which are Kirtleton, Blackwoodhouse, and Burnfoot, the first an ancient, and the two last modern mansions, delightfully situated on the banks of the Kirtle and the Mein. The several villages of Eaglesfield, Kirtlebridge, and Waterbeck are described under their respective heads. The cotton and linen manufactures are carried on, affording employment to a considerable number of the inhabitants; a circulating library has been established, and there are several friendly societies. Facility of communication is maintained by good roads, of which the turnpike-road from Glasgow to Carlisle passes for two miles through the parish; the statute roads here have been much improved within the last few years, and are kept in excellent repair. Great facility of intercourse is also afforded by the Caledonian railway, which has a station near Kirtlebridge; it crosses the Mein Water by a viaduct of five arches of thirty feet span each, and is carried over the beautiful river Kirtle by a noble viaduct of nine arches, each thirty-six feet in span. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Annan and synod of Dumfries. The minister's stipend is about £220, with a manse, and a glebe valued at about £40 per annum; patron, the Duke of Buccleuch. The church, erected in the year 1821, is a plain structure, containing 700 sittings. There is a place of worship in the village of Waterbeck for members of the United Presbyterian Church. Two parochial schools are maintained, together affording instruction to about 150 children; the master of each has a salary of £25. 13., without either dwelling-house or garden, and the fees average £25 per annum to each. There are still some remains of a stronghold called Blacket House, one of the ancient fortresses occupied during the border warfare; the ruins consist chiefly of the tower and portions of the walls, and are rapidly going to decay. Numerous fossils and organic remains are found in the limestone quarries; and there are several mineral springs, some of which are strongly impregnated, but they have long been disused for medicinal purposes. Among the most distinguished persons connected with this parish was the late Dr. Currie, of Liverpool, author of the *Life of Burns* and other works, whose father was minister. The Duke of Buccleuch takes the inferior title of Baron Middlebie from this place.

MIDDLETON, and NORTH MIDDLETON, villages, in the parish of BORTNICK, county of EDINBURGH, one distant $12\frac{1}{2}$, the other 12, miles (S. E. by S.) from Edinburgh; containing respectively 148 and 68 inhabitants. The first of these places was of some importance; it was once the chief village in the parish, and one of the prebends which belonged to the collegiate church of Crichton. The great road to the south formerly passed through it; and it had a stirring population, many of whom were of the gipsy tribe, who made it one of their principal places of abode. It has, however, become remarkably quiet and retired, the inhabitants being occupied in agriculture and such handicraft trades as are necessary to small communities; there are two farm-houses in the vicinity. North Middleton is on the road side, and consists of a line of cottages, most of which

have been built within the last twenty or thirty years. Two streams, called the North and South Middleton burns, unite at the termination of a neck of land on which the castle of Borthwick stands, when they assume the name of the Gore. Middleton House, built in 1710, is surrounded by an extensive wood of tall beech-trees, and has an air of genteel seclusion: the gardens attached to it are exceedingly admired.

MIDDLETON, a hamlet, in the parish of ORWELL, county of KINROSS, 3 miles (N. E.) from Kinross; containing 66 inhabitants. It lies in the eastern part of the parish, and is a small place, distant a little more than a mile from Milnathort, the chief village. The cottages of which it consists are built on the high road leading to Kinross.

MIDLEM, a village, in the parish of BOWDEN, district of MELROSE, county of ROXBURGH, 4 miles (S. S. W.) from Melrose; containing 185 inhabitants. It is situated in the south-western part of the parish, and consists of about fifty families, some of them engaged in manufactures and handicraft trades, but the greater number employed in agriculture. The town of Selkirk is distant westward from the village about three miles and a half. The United Original Seceders have here a place of worship; and a school on the parochial establishment is attended by about forty-five children, of whom those of paupers are taught gratuitously: the master, who instructs in the usual branches, receives a salary of £21, and the fees.

MIDMAR, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, 15 miles (W.) from the city of Aberdeen; containing 1093 inhabitants. Midmar, a term supposed to be compounded of the Saxon word *mid*, and the Gaelic word *marr* denoting "a black forest", is the name of one of the three great divisions of the extensive region originally styled Marr, which lies between the rivers Dee and Don. This district of Marr comprised Brae-Marr, an appellation expressive of the highest part of the country; Cro-Marr, a lower and more cultivated tract; and Mid-Marr, so called, as is thought, from its central situation in respect to the two rivers, each being distant about six miles from the church. The parish is nearly seven miles in length from east to west, and about five miles in average breadth, containing between 12,000 and 13,000 acres, of which 5000 or 6000 are under cultivation, 1600 in plantations, 1000 pasture, and the remainder hill, moss, and moor. Its surface is rugged and uneven, and marked principally by two hilly ridges with their vales. The lower grounds are enlivened by pleasing rivulets and burns, and those parts of the eminences where the soil is too thin for the operations of the plough are planted with Scotch firs, which flourish tolerably well, and are not only a great improvement to the scenery, but form a protection to the lands and the cattle from the severity of the weather. The hill of Fare, at the southern limit, is the most considerable elevation, measuring at its base seventeen miles in circumference, and rising nearly 1800 feet above the level of the sea. It affords excellent pasturage for numerous flocks of sheep, and the mutton is reputed to be of very superior flavour. In the northern and eastern parts of the parish the soil is a good dry mould, resting on a deep subsoil of clay; in the western quarter, where the hills sink into the lower grounds, it is principally a thin sandy or clayey earth, with a little loam, on

a gravelly subsoil. The grain raised consists chiefly of oats and bear, and the green crops consist of turnips and potatoes. Black-cattle and sheep are reared in considerable numbers, and many swine are also fattened for the market. The land varies greatly in quality, and much of it is wet and mossy, and rented at a very low rate: but large tracts have been reclaimed and improved during the present century, and in some parts the fields have been inclosed with good stone dykes. Many of the farm houses and offices have been enlarged, or rebuilt on a better plan; and agricultural advancement is steadily kept in view by the farmers throughout the parish. The rocks are mostly granite and whinstone, both of which are quarried; the former is sometimes obtained of superior quality, and in large blocks, and on account of its taking a fine polish is used for the ornamental parts of buildings. The annual value of real property in Midmar is £4475.

The mansions of Kebabty and Corsindae are both modern structures, the houses of resident proprietors. Midmar Castle, an ancient turreted edifice, is situated in a kind of glen on the north side of the hill of Fare, and is surrounded by wood: it commands fine views of the nearer scenery, consisting of hills and valleys beautifully grouped, and enriched with shrubs and trees; and is itself an interesting and conspicuous object at a distance, being seen to great advantage from many parts of the adjacent country. The population is entirely rural and agricultural: the fuel in common use is wood and peat; the former is very cheap, and the latter is procured in great plenty from the mosses in the parish. A road runs on the north from the vale of Alford, and another on the south from the Cromar district, both to Aberdeen, to which place the marketable produce is generally sent. Ecclesiastically the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of the Crown and Sir John Forbes, of Craigievar, Bart., the latter presenting twice in succession. The minister's stipend is £224, with a manse, built in 1840, and a glebe valued at £14 per annum. Midmar church, which accommodates 600 persons, is a very plain structure, built in 1787. There are places of worship for the United Presbyterian Church and the Free Church. The parochial school affords instruction in Latin and in practical mathematics, in addition to the usual elementary branches; the master has a salary of £34, with a house, a share in the Dick bequest, and £19 fees. A parochial library of considerable size is supported by subscription. Near the church are some Druidical remains, with an altar in good preservation. An excavation in a rock near the southern boundary of the parish is still called the "Queen's Chair", Queen Mary, as is said, having sat in it when, returning from Aberdeen, she surveyed the neighbouring valley of Corriehie, where a battle had been fought between the forces of the Marquess of Huntly and the Earl of Murray, Mary's general.

MIGVIE, county of ABERDEEN.—See TARLAND.

MILE-END, a village, in the parish of BARONY, suburbs of the city of GLASGOW, county of LANARK; containing 2716 inhabitants.

MILL OF HALDEN, a village, in the parish of BONHILL, county of DUMBARTON, 1½ mile (N.) from the village of Bonhill; containing 147 inhabitants. This place lies on the high road from Drymen to Dumbarton,

a little eastward of the river Leven, and near the southern extremity of Loch Lomond. The inhabitants are engaged for the most part in the bleaching and printing works, and other branches of industry, which have increased considerably of late years within the parish.

MILL, WEST, a village, in the parish of **COCKPEN**, county of **EDINBURGH**; containing 124 inhabitants.

MILLARSTON, a village, in the **ABBEY** parish of the town of **PAISLEY**, and Upper ward of the county of **RENFREW**; containing 364 inhabitants. This place, with **Maxwelton** and **Ferguslie**, forms the western suburb of the town of **Paisley**, and is comprehended within the parliamentary burgh.—See **PAISLEY**.

MILBAY, a village, in the parish of **KILBRANDON** and **KILCHATTAN**, district of **LORN**, county of **ARGYLL**. This is one of several villages or hamlets in the parish built in the neighbourhood of slate-quarries; but some of the quarries are not now wrought to any extent.

MILLBREX, a district, in the parishes of **FYVIE** and **MONQUHITTER**, district of **TURRIFF**, county of **ABERDEEN**, 6 miles (S. W. by W.) from **New Deer**; containing 939 inhabitants. It is a mission station of the Committee for managing the Royal Bounty in Scotland; and has a church built in 1833, and enlarged in 1836, containing about 500 sittings. The edifice is so placed as to accommodate the inhabitants of the northern part of **Fyvie** parish and those of the southern part of **Monquhitter**; three-fourths of the district are in the former parish, and one-fourth in the latter. The **Earl of Aberdeen**, who is chief proprietor of **Millbrex**, contributed handsomely towards the erection of the church, for which he gave the site; and allocated land as glebe for its minister. A manse and offices were built in 1835; and it is proposed to found a school on the parochial footing, in connexion with the Establishment: there is at present a Sunday school.

MILLBRIDGE, a hamlet, in the parish of **CATHCART**, Upper ward of the county of **RENFREW**; containing 22 inhabitants.

MILLERHILL, EASTER and **WESTER**, villages, in the parish of **NEWTON**, county of **EDINBURGH**, $1\frac{1}{2}$ mile (N. W. by N.) from **Dalkeith**; one containing 220, and the other 70, inhabitants. They lie in the south-eastern part of the parish, a short distance east of the village of **Newton**, and are chiefly inhabited by persons engaged in the coal-mines of the district.

MILLERSTON, a village, in the parish of **BARONY**, suburbs of the city of **GLASGOW**, Lower ward of the county of **LANARK**; containing 466 inhabitants.

MILLFIELD, a hamlet, in the parish of **INVERKEILLOR**, county of **FORFAR**; containing 65 inhabitants. It is one of several small hamlets in the parish, all inconsiderable, the village of **Inverkeillor**, the principal place within its limits, containing little more than double the population of **Millfield**.

MILLGUY, county **STIRLING**.—See **MILNGAVIE**.

MILLHEUGH, a village, in that portion of the parish of **DALSEIP** which formed part of the quoad sacra district of **LARKHALL**, Middle ward of the county of **LANARK**, 1 mile (W. by S.) from **Larkhall**; containing 384 inhabitants. This village is situated in the north-western part of the parish, and in a narrow valley on the banks of the river **Avon**, through which passes the road from **Glasgow** to **Carlisle**. It is a place of some antiquity, and formerly had a distillery, a brewery, and some

factories, all of which have disappeared; its population, however, is engaged in various other branches of industry, and a bleachfield has been established, affording employment to a considerable number of hands. The village of **Rosebank** nearly adjoins **Millheugh**.

MILLIGS, a village, in the parish of **ROW**, county of **DUMBRAY**; containing 241 inhabitants. It is situated close to **Helensburgh**, a little northward of that town, and on the east side of the **Gareloch**, near its mouth. The village is distant about two miles from that of **Row**, where is a ferry across the loch to **Roseneath**. Here were anciently two chapels, one on the farm of **Kirkmichael**, which received its name from the saint to whom the chapel was dedicated, and the other on the farm of **Millig**, called after the same saint, and until lately presenting some ruins.

MILLPORT, a village, in the island and parish of **GREAT CUMBRAY**, county of **BUTE**; containing 817 inhabitants. This is a modern village, pleasantly situated in the south-east corner of the island, and having a commodious harbour capable of admitting vessels of considerable burthen, the depth at low water being six feet, and at high water fourteen. The anchorage ground is of large extent, and finely sheltered by two small rocky islands, called the **Allans**, to which vessels resorting hither in stormy weather are moored, by means of iron rings fastened in the rocks, so as to ride in perfect safety. A fine pier was erected, chiefly by the late **Marquess of Bute**. Several vessels belong to the port, some of the burthen of forty tons; and it is regularly visited by the **Clyde** steamers from **Glasgow**. The village is thriving, and is a great summer resort for sea-bathing, having excellent accommodation for that purpose; it contains some good lodging-houses, and the dwellings in general are neat, and of cleanly appearance. The inhabitants are engaged in fishing, weaving, and other pursuits: there are about sixty looms, and plain and fancy work is executed in great variety for the **Glasgow** manufacturers. The parish church, which is situated here, was built in 1837, and is a handsome edifice, ornamented with a tower, and containing 750 sittings. Here are also the parochial school, another day school, and two Sunday schools; a small library, a friendly society, and one or two other useful institutions.

MILLTOWN, a village, in the parish of **ROTHIEMAY**, county of **BANFF**, 7 miles (W. by N.) from **Inverkeithny**; containing 79 inhabitants. This is a small village, situated on the northern bank of the **Doveron**, at the point where that river begins to divide the parish. It is surrounded by well-inclosed fields and woods, which, with fields and woods on the opposite side of the river, rising by a gradual ascent to a great height, form much rich and beautiful scenery, seldom equalled, for the same extent, in any part of the kingdom. Here is an excellent meal-mill. The church and manse are in the vicinity of the village, as is **Rothiemay House**, a fine seat of the **Earl of Fife's**.

MILNATHORT, or **MILLS** of **FORTH**, a village, in the parish of **ORWELL**, county of **KINROSS**, 1 mile (N.) from **Kinross**, containing 1605 inhabitants. This is a considerable village, pleasantly seated in the south-eastern part of the parish, about three-quarters of a mile north-west of **Loch Leven**, and on the high road between **Kinross** and **Perth**; it is of very neat appearance, and is lighted with gas. Its inhabitants are partly engaged in

weaving cotton goods for the Glasgow manufacturers. The chief manufacture, however, is that of tartan shawls and plaids, which has in a measure superseded that of cotton goods; and spacious workshops have been erected, adapted to the use of larger looms, and the more constant employment of a greater number of persons. Some of the tartan weavers obtain work from Tillicoultry, but the majority are employed by resident manufacturers. A market is held weekly, and is well attended by the agents of distilleries in distant places for the purchase of grain, this being the only grain-market in the county: an attempt was made to establish also a market for cheese, butter, and poultry, but without success. Fairs for cattle are held on the Thursday before Christmas, and the second Thursday in February; and for cattle, sheep, and horses in the beginning of May, July, and November, and the end of August. This place has latterly much increased in population, and has now, among other institutions, a post-office; a public library of 1500 volumes, supported by subscription, under the management of a proprietary of forty members; a parochial library of about 500 volumes, in connexion with the Established Church; and two other libraries, in connexion with dissenting congregations. The members of the Free Church have a place of worship in the village of Milnathort.

MILNGAVIE, a village, and for a time a quoad sacra parish, in that part of the parish of NEW KILPATRICK which is in the county of STIRLING, 7 miles (N. W. by N.) from Glasgow; containing 1622 inhabitants, of whom 1432 are in the village. This district, which was separated for ecclesiastical purposes from the parish under act of the General Assembly, comprised but a small territory surrounding the village. The village, situated on the river Allander, has increased greatly in extent and population since the establishment of cotton-works and other branches of manufacture, and has become a place of considerable importance. Its houses are neatly built; a library is supported by subscription; and there are numerous good shops amply stored with various kinds of merchandise for the supply of the neighbourhood. The printing of calico, for which there is a very extensive establishment, affords occupation to between 300 and 400 persons; the cotton-factory, lately enlarged, employs 200, and more than eighty persons are employed in the bleaching of cotton and linen, of which about 4,000,000 of yards are annually bleached. There are several corn-mills. A post-office has been opened under that of Glasgow, and every facility of communication is afforded by the various roads that pass through the parish. A school, built by subscription, is under the superintendence of a committee.

MILNTOWN, a village, in the parish of KILMUIR EASTER, county of ROSS and CROMARTY, 9 miles (S.) from Tain; containing 200 inhabitants. This village is situated on the high road from Tain to Inverness, and near the northern shore of Cromarty Firth. It consists of some neatly-built houses and numerous cottages to which are attached small portions of ground. The inhabitants are chiefly engaged in the various handicraft trades requisite for the supply of the immediate vicinity, and there are several shops for the sale of different kinds of goods. A post-office, which has a daily delivery, is established at Parkhill, in the village; and fairs for sheep, cattle, and agricultural produce are held on the

first Tuesday in January, the third Tuesdays in March and May, and the last Tuesday in October.

MILTON, a village, in the parish of OLD KILPATRICK, county of DUMBARTON, 8 miles (E. by S.) from Dumbarton; containing 341 inhabitants. This is one of a cluster of villages in a large manufacturing district in the eastern part of the parish, and derives its prosperity from extensive cotton-works established by William Dunn, Esq., a wealthy and enterprising landowner here, about the year 1821. The factory was built on the site of the old Dalnotter iron-works; a bleachfield and some printing-works were subsequently added, and they are all now in full operation, employing the whole population of the village and its immediate neighbourhood: a powerful steam-engine was erected in 1835. The quantity of cotton goods annually produced at this place, and at the mills of Duntocher, Fairley, and Hardgate, within less than a mile of the village, may be stated at 2,000,000 of yards. The road from Dumbarton to Kirkintilloch passes through the district. A school has been established for the children of the work-people.

MILTON, a village, in the parish of GLAMMIS, county of FORFAR, $1\frac{3}{4}$ mile (S.) from Glammis; containing 83 inhabitants. This place lies in the glen of Ogilvie, and on the great road from Kirriemuir to Dundee. The glen, anciently the property of the Ogilvies of Powrie, afterwards of Graham of Claverhouse (Viscount Dundee), and now of Lord Douglas, is very beautiful; and the village is usually called after it, "Milton of Glen of Ogilvie." The Glammis burn passes through the vale.

MILTON, a hamlet, in the parish of ST. CYRUS, county of KINCARDINE, $6\frac{1}{2}$ miles (N. N. E.) from Montrose; containing 34 inhabitants. It is situated on the coast, and is a small fishing-place, consisting of a group of cottages. The former village of Milton of Mathers was built on an ancient shingle beach protected by a projecting ledge of limestone rock; this rock was quarried for lime to such an extent that the sea broke through in 1795, carried away the village in one night, and penetrated 150 yards inward, where it has maintained itself ever since. The present hamlet was built further inward, on the new shore. The lime-works in this neighbourhood were discontinued about 1836.

MILTON, for a time a quoad sacra parish, in the parish of BARONY, suburbs of the city of GLASGOW, Lower ward of the county of LANARK, 2 miles (N. E.) from Glasgow; containing 5364 inhabitants. The village of Milton is in the northern part of Barony parish, and on the Perth road. The church was erected by the Church-Building Society of Glasgow; it is a neat structure with 1060 sittings.

MILTON, a village, in the parish of CAMPSIE, county of STIRLING; containing 564 inhabitants. Facility of intercourse is afforded by a station on the Campsie branch of the Edinburgh and Glasgow railway.

MILTON, in the parish of DUNIPACE, county of STIRLING.—See HERBERTSHIRE.

MILTON OF BALGONIE, a considerable village, and also a quoad sacra parish, in the parish of MARKINCH, district of KIRKCALDY, county of FIFE; containing, with the villages of Balcurvie, Haugh-Mill, Burns, and Windygates, 1408 inhabitants, of whom 592 are in the village of Milton, $1\frac{1}{2}$ mile (E. S. E.) from Markinch. The village takes its name from the extensive mills around which it has arisen; it is situated on the river Leven, and consists

of neat substantial cottages inhabited chiefly by persons employed in the mills. Since 1836 it has greatly increased in extent and population. The mills for the spinning of flax and tow are the property of Messrs. Baxter and Stewart, and form a spacious structure, occupying three sides of a quadrangle 160 feet in length and 140 feet in width. Two sides of the quadrangle comprise the buildings for the machinery, which is propelled by the water of the Leven; and the third side contains three spacious warehouses, above which are heckling rooms. In detached situations are a warehouse capable of holding 200 tons of flax, a smithy, gas-works from which the factory is lighted, and stabling. The total cost of raw materials consumed in a late year was £25,000; the quantity manufactured was 475 tons of flax, imported from the Baltic, Archangel, Holland, France, and Ireland. The number of persons generally employed is about 270, of whom 120 are women and fifty children. The finer yarns spun here are sold in the adjoining districts, or exported to France; the heavier are manufactured into canvass, sacking, and other articles, chiefly for the London market. This latter branch of the establishment is at present carried on at Dundee, but will be soon removed to this place, when the number of persons employed in the concern will be augmented by an addition of 100 men and fifty women. In the east end of the district is the Haugh spinning-mill, a very extensive factory; also the Cameron distillery, one of the largest works of this description in Scotland. The Balgonie bleachfield, the property of Messrs. William Russell and Company, was established for the bleaching of linen yarns: the works, which are situated on the banks of the Leven, afford employment to about seventy persons, and the quantity of yarn annually averages 480 tons. Milton quoad sacra parish is about three miles and a half in length, and nearly three miles in breadth, comprising an area of eight square miles. The church was erected in 1836, at an expense of £850, of which £140 were a grant from the funds of the General Assembly, and the remainder raised by subscription; it is a neat building containing 625 sittings. There are week-day and Sabbath schools in the village and in Balcurnie. Balgonie Castle, in the neighbourhood of Milton village, an ancient seat of the Earls of Leven, is of considerable strength, and supposed to be an erection of the twelfth century: its architecture is still very entire; the court-yard is 108 feet by sixty-five feet, and the tower on the north side is eighty feet in height.

MILTON, WHINS OF, county of STIRLING.—See WHINS OF MILTON.

MINGALA, an island, in the parish of BARRA, county of INVERNESS; containing 113 inhabitants. This is one of the most southern of the Barra isles, and is about two miles in length, and one mile and three-quarters in breadth. It is separated, on the north, from Pabba by the sound of Mingala; and from Bernera, on the south-west, by the sound of that name. The coast around is bold and rocky, and in some parts the ground rises to a great height; the island is chiefly pastoral, and near it is a rock whose summit is covered with luxuriant verdure, to which the sheep are elevated by ropes, and left to pasture for the season. Innumerable sea-fowl visit the cliffs at the period of incubation, and disappear with their young in autumn.

MINNIGAFF, a parish, in the stewartry of KIRK-CUDBRIGHT; containing, with the village of Creebridge, 1826 inhabitants, of whom 170 are in the village of Minnigaff, $\frac{1}{2}$ a mile (N.) from Newton-Stewart. This place, the name of which is in the Gaelic language minutely descriptive of its dark mountainous aspect, formed part of the territories of the ancient Earls of Galloway, who resided in the baronial castle of Garlies, of which there are still some remains within a mile and a half of the village of Minnigaff. During the contest for the throne between Baliol and Bruce, the latter, after his defeat by the English at Carrick, retired to this district with his followers, and encamped in the secluded wilds at the head of Loch Dee. Bruce lodged at night in the cottage of a poor widow at Craigencallie; and being discovered by his hostess, who had three sons by three different husbands, they all entered into his service, and remained zealous adherents to his cause. At their suggestion the followers of Bruce, not more than 300 in number, and greatly inferior to the English, who had encamped on the opposite side of the river Dee, collected all the wild horses and goats they could find in the neighbourhood; and from the noise thus occasioned, the English, thinking that Bruce had procured a large reinforcement, did not venture beyond the precincts of their camp. In the night Bruce attacked the English, and obtained an easy victory over his enemies, who, fancying themselves assailed by a superiority of numbers, fled with precipitation, many of them being killed in their retreat. The three sons of the widow, whose names were Mc Kie, Murdoch, and Mc Lurg, received from Bruce, after his establishment on the throne, the lands of Hassock and Cumloden in recompense for their services. On the death of the descendant of Mc Kie without male issue, a portion of the lands passed to the family of Heron, of Heron, by marriage with Margaret, his only daughter and heiress; this portion is now the property of Lady Heron Maxwell. Cumloden, which was the portion of Murdoch, the second son, was sold by his descendant to the Stewart family in the last century, and now belongs to the Earl of Galloway.

The PARISH is bounded on the east by the Dee, which divides it from the parishes of Kells and Carsphairn; and on the west by the river Cree. It is nearly twenty-four miles in length and from eight to twelve miles in breadth, comprising an area of 86,787 acres, of which 6000 are arable and in cultivation, about 1600 acres woodland and plantations, and the remainder moorland pasture and waste. The surface is mountainous, including a considerable portion of the hilly range extending from St. Abb's Head on the eastern coast. The highest of the hills is the Meyrick, which has an elevation of 2500 from the level of the sea; and that of Cairnsmuir, though of inferior height, yet, rising from a less elevated base, appears almost equally lofty. The summit of the latter hill commands a most extensive and richly-varied prospect, embracing the valley of the Palnure, the wooded demesnes of the Cairnsmuir and Bargally mansions, the river Cree, the town of Newton-Stewart, parts of Wigtownshire diversified with hill and dale, the burgh of Kirkcudbright, and other interesting features, with the Isle of Man and the mountains of Ireland and of Cumberland in the distance. For several miles along the banks of the Cree, the ground is level, forming a fine tract of carse land, but not of any consi-

derable breadth, in a high state of cultivation. There are numerous springs; and of several picturesque lakes the largest are Loch Trool, environed with hills, and Loch Dee, neither of which, however, exceeds two miles in length. The streams and lakes abound with trout; salmon are found in the Cree, and sea-trout in the months of June and July.

In this parish the soil is various, generally of a dry gravelly kind, but in some parts a tenacious clay interspersed with moss, which, however, at a moderate expense, might be reclaimed and brought into profitable cultivation. The crops are, grain of all sorts, with potatoes and turnips, and the different grasses. The system of agriculture is advanced, and the lands have in several parts been well drained. Some of the farm-buildings within the last few years have been rebuilt in a more substantial and commodious manner, and most of the recent improvements in implements of husbandry have been adopted. Many cattle are reared and pastured in the parish; they are chiefly of the pure native Galloway breed, and great attention is paid to the bettering of the stock: there are also about 35,000 sheep, which are of the black-faced breed with the exception of a few of the Leicestershire on the lower lands. The substrata are mainly greywacke and clay-slate; granite occurs in boulders at various places, and at Craighdews in large masses, from which blocks have been cut for building purposes. Lead-ore is found in the south-western portion of the parish, and was formerly wrought to a considerable extent; but having lately become unproductive, the mines have been discontinued. The annual value of real property in Minnigaff is £10,976.

The most extensive and important portion remaining of the ancient forest of the district is the Cree wood, on the estate of Garlies, the property of the Earl of Galloway; it extends for nearly three miles along the banks of the Cree, and consists chiefly of oak, intermixed with ash, hazel, and birch. Around the castle of Garlies are also about 500 acres of plantations, the greater portion of recent date. Kirouchtree, the seat of Lady Heron Maxwell, is beautifully situated in a well-planted demesne; and near the house are many trees of venerable growth. Cumloiden Cottage, the summer residence of the Earl of Galloway, was built by Lieutenant-General Sir William Stewart, K. C. B., who commanded the troops embarked with Lord Nelson in the expedition to Copenhagen, and who served under the Duke of Wellington in Spain and Portugal: he died at Cumloiden Cottage in 1827. Cairnmuir and Bargally are both houses well situated. The village of Minnigaff, near the confluence of the rivers Cree and Penkill, though formerly a place of some extent and importance, has since the erection of Newton-Stewart in Wigtownshire dwindled into a hamlet. About a quarter of a mile below it, a street of good houses called Creebridge has been built near a bridge over the river, a handsome structure of granite of five arches, from which the street takes its name, and which leads into the town of Newton-Stewart. The chief manufacture is that of cotton, in which sixteen persons are employed, and at Cumloiden the weaving of blankets and coarse plaids occupies about twelve persons. Facility of communication is afforded by the road from Portpatrick to Dumfries, by a turnpike-road to New Galloway, and by the Ayrshire road *via* Straiton, which last passes for many miles through the upper part of the

parish. The Cree is navigable for vessels of forty tons to Port-Carty, about a mile south of Newton-Stewart; and at Palnure is a small wharf, where grain and other agricultural produce are shipped for Liverpool, and coal and lime imported for the supply of the district.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Wigtown and synod of Galloway. The minister's stipend is £245. 4. 10., with a manse, and a glebe valued at £25 per annum; patron, the Crown. The church, erected in 1836 after a design by Mr. Burn of Edinburgh, at a cost of £1800, is an elegant structure in the later English style of architecture, with a square embattled tower, and contains 850 sittings; the interior is well arranged, and the east window embellished with stained glass. In the churchyard is a monument to Sir William Stewart, above mentioned. A church has since been erected at Bargrennan, in the upper part of the parish, to which a district has been assigned; there are 207 sittings, and the duty is performed by a licentiate, who has a stipend of £50 per annum, towards which the Earl of Galloway contributes £20, and Colonel Stopford Blair of Penninghame, and the Rev. Mr. Johnstone, £10 each. In the parish is also a place of worship for members of the Free Church. The parochial school is attended by about seventy children; the master has a salary of £34, with a house and garden, and the fees, about £30. There is also a school at Bargrennan, of which the master receives a salary of £23 per annum from Lord Galloway, Col. Blair, and others, in addition to the fees. A school in which twenty-five girls are taught reading, writing, and arithmetic, and needle-work, is supported by the Countess of Galloway; and there is a Sabbath school, to which is attached a library of about 400 volumes. A clothing club was instituted a few years since by Lady Galloway, who adds to the weekly deposits one-half of the amount at the end of the year: a similar institution is under the patronage of Lady Heron Maxwell.

On the summit of a bank at the junction of the Cree and the Penkill, is a mound which appears to have been anciently a seat for administering justice; and there are various others in the parish. Several tumuli have been opened, in which were found human bones and military weapons. On the lands of Kirouchtree, in forming the plantations, a large mound was opened, covered on the top with clay, under which were ashes, and, beneath, a vitrified substance about an inch in thickness, on removing which a circular wall was discovered, inclosing an area filled with red ashes to the depth of three feet. Below these was a flagstone six feet long and three feet wide, covering a pit, where a human body was found, which on exposure to the air crumbled into dust. About a mile from Creebridge, on the Dumfries road, is a tumulus supposed to cover the remains of the slain in some battle of the Scots with the Romans or the Picts.

MINNYHIVE, a village, in the parish of GLENCAIRN, county of DUMFRIES, 17 miles (N. W. by W.) from Dumfries; containing 667 inhabitants. It is situated nearly in the centre of the parish, on the south bank of the small river Dalwhat, one of three streams that unite a little below the village, and form the Cairn. This place has latterly much increased in extent and population, and the houses which have recently been built are of a superior description; the inhabitants are partly engaged in agriculture, and partly in handicraft

trades and manufactures. A post-office has been established; and fairs are held in March, July, and October, chiefly for hiring servants. The Dalwhat is crossed here by a bridge leading to the pleasant village of Dunreggan; and the turnpike-road from Dumfries passes in the vicinity. In Minnyhive is a cross, erected about the year 1638, when a charter was granted constituting the place a burgh of barony, with power to hold a weekly market. Within a quarter of a mile, on rising ground, a monument was erected in 1828 to the memory of the Rev. James Renwick, executed at Edinburgh in 1688, and popularly known as "the last of the martyrs".

MINTLAW, a village, in the parish of LONGSIDE, district of BUCHAN, county of ABERDEEN, $8\frac{1}{2}$ miles (W. by N.) from Peterhead; containing about 240 inhabitants. It is situated at the junction of the high roads from Fraserburgh to Aberdeen and Peterhead to Banff, and two miles and a half from the village of Longside. It is of modern date, having been built in the present century, and contains a post-office for the surrounding district. The mail from Aberdeen to Fraserburgh passes through the village. Fairs for cattle, sheep, and horses are held here on the Tuesdays after the 25th February, 14th April, 14th June, 25th August, 7th October, and 14th December.

MINTO, a parish, in the district of JEDBURGH, county of ROXBURGH; containing, with part of the suppressed parish of Hassendean, 455 inhabitants, of whom 90 are in the village of Minto, $5\frac{1}{2}$ miles (N. E. by E.) from Hawick, and the remainder in the rural districts of the parish. This place, the name of which is of very questionable origin, is of considerable antiquity. It anciently formed part of the possessions of the powerful families of the Stewarts and the Turnbells: the estate afterwards belonged to the Riddells, and was purchased before the Union by Sir Gilbert Elliot, a lord of session; ancestor of the Earl of Minto, lord privy seal, the present proprietor of the estate, and one of the four heritors in the parish. Minto comprises a considerable portion of the parish of Hassendean, of which the church, with the larger part of the lands, was granted by David I. to the Bishop of Glasgow. The parish is nearly four miles in length, and about two miles and a half in breadth, and is bounded on the north by the parish of Lilliesleaf, on the east by the parish of Anernum, on the south partly by the parish of Cavers and the river Teviot, and on the west by the parish of Wilton. Its surface is broken by frequent undulations more or less bold, leaving but a very small proportion of level ground. The highest of the hills is about 900 feet above the level of the sea. They are richly covered with verdure; and a congeries of rocks forms an elevated ridge called the Minto Craigs, overhanging the vale of Teviot, to which, with their wooded summits, they give a character of peculiar beauty. The Craigs rise to a mean elevation of 700 feet, and the country adjoining is indented with several small glens watered by rivulets descending from the higher grounds, and which in the winter months assume the velocity of torrents. One of the glens, near the western extremity of the parish, is strikingly beautiful, and has been tastefully laid out in walks, leading to the different points from which its richest scenery may be observed. Another, of narrower dimensions, is planted with evergreens of every variety; and the stream that flows through it, being intercepted in its progress by an artificial barrier,

spreads into a beautiful sheet of water, forming beneath a pleasing cascade. A pathway from this glen leads to the Minto Craigs, the base of which is concealed by large masses of rock that have fallen from the heights at various times, and accumulated on the spot; and large projections from the craggy precipice threaten every moment to add to their number. Among these rugged heights are some intervals of level rock, said to have been the retreats of border chieftains; and on one of them are the ruins of an ancient tower, from which a romantic and boldly varied prospect is obtained.

The SOIL is very various, in some parts tolerably fertile, and the hills afford good pasturage for sheep and young cattle. The whole number of acres in the parish is estimated at 4500, of which nearly 2000 are arable, 1400 in permanent pasture, and about 800 in wood. The crops are, grain of all kinds, potatoes, and turnips; the system of agriculture is in an improved state, and the rotation plan of husbandry in use. Bone-dust has been introduced as manure; the lands have been well drained and inclosed, and the farm-buildings are generally substantial and well arranged. The sheep are of the Cheviot and Leicestershire breeds, and the cattle of the short-horned breed. The woods principally consist of oak, elm, ash, and Scotch, spruce, larch, and silver firs; some of the larch-trees have attained to a remarkably fine growth, and of all the older timber there are numerous stately specimens. The annual value of real property in the parish is £4211. Minto House, the property of the Earl of Minto, is a spacious and elegant mansion, finely situated in an extensive demesne richly wooded, and abounding with picturesque and strikingly romantic scenery. Teviot-bank House, recently erected, is a handsome mansion in the early English style of architecture, commanding many highly interesting views. The village is neatly built, and inhabited by persons chiefly employed in agricultural pursuits; it has a facility of communication with the neighbouring towns by good roads, and on the west of it runs the Edinburgh and Hawick railway.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Jedburgh and synod of Merse and Teviotdale. The stipend of the incumbent is £206: the manse, lately erected, is a very handsome and comfortable residence pleasantly situated, and the glebe has been valued at £40 per annum. Minto church is an elegant and substantial edifice built in 1832, in the later English style of architecture, and is adapted for a congregation of 350 persons. The parochial schoolmaster has a salary of £34, with a house and garden, and the fees average £25 per annum, to which may be added the interest of £100 bequeathed for the education of the poor. There are no remains of the church of Hassendean, the very site of which has been covered by encroachments of the river Teviot: of the ancient tower or stronghold of Hassendean only a slight vestige is left; and of the fortress of Minto nothing is left but the site, on which the present house has been erected. On the summit of the Craigs are the remains of an ancient peel called Fatlips Castle, supposed to have been a stronghold of the Turnbull family. When taking down the old church of Minto in 1831, under the foundation of one of the walls were discovered 400 silver coins of the reigns of Edward I., II., and III., of England, and some of the reigns of Alexander and Robert, Kings of Scotland.

MOCHRUM, a parish, in the county of WIGTOWN; containing, with the villages of Eldrig, Kirk of Mochrum, and Port-William, 2539 inhabitants, of whom 187 are in the village of Kirk of Mochrum, $7\frac{1}{2}$ miles (S. W.) from Wigtown. This place, the name of which is altogether of unknown derivation, appears to have formed part of the possessions of the Dunbar family, having been conferred about the year 1368 upon the second son of Patrick, Earl of Mar, their ancestor. Among his descendants, who were subsequently raised to the dignity of baronets, the most distinguished was Gavin, son of Sir John Dunbar, who, having devoted himself to study, was in 1504 made prior of Whithorn, and in 1522 succeeded James Beaton as archbishop of Glasgow. In 1526 he was made lord chancellor of Scotland, and in 1536 was chosen one of the lords of the regency during the absence of James V. at the court of France while celebrating his marriage with Magdalene, daughter of Francis I. The original residence of the Dunbars, knights of Mochrum, was an ancient castle called the Old Place of Mochrum; the walls, of great strength, are still nearly entire, and it has an interesting and highly picturesque appearance. The castle, and the lands attached to it, remained in the possession of the Dunbars till towards the close of the last century, when they passed to the Earls of Dumfries, and subsequently to the family of the present Marquess of Bute; the title of baronets of Mochrum is still retained by their descendants, represented by Sir William Rowe Dunbar, Bart. The Maxwells settled in the parish in the early part of the 17th century, and the great body of its rental is received by their representative, Sir William Maxwell, Bart.

The PARISH is bounded on the south-west by the bay of Luce, and is nearly ten miles in length and from four to five miles in breadth, comprising from 20,000 to 22,000 acres, of which 200 are woodland and plantations, about 1000 waste, a number of acres under water, and the remainder, almost in equal portions, meadow, pasture, and arable land in good cultivation. Its surface, though not rising into hills of any considerable elevation, is boldly undulated, and diversified with tracts of level land and gentle acclivities in pleasing variety. The higher grounds command a fine view, extending over the bay of Luce and the Irish Channel, and embracing the Mull of Galloway, the Isle of Man, the mountains of Morne on the Irish coast, and the heights of Skiddaw in Cumberland. Towards the north-west are numerous lakes, of which the most important are Mochrum and Castle lochs, each about a mile and a quarter in length and a quarter of a mile in width, and containing islets of picturesque appearance. From these, and also from the smaller lakes, issue rivulets that intersect the lands in various directions; and some, uniting their streams, form the Malzie water, which flows eastward through the parish into the Bladenoch, and is the only water approaching in character to a river. The coast extends nearly ten miles, and for the greater part is a flat smooth gravelly beach about fifty yards in width, but is bounded by a precipitous bank rendering communication with the interior difficult, and at about a mile from the western extremity terminates in a steep rock projecting into the bay, and forming a bold and almost inaccessible shore. There are several indentations or creeks affording shelter to boats; but the only harbour accessible to trading vessels of any considerable

burthen is Port-William, near the eastern extremity of the bay: it has safe anchorage for vessels of 200 tons, and was constructed during the last century by Sir William Maxwell. The bay abounds with fish of almost every variety, and of excellent quality; salmon and herrings are taken in moderate quantities, and cod, mackerel, whiting, and other white-fish are found in considerable numbers.

Along the coast the SOIL is mostly a rich deep loam, alternated with patches of lighter quality: towards the central part it gradually becomes thin and stony; and in the west and east are some tracts of moor and moss, with intervening portions of dry and fertile arable land. The system of husbandry has been greatly improved under the auspices of Sir William Maxwell, who gives liberal encouragement to his tenants; favourable crops are raised, and considerable numbers of cattle and sheep are reared here. The farms are well inclosed, chiefly with hedges of thorn; the farm houses and offices are generally substantial and commodiously arranged, and all the more recent improvements in the construction of agricultural implements have been adopted. Though not extensive, the plantations add much to the beauty of the scenery, and such of them as are sheltered from the sea breezes are in a thriving state: the soil does not appear to be adapted to their extension. The annual value of real property in the parish is £8980. Monreith House, the seat of Sir William Maxwell, is a modern mansion, situated on an eminence near the eastern boundary of the parish, about a mile from the sea, and at the head of a small but beautiful lake surrounded with plantations. Myrton Cottage, a handsome residence, was built by the same gentleman within the last few years. The village of Mochrum, in which the church stands, is neatly built; and its inhabitants are chiefly employed in agricultural pursuits. The villages of Eldrig and Port-William are described under their respective heads; at Port-William is a post-office which has six deliveries in the week. Facility of intercourse is maintained by good roads, of which the turnpike-road to Glenluce passes along the coast for several miles, opening a communication with the Rhinns of Galloway. Ecclesiastically the parish is within the bounds of the presbytery of Wigtown and synod of Galloway. The minister's stipend is £153. 3. 5., with a manse, and a glebe valued at £25 per annum; patron, the Crown. Mochrum church, built in 1794, and successively enlarged by the addition of galleries in 1822 and 1832, is a substantial structure containing 700 sittings. There is a place of worship for members of the United Presbyterian Church. The parochial school is well attended; the master has the minimum salary, with a garden, and an allowance in lieu of a house, and the fees average upwards of £20 annually. The school-room is a handsome building, adapted for the reception of 150 children. Near the church is a large earthen mound surrounded by a deep fosse. On the summit of an eminence not far from the eastern extremity of the coast, are some very distinct traces of an Anglo-Saxon camp; and near the shore, about two miles from the western extremity, are the ruins of the ancient chapel of St. Finian.

MOFFAT, a parish, partly in the county of LANARK, but chiefly in that of DUMFRIES; containing 2199 inhabitants, of whom 1413 are in the town of Moffat, 21 miles

(N. N. E.) from Dumfries, and 52 (S. by W.) from Edinburgh. This place, the name of which is of doubtful etymology, but supposed to be derived from *Muir-foot*, is not distinguished by many events of historical importance; the principal on record are, the defeat of Edward Baliol in 1333, by Sir Archibald Douglas, at the head of 1000 horse, and the passage of a division of the Highland army in the service of the Pretender in 1715, on its route to England. With the exception of two farms only in the county of Lanark, the parish is contained within the county of Dumfries. It is about fifteen miles in extreme length and nine miles at its greatest breadth, comprising 38,400 acres, of which 3750 are arable, 800 woodland and plantations, and the remainder hill-pasture, moor, and waste. Nearly one-half of the lands are the property of Mr. Hope Johnstone of Annandale, a descendant of the Johnstones of Lochwood, lords of Annandale, of whom William, the second earl, was created a marquis in the reign of William III.; the remainder is divided among numerous proprietors. The surface is generally hilly, and towards the borders mountainous. On the northern boundary are the mountains of Hartfell and Locheraig, nearly equal in height, and of which the former has an elevation of 3000 feet above the level of the sea, terminating in a flat summit of very considerable extent: in the north-east are the heights of Saddle-yoke, Bodisbeck, and Lochfell. The vales of Evan, Annan, and Moffat, through which flow the rivers of those names, are nearly parallel, and inclosed by ranges of hills of moderate elevation. The river Evan, which runs for four miles through the parish in a south-eastern direction, and the Moffat, which takes a south-western course of about seven miles, both fall into the Annan, a few miles below the town; and the Annan, after a southern course of ten miles here, and receiving the waters just referred to, passes through the rest of Annandale into the Solway Firth. Moffatdale is considered one of the finest vales in the south of Scotland, and abounds with interesting associations: the Covenanters took refuge in the wild and rugged mountains that encircle it, when they were pursued by Claverhouse and his followers; and in recent times, the vale was one of the favourite haunts of the poet Burns. The only lake of importance is Loch Skeen, situated to the north-east, at an elevation of 1400 feet above the level of the sea; it is about three-fourths of a mile in length and one-fourth in breadth, and surrounded by mountains of dreary aspect. In the centre is a rocky islet, the undisturbed resort of the eagle. The lake abounds with three kinds of trout, and is frequented by anglers: a stream issues from it with great force, and, falling from precipitous rocks nearly 400 feet in height, forms a stupendous cataract called the Grey Mare's Tail.

In the vales, especially those of Annan and Moffat, the soil is rich, dry, and fertile; and in the higher lands, light and heathy, chiefly affording pasture for sheep, for which purpose above 30,000 acres are appropriated. The crops are oats, wheat, barley, potatoes, and turnips, with the various grasses. The system of agriculture is good, and the farm-buildings are substantial and commodious; great attention is paid to the management of live stock, and a farming association has been established. About 400 milch-cows of the Ayrshire breed are kept, and there are 550 head of young cattle; the number of sheep is about 25,000, and of swine 400. There are remains of

ancient woods at Craigieburn and in a few other places; the plantations consist of larch, oak, ash, birch, hazel, and mountain-ash, and are well managed and in a thriving state. The chief substrata are sandstone and blue whinstone, with slate of good quality for roofing; an attempt to find coal was made in 1844, but without success, and a previous search for copper-ore in Hartfell was equally unavailing. The principal seats are, Craigieburn House, the seat of Mr. Proudfoot, which, with the adjacent wood, is celebrated by the poet Burns; Dumcrief, the property of Mr. Rollo, once the residence of McAdam, the celebrated improver of roads, whose remains lie interred in the churchyard of Moffat; Granton, the seat of Mr. Jardine, a new and elegant structure; and Heathryhaugh, the seat of the late Mr. Tod, a beautiful spot, situated on the road to Moffat well.

The town stands near the opening of the vale of Annan, on an elevated site 300 feet above the level of the sea. It is neatly built, consisting of one spacious street, in the centre of which is the market-place, a square area where is a public cistern for supplying the town with water. This place is much frequented by visitors, who resort in numbers during the season to drink the waters of the mineral springs in its immediate neighbourhood, and for whose accommodation there are several good inns and respectable lodging-houses. Moffat is also celebrated as a fishing station. The vicinity abounds with beautifully picturesque scenery and with objects of interest; many new houses have been erected, and some pleasing villas have been built, which are inhabited by opulent families. *The Well of Moffat* is about a mile and a half from the town, and is approached by an excellent carriage road. The water is strongly sulphureous, and on analysis by Dr. Garnet a wine gallon was found to contain, of muriate of soda thirty-six grains, sulphuretted hydrogen gas ten cubic inches, of azotic four, and carbonic acid gas five. It evaporates quickly, and can be drunk with due effect only at the well, for which purpose elegant baths have been erected, with reading and billiard rooms and a bowling-green attached; a quadrille band plays in the pump-room twice a week, and there is good stabling at the inn. *The Hartfell Spa*, about four miles from the town, is a powerful chalybeate issuing from a deep ravine on the west side of the Hartfell mountain. A wine gallon contains, of sulphate of iron eighty-four grains, sulphate of alumina twelve grains, and of azotic gas five cubic inches: the water is a powerful tonic, and may be kept for a considerable time without losing its efficacy. *The Evan-Bridge Spa*, a little to the south of the town, in the parish of Kirkpatrick-Juxta, is a chalybeate less powerful than the Hartfell, containing in a wine gallon, of oxide of iron two grains, of carbonic acid gas thirteen cubic inches, and of azotic gas two.

The weaving of stockings is carried on to a moderate extent, and there are a mill for fulling cloth, a saw-mill, and a corn-mill; many of the inhabitants are employed in the various handicraft trades requisite for the supply of the neighbourhood, and there are numerous shops well stored with merchandise. A market is held weekly, and two branch banks have been established; the post-office has two deliveries daily. The police is under the management of two special constables; two magistrates reside in the town, and a court of petty-sessions is held monthly. Facility of communication with Edinburgh,

Glasgow, Carlisle, and other places, is afforded by good roads, and by the Caledonian railway. The annual value of real property in the parish is £8654. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lochmaben and synod of Dumfries. The minister's stipend is £260. 5., with a manse, and a glebe valued at £25 per annum; patron, Hope Johnstone, Esq., of Annandale. Moffat church, a handsome structure, built by James, Earl of Hopetoun, and beautifully situated, contains about 1000 sittings. There are places of worship for Burghers and members of the Free Church. The parochial school is well conducted; the master has a salary of £25. 13. 6., with a house and garden, and the fees average £10 per annum. A distinct grammar school was formerly supported from the proceeds of a bequest of £1000 by Robert Johnstone, Esq., of London, for its erection and endowment; but this is now combined with the parochial school under the superintendence of a head-master and an assistant. There are, also, a free school endowed by the late Mr. Morrison; a school supported by subscription; and others, depending solely on the fees. Part of the Roman road through the vale of Annan to Crawford may still be traced in the parish; and there are some tolerably perfect remains of Frenchland Tower, of which little of the origin is recorded; also of a more ancient fortification called the Cornal Tower.

MOLLENSBURN, a village, in that part of the parish of CADDER which formed the quoad sacra parish of CHRYSTON, Lower ward of the county of LANARK, 1½ mile (N. E. by E.) from the village of Chryston; containing 202 inhabitants. This place is in the extreme east of the parish of Cadder, and on the high road from Perth to Glasgow; it is neatly built, and from its pleasant situation and many advantages is likely to increase in population and importance. The district abounds with wood and water; excellent whinstone is prevalent in the neighbourhood, and is quarried for building and other purposes. The inhabitants are chiefly engaged in agriculture and in the quarries.

MONAN'S, ST., a fishing-town, in the parish of ABERCROMBIE, county of FIFE, 1 mile (W. S. W.) from the town of Pittenweem; containing 1029 inhabitants. This place, which is situated on the Firth of Forth, is now generally pronounced St. Monance. It seems to have owed its origin to a chapel, raised by David II. in gratitude for the escape of himself

Burgh Seal.

and his queen from shipwreck on this part of the coast, and which, upon the annexation of the barony of Monan's to the lands of Abercrombie, became the church of the two united parishes. The inhabitants are chiefly engaged in the cod, haddock, and turbot fishery, and the herring-fishery, of which this is one of the most important stations on the eastern coast of Scotland. Herrings are taken in the winter and autumn within a moderate distance of the harbour; but the principal fishery, formerly at Caithness, has of late years been at Peterhead, where sixty boats from St. Monan's of about fifteen tons' burthen each are engaged, affording employment to about

150 persons belonging to the town, and a like number from the country district. The cod, haddock, and turbot fishery is also carried on to a considerable extent, about twenty-six yawls, each manned with a crew of six, being engaged in it throughout the year, with the exception of a few weeks in winter and autumn, when the large boats are used in the herring-fishery. Many persons are occupied in curing and packing cod for exportation, chiefly to the London and Liverpool markets: turbot and haddocks, also, are sent in large quantities to Edinburgh and places adjacent. The manufacture of kelp, at one time a very profitable trade, has been altogether discontinued. A number of persons are engaged in making nets for the fishermen; and there is a very extensive brewery and malting concern. St. Monan's harbour, which is formed by the extension of two parallel ridges of rock, and by a strong pier carried out from the shore, is safe and commodious, affording good shelter for the fishing-boats and for vessels of larger dimensions; the depth at spring-tides is from eighteen to twenty feet, and at neap-tides from thirteen to fifteen feet. The principal exports are, cured cod, herrings, and potatoes; and the chief imports, coal, lime, and salt. St. Monan's received a charter of incorporation from Sir William Sandilands, dated 1622, by which it was erected into a burgh of barony, and the government vested in three bailies, a treasurer, and fifteen councillors. The bailies are chosen by the feuars and burgesses, and after their election appoint the council; and twelve constables are chosen annually by the corporation, for the preservation of the peace and the regulation of the town. The bailies exercise little jurisdiction except in cases of petty misdemeanors. The town-house, a plain building, consists of two apartments on the ground-floor and two immediately above. —See ABERCROMBIE.

MONEYDIE, a parish, in the county of PERTH, 6 miles (N. W. by N.) from Perth; containing 315 inhabitants. This parish consists of two portions, viz., the old parish of Moneydie and the district of Logiealmond, which latter, about eighty or ninety years ago, was separated from the neighbouring parish of Monzie, and annexed quoad sacra to Moneydie. Before the Reformation Moneydie Proper appears to have been a parsonage connected with the diocese of Dunkeld; and about the year 1480 the living was held by Alexander Myln, canon of Dunkeld, calling himself "prebendary of Moneydie." A large proportion of the land here seems to have been held by the bishops, one of whom had obtained it by purchase, and caused it to be united to the barony of Dunkeld, but upon condition that a layman was to hold of the Church, and to perform the necessary services to the king. Other proprietors of lands in former times were, James, Master of Gowrie, Sir Patrick Crichton, and Sir Andrew Malcolm, who all had large estates in the parish; and the district of Logiealmond, which is more than double the size of the original parish of Moneydie, appears to have been once possessed by a family of the name of Logie. At present, Moneydie Proper is nearly equally divided between the Duke of Atholl and another family; while Logiealmond belongs to Sir William Drummond Stewart of Grandtully.

The PARISH is bounded on the north by the parishes of Auchtergaven and Little Dunkeld; on the west by Fowls; on the south by Redgorton and Methven; on

the east by Redgorton. Logiealmond, or the *western* district, lies on the southern face of the first range of the Grampians, sloping towards the river Almond; the *eastern* extremity of the parish reaches almost to the river Tay, near Lunearly bleachfield. The surface is but little diversified; and with the exception of the Logiealmond hills, which are about 1800 feet above the level of the sea, there is no material elevation. The Almond, which skirts the southern boundary of the parish for a number of miles, is the only river of importance; but there are the two small streams of Shochie and Ordie, which rise in the Grampian range, and fall into the Tay. The Almond abounds in salmon and trout, and the two streams are famed for trout-fishing. In the lower district the soil is much varied: near the Almond it is a light alluvial mould, changing occasionally into a rich loam resting upon a gravelly subsoil; while at some distance from the river it is a hard red earth, with a considerable proportion of black loam. On the higher grounds it consists of a cold wet till, with a little peat-moss. In Moneydie Proper 2718 acres are under cultivation, and 771 in pasture; in Logiealmond 2237 are cultivated, and 4869 in pasture. About 800 acres are occupied by wood, much of which consists of Scotch fir, and is of some age; the younger plantations are chiefly of larch, spruce-fir, and oak, the last of which prevails to a great extent upon one estate. All kinds of white and green crops are produced; of the latter, potatoes form the principal article. Cattle of every description are reared, from the bulky Teeswater to the diminutive West Highland; the sheep are chiefly of the Leicester breed, especially on the low lands, being preferred both on account of their readily fattening, and for the superior value of their fleece. The best system of husbandry is followed; and the improvements which have been made in agriculture have trebled the rent of the parish within the last forty or fifty years. The draining, inclosing, and improving of waste land have advanced with great rapidity; but the most important change consists in the introduction of bone manure for turnips, which are eaten off the land by sheep. By this means, independently of some other advantages, the whole farm-yard dung is reserved for the potatoes, large quantities of which are sent to the London market. The annual value of real property in the parish amounts to £3654. The rocks in the hills are chiefly blue slate; and in about the middle of the upper district is a quarry of grey freestone, of fine quality, and easily wrought. A flax spinning-mill has been established at Milnhaugh, driven by the river Almond, and employing about fifty persons. The village of Herriotfield, the only one in the parish, contains about 100 inhabitants. Logiealmond House, a seat of Sir William D. Stewart's, is partly of ancient date; it is romantically situated on the bank of the Almond. Peat and wood are used as fuel in the upper part of the parish: in the lower the people obtain English coal from Perth.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Perth and synod of Perth and Stirling; patron, the Earl of Mansfield. The stipend of the minister is £216; and there is a small manse, with a glebe of nearly nine acres of good land. The church is a plain substantial structure, with a square tower, and accommodates 460 persons with sittings: it was built about the year 1817. At Chapelhill, in Logie-

almond, four miles distant, an ancient chapel was fitted up and opened by subscription, in connexion with the Establishment, in 1834, at an expense of about £150: the allowance to the minister, which is small, arises from seat-rents and collections. There is also a meeting-house in the parish belonging to the United Presbyterian Church; and the members of the Free Church have a place of worship. A parochial school is maintained in Moneydie; the master has a salary of £34, with about £10 fees, and a house and two acres of land. There is another school at Chapelhill, the master of which has a salary from the heritors of 100 merks Scots, a dwelling-house, and about two acres of land. A school, also, is attached to the United Presbyterian meeting-house. The usual branches are taught in all these schools, with the addition of the classics and French, if required, in the parochial school. A small library belongs to the congregation of the Established Church, and another to the United Presbyterian body.

MONIFIETH, a parish, in the county of FORFAR; † containing 3471 inhabitants, of whom 308 are in the village of Monifieth, 6 miles (E. by N.) from Dundee. The name of this place, written in ancient records *Monie-fuith*, *Monefuit*, and *Monefut*, is of Celtic origin, signifying "the moss of the stag", and is supposed to be descriptive of the state of a portion of the parish in former times, in connexion with the sport here carried on. A deep stratum of moss, now covered by the sandy links along the Firth of Tay, is the depository of many stags' horns; and King David I., according to tradition, had a hunting-seat here. The Culdees were in ancient times settled at this place, and the remains of a religious edifice that belonged to them were discovered in 1812, in digging the foundations of the present church. There were anciently the four chapelries of Monifieth, Broughty, Eglismonie, and Kingennie, with some minor charges, all which were ultimately consolidated into one parochial benefice; and about the end of the twelfth century, Gilbert, third Earl of Angus, gave the church of Monifieth, with the churches of Murroes, Kirriemuir, and Strath-dighty, to the abbey of Arbroath. His countess, Matilda, added the whole land on the south side of the church; and afterwards, Monifieth continued to be dependent on the abbey until the Reformation. The PARISH, which is of an oblong shape, is bounded on the south by the Firth of Tay, and is five miles long, and from one and a half to three and a half miles broad; comprising 6054 acres, of which 4574 are under cultivation, 926 in pasture, chiefly links, and 554 in plantations. Its coast is about three miles and a half in length, and is low and sandy, without any harbour: numerous small craft and boats run up the beech to land goods at different places, and are left dry upon the shore at the ebb of the tide. The surface gradually rises from the Tay towards the north; a ridge, partly cultivated and partly planted, crosses it in the middle; and the lands attain at the northern extremity an elevation of 500 feet above the level of the sea. The climate is cold in the northern quarter, but mild and salubrious in the south; and the scenery is enlivened by the Dighty stream: this stream empties itself into the Tay, and on its banks are several mills and manufacturing works.

In the north the soil rests upon a cold tilly bed, but is gradually assuming an improved character, under the process of thorough-draining: from the eminences that

intersect the middle of the district, down to the shore of the Tay, the land is rich and fertile, producing excellent and very heavy crops. Every kind of grain, and the usual green crops, are raised. Large quantities of potatoes especially are grown, of superior quality, and principally for the Dundee market; and dairy-farming is carried on to a considerable extent for the supply of the same place. Little stock is reared in the parish. The farms let on leases of nineteen years vary in size from 100 to 300 acres; there are two or three farms of less extent, and a great number of allotments of not more than five, ten, and fifteen acres each. Scarcely any land capable of improvement now remains waste; the rent of some tracts is only about £1, but that of the best about £4, per acre. In the south the prevailing rock is whinstone; that in the north is a superior kind of stone adapted for pavement, and a quarry of which has been in operation, it is supposed, for nearly 300 years. The annual value of real property in the parish is £14,642. Grange, the ancient seat of the Durhams, has been replaced by a new mansion pleasantly situated about half a mile from the shore; the old edifice was rendered famous by the escape of Erskine of Dun, and for an attempt of the same kind, that was nearly successful, of the Marquess of Montrose, when on his way to Edinburgh after his capture at Assynt. Linlathen is a large structure on the banks of the Dighty; and at Laws a mansion has been lately built, in an ornamental style, commanding very fine views of the surrounding country.

Several villages formerly existed here, including two of considerable size, called Cadgerton and Fyntrack or Fintry, of which no vestiges now remain. The parish at present contains the villages of Broughty-Ferry, Monifieth, and Drumsturdy; and another populous village is springing up on the links of Barnhill, Lord Panmure having begun to let ground there on building-leases of ninety-nine years. A few of the inhabitants are employed in weaving: the yarn is generally brought from Dundee, by persons regularly employed for that purpose, who take it to the weavers around, and carry the work back to Dundee. A spinning-mill, situated at the mouth of the Dighty, and driven partly by water and partly by steam, occupies about 120 or 130 hands; and half a mile further up the stream is a bleaching-work, engaging as many as 100 persons. A foundry, and some works for making machinery, in the village of Monifieth, give occupation to about 100 hands; and there is also an old-established cart and plough manufactory. The salmon-fishery pursued along the coast, rented at £325, returns about £740 a year; and the value of the white-fishing, which is carried on chiefly by the inhabitants of Broughty-Ferry, a populous watering-place and fishing-village, amounts to upwards of £5000 per annum: haddock, cod, ling, soles, whiting, and other fish, are sent to the Dundee market; and there is an establishment for curing cod, at which a considerable quantity is prepared for exportation. Broughty-Ferry also contains two ropeworks, a brewery, and the other usual establishments necessary for a large population. It is in very high repute as a sea-bathing place; the houses are rapidly increasing in number, and the population is upwards of 2000. The salubrity of the climate, the facility for railway travelling, and the suitability of the beach for bathing, have also caused a considerable influx of strangers into the village of Monifieth, and the want of

accommodation in the village alone prevents their numbers from being greatly increased. The fuel in general use is coal from England; but brushwood is also consumed to some extent. The railway and the turnpike-road from Dundee to Arbroath pass through the southern part of the parish, and the public road from Dundee to Brechin skirts the north-western boundary. A sub-post-office is established in the village of Broughty-Ferry. The principal market for the sale of produce is Dundee. A fair used to be held every half-year for cattle, horses, &c., which was at one time of some repute, but at length dwindled away.

Ecclesiastically the parish is in the presbytery of Dundee, synod of Angus and Mearns, and in the patronage of Lord Panmure: the minister's stipend is £255, with a manse, and a glebe of four acres and a half valued at £12. 10. per annum. The church, built in 1813, is situated at the southern extremity of the parish, on the brink of the Tay, and contains sittings for 1100 persons. A chapel, with accommodation for 720 persons, was erected in 1826 at Broughty-Ferry, and now forms the chapel of a quoad sacra parish: the minister, who receives about £150 per annum, derived from seat-rents and collections, is elected by the male communicants. In the same village are places of worship for the United Presbyterian Church and the Free Church. The parochial school affords instruction in the ordinary branches; the master has a salary of £25. 13., with a house, and about £35 fees. Two female schools, and a school for infants, are supported by Mr. Erskine of Linlathen; and there are two schools partially endowed; also a good school in connexion with the church at Broughty-Ferry. The parish contains two public libraries and two savings' banks. There is a bequest of £100 Scots yearly, partly for poor scholars, and partly towards the poor's fund.

Broughty Castle, situated on a rock jutting into the Tay, near the western limit of the parish, is a very ancient structure. It was garrisoned by the English after the victory at Musselburgh, in 1547, as the key commanding the river Tay, which is here about a mile broad. After repeated attempts to reduce it, without success, it was stormed and carried in 1550 by De Thermes, commander of the allied army of the Scots, French, and Germans, and was subsequently dismantled. All that now remains is a large square keep, used as a signal-tower by the coast-guard. Upon the hill of Laws, about the middle of the parish, are the remains of a vitrified fort; and not far from this spot is the Gallow-hill of Ethiebeaton. A little to the north of Linlathen is a large heap of stones called Cairn-Greg, where it is said a famous Scottish chieftain, whose name was Greg or Gregory, fell in battle. On the summit of a small knoll near Kingennie is a circle of large stones called St. Bride's ring, supposed to have been a place of worship dedicated to St. Bride, from whom the neighbouring parish of Panbride took its name.—See BROUGHTY-FERRY.

MONIKIE, a parish, in the county of FORFAR, $3\frac{1}{2}$ miles (W. by N.) from Muirdrum; containing, with the villages of Craigton, Guildie, and Guildiemuir, and the hamlet of Bankhead, 1317 inhabitants. This parish is supposed to have derived its name, of Gaelic origin, from the character of its surface, rising into an elevated tract of upland moss. It is said to have been the scene of the death of Camus, the Danish general, who, after the defeat of his army by Malcolm II., was slain here;

in commemoration of which event, a stone pillar in the form of a cross was erected on one of the hills, thence called Camustane. The extreme length of the parish, from north-west to south-east, is about seven miles, and its greatest breadth rather more than five; comprising an area of nearly 6000 acres, of which 4450 are arable, 500 woodland, and the remainder moor and waste. Its surface is marked by two ranges of hills, stretching from east to west in a nearly parallel direction, and dividing the parish into three several portions, which differ materially in climate and soil. Of these, the range lying to the south of the Downie hills, and sloping towards the mouth of the Tay, has a rich and fertile soil resting upon trap and gravel, and producing abundant crops of grain of all kinds, and especially of wheat and barley of excellent quality. The soil in the central district, which is a valley between two ranges of hills rising to the height of 400 feet above the level of the sea, is in many parts a thin black loam on a wet and tilly substratum, difficult to work, and producing only oats: in other parts the subsoil is gravelly, and good crops of wheat, barley, and oats are raised. The third portion, which has an elevation in some parts of about 500 feet, is a swampy tract of moorland, extending along the northern boundary of the parish, and of which only very small portions are cultivated with any success. The Downie hills are chiefly of whinstone of good quality for building and for roads, with sandstone, which is quarried to a considerable extent; and in the northern district is an extensive bed of slatestone, well adapted for pavements. Beautiful specimens of agate, spar, and jasper are found in the trap-rock of the Downie hills; and along the summit of the range is a great variety of plants.

The system of agriculture has been progressively improving for a considerable time, and is now in a very efficient state: the chief crops are wheat, barley, oats, turnips, and potatoes, for all of which a ready market is found in Dundee, whither, also, the produce of the dairylands is sent. The farm houses and offices are substantial and commodiously arranged. Considerable attention is paid to the breed of cattle, under the auspices of the agricultural societies of the county; and all the modern improvements in implements of husbandry have been generally adopted. The plantations are chiefly of fir; but they are not in a very flourishing state, and there are still some large tracts of waste that might be planted with greater success. The annual value of real property in the parish is £3151. The principal villages are Craigton and Guildie, the former containing 162 and the latter 158 inhabitants, who during winter are mostly employed in the weaving of linen for the manufacturers in the neighbouring towns of Dundee and Arbroath. Great facility of communication is afforded by the turnpike-road from Dundee to Arbroath, and by the Dundee and Arbroath railway. At Denfiend, on the old road from Dundee to Brechin, a strong massive bridge of one arch is erected over a precipitous chasm fifty-five feet in depth. Some years ago, a proposal was made for supplying the town of Dundee with water from the highest district of this parish, and surveys were made, and an act of parliament obtained, when some difficulties arose as to the manner in which the inhabitants were to be assessed; an expensive law-suit followed, and the proposed object was abandoned. In the year 1844, however, a new company was formed, fresh surveys made,

and in the session of 1845 an act was passed, giving the company the necessary powers for executing their works. According to the plan, the water from the springs was to be collected, and conducted by an aqueduct upwards of two miles in length to a reservoir and clearing-basin, together covering more than ninety acres, a little to the west of the village of Craigton; the water to be thence conveyed by another aqueduct and pipes, a distance of above nine miles, to Dundee.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dundee and synod of Angus and Mearns: the minister's stipend is £239. 16. 9., with a manse, and a glebe valued at £12 per annum; patron, the Crown. Monikie church is a substantial structure erected in 1812, and contains 900 sittings. There is a place of worship belonging to the United Presbyterian Church. The parochial school is well attended; the master has a salary of £34. 4. 4., with a house and garden, and the fees average about £20 per annum. Other schools are supported principally by the fees; the master of one of them has a house rent free, and a small annual gratuity from the Kirk Session. On the hill of Camustane is a handsome column 105 feet in height, rising from a rusticated pedestal containing a room for visitors and accommodations for the keeper. It was erected in 1839 by the tenantry of Lord Panmure, the principal landed proprietor, as a testimonial of their attachment to a landlord who, during a long life, has made the interest and comfort of his tenants his peculiar care. From the visitors' room, in which is a bust of his lordship by Chantrey, a spiral staircase leads to the balustrade above the capital of the column, which is surmounted by an ornamental vase. Affleck Castle, though long uninhabited, is still entire, and forms an interesting memorial of baronial grandeur. Hynd Castle, on the northern boundary of the parish, is an ancient square tower, of smaller dimensions, situated on an artificial mound. There is also a tumulus near the western extremity of the parish, called Hare Cairn, supposed to cover the remains of persons who fell in some hostile encounter near the spot.

MONIMAIL, a parish, in the district of CUPAR, county of FIFE; including the villages of Letham and Easter Fernie, and containing 1162 inhabitants, of whom 117 are in the village of Monimail, $5\frac{1}{2}$ miles (W.) from Cupar. The name of this place is of uncertain derivation, but most probably of Celtic origin. The archbishops of St. Andrew's had a palace here, which was occasionally their summer residence; and there is still remaining an ancient tower, supposed to have been added to the original building by Cardinal Beaton, who resided at Monimail in 1562. The parish is of elliptical form, extending at its extreme length for about six miles, and in its greatest breadth to about five miles; and comprises 6000 acres, of which 3000 are arable, 2000 meadow and pasture, and 500 woodland and plantations. Its surface is varied, rising in the northern part into a continuous range of hills, of which Mount Hill is the highest, and in the southern part forming a broad tract of nearly level ground, intersected by numerous streamlets that fall into the river Eden. On the summit of Mount Hill is a stately column more than 100 feet in height, erected to the memory of General Lord Hopetoun, and which forms a conspicuous and interesting object in the landscape. The soil consists generally of decom-

posed rock and vegetable earth, interspersed with occasional beds of clay, but in some parts comprises sand and gravel. Agriculture is highly improved, and the rotation plan of husbandry prevails, with due regard to the quality of the soil; the crops are barley, oats, wheat, turnips, and potatoes, of which last great quantities are raised, and shipped for the London market. The pastures are usually good, and great attention is paid to the cattle, which are of the Fifeshire, Ayrshire, and Teeswater breeds; the Fifeshire are preferred for breeding, and the Ayrshire for the dairy. Few sheep are reared; but considerable numbers, of the Cheviot and black-faced breeds, are bought in the autumn, and fed on turnips during the winter. The lands are well drained and fenced, and the farm houses substantial. The annual value of real property in the parish is £9463.

The plantations, principally on the lands belonging to the gentlemen's seats, consist of Scotch fir, larch, beech, oak, ash, elm, and plane; they are well managed and generally thriving. In the north of the parish the substratum is mostly whinstone, and in the south, sandstone: there are strata of coal in several parts, but no works have been opened, and the principal fuel is therefore brought from Markinch and Dysart. Melville, the property of the Earl of Leven and Melville, is an elegant modern mansion, beautifully situated in a well-disposed demesne embellished with plantations. Fernie Castle is an ancient structure of great strength, and said to have been one of the castles of Macduff. Cunoquhie is finely situated in a richly-planted demesne; and Bargarvie is also a handsome edifice with grounds tastefully embellished. The weaving of linen is carried on extensively at the village of Letham, affording employment to a great number of persons, who work with hand-loom in their own dwellings. Communication with the principal towns in the district is facilitated by good roads, and by the Dundee section of the Edinburgh, Perth, and Dundee railway. There are two parochial libraries, one containing a well-chosen collection of volumes on general literature, and the other exclusively appropriated to religious subjects. Monimail is within the presbytery of Cupar, synod of Fife, and in the patronage of the Earl of Leven: the minister's stipend is about £272, with a manse, and a glebe valued at £12 per annum. The church, which is inconveniently situated near one extremity of the parish, is a handsome building with a tower; it was erected in 1796, and affords accommodation for a congregation of 600 persons. The members of the Free Church have a place of worship. Monimail parochial school is well attended; the master has a salary of £34. 4. 4., with £24 fees, and a house and garden. There are four other schools, which are supported partly by private subscription, and partly by the fees: two of them are female schools.

MONIVAIRD or MONZIEVAIRD, and STROWAN, a parish, in the county of PERTH, 3 miles (N. W.) from Crieff; containing 853 inhabitants. The word Monivaird is a corruption of the Gaelic term *Moivard*, or *Monward*, signifying "the hill of the bards". Strowan is corrupted from Rowen, Rowan, or Ronan, a saint who flourished about the middle of the seventh century, who was eminent for learning, and is said to have been in possession of the estate now called Strowan; he also gave name to a spring and a lake here, and to a festival held in the place. The two parishes are supposed to

have been united about 200 years; but the church of each was kept distinct, and retained for public worship, till the year 1804, when a new church was built in a central part for the use of the whole population. The church of St. Servanus, or Serf, at Monivaird, is thought to have been given by the Earl of Strathearn, at the beginning of the thirteenth century, to the monastery of Inchaffrey. In 1511, in the reign of James IV., the sacred edifice was the scene of a bloody strife between the clans of the Murrays and the Drummonds, the former of whom, being out-numbered and in great danger, had fled thither and concealed themselves. But their hiding-place being discovered by an accidental circumstance, and all the men refusing to surrender, the Drummonds set fire to the building, which was soon burnt to the ground; and the victims, amounting, according to the account of Sir Walter Scott in his *Legend of Montrose*, to eight score men, with their wives and children, were consumed by the flames. The Master of Drummond, William, son of John first Lord Drummond, was immediately afterwards apprehended by order of the king, and conveyed to Stirling, where, with several of his followers, he was shortly executed. Upon digging the foundations for the mausoleum of the Murray family, in 1809, on the site of the old thatched church, some charred wood and a large quantity of human bones confusedly heaped together were found, supposed to have been the result of the conflagration in 1511.

An old castle situated on the north of the loch of Monivaird is said to have belonged to Red Cumyn, the rival of Bruce: it is called Castle-Cuggy, is exceedingly strong, and was inhabited during the time of Cromwell by Sir William Murray, the first baronet of Ochertyre. The residence of the Malises or Grahams, Earls of Strathearn, was also in the parish of Monivaird, the castle occupying the summit of Tom-a-chastel. It was burnt down, according to tradition, while inhabited by some ladies of note, who perished in the flames. One of them is conjectured to have been Joanna, daughter of Malise, Earl of Strathearn, and of the Princess of the Orkneys, and wife of the Earl de Warenne; who, in consequence of her treasonable practices against King Robert I., had been condemned to perpetual imprisonment in the keep of this castle by the Black parliament held at Scone in 1320. No events of historical importance have occurred in connexion with the parish in recent times. In the autumn of 1839, the locality was visited by some severe shocks of earthquake, passing along from the north-west to the south-east, and which were partially felt as far as Inverness, the banks of Loch Awe, Dunbar, and Berwick. Shocks had been occasionally felt for the previous fifty years; but these last were far more serious, and so much alarmed the inhabitants of the district, by shaking the houses from top to bottom, for several miles round, that most of the people residing at the adjacent village of Comrie spent the whole night in the streets, or in the churches, which were opened for prayer. Similar shocks have occurred since, but much more slightly. During the winter of 1843-4, when the loch of Monivaird was frozen over with very thick ice, there was an earthquake that rent the ice on the loch in three parallel lines running from east to west: it occurred on a Sunday, when the people were at church, and some pieces of plaster fell from the roof of the building; but the alarm was only momentary.

The PARISH is situated in the district of Strathearn, and is about nine miles long from north to south, and six miles broad. It approaches in form to an oval figure; but two tracts stretch into the contiguous parish of Comrie (and are annexed to it ecclesiastically): one of these is on the south-west, in the direction of Glenartney, and the other up Glenlednock, towards the north or north-west. The number of acres comprised in the whole is between 21,000 and 22,000; about 3000 acres are cultivated, 2000 occupied by wood, and the remainder in pasture. The surface is hilly and mountainous, but well watered and richly wooded, and partakes to a considerable extent of the milder and more picturesque features of Lowland, combined with the bolder and more romantic scenery of Highland, districts. A ridge of the Grampians runs along the northern boundary from east to west; and though bare and craggy at the summit, yet in its slope to the beautiful vale of Earn it is clothed with large plantations of forest-trees, which form a striking and interesting feature in the scenery. The highest elevation in this chain is Benchonzie, or "the mossy mountain", so called from an area of about forty acres on its top being covered with a light-coloured moss; it rises about 2922 feet above the level of the sea. At the south-eastern extremity of the parish is Turleum, a hill about 1400 feet high, connected with the lower parts of the northern ridge by a series of conical hills partly clothed with copse, and crowned with lofty firs. This line of hills crosses the valley of the Earn, and consists of the eminences of Laggan, Drummachargan, and Tom-a-chastel. On the last of these, most romantically situated, is the monument erected to the memory of General Sir David Baird, the hero of Seringapatam; it is an obelisk of fine Aberdeen granite, eighty-two feet high, and an exact resemblance of Cleopatra's Needle.

The valley separating Monivaird on the north from the district of Strowan on the south, presents the most rich and diversified scenery, comprehending hill and dale, wood and water, finely contrasted with the adjacent mountains of various size and figure; while in the distance appear the stately heights of Benchonzie, Benvoirlich, and Benmore. Most of the hills abound in all kinds of game; and on the celebrated cliffs of Glen-Turret the eagle annually builds her nest and rears her young, not infrequently, in time of scarcity of game, making great depredations among the flocks by carrying off young lambs. This glen was formerly famed for its breed of falcons; and here was procured the pair presented to George III. at his coronation, by the Duke of Atholl, in token of the tenure by which he held the Isle of Man under the crown of England. The largest loch in the parish is Loch Turret, embosomed in Glen-Turret, at the foot of Benchonzie; it is about a mile long and a quarter of a mile broad, and well stocked with trout, pike, and perch. Loch Ouan, in the same glen, is remarkable for the number of trout taken in it; and among several small lakes in the lower part of the parish, prolific in tench, eel, and other kinds of fish, is Loch Monivaird, covering an extent of about forty acres: it is situated at the base of a wood, and for many years yielded large quantities of shell-marl. The river Earn, issuing from the loch of the same name, in the parish of Comrie, passes through this and other parishes, and after a winding course of about thirty-six miles, falls into the Tay at Rhynd. It is joined on the east, near

Crieff, by a stream issuing from Loch Turret, and which, in its precipitous course of about six miles, is marked by many powerful falls. One of these, called the falls of Ochertyre, and situated in the heart of a thickly-wooded dell, is exceedingly beautiful, the water descending with tumultuous uproar for thirty feet: opposite to it, in a romantic spot, a grotto has been cut in the rock by the proprietor, for the accommodation of visitors; while a bridge has been thrown over the stream a little below. The Barvic, another rapid stream, running along the north-eastern boundary, separates Monivaird from Monzie; and after an impetuous course of four miles through a romantic ravine, displaying a number of beautiful cascades, it falls at last into the Turret.

The soil on the lower grounds is light and gravelly, and on the sides of the rivers, for the most part, alluvial; producing excellent crops, especially of barley. Barley and oats are the kinds of grain chiefly raised. Of the latter, the Flemish are sown on the best soils, and the Irish on the worst; the Angus-shire sort being preferred for clayey grounds. Turnips and potatoes, and various kinds of grasses, also form a considerable portion of the produce, and alternate with the white crops in the rotation system of husbandry, which, with the usual modern improvements, is successfully followed here. The ordinary sheep are the black-faced, Leicester sheep however being kept on ornamental grounds; the cattle in the higher parts are the Highland breed, and in the lower, crosses with the Teeswater and Ayrshire. Draining has been carried on to some extent; and within the present century the inclosures and farm-buildings have received considerable attention. Much has been effected through the encouragement afforded by the premiums of the Strathearn Agricultural Society, instituted in 1809, by the late Sir P. Murray, Bart. In general the rocks are covered with moss, turf, and peat, a supply of the last of which for fuel is obtained from Glen-Turret; barked-oak, also, is much used for fire-wood, and coal brought from a distance is burnt in considerable quantities. The strata in the mountains consist chiefly of clay-slate and red sandstone; a slate-quarry has been opened, and several freestone quarries are in operation, one of them producing a material of excellent quality. The annual value of real property in the parish is £6000.

Much of the natural wood is thought to have formed part of the ancient Caledonian forest. In this parish the trees comprise oak, ash, elm, pine, birch, plane, and laburnum, ornamentally disposed, and displaying in different directions a profusion of ever-varying and beautifully-tinted foliage. Within the last thirty or forty years, large tracts, belts, and clumps of hard and other kinds of wood have been planted, especially on the estate of Ochertyre, on which stands the mansion of the principal heritor, Sir Wm. Keith Murray, Bart. The Murray family is the oldest in the parish, having been founded by Patrick, third son of Sir David Murray, sixth baron of Tullibardine, ancestor of the Atholl family, who died in 1476. Ochertyre is a modern structure, beautifully situated on a richly-wooded slope; it commands fine views, and is ornamented with superior gardens. The park, which comprehends part of the plain of Monivaird, was the place, according to Chalmers, where Kenneth IV., King of Scotland, was slain in battle in the year 1003; and a mountain overlooking the plain is still called *Cairn-chainachan*, or "Kenneth's cairn". In the

parish are also the mansion of Lawers, a tasteful Ionic building, embosomed in wood; and Strowan and Clathick, two modern convenient residences. Two turnpike-roads run between Crieff and Comrie, one passing on the north side of the Earn, through Monivaird, and the other on the south, through Strowan; and there are several good stone bridges over the rivers. The chief communication is with Crieff and Comrie, the former place half a mile distant from the parish boundary on the east, and the latter somewhat nearer on the western side. Ecclesiastically the parish is in the presbytery of Auchterarder, synod of Perth and Stirling, and in the gift of the Earl of Kinross: the minister's stipend is £261, with a manse, and a glebe of twelve acres valued at £30 per annum. The church was built in 1804, and contains 600 sittings. The parochial school affords instruction in the usual branches; the master has a salary of £34, with a house, and £15 fees. There is a parochial library of about 250 volumes, chiefly religious. Many Roman antiquities have been found in the neighbourhood; and a cross with the initials J. N. R. J. (*Jesus Nazarenus Rex Judæorum*) is still to be seen near the mansion-house of Strowan, pointing out the site where the market of that place was held.

MONKEIGIE and KINKELL, county of ABERDEEN.—See KEITH-HALL.

MONKLAND, NEW or EAST, a parish, in the Middle ward of the county of LANARK, 11 miles (E. by N.) from Glasgow; containing, with the market-town of Airdrie, the former quoad sacra parish of Clarkston, and the villages of Greengairs, Riggend, Wattstown, and others, 20,511 inhabitants, of whom 3567 are in the country portions of the parish. This place originally formed part of an extensive district which, in the middle of the twelfth century, was granted by Malcolm IV. to the abbey of Newbattle, and thence obtained the appellation of Monkland. The abbots held their courts for the barony in a chapel at Kipps, which was destroyed at the time of the Reformation, but of which there were some remains till the close of the last century, when they were obliterated by the plough. Towards the middle of the seventeenth century, the barony of Monkland was divided into two portions, that to the east being erected into a separate parish, and called New Monkland, to distinguish it from the western portion, which has the appellation of Old Monkland. NEW MONKLAND is bounded on the north by the river Luggie, and on the south, like Old Monkland, by the North Calder water. It is nearly ten miles in length and seven miles in extreme breadth, comprising about 35,000 acres, of which the greater portion is arable and in good cultivation, and the remainder pasture and waste. Though not diversified with hills of any remarkable height, the surface rises gradually from the shores of the Luggie and the Calder to an elevation of almost 700 feet above the level of the sea, forming a central ridge that extends throughout the whole length of the parish from east to west. The rivers are, the Luggie, which has its source in Dumbartonshire, and flowing westward along the boundary of the parish, falls into the Kelvin at Kirkintilloch; and the Calder, which, issuing from the Black loch, on the eastern border of the parish, forms its southern boundary, as already stated, and flows into the Clyde near Daldowie House in the parish of Old Monkland. The spacious reservoir of the Monkland and the Forth and

Clyde canals, is situated partly in this parish, and partly in the adjoining parish of Bertram-Shotts; it is of very irregular form, and about 300 acres in extent. The Monkland canal, begun in 1770, and since greatly extended and improved, runs near the border of the parish. This canal is about twelve miles in length, thirty-five feet wide at the surface, but diminishing to twenty-six feet at the bottom, and six feet in depth. It receives a considerable part of its supply from the river Calder, and, by means of two locks near Airdrie, and eight near Glasgow, is raised 113 feet above the level of the Forth and Clyde canal. Terminating at Glasgow, where it communicates by a cut with the Forth and Clyde line, it affords great facilities of conveyance for the mineral and agricultural produce of the district it passes through.

The SOIL in the north and west is a strong rich clay, alternated with portions of lighter and drier quality, and in the central and eastern portions mossy, but not unfertile. The chief crops are, grain of all kinds, peas, beans, potatoes, and turnips, with the usual grasses. Flax was formerly raised in great abundance, but for some years it has been little grown. The system of husbandry has been gradually advancing, and several tracts of waste land have been brought into profitable cultivation. Ploughing matches take place annually, at which prizes are awarded to the successful competitors; and most of the more recent improvements in the construction of implements have been adopted. The cattle, of which considerable numbers are reared in the pastures, are chiefly of the Ayrshire breed, and great attention is paid to their improvement. There are scarcely any plantations, except around the houses of the landed proprietors; and the want of timber, both for ornament and shelter, is much felt.

The chief source of prosperity to the parish is its MINERAL produce. Among the principal substrata are whinstone and sandstone, which are largely quarried for the roads and for building purposes: limestone is also found in several places, but it is not much wrought, lime from Cumbernauld, and dung from Airdrie, being almost exclusively employed in farming. Coal and ironstone of excellent quality prevail nearly in every part in great abundance, and are in most extensive operation. The seams of coal range from three to nine feet in thickness: the principal varieties are the Ell, the Pyotshaw, the Humph, the Main coal, and the splint; and smithy-coal and blind-coal are wrought in various parts. There are not less than forty different collieries at present in operation, the produce of which is conveyed partly by the Monkland canal or by railway to Glasgow, and thence to the Highlands and the coasts of Ireland; and partly by the Kirkintilloch railway to Kirkintilloch, and thence by the Forth and Clyde canal to Edinburgh. The ironstone, of very rich quality, occurs partly in balls, and partly in seams, of which the most usual are the muscle and the black-band; the black-band is by far the most valuable, and is generally found at fourteen fathoms below the seam of splint-coal. There are as many as ninety iron-mines in operation; the produce is sent to the works of the Carron Company, the Clyde, the Calder, the Gartsherrie, the Chapel-Hall, and other works. The working of these mines and collieries affords constant employment to thousands of the industrious classes, and has contributed greatly to the increase of the population,

and to the growing prosperity of the adjoining districts. To the mineral wealth of the parish may, indeed, be attributed the existence of the flourishing town of Airdrie, and of the numerous thriving villages that have sprung up within its limits, and of which all the inhabitants are more or less occupied either in the mines and collieries, or in the various works to which they have given rise. The annual value of real property in New Monkland amounts to £35,967.

In this parish the principal mansion-houses are, Airdrie House, the seat of Sir William Alexander, superior of the town of Airdrie; Monkland House, the property of the Hon. William Elphinstone; Rochsoles; Auchingray; and Easter and Wester Moffat. The town of Airdrie, the village of Clarkston, and the villages of Ballochney, Greengairs, Riggend, Wattstown, and others, are all described under their respective heads. In addition to the great numbers of persons engaged in the collieries and mines, many of the inhabitants are employed in various branches of trade and manufacture; the principal is that of cotton, for which there are large mills at Airdrie and Clarkston. A considerable number of people are occupied in hand-loom weaving at their own dwellings, for the manufacturers of Glasgow; and there are also a brewery and a distillery, both conducted on a very extensive scale. There is a post-office at Airdrie, which has three deliveries daily; and two fairs, numerously attended, and amply supplied with cattle and with different kinds of merchandise, are held there annually in May and November. In 1846 an act of parliament was passed to erect the parishes of New and Old Monkland, and parts of the parishes of Bothwell and Bertram-Shotts, into a police district, with an efficient police force. Facility of communication is maintained by the turnpike-road from Edinburgh to Glasgow, which intersects the southern part of the parish from east to west; by the road from Stirling to Carlisle, which crosses it from north to south; by the Monkland canal; and by the Caledonian, the Kirkintilloch, the Ballochney, and the Slamannan railways.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. The stipend is £265. 7. 11., with a manse, and a glebe valued at £11. 10. per annum; patrons, the heritors and elders. New Monkland church, situated on an eminence in the western district of the parish, was built in 1777, and substantially repaired in 1817, and is a neat plain structure containing 1200 sittings. Several additional churches have been erected within the last few years; and to all of them quoad sacra districts were for a time annexed under act of the General Assembly. There are places of worship for members of the Free Church, the United Presbyterian Synod, Cameronians, Independents, Baptists, and Wesleyans, and a Roman Catholic chapel. The parochial school is attended by about fifty children; the master has a salary of £30, with a house and garden, and the fees average £30 per annum. Schoolrooms have been built at Airdrie, Clarkston, Greengairs, Coathill, &c. The New Monkland Orphan Society is supported by subscription, and affords clothing and instruction to eighty children. Near Airdrie is a mineral well, the water of which is strongly impregnated with iron and sulphur; it was once in high repute, but is at present little used.

MONKLAND, OLD, a parish, in the Middle ward of the county of LANARK, 3 miles (S. W. by W.) from Airdrie; containing, with the former quoad sacra parishes of Crosshill and Gartsherrie, and numerous populous villages, 19,709 inhabitants, of whom 4022 are in the country districts. This place was included in the district granted by charter of Malcolm IV. to the monks of Newbottle Abbey, and thence called Monkland, of which the greater portion, soon after the Reformation, became the property of Sir Thomas Hamilton, who was created Earl of Melrose, and subsequently Earl of Haddington. The lands passed from the Haddington family to the Clellands, from whom they were purchased in 1639 by James, Marquess of Hamilton; and in the reign of Charles II. they were sold by Anne, Duchess of Hamilton, to the college of Glasgow. Monkland was divided about the year 1650 into two distinct parishes, called respectively Old and New Monkland; the former comprehends the western, and the latter the eastern portion of the district. OLD MONKLAND is bounded on the west by the river Clyde, and is about ten miles in length and four miles and a half in extreme breadth; the number of acres has not been ascertained. The surface is generally level, in few parts attaining any considerable elevation; on the west it slopes gently towards the Clyde. There are several tracts of moss, in the aggregate amounting to nearly 1500 acres; and about 1200 acres in plantations. The principal rivers are the Clyde and the North Calder; the latter, bounding the parish on the south, flows between banks richly wooded into the Clyde at Daldowie. There are several burnes that intersect the parish in various directions; and also some lakes, of which Bishop loch covers about eighty, Woodend loch fifty, and Lochend forty acres of ground. These lakes abound with pike, some of which are of large size. The ancient bishops of Glasgow are supposed to have had their summer residence on the side of Bishop Loch; whence the name.

Along the banks of the Clyde and the Calder the soil is a strong clay, by good management resembling loam, and producing luxuriant crops of wheat: towards the centre is a light sand, well adapted for oats and potatoes; and to the north the soil is mossy, in some parts much improved. The crops are wheat, oats, potatoes, peas, beans, turnips, and flax, which last was formerly raised in much larger quantities than at present. The system of agriculture has been greatly improved under the auspices of the New Farming Society, established here about the year 1830. The farm houses and buildings are in general substantial and commodious, and the lands are well inclosed with fences of thorn. The cattle are of the Ayrshire, and the horses of the Clydesdale breed, and very great attention is paid to their improvement: prizes have at different times been awarded at the Highland Society's cattle-shows, for specimens of live-stock reared in the parish. The substrata are coal, ironstone, and various other minerals, of which there are extensive beds also in the adjoining parish of New Monkland; and the working of the several mines, and the establishment of iron-works, have led to the erection of numerous villages. Among the villages in this parish are Calderbank, containing 1064, Carmyle 238, Causeyside 367, Dundyvan 1298, New Dundyvan 2202, Faskine 408, Greenend 502, and Langloan, containing 1111 inhabitants. The quoad sacra parishes of Crosshill and Gartsherrie contained,

the former the villages of Baillieston, Barachnie, Broomhouse, Craigeud, West Merrystone, and Swinton; and the latter, those of Coatbridge, Coatdyke, Garteloss, Gartsherrie, East Merrystone, and Summerlee. Some of the principal COAL-WORKS are at Gartsherrie, where five seams of coal are found, in beds varying from two to four feet in thickness. At Garteloss are three seams, of which the lowest is thirty fathoms in depth; at Gartgill, three seams, at forty fathoms' lowest depth; at Gunnie, seams of every kind, at depths varying from twenty-seven to fifty fathoms; and at Drumpellier, four seams at nearly similar depths with the preceding. At the Calder iron-works are two mines, one forty and the other 100 fathoms deep, containing all the varieties. At Palace-Craig ironstone is found alternating with the coal, in seams from twelve to eighteen inches thick. At Faskine, where the first mine was opened, splint-coal was found in 1791, at a depth of seventy-five fathoms; and at Whiteflat, where are two pits at the depth of forty fathoms, black-band ironstone occurs in seams of eighteen inches. There are also coal-works at Netherhouse, Easterhouse, Mount Vernon, and Rosehall, the last on a very extensive scale.

The ironstone occurs in various parts of the district, in seams of different thickness and quality. The black-band ironstone is found on the lands of Monkland House, Faskine, Garturk, Lower Coats, and Dundyvan, in seams from fourteen to eighteen inches thick, yielding from thirty to forty per cent. of iron; these seams occupy an area of nearly ten square miles. At Palace-Craig, the upper black-band occurs in seams of eighteen inches, at sixteen fathoms below the splint-coal, and is of rather inferior quality. In part of the lands of Airdrie Hill, in the parish of New Monkland, is a seam of ironstone varying from two to four feet in thickness; it is of the black-band species. Red freestone is quarried at Langloan: white freestone of very fine texture is wrought at Souterhouse, Garturk, Summerlee, Coatdyke, and other places, chiefly for use in the manufacture of iron; and whinstone is quarried at Rawmone and Easterhill. Considerable remains are still to be seen of ancient wood; and the numerous plantations, which are in a thriving condition, add much beauty to the scenery of the parish, and, combining with the high state of cultivation and the luxuriance of the meadows and pastures, give to it the appearance of an extensive garden. There are many handsome houses belonging to the proprietors, and to others connected with the mines and works in the parish and its immediate vicinity.

The chief trade is the IRON manufacture, for which several very extensive works have been established here, the abundant supply of ironstone and coal and other facilities for the purpose having long since rendered this place a great seat of the manufacture. The Gartsherrie works, belonging to Messrs. W. Baird and Co., employ sixteen blast furnaces for smelting ore. The Dundyvan works, the property of Mr. J. Wilson, have nine furnaces; the works belonging to the Monkland Iron Company, five furnaces in operation; and the Clyde iron-works, the property of James Dunlop, Esq., five furnaces, of which at present four are in operation. The Summerlee works, belonging to Messrs. Wilson and Co., employ five furnaces, to which two are about to be added. The Calder works, belonging to Messrs. W. Dixon and Co., situated on the border of Bothwell parish, have six furnaces in operation; and the Langloan works, five furnaces. The

quantity of pig-iron manufactured annually in these several establishments is in the aggregate 280,000 tons, in the production of which nearly 850,000 tons of coal are consumed. The Monkland Iron Company are erecting mills and forges for the manufacture of bar-iron, on a scale sufficient for the making of 230 tons of malleable iron weekly; and the Dundyvan Company are carrying out similar arrangements on a still more extensive scale. The steam-engines used in the works are of very great power; and the introduction of the hot-blast instead of the cold-air in the management of the furnaces, by which the consumption of fuel is much diminished, is now generally adopted in the works. This important discovery, first made by Mr. Sadler in 1798, was carried into partial effect by the Rev. Mr. Stirling, of Kilmarnock, who obtained a patent in 1816. Improvements were made in the process by J. B. Neilson, Esq., of Glasgow, in 1828. Mr. Dixon, of the Calder iron-works, subsequently discovered that, by the adoption of the hot-air blast, common pit-coal might be substituted for coke, previously used; and Messrs. Baird, of Gartsherrie, by some improvements on Mr. Neilson's process, ultimately brought the invention to its present efficiency.

The nearest market-town is Airdrie, on the confines of the parish. Facility of communication is afforded by excellent roads, of which the turnpike-road from Edinburgh, by Airdrie, to Glasgow, passes through the parish. There are also five railways for the conveyance of goods and passengers, the Caledonian, the Monkland and Kirkintilloch, the Wishaw and Coltness, the Ballochney, and the Glasgow, Garnkirk, and Coatbridge. *The Monkland and Kirkintilloch railway* connects the rich coal districts in this parish and New Monkland, within ten miles of the city of Glasgow, with the Forth and Clyde canal near the town of Kirkintilloch: the original act was obtained in 1824. *The Wishaw and Coltness railway* extends from the termination in this parish of the Monkland and Kirkintilloch railway, southward, to the estates of Wishaw, Coltness, and Allanton. The *Caledonian* line runs north-eastward, to Castlecary: the *Ballochney*, eastward; and the *Garnkirk* line, westward. *The Monkland canal* to Glasgow passes nearly through the whole length of this parish, in which it has its commencement. This canal was begun in 1770, and since 1792 has undergone various improvements. Its length from Woodhall, about two miles south-east of Airdrie, to the basin at Glasgow, is twelve miles; and it communicates by a lateral cut with the Forth and Clyde canal at Port-Dundas. By means of eight double locks at Blackhill, near Glasgow, and two single locks, of eleven feet and a half each, near Airdrie, the canal is raised 113 feet above that of the Forth and Clyde, and 273 above the level of the sea. It is thirty-five feet wide at the surface, twenty-six at the bottom, and has six feet water. An extensive basin was lately formed at Dundyvan, for the shipment of coal and iron by this canal from the Wishaw and Coltness and the Monkland and Kirkintilloch railways; and boats to Glasgow take goods twice every day. At the village of Coatbridge, within a mile and a half from the parish church, is a post-office.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Hamilton and synod of Glasgow and Ayr. The minister's stipend is about £300, with a manse, and a glebe valued at £16 per annum; patrons, the heritors and Kirk Session. The parish

church, erected in 1790, is a plain substantial structure, containing 902 sittings. Churches, to which quoad sacra parishes were for a time annexed, have been erected at Crosshill and Gartsherrie; and there are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school is well attended; the master has a salary of £31, with a house and garden, in addition to the fees. Connected with the parochial school are three branch schools, the masters of which have each a salary of £6. 15. 11. per annum, with moderate fees. There are also schools supported exclusively by the fees. At Coatbridge is a flourishing academy, erected by W. Baird, Esq., of Gartsherrie; and in the village of Langloan is a library of about 500 volumes. In digging the foundation for the buildings of the Clyde iron-works, great numbers of human bones were found covered with slabs of stone, and some earthen urns containing bones and ashes. Urns perfectly smooth, and of a red colour, were found in 1834, in a plantation near Blair-Tummock.—See the articles on the villages.

MONKSTON, a village, in the parish of COLLESSIE, district of CUPAR, county of FIFE; containing 102 inhabitants. This place appears to have arisen upon the decline of the village of Kinloch, which formerly contained 191 inhabitants, but at present has only fifty-eight, the greater number having removed to Monkston. The village is handsomely built, consisting of six detached ranges of four houses each, between which are intervals of a few yards; it is pleasantly situated, forms an agreeable place of residence, and promises rapidly to increase. A school has been opened, and is attended by about thirty scholars; the master is wholly supported by the fees. There is also a Sabbath school.

MONKTON and PRESTWICK, a parish, in the district of KYLE, county of AYR, 4 miles (N. N. E.) from Ayr; containing 1933 inhabitants, of whom 1152 are in the ancient burgh-of-barony of Prestwick. Monkton and Prestwick formerly consisted of one district under the name of Prestwick, which, on the institution of the abbey of Paisley, was granted to that establishment by its founder, Walter, son of Alan, the High Steward of Scotland, in 1163; and the two churches here, of which one was dedicated to St. Nicholas and the other to St. Cuthbert, are in the chartulary of the abbey both styled churches of Prestwick. Subsequently, however, the parishes assigned to the two churches respectively occur under the designations of Prestwick de Burgo and Prestwick Monachorum. The inhabitants of the former place had a charter of incorporation at an early period, conferring all the privileges of a burgh, which were ratified by a charter of James VI. setting forth that Prestwick had been a free burgh of barony for more than 600 years. This second charter gives the inhabitants power to elect a provost, bailie, and other officers, and to hold a weekly market, and assigns to the freemen a participation of the lands in equal portions. The records of the abbey of Paisley describe the church of Monkton as a rectory, and it continued to be such till the time of the Reformation; that of Prestwick eventually became a chapel. The precise time of the union of the parishes does not appear.

The parish is about three miles and a half in length and the same in breadth. It is bounded on the west by the Firth of Clyde, and comprises 3052 acres, of which 2270 are arable, sixty-three acres woodland and planta-

tions, and the remainder pasture. The surface is generally level, with a gentle rise towards the north-east, and the coast is also flat with the exception of occasional sand hills. There are two small streamlets, of which the larger, called the Pow burn, rises in the parish of Craigie, and flowing through the lands, and turning two mills in its course, falls into the sea near the parish of Dundonald. The scenery is not much varied, and but little enriched with wood. Along the coast the soil is light and sandy; in other parts, of richer quality, consisting of deep loam; and in some a stiff tenacious clay. The crops are wheat, oats, barley, potatoes, turnips, and beans. The system of husbandry is greatly improved: furrow-draining has been extensively practised, and much unproductive land has been rendered fertile; the farm-buildings are of a very superior order, and all the more recent improvements in agricultural implements have been adopted. Coal, green whinstone, and freestone are the principal substrata. The coal occurs in two seams, the upper of which lies at a depth of about six fathoms from the surface, and, having been wrought for more than five-and-thirty years, is now exhausted: the other, at a depth of forty fathoms, has also been worked for more than twenty or thirty years; it is of harder and better quality, but the works are at present discontinued. The freestone, which is found both of a white and a red colour, is of excellent quality. The annual value of real property in Monkton and Prestwick is £4942. In this parish the seats are, Adamtown, erected in the thirteenth century by the family of Blair; Orangefield; Fairfield, formerly Monkton-Mains; and Ladykirk. The village of Monkton, anciently *Villa Monachorum*, is rural; a few of the inhabitants are employed in hand-loom weaving. The Glasgow and Ayr railway has stations here and at Prestwick.

Ecclesiastically the parish is within the bounds of the presbytery of Ayr and synod of Glasgow and Ayr: the minister's stipend is £203. 16. 10., with a manse, and a glebe valued at £35 per annum. Both the two old churches, which are of great antiquity, are still remaining, but they are no longer used for the performance of divine service. A new church, in a central situation, was erected at an expense of more than £2500, and completed and opened for public worship in 1837; it is a substantial and handsome edifice in the later English style, and is adapted for a congregation of 825 persons. The members of the Free Church have a place of worship. The parochial school, situated in the village of Monkton, affords education to about 130 scholars; the master has a salary of £34, with £33 fees, and a house and garden. There is a school in the village of Prestwick, which gives instruction to about fifty children; the master has the use of the old town-house for a schoolroom, and receives a gratuity annually in lieu of a dwelling-house, in addition to the fees. On the lands of Ladykirk are the remains of a chapel dedicated to the Virgin Mary, which in ancient documents is styled the chapel of "Ladykirk in Kyle"; the building was quadrilateral, with turrets, one of which is remaining. Between the villages of Prestwick and Prestwick-Toll are the ruins of an old hospital called Kingcase, traditionally said to have been founded by Robert Bruce for lepers, in consequence of his having, when affected with the disease, received considerable benefit from drinking the water of a spring at that place.

MONKTONHALL, a village, in the parish of **INVERESK**, county of **EDINBURGH**, 1 mile (S. S. W.) from **Musselburgh**; containing 117 inhabitants. This place lies nearly in the heart of the parish, a little to the south of the **Esk** river; it is the seat of one of the principal collieries in the parish, and its inhabitants are almost exclusively workers in the mines. About a mile above the village, on the **Dalkeith** road, stands **Monkton House**, said to have been built by the famous **General Monk**, and to have been his favourite Scottish residence. This venerable structure, now used as farm-offices, stands in the court of the present mansion-house, the property of **Sir John Hope, Bart.** The gardens of **Monktonhall**, and those of **Stoneyhill**, in the vicinity, appear to have been among the earliest in Scotland.

MONQUHITTER, a parish, in the district of **TURRIFF**, county of **ABERDEEN**, 6 miles (E.) from **Turriff**; containing, with the villages of **Cuminestown** and **Garmond**, 2074 inhabitants. The farm on which the church was originally built was termed **Montquhitter**, or **Monquhitter**, a word signifying "the place for ensnaring the deer"; or, as others think, "the moss of desolation". From this farm the district, which was disjoined from the parish of **Turriff** in 1649, took its name. The parish is about ten miles in length from north to south, and seven or eight in breadth; and comprises 20,000 acres, of which two-thirds are in tillage, 300 acres in plantations, and part of the remainder swampy ground, moss, and heath, which in many places are undergoing agricultural improvement. The surface to a great extent presents a series of undulations; but the scenery is in general rather uninviting, the hills being bleak and barren, with but very little wood, and a part of the lower grounds undrained. Of late years the aspect of the parish has been vastly improved by the extension of farming operations. The small stream of **Aslead**, running towards the south, separates this parish from those of **New Deer** and **Methlick**, and falls into the river **Ythan**. Another stream, called the **Water of Idoch**, which gives its name to a valley, flows by the parish church and near the village of **Cuminestown**, and, passing westward to the parish of **Turriff**, where it takes the name of the burn of **Turriff**, falls into the **Doveron**. Both these streams are augmented in their course by numerous tributary rivulets, and are well stocked with small fine-flavoured trout.

The SOIL on the cultivated grounds consists of two distinct kinds, one a reddish loam, and the other a black mould of considerable depth, and both incumbent on a clayey subsoil interspersed with pebbles. Among other crops, oats of excellent quality are produced; and the newly-ploughed lands, after being well limed, bear rye-grass and clover in perfection: the richer description of grass-pasture is not to be found here to any great extent, the disposition of the land to return to a state of heath, with which the parish was formerly covered, rendering it impossible to keep it long exempt from tillage. Some spirited improvements have been carried out by the present proprietor of **Auchry**, who, on an opportunity occurring, has taken into his own hands the land formerly let to tenants and crofters, and improved it according to the newest and most esteemed systems of husbandry. Artificial grasses are successfully raised by this proprietor, and among other things he has introduced the planting of hedges, with the most promising

effect, in a manner hitherto unknown in this part of the country. The **Earl of Fife**, another landowner, has likewise contributed to the improvement of the parish. The sheep, which are not numerous, are mostly of the black-faced breed: during winter, large droves of the same breed, from the inland and mountainous parts of the country, are pastured on the whins and heath in this parish, until the return of spring has dispelled the snow from their own bleak regions. Of cattle, a cross between the **Buchan** and the **Teeswater** is preferred; the **Teeswater** and the **Galloway**, which have been frequently tried, not having succeeded so well on account of the nature of the climate, the want of shelter, and the inferiority of the pasture. The proprietor of **Auchry** patronises the pure **Hereford** breed, which seems to thrive well amid the luxuriant grass, and under the shelter of the plantations, by which **Auchry House** is surrounded, although it would not be suited to bleak and exposed situations in the parish. **Furrow-draining** has been adopted in the district; and the reclaiming of waste land has been much furthered by the introduction of bone manure, which is extensively used on all the grounds. **Guano** and other manures have also been tried with success; and the facility of exporting cattle to **London** by steam navigation has given a powerful impulse to the efforts of those employed in breeding and fattening beasts for the market. The farm-houses, which in general are thatched with straw or heather, are small, but adapted to the size of the farms. In this parish the substratum is a soft kind of red sandstone, much mixed with iron-ore: the stone is raised in large blocks, and used for building; but on account of its friable character when exposed to the weather, it is not in much esteem. The annual value of real property in **Monquhitter** is £5419.

The only mansion is **Auchry**, a plain edifice, purchased in 1830, with the principal part of the estate, by the present proprietor from the family of **Joseph Cumine, Esq.** That gentleman, on assuming the management of his estate in 1739, commenced extensive improvements in the district in every branch of husbandry, and became distinguished for the impulse which he gave to agricultural pursuits throughout the north of Scotland. He also founded the village of **Cuminestown**. Besides this village, the parish contains that of **Garmond**; and a daily post has been established at the former place by the influence of the present proprietor of **Auchry**: the whole of the roads in the district are in very bad condition. The grain raised here is forwarded to **Banff** and **Maeduff**, both about fourteen miles distant, whence lime and coal are brought in return. The cattle are sold at the markets of **Turriff**, **New Deer**, and other places; and the dairy produce is disposed of to general dealers resident here, who send it to **Aberdeen** and **Leith**. An annual fair is held at **Cuminestown**, for cattle and horses, on the last Thursday in April or the first in May; and the proprietor has established several other markets. Ecclesiastically the parish is in the presbytery of **Turriff**, synod of **Aberdeen**, and in the patronage of the **Earl of Fife**: the minister's stipend is about £190, with a manse, one of the most spacious in the neighbourhood, and about ten acres of very excellent land. The church, which is conveniently situated near the villages, is an unadorned and uncomfortable edifice, accommodating 1000 persons; it was built in 1764, and increased by

the addition of an aisle in 1792. A chapel of ease was erected in Fyvie, in 1833, for the benefit of the remote parts of that parish and Monquhitter; a district of the latter, containing 195 persons, being ecclesiastically annexed to it. There is a small episcopal chapel, a tasteful building; and the members of the Free Church have a place of worship, the minister of which resides in an elegant cottage erected as a manse for his use. The parochial school affords instruction in the usual branches; the master receives a salary of £34, and about £23 fees, and also shares in the Dick bequest. The minister of the parish has the patronage of a bursary at King's College, Aberdeen, founded in 1813 by Mr. James Cruickshank, of Touxhill, in the parish of New Deer, and only to be held by individuals of the name either of Cruickshank, or of Top or Tap. Poor householders who are not paupers have the benefit of a charitable bequest of £200 by Mr. Grieve, the proceeds of which are annually distributed. A savings' bank, instituted a few years since, is in a flourishing condition.

MONRIETH, a village, in the parish of GLASSERTON, county of WIGTOWN, 6 miles (W.) from Whithorn; containing 94 inhabitants. This is a small village situated near a creek or bay of the same name, opening into the bay of Luce. The road from Whithorn passes through the village to Port-William, about two miles north-westward of it. At a short distance, near the sea-shore, are some remains of the ancient church of Kirkmaiden; they consist of the walls, which are still pretty entire.

MONTEITH, PORT OF.—See PORT OF MONTEITH.

Burgh Seal.

MONTROSE, a royal burgh, a sea-port, and parish, in the county of FORFAR; containing 15,096 inhabitants, of whom 13,402 are in the burgh, 20 miles (E. N. E.) from Forfar, and 72 (N. E. by N.) from Edinburgh. This place, anciently called *Celurca*, is supposed to have derived its present name from the Gaelic *Main Ross*, signifying "a promontory in the of the town-seal apparently favours the fanciful derivation from the Latin *Mons Rosarum*, or "the Mount of Roses". The town is of considerable antiquity: it seems to have received a charter from David I., conferring upon it all the privileges of a royal burgh; and though there is no authentic record of its early history, it appears to have been identified with many incidents of importance. In 1330, Sir James Douglas, attended by a numerous and splendid retinue, embarked at this port, bearing with him the heart of Robert the Bruce, to be deposited in the Holy Sepulchre at Jerusalem. In 1493, the inhabitants of Montrose suffered so much oppression from John Erskine, lord of Dun, that the magistrates of the burgh, on petition to James IV., obtained a summons from the king, commanding his appearance before the council at Edinburgh. In 1534, the study of Greek was introduced here by John Erskine, grandson of the former, and associate of John Knox in promoting the Reformation; who established in the burgh school a teacher of that language, whom he had brought from the continent:

this is believed to have been the first place in Scotland where the Greek language, previously almost unknown in the country, was taught. James Graham the celebrated Marquess of Montrose, at one time a resolute champion for the Covenant, but subsequently a zealous adherent of Charles I., was born here in 1612. In February, 1716, the Pretender embarked at this port, on the failure of his enterprise, with the Earl of Mar and a single attendant, for the continent.

The town is situated on the western shore of a peninsular eminence, bounded on the east by the German Ocean, and on the south by an outlet from the bay of Montrose: this bay is formed by an expansion of the South Esk, and bounds the town on the west. Montrose consists of one spacious street called the High-street, and of several other well-formed streets, among which are Castle-street, Murray-street, and Bridge-street, the last leading to the suspension-bridge that connects the town with the island of Inch-Brayock, in the entrance of the bay. To the north-east of the town are the Links, about four miles in circuit, supposed to have been originally covered by the sea, and to which a communication was opened from John-street in 1830, and by Union-street, a handsome range of houses, in 1838. The streets are well paved, and lighted with gas; and the inhabitants are amply supplied with excellent water conveyed by pipes from springs in the parish of Dun. A public subscription library, established in 1785, forms a valuable collection of several thousand volumes; and a reading society was commenced in 1819, which has a library of nearly 2000 volumes. A commercial reading and news room, and also the Exchange Coffee-house, are well supplied with daily journals and periodical publications; and two weekly newspapers are published in the town. Subscription assemblies are held in a handsome suite of rooms. A Horticultural Society, formed in 1825, is well supported; and a Natural and Antiquarian Society, established in 1837, has a museum containing a collection of specimens in zoology, mineralogy, geology, and antiquities.

The principal manufactures carried on are the spinning of flax, and weaving. There are five mills for spinning linen yarn, of which four are driven by steam-engines of 120-horse power in the aggregate, and the other, on the North Esk, is driven by water; there are also two in the parish of Logie-Pert that belong to firms in the town, producing about 300,000 spindles yearly. The articles chiefly woven are sheetings, dowlas, ducks, canvas, Osnaburghs, bagging, sacking, and tarpaulins, of which 25,000 pieces are annually made in the town, exclusively of large quantities in branch establishments. There are a foundry, two establishments for the manufacture of machinery, two tanneries, two rope and sail manufactories, a manufactory for soap, one for starch, two candle-works, five breweries, a steam meal and flour mill, and establishments for making bricks and tiles. Ship-building is also carried on to a considerable extent, and there is a patent-slip for repairing vessels. There are salmon-fisheries in the rivers North and South Esk; and great quantities of cod and other white-fish are taken off the coast, and, after being dried, sent to the English markets. The trade of the port consists chiefly in the export of grain and other agricultural produce, and manufactured goods, chiefly coastwise; and in the importation from Scottish and English ports of a variety

of goods, and from foreign ports of flax, hemp, tallow, timber, deals, and, as Montrose has now the privilege of bonding, wines and spirits for the supply of the adjacent districts. The jurisdiction of the port until lately extended from the Lights of Tay, on the south, to Todhead, on the north, including Arbroath; but Arbroath is now independent. The number of vessels registered as belonging to the port in 1848 was 113, of the aggregate burthen of 14,402 tons; and the amount of duties paid at the custom-house was £26,558. The HARBOUR, which might be made one of the best on the eastern coast of Scotland, has a depth of eighteen feet water on the bar at the entrance, at the ebb of spring tides; and it is accessible to large vessels, except during strong easterly gales. The isle of Inch-Brayock is connected with the southern shore by a swivel-bridge, allowing a passage for vessels to Old Montrose, where is a pier for landing coal and lime; and with the shore on the north by an elegant suspension-bridge, erected in 1829, at a cost of £20,000, from a design by Sir Samuel Brown, of the Royal Navy. After a severe gale in 1838, which destroyed a great portion of the suspension-bridge, it was speedily repaired at an expense of £3000, by Mr. J. M. Rendel, civil engineer. The towers from which the chains that sustain the platform are suspended, are seventy-one feet in height, and the distance between them 432 feet; the breadth of the platform is twenty-six feet within the rods, and on each side of the central roadway is a foot-path, separated by an iron palisade. The quays and warehouses of the port are commodiously arranged, and substantially built. A wet-dock has been constructed, capable of receiving 6000 tons of shipping; and two lighthouses have been erected below the harbour: in the larger, to which a life-boat is attached, and where the light-keeper resides, are accommodations for the reception and recovery of shipwrecked mariners.

By charters of David I. and David II., confirmed and extended by charter of James IV., dated 1493, the government of the BURGH is vested in a provost, three bailies, a dean of guild, treasurer, master of the hospital, and twelve others, forming a council of nineteen. There are seven incorporated trades, viz., the blacksmiths, the wrights, shoemakers, weavers, masons and slaters, bakers, and tailors. The fees of admission into the trades, for strangers, vary from £5 to £10, for sons and sons-in-law of burgesses from £2 to £5, and for apprentices from £3 to £6; the fees of admission as members of the guildry are £16. 16. for strangers, £10. 10. for apprentices, and £8. 8. for sons and sons-in-law of guild members. The magistrates exercise jurisdiction in civil cases to any amount, and take cognizance of misdemeanors; they hold a bailie-court weekly, in which they are assisted by their town-clerk, who acts as assessor. The town-hall, situated in High-street, contains the guildhall, council-room, the courts, and a coffee-room and public library. A new gaol has been built, well adapted to the purpose. Montrose is associated with Forfar, Brechin, Arbroath, and Bervie, in returning a member to the imperial parliament; the number of qualified voters is about 460. The post-office has a good delivery; and there are branches of the Bank of Scotland, the British Linen Company, the National Bank of Scotland, the Western Bank of Scotland, and the Eastern Bank of Scotland. The market is on Friday, and is well supplied with grain and other

agricultural produce, of which great quantities are shipped from the port. Fairs are held annually at Whitsuntide and Martinmas, chiefly for hiring servants. Facility of communication is afforded by excellent roads; there is a branch to the town of the Aberdeen railway, and the Aberdeen steam-boats, for seven months in the year, touch here, taking in goods and passengers.

The PARISH, which is bounded on the east by the German Ocean, and on the north and south by the North and South Esk respectively, is about three miles in length and nearly of equal breadth; comprising 3900 acres, of which, with the exception of the beach and some steep acclivities, the whole is arable and in good cultivation. Its surface is generally level, with a gradual ascent towards the north-west, from whose summit, though of inconsiderable elevation, the view of the basin of Montrose, a circular sheet of water nearly three miles in diameter, and of the adjacent country interspersed with handsome mansions and pleasing villas, is strikingly beautiful. In the lower parts of the parish the soil is sandy, and in the higher light and thin; it has been much bettered by good management, and some tracts of moorland and moss have been brought into profitable cultivation. The crops are, grain of all kinds, with potatoes and turnips, and the various grasses; the green crops, from the high prices they obtain, are raised in great abundance. The system of husbandry has been much improved. On the estate of Charlton a considerable number of different sorts of forest-trees have been planted; and in the north-west of the parish are plantations of fir. The substratum is principally limestone, of which there is a quarry on the lands of Hedderwick; but for building and other purposes stone is chiefly brought from Brechin. The annual value of real property in the parish is £28,845.

Ecclesiastically this place is within the bounds of the presbytery of Brechin and synod of Angus and Mearns. There are two charges. The minister of the first charge has a stipend of £295. 5. 10., with a manse, and a glebe valued at £20 per annum; patron, the Crown. The minister of the second charge has a stipend of £340, without either manse or glebe; patrons, the Magistrates and Town-council. Montrose parish church, with the exception of the tower, was rebuilt in 1791, and was repaired in 1832, when the old steeple, being thought insecure, was taken down, and replaced by a handsome square embattled tower surmounted with a lofty spire, at a cost of £3000. The interior, which is well arranged, has two tiers of galleries, and contains 2500 sittings. St. John's church was originally built as a chapel of ease, in 1829, at an expense of £3969, defrayed by subscription. In 1834 an ecclesiastical district, including a population of 4999, was assigned it under act of the General Assembly, forming for a time the quoad sacra parish of St. John. The structure is neat and substantial, and contains 1500 sittings. There are two Episcopalian chapels, one of which, dedicated to St. Peter, is in strict connexion with the Church of England; the other is connected with the Scottish Episcopal Church. The members of the Free Church have two or three places of worship; there are two for the United Presbyterian Synod, and places of worship for Baptists, Independents, and Wesleyans. The Montrose academy is under the direction of a rector, who teaches the mathematics, geography, and French; two teachers of Latin, two of

the English language, and two teachers for writing and arithmetic. The number of children attending the academy averages 350. There are also a school for eighty children, the master of which has a house and garden, and a payment of £2 per annum, in addition to the fees; a free school founded by Mr. David White, the master of which has a salary of £36, with a house and garden; and another, founded by Miss Stratton, the master and mistress of which divide between them the interest of £900 bequeathed by that lady. In these two last about 175 children are gratuitously taught; and there is a school erected by the trades, the masters of which have the house, but no salary. There are likewise numerous private schools, supported exclusively by the fees; and various Sabbath schools.

The lunatic asylum, with which were formerly connected the infirmary and dispensary, was erected in 1779, and has been subsequently enlarged and improved. It was incorporated by royal charter in 1811, and placed under the direction of the provost, first bailie, parish ministers, and principal inhabitants of the town, and under the immediate care of a keeper, matron, and resident medical attendant. In 1838, the infirmary and dispensary were detached from the asylum; and a handsome building was erected for the purpose, at a cost of £2500, to the west of the bridge. The funds of the ancient hospital of the Grey Friars were appropriated to the use of the poor, and are now vested in the town-council, producing about £280 per annum, which sum is distributed in monthly payments. The poor have also some bequests varying from £100 to £1000 each, made by charitable individuals, and a bequest of £3000 by John Erskine, Esq., in 1786, of which £50 per annum were for an additional teacher in the academy, and the remainder to be divided among eight orphans of the school, each of whom receives from the fund about £17 per annum. The same benefactor bequeathed £2000 for ten poor families, each of which receives an annual payment of £12. 12. Dorwood's House of Refuge was founded in 1839 by William Dorwood, Esq., of this town, who gave £10,000 towards its erection and endowment, and £600 for additional buildings and furniture. The buildings form a handsome structure in the ancient English style of architecture, and are adapted to the reception of 200 inmates. The institution is under the superintendence of twenty-four trustees. Montrose gives the title of Duke to the family of Graham.

MONYMUSK, a parish, in the district of GARIOCH, county of ABERDEEN, 125 miles (N. by E.) from Edinburgh; containing 895 inhabitants. This parish appears to have derived its name from two Gaelic words, *Monaugh*, "high or hilly", and *Mousick*, "low and marshy ground"; which are descriptive of the general appearance of the land. A priory was founded here in the eleventh century by Malcolm Canmore, who is said to have encamped at Monymusk, on his expedition to the north, and to have vowed that if he returned victorious he would devote the village to St. Andrew, the tutelary saint of Scotland. On his arrival at the river Spey, he was stopped by the priests, in their canonicals, who, with his permission, passed over to the enemy, and finished the campaign without any effusion of blood. In consequence of this affair he founded and endowed the priory of Monymusk, as appears from an old Latin

document in Monymusk House, extracted from the register of St. Andrew's, and which, after describing the assigned boundaries, concludes with the following passage: "And thus these are the marches which King Malcolm bequeathed, on account of a victory granted, to God and the Church of St. Mary of Monymusk, giving the benediction of God and St. Mary to all who preserve the rights of the Church". Few other events of historical importance have occurred; but near the bank of the river Don is a field called the Camp Field, where, according to tradition, King Robert Bruce's army lay immediately previous to the battle of Inverury.

The PARISH is about seven miles in length and between four and five in breadth; it contains 12,600 acres. On the north and north-west lie the parishes of Keig, Oyne, and Chapel of Garioch; on the south and east, the parishes of Kemnay and Cluny; and on the west, the parish of Tough. There are great inequalities of surface, some parts being low and flat, and others considerably elevated: on the north and west are several hills, of which the most lofty, that of Cairnwilliam, rises 1400 feet above the level of the sea. The numerous woods and plantations give a pleasing variety to the scenery; they include almost every kind of tree common to the country, but on the higher grounds the fir is most extensively cultivated. In the old "Garden of Paradise," laid out in 1719, and now forming a part of what is called Paradise Wood, are numbers of spruces and larches upwards of a century old, some of which are of large dimensions and noble and commanding appearance. The river Don, rising in the mountains of Corgarff, divides the parish into two unequal parts, and after pursuing a winding course of sixty miles from its source, falls into the sea at Old Aberdeen; its mean breadth in this part is thirty-five yards. About 5370 acres in the parish are cultivated or occasionally in tillage; 3080 are either waste or pasture, and 4150 are in plantations. The total annual value of the produce, which consists of all kinds of grain and green crops, is £14,910. The sheep are few in number, having been found injurious to the hill plantations; but the rearing of cattle and horses receives much attention, and the breeds are in general good. The modern system of husbandry is followed: great improvements have taken place in the construction of the farm-buildings, which are now of stone and lime, and have slated roofs; and on some farms the fields are well inclosed with stone dykes. Granite is the principal kind of rock; it is of superior quality and in great abundance, and from the quarries wrought here many large blocks were procured by a company at Aberdeen, for building the colonnade of the market-place in Covent Garden, London. Iron is said to have been discovered many years ago in one of the hills, the ore yielding $\frac{13}{10}$ of metal; but owing to the scarcity of fuel in this part of the county, it was not wrought. A quarry of felspar was worked for some time by an agent of one of the Staffordshire potteries; this, also, was abandoned, on account of the expense of the land carriage to Aberdeen. The annual value of real property in the parish is £4285.

Monymusk House, the only mansion of any note, is an ancient and a spacious structure, pleasantly situated on the south bank of the Don. It has a library containing about 5000 volumes, and a collection of valuable paintings, most of which are by the old masters. This

mansion is the residence of Sir James Grant, of Monymusk, Bart., proprietor of the whole parish, and the lineal descendant of Francis Grant, of Cullen, who was knighted by Queen Anne in 1705, and afterwards appointed one of the senators of the college of justice by the title of Lord Cullen. He was the first of the Grant family who was proprietor of Monymusk, having purchased it from Sir William Forbes. The population is chiefly agricultural; but there are a distillery and two saw-mills, which give employment to several people: the timber here prepared for use is all grown in the parish. The small village of Monymusk is a place of considerable antiquity, being mentioned by Buchanan as *Monimuscum vicum*, where Malcolm Canmore lay encamped, in his journey towards the north to quell the insurrection in Moray. It has been almost entirely rebuilt by the proprietor, and now forms a very neat square, with some fine old trees growing in the centre. There is a daily post established here; and the village has two turnpike-roads passing through it, in different directions, to Aberdeen. Monthly markets for the sale of cattle and grain are held in the village on the second Mondays of December, January, February, March, and April: there are also annual fairs at Whitsuntide and Martinmas, chiefly for the hiring of servants, and on the last Thursday of August, for cattle, and small wares of various kinds. The fuel consists principally of peat, turf, and wood; but coal also is procured from Aberdeen and Kintore.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Garioch and synod of Aberdeen; patron, the Crown. The stipend of the minister averages about £200; and there is a good manse, with a glebe of seven acres, worth £12. 6. per annum. Monymusk church is very ancient, with a square tower at the west end: it is supposed to have been built in the eleventh century, at the time of the founding of the priory by Malcolm Canmore, who is said to have endowed both church and priory. There is also an episcopal chapel in the village, seating about 150 persons. A parochial school is held, in which the Latin language and the usual branches are taught: the master has a salary of £26, about £14 fees, and a portion of the Dick bequest; also an excellent house rent free, a good garden, and an allowance of £10 or £12 a year for teaching as many poor scholars. There is an endowed school called Lord Cullen's, the teacher of which receives a salary in meal and money amounting to £50: it was founded in 1718, out of the estate of Monymusk; and a school-house was built in 1824, on the north side of the Don. Two friendly societies are supported, one of which, "Sir Archibald Grant's Lodge of Gardeners," was established in 1808, and the other, a "Benefit Male and Female Society," in 1824. The interest of £765 three per cent. consols, the bequest of the late Dame Jane Johnston, Lady Grant, is distributed in January amongst poor families not receiving parochial relief, or aid from any other charitable fund. In this parish the only antiquities are two Druidical circles, and the old building called Pitfichie Castle, which belonged originally to the family of General Hurry, of Urrie, and afterwards to the family of Forbes, as part of the estate of Monymusk. Lord Cullen, one of the senators of the college of justice, an ancestor of the present family of Grant of Monymusk, and founder of the school already noticed, was born at Ballintome, in the county of Moray, in 1658,

and died in 1726: both as an advocate and a judge, he was distinguished by profound erudition and most inflexible integrity. The Rev. Alexander Nicol, canon of Christchurch, and regius professor of Hebrew in the university of Oxford, whose reputation as a general scholar and linguist was of the highest order, was a native of Monymusk; he was born in the village in 1793, and died in 1828.

MONZIE, a parish, in the county of PERTH; containing, with the villages of Chapelhill and Herriotfield, about 1260 inhabitants, of whom about 118 are in the village of Monzie, 3 miles (N. N. E.) from Crieff. The name Monzie is derived from the Gaelic *Moighidh*, signifying "a level tract." There are few events of importance connected with the place: some relics of antiquity, both of Druidical and of Roman origin, are still visible, but all historical memorials identifying them with any particular transactions are lost. The PARISH is twelve miles long and about seven in extreme breadth, and contains about 50,000 acres. It is bounded on the north by the parishes of Dull, Weem, and Kenmore; on the south by Crieff; on the east by Fowlis; and on the west by Monivaird and Comrie. This is a mountainous district lying on the south side of the Grampian hills, the only habitable portions being two narrow valleys called the Back and the Fore part, separated from each other by a ridge of lofty hills four miles broad. Only about one-third of the land is arable; the remainder is covered with heath, coarse grass, and moss, appropriated to the pasturage of vast flocks of sheep. The lands are watered by the Almond, the Shaggie, the Keltie, and the Barvick, the first of which, a considerable river, running for about twelve miles along the boundary of the parish from east to west, falls into the Tay two miles above Perth. All the streams are stocked with trout, and in the Almond is a plentiful supply of sea-trout. Like most Highland districts, the parish is famed for its cascades, which are numerous on all the streams, and of which the Barvick especially exhibits an almost uninterrupted succession throughout its whole course, the effect being greatly increased by the abrupt, lofty, and, in many places, well-wooded banks of rock between which the stream passes.

In this parish the SOIL is light and dry, and tolerably fertile, though in general rather shallow: the usual white and green crops are raised. The sheep are the Highland or black-faced, and great attention is paid to their improvement; the cattle are mostly a cross between the Highland and the Lowland, but a few Ayrshire cows are kept for the dairy. The character of the husbandry is good, and considerable advances have been made in draining and trenching; but the expense of procuring lime, which is brought from a distance, is a serious obstacle to agricultural improvement. Many of the farm-steadings have lately been rebuilt on a better plan; but much remains yet to be done in this respect, especially on the estate of Monzie. The parish being to a great extent pastoral, there is much land uninclosed; where fences have been erected, however, they are in general in good condition. The prevailing rocks are slate, sandstone, and limestone: there are two slate-quarries, and a quarry of superior sandstone of a red colour, and of great durability; but the limestone, on account of its inferior quality and its distance from coal, is not wrought. The mansion-houses are, Monzie Castle, the residence

of Campbell of Monzie, a massive square building with a circular turret at each corner, erected in 1806, and containing a superior collection of paintings, ancient armour, &c.; Cultoquhey House, the seat of the Max-tones, an elegant edifice from a design by Smirke, erected about five-and-twenty years since; and Glen-Almond Cottage, the occasional residence of the Patton family, also a modern and comfortable house. Monzie and Gilmerton are the chief villages: that of Monzie, often called the Kirkton, consists of a cluster of cottages, nestling in a sunny corner round the church; the other, the larger of the two, has sprung up within these few years. There are a few hand-loom weavers. A fair for sheep and for general traffic is held at Monzie on the 22nd of August: a fair on the 23rd, formerly held here, has been transferred to the neighbouring parish of Crieff, and now makes one of its eight fairs. Oats and barley are sent hence to Crieff, and potatoes to London by way of Perth. The Glen-Almond road, one of the grand passes into the Highlands, runs through the parish; besides which there are several roads for local convenience. The annual value of real property in Monzie is £4300.

"THE COLLEGE OF THE HOLY AND UNDIVIDED TRINITY," in Glen-Almond, occupies a site acquired from George Patton, Esq., consisting of a portion of his estate of Cairnies, in the parish of Monzie. In the year 1841, certain lay members of the Scottish Episcopal Church, deeply interested in her welfare, associated themselves together for the purpose of founding an institution in a central part of Scotland, to remedy the serious wants that existed in regard to the education of persons designed for holy orders in that Church, and of the children of the middle and upper classes in communion with the Church. Having submitted their views to the Scottish bishops, the latter formally approved of the design by a synodal or pastoral letter, dated September 2nd, 1841; and agreeably with the terms of this synodal letter, contributions in aid of the work were solicited through the instrumentality of a committee. In the month of September, 1845, a general meeting of the bishops, the committee, holders of rights of nomination, and subscribers to the institution, was held in the Hopetoun Rooms, Edinburgh, at which a council was appointed for the college, and arrangements were made for drawing up a deed of constitution, which was accordingly completed in the ensuing month of December. The college was brought into partial operation in 1847, forming a place of general education, and of preparation of candidates for holy orders. A considerable sum, probably not less than £20,000, is still required to complete the erection according to the original design, and thereby secure to the members of the Scottish Episcopal Church the full benefits which the institution is calculated to convey. The college unites, with all the necessary internal accommodation, those external features of stability and elegance which suitably represent its important object. The site is well chosen, within ten miles of the city of Perth, at the foot of the Grampians, and on the banks of the river Almond; it cannot be surpassed for healthiness, and the surrounding scenery is remarkable for its beauty and grandeur. The buildings at present finished consist of two sides, north and west, of a large quadrangle 190 feet square; comprehending the warden's house, apartments for the sub-warden and five assistants, complete

accommodation for 130 boys, and rooms for thirteen divinity students. The east side of the quadrangle, which is to comprehend the large schoolroom and the hall, with accommodation for domestics in the upper story of the former, remains yet to be built; as also does the south side, which is to consist of a cloister connecting the warden's house in the south-west angle with the chapel, which stands out from the south-east angle. The grounds comprise a space of twenty acres, laid out in kitchen-garden, walks, and playground for the boys. With respect to the expenditure on the college, it may be stated that the works already completed, including stabling and outhouses, have required little less than £42,000, of which about £36,000 have been raised by subscriptions, the greater part collected in England: Sir John Gladstone, Bart., of Fasque, presented the munificent sum of £5000, the Rev. Charles Wordsworth, A.M., warden of the college, an equal amount, the Duke of Buccleuch £2000, and the Society for Propagating Christian Knowledge £1000. The remaining £6000 of the above-mentioned outlay of £42,000 were recently advanced on loan by members of the council and other friends of the college, in order to meet an offer made by the warden, who, in addition to his large contribution already noticed, proposed to take upon himself the erection of the chapel, at the cost of between £5000 and £6000, provided others were willing to advance a similar sum for other portions of the work, and provided also that both parties should be gradually reimbursed, in equal shares, out of the first available surplus of the college funds. To repay these parties, and to complete the quadrangle by the erection of the schoolroom and hall on the east side, and the cloisters on the south, it is estimated that a sum little short of £20,000 will be needed. The warden's offer having been liberally met by the Duke of Buccleuch, Sir John Gladstone, Bart., Mr. Smythe of Methven, Mr. Walker of Bowland, and others, the chapel was immediately proceeded with, and is now in rapid progress. Efforts are being made to enlist the support of new contributors to the undertaking generally. The number of boys in the junior department, at present, is forty-seven; of students in the senior department, seven; to which numbers no large addition can be received before the completion of the chapel and schoolroom. Of the forty-seven boys, ten, who are mostly sons of clergy, are receiving exhibitions from the college, and if the institution continues to succeed and flourish, it is intended that the number of these exhibitioners shall be proportionally increased. Almost all the students of the senior department, also, are largely assisted by bursaries.

The parish of Monzie is ecclesiastically in the presbytery of Auchterarder and synod of Perth and Stirling; patron, the Crown. The stipend of the minister is £150, of which a tenth is paid by the exchequer; and there is a manse, with a glebe of nearly twelve acres of superior land. Monzie church, a neat but unpretending edifice, was built in 1830-1, and contains sittings for 512 persons. The members of the Free Church have a place of worship in the village of Gilmerton. There is a parochial school, in which the classics, French, and geometry are taught, with the usual branches of education; the master has a house, a salary of £34, and about £30 in fees. There is also a preparatory school in the village of Gilmerton, under the control of the Kirk-Session of the

parish. At a small distance from the village of Monzie, upon an eminence called Knock-Durroch, "the oaken knoll", is an intrenchment of an oval form; and on the estate of Cultoquhey is another of the same kind, but considerably larger. The principal relic of antiquity, however, is the camp at Fendoch, thought to have been constructed by the soldiers under Agricola or one of his successors. It is situated upon table-land, near the mountain pass called the Small Glen, and not far from the fort of Dunmore, which had the complete command of the passage. The camp covers forty-five acres of ground, and is said to have been capable of containing 12,000 men. Adjacent to it are several large cairns, and other relics pointing it out as the arena, in ancient times, of important military transactions. In the vicinity of Glen-Almond is a cave called the "Thief's Cavc", from its having been the retreat of a noted sheepstealer called Alaster Baine, who at last was executed at Perth. Near this cave is a very curious natural pile of large stones, called "the Kirk of the Grove", in the vicinity of which stands a solitary aged pine, marking out the reputed sepulchre of Fingal's father. Towards the upper extremity of the pass before named is a stone of cubical form, eight feet high, said to point out the grave of the far-famed Ossian, the Caledonian bard.

MONZIEVAIRD and STROWAN, in the county of PERTH.—See MONIVAIRD and STROWAN.

MOODIESBURN, a village, in that part of the parish of CADDER which formed the quoad sacra parish of CHRYSTON, Lower ward of the county of LANARK, 1 mile (N. E. by E.) from Chryston; containing 220 inhabitants. It lies in the eastern part of the parish of Cadder, on the high road from Perth to Glasgow.

MOONZIE, a parish, in the district of CUPAR, county of FIFE, 2 miles (N. W.) from Cupar; containing 174 inhabitants. This place, the name of which signifies in the Gaelic language "the hill of the deer", was anciently the seat of the Crawford family, of whom Alexander, the third earl, is said to have built the castle of Lordscairnie, situated here, in which he occasionally resided, and of which there are still considerable remains. Sir William Ramsay, also, who lived in the reign of David II., and was taken prisoner at the battle of Durham in 1346, when the Scottish army was completely defeated, resided at Colluthie, in the parish. The PARISH, which is one of the smallest in Scotland, is situated on the south side of the Grampian hills, and is less than two miles in length, and not a mile and a half in breadth; comprising an area of about 1260 acres, of which, with the exception of a few acres of plantations, the whole is arable. Its surface is diversified with hills and dales: towards the west are several rising grounds of considerable elevation, which, sloping gradually towards the east, terminate in a valley of some extent. The highest grounds are about 300 feet above the level of the sea; the lower grounds are intersected by the Moonzie burn, which has its source in Lordscairnie Myre, and falls into the river Eden.

The soil is generally a black loam of great fertility, resting on a substratum of trap-rock, but in some parts is a strong coarse clay; with a few acres of moss. The crops are wheat, oats, barley, peas, beans, and potatoes; the lands have been well drained and inclosed, and are in excellent cultivation under a highly-improved system of husbandry. The farm-buildings are substantial and

commodious; and on several of the farms are threshing-mills, two of which are driven by steam. Sheep are reared upon one farm, of a breed between the Cheviot and the Leicestershire; the cattle are principally of the Fifehire kind, which is preferred to the Teeswater, for some time the favourite breed. Great attention is paid to the improvement of the live stock; and several of the farmers breed a number of horses for agricultural purposes. The plantations, chiefly on the summits of the hills, are mostly Scotch firs. There are some small clusters of houses in several parts, inhabited by agricultural labourers; but none of them can properly be called a village. Facility of communication is afforded by the turnpike-road from Cupar to Newburgh, which passes along the southern boundary of the parish, and by a statute road in good repair. The annual value of real property in Moonzie is £2215. Ecclesiastically the parish is within the bounds of the presbytery of Cupar and synod of Fife. The minister's stipend is £187. 17. 10., with a manse, and a glebe valued at £30 per annum; patron, the Earl of Glasgow. Moonzie church, situated on rising ground in the south-western part of the parish, is an ancient structure without either tower or spire; it has been repaired, and contains 171 sittings. The parochial school is attended by about sixty children; the master has a salary of £30, with a house and garden, and the fees average £18 per annum. The remains of Lordscairnie Castle stand on some gently-rising ground nearly in the centre of what is called the Myre, previously to the draining of which, the castle must have been surrounded with water. They consist chiefly of the walls, about six feet in thickness and forty feet in height, and comprise four stories: of the wall that inclosed the court, little is left except one of the several towers by which it was defended. There are also some remains of Colluthie House, now repaired, and converted into a private residence. Stone coffins have been found at various times in the parish.

MORAY, COUNTY OF.—See ELGINSHIRE.

MORDINGTON, a parish, in the county of BERWICK, 4 miles (N. W.) from Berwick-on-Tweed; containing 392 inhabitants. This place, situated on the border, and consequently exposed in former times to frequent hostile incursions, was celebrated for its ancient castle, seated on the summit of a rock rising almost perpendicularly from the bank of the river Whitadder, which winds round its base. It appears to have been regarded as a fortress of importance at an early period, and to have been alternately in the possession of the Scots and the English: in treaties of peace concluded between the two kingdoms, it invariably formed an article of separate stipulation. The castle was in the hands of the English for a considerable time prior to the reign of Henry VIII., by whom it was voluntarily restored to James V. in 1534, from which period till the Union it was held, with the lands appertaining to it, in royal demesne. Previously to the middle of the seventeenth century the parish comprised only the barony of Mordington and the lands of Edrington; but the manor of Lamberton was then severed from the parish of Ayton, and annexed to Mordington. The church or chapel of Lamberton, which seems to have been an appendage of the priory of Coldingham, but has long fallen into decay, is distinguished for the marriage contract concluded within its walls between James IV. of Scotland, and

Margaret, daughter of Henry VII. of England, in the year 1503.

The PARISH is about four miles in extreme length, and of very irregular form. It is bounded on the east by the German Ocean, and on the south by the river Whitadder; and comprises 3600 acres, of which 2600 are arable, thirty woodland and plantations, and the remainder moorland pasture and waste. The surface is greatly varied. In the northern portion it rises into numerous eminences commanding extensive and richly-diversified prospects over the surrounding country, with part of the county of Northumberland, terminating to the south in the range of the Cheviot hills, towards the east embracing a view of the sea, and to the west the Rubberslaw, the Eildon, and the Lammermoor hills. The southern portion has a gentle declivity to the banks of the Whitadder, and on the east towards the sea. The scenery is enriched with wood of ancient growth and with thriving plantations, and is in many parts very picturesque, the river winding beautifully between precipitous banks finely wooded: the coast is one continued series of steep and rugged rocks, of which some detached masses project boldly into the sea. In this parish the SOIL is various, in some parts marshy, and in others fertile and productive: the chief crops are, grain of every kind, with potatoes and turnips. The system of agriculture is advanced. Manure of all kinds is obtained in abundance from Berwick, and bone-dust has been employed with success in the cultivation of turnips. The lands have been drained and inclosed; the farm houses and offices are substantial and well arranged, and all the more recent improvements in implements are in general use. Considerable numbers of cattle and sheep are pastured in the upland parts, but few are reared on the farms. The plantations are in a flourishing condition. The chief substrata are sandstone, indurated marl, and trap-rock, with porphyry. Coal is supposed to exist in abundance, though at a considerable depth; two seams of it have already been discovered, varying from twenty-six to thirty-two feet in thickness, and it is thought that beneath these there is another seam. Limestone has been also found, near the coal, but of very inferior quality. Mordington House, pleasantly seated on an eminence, and Edrington House, situated in a richly-wooded densive, are both handsome mansions.

A lucrative coast-fishery is carried on at the small village of Ross: the fish generally taken are cod, ling, and haddock, lobsters, crabs, and salmon in small quantities; the cod, ling, and haddock are sent chiefly to Edinburgh, and the lobsters by smacks to the London market. Salmon and trout, also, are found in the Whitadder, but not in any large quantity. A flour-mill is set in motion by the Whitadder, near the castle of Edrington; and a threshing-mill, above 500 feet distant, is worked by the same wheel by means of a shaft carried through a tunnel in the rock. The agricultural produce of the parish is sent to Berwick, and the newly-established market at Eyemouth; and wool-staplers from Yorkshire attend to purchase wool, for the manufacture of which several of them have mills on the banks of the Whitadder, one of which is within the parish. Great facility of intercourse is afforded by the North-British railway, and the Berwick and Dunbar road. The annual value of real property in Mordington is £3325. It is in the presbytery of Chirnside, synod of

Merse and Teviotdale, and in the patronage of J. Campbell Renton, Esq., of Mordington: the minister's stipend is £157. 11. 8., with a manse, and the glebe is valued at £37. 10. per annum. The church, erected in 1757, is a neat plain edifice adapted for a congregation of 170 persons. The members of the Free Church have a place of worship. Mordington parochial school affords a useful education to about fifty children; the master has a salary of £34, with £23 fees, and a house and garden. A small library is supported by subscription; it contains a well-assorted collection of books, which circulate gratuitously. A portion of the outer walls of the chapel of Lamberton is still remaining, and is appropriated as a place of sepulture by the family of Renton. There is also a small portion of the castle of Edrington, or Mordington, existing, but in a very dilapidated condition. On the heights towards the north-west are the remains of a circular camp supposed to be of Danish origin; it appears to have been defended with a triple intrenchment, the ramparts of which are about twenty feet high: one-half, within this parish, is tolerably entire; but the other, in the parish of Ayton, is almost obliterated.

MOREBATTLE and MOW, a parish, in the district of KELSO, county of ROXBURGH; containing 1051 inhabitants, of whom 365 are in the village of Morebattle, $7\frac{1}{2}$ miles (S. S. E.) from Kelso. The name of Morebattle is supposed to have been derived from the Saxon words *Mere*, "a marsh", and *Bott*, "a hamlet", descriptive of its state in former times, when it seems to have been to a considerable extent under water. The name of Mow has been traced to the ancient British word *Moel*, which signifies "bare" or "naked", and it is also descriptive of the appearance of the district to which it is applied. Few events of importance are recorded in connexion with the parish. It contains some circular rows of stones called the Trysting-stones, and on the heights are traces of encampments which, like similar antiquities in many neighbouring places, indicate the scene of military operations, of the particulars of which we are altogether ignorant. There is also a tower or fort called Whitton, now nearly in ruins, which was demolished by the Earl of Surrey in the reign of Henry VIII., on the occasion of his making an inroad into this part of the country. Another fort, called Corbet-House Tower, was burnt in 1522 by the English, who were then plundering the banks of the Kale and the Beaumont, in retaliation for a marauding expedition of the Scots into Northumberland, of which Launcelot Ker, of Gateshaw, had been one of the leaders. This tower was repaired and renewed about thirty or forty years ago by the late Sir Charles Ker.

The length of the PARISH from north to south is about nine miles and a half, and its breadth from east to west six miles. It contains 23,000 acres, and is bounded on the north by the parishes of Yetholm and Linton; on the south by the county of Northumberland, and Hounam parish; on the east by part of Yetholm and by Northumberland; and on the west by Hounam, Eckford, and Linton. The surface is diversified throughout by hill and valley, the parish extending to the summit of the Cheviot range; and the lands exhibit the usual features of mountain scenery. The principal hills are, part of the Cheviots, the Curr, the Schell, the Whitelaw, Percy hill, Woodside hill, and Clifton hill, the last of which rises majestically with its well-rounded top from

the eastern side of the valley of Beaumont. These hills vary in height from 500 to upwards of 2000 feet, and in general are covered with rich verdure. Some of them, especially the Cheviot range, command beautiful prospects of the counties of Northumberland, Berwick, and Roxburgh, with the German Ocean on the east, and on the south and west the mountainous tract stretching from Westmorland to the sources of the Clyde and the Tweed.

The circle embraced by the eye from the Grubit hills, though not so extensive as that from some others, is more picturesque and striking, and crowded with well-combined and interesting objects standing in a wide field of the most attractive scenery. The fine vales of the Kale and the Beaumont lie at the base of the eminence, and are studded with the pleasant villages of Yetholm and Morebattle, the Prinside and Linton lochs, the romantic church of Linton, the wooded villas of Marfield and Clifton Park, the celebrated ruins of Cessford Castle, the tower of Corbet House, and many cheerful farm-houses with their neighbouring and peaceful cottages. The distant perspective includes on one side the lofty range of the Cheviots, and on the other the district of the Merse, ornamented with many seats of the gentry, the rich vale of the Teviot, and the windings of the Tweed, with other interesting features, the back-ground of the prospect terminated by the hills of Lammermoor and of Selkirkshire.

Wood is wanting generally throughout the parish, and in several places waste patches prominently appear; but some of these tracts have been recently cultivated and planted, and it is expected that this description of improvement will now make gradual progress. The climate is dry and salubrious, except in the higher parts, where, on account of the peculiar character of the land, the winters are severe and stormy. The chief rivers are the Kale and the Beaumont, both of which rise in the Cheviot range. At the close of autumn, salmon from the Teviot and the Tweed ascend the Kale for the purpose of spawning, and great numbers are killed by poachers in the night by torch-light. The streams abound in trout. The lochs are those of Yetholm and Linton, but only parts of them are in this parish.

In general the soil is light, and well adapted to turnip husbandry, which prevails to a considerable extent. The higher lands are in pasture; but the lower are under tillage, and produce, besides turnips, much barley and oats, with a small quantity of wheat: the five years' rotation is usually followed, in which case the land remains for two years in grass; but in the four years' shift it lies in grass only one year. Dung produced on the farm, lime, and bone-dust are used; and the last of these has vastly multiplied the turnip crops, the larger part of which are eaten off the ground by the sheep, which thus supply a sufficient manuring for the remaining years of the rotation. Of late, the use of bone-dust has been very much superseded by the introduction of guano. The cattle are mostly of the short-horned or Teeswater breed; and the sheep mostly Cheviots and Leicesters, the former kept on the higher grounds, and the latter on the lower: there is also a cross between these two breeds on some of the farms. The annual value of real property in the parish is £11,388. The village stands on an eminence on the banks of the Kale: the houses, formerly consisting of only one story, with a thatched

roof, are now principally of two stories, and covered with slate. A small common near the village was divided among the inhabitants about forty or fifty years ago by consent of the Tweeddale family, of whom the houses are held on lease; it has since been inclosed and cultivated, and now produces good crops, to the great advantage of the villagers. The population of the parish are employed in agricultural pursuits, and in the domestic trades required by the neighbourhood. Coal is the fuel used. A turnpike-road passes through the village, communicating with the Kelso and Jedburgh road on the west, and running to Northumberland on the east.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kelso and synod of Merse and Teviotdale; patron, the Duke of Roxburgh. The stipend of the minister is about £230, with a large manse, and a glebe of eleven acres of good land: the house is badly constructed, but has lately undergone considerable repairs. The church, situated on the north side of the village, was built in 1750, and seats 450 persons: the original church was dedicated to St. Lawrence, from whom a well below the churchyard is still called Lawrie's well. There are places of worship belonging to the Free Chnreh and United Presbyterian Church. Two parochial schools are maintained, in which mathematics and Latin are taught, with all the usual branches of an ordinary education. The master of the school at Morebattle has the maximum salary, with about £30 fees, and a house and garden; and the master of the other school, which is situated at Mowhaugh, on Beaumont water, a salary of £17, with about £10 fees, and the allowance of house and garden. There is also a parochial library containing nearly 700 volumes. About ninety years since, £1500 were left by Mr. Moir, a native of the parish, for the support and education of indigent orphans. Thomson, the author of the *Seasons*, occasionally resided in the parish, at Wideopen, the property of his maternal uncle.

MORHAM, a parish, in the county of HADDINGTON, $3\frac{1}{2}$ miles (S. E. by E.) from Haddington; containing 287 inhabitants. This place appears to have derived its name from its situation at the head of an extensive tract of land that was formerly an uncultivated moor. There was anciently a castle here, the baronial residence of the lord of Morham, which in the twelfth century belonged to the family of Malherb, who subsequently took their name from the estate; and by marriage with the daughter and heiress of Sir Thomas de Morham, the lands were conveyed to John de Gifford of Yester, from whom they passed to the Hays of Loehewart, ancestors of the Marquess of Tweeddale. The glen of Morham is by some writers supposed to have been the resort of the early preachers of Christianity in this part of Britain, and probably of St. Baldred while promulgating the Christian doctrine; a small elevated rock is pointed out as the station occupied by the preacher, and the opposite ground, ascending gradually from the bank of a rivulet, as the place of his assembled hearers.

The PARISH is about three miles in length, and varies in breadth from half a mile to one mile. It comprises 1840 acres, of which, with the exception of sixty in woods and plantations, the whole is in cultivation. The surface rises towards the Lammermoor range of hills, but no where attains an elevation of more than 300 feet

above the level of the sea; it is watered by a small rivulet, and by springs which afford a sufficient supply for domestic use. In general the soil is clayey, of greater or less stiffness, in some parts exceedingly rich and fertile; and from a judicious course of husbandry, there is, as already stated, no waste or unproductive land. The crops are wheat, oats, barley, potatoes, and turnips. The lands are well inclosed, chiefly with stone dykes, but on some farms with hedges of thorn; both of which are kept in good order. Draining has been very extensively practised, and all the more recent improvements in agricultural implements have been adopted. The farm houses and offices are commodious, but inferior to those of other parishes in the district; and especially the cottages of the labourers require improvement. About 800 sheep are annually pastured; but the lands being almost exclusively under tillage, live stock generally is very little attended to. The substratum is mostly trap rock, in some parts interspersed with porphyry, and tinted with iron-ore. Coal was formerly wrought here, but the works have been long discontinued. Freestone is still quarried, but not in great quantities; it is of a coarse quality, and very soft. The nearest market-town is Haddington, which is the principal mart for the agricultural produce of the parish, and for the supply of its inhabitants with the necessary articles of consumption: there is, however, but little facility of communication, the roads, though good, being very circuitous, and no regular mode of conveyance being established. The annual value of real property in Morham is £3318.

It is in the presbytery of Haddington, synod of Lothian and Tweeddale, and in the patronage of Sir Charles Ferguson: the minister's stipend is £156. 1. 5., with a manse, and a glebe valued at £10 per annum. The date of the foundation of the ancient church is unknown; it was taken down, and the present edifice erected in 1724, a neat and substantial structure affording sufficient accommodation for all the parishioners, and capable of being much enlarged at an inconsiderable expense. Morham parochial school, for which a school-house has been lately built, affords education to more than seventy children, several of whom attend from the adjoining parishes; the master has a salary of £34, with £36 fees, a house, and an allowance in money for deficiency of garden ground. The vault of the Dalrymples of Hailes occupies a small aisle of the church. Sir David Dalrymple, the first baronet of that family; his son, Sir James, auditor of the exchequer, and connected by marriage with the Earls of Haddington; and Lord Hailes, who died in 1792, were all interred here.

MORMOND, a village, in the parish of STRICHEN, county of ABERDEEN, $1\frac{1}{4}$ mile (N. N. E.) from Strichen; containing 681 inhabitants. This place takes its name from the adjacent hill of Mormond, an eminence rising to the height of 800 feet above the level of the sea, which was used as one of the stations in the recent trigonometrical survey of Scotland, and is supposed to be the Roman post *Ad Montem Grampium* of Richard of Cirencester. The building of the village, which is situated on a tributary of the North Ugie, was commenced in 1764, at the instance of Lord Strichen, the proprietor, and at that time one of the judges of the court of session. The houses are chiefly of native granite, and are disposed in regular streets; many of them have slated

roofs, and are of exceedingly neat and interesting appearance. The population comprises masons, blacksmiths, carpenters, tailors, and numerous shoemakers and weavers. The turnpike-road from Peterhead to Banff passes through the village, in which there are several inns, and a neat town-house with a spire, built in 1816, by order of Mrs. Fraser of Strichen, mother of Lord Lovat.

MORNINGSIDE, a district within the limits of the parish of ST. CUTHBERT, suburbs of the city of EDINBURGH, $1\frac{1}{2}$ mile (S. by W.) from Edinburgh; containing 1795 inhabitants. This district was separated for ecclesiastical purposes from the parish of St. Cuthbert, and comprehends a large and fine portion of the southern suburbs of the metropolis; it is richly studded with mansions, villas, and other handsome residences, and is remarkable for the salubrity and mildness of its air. The village of Morningside is a favourite summer resort of the citizens, being delightfully situated on an acclivity beyond Burghmuirhead and Bruntsfield-Links, looking towards the Blackford, Braid, and Pentland hills. In its immediate vicinity is the Royal Edinburgh Lunatic Asylum, an extensive range of building. Around the village are also the old castle of Merchiston, at one time the seat of the celebrated Sir John Napier, the inventor of logarithms; Greenhill, the property of Sir John Forbes of Pitligo, Bart.; Bruntsfield House, that of Sir John Warrender, Bart.; St. Margaret's Convent, Falcon Hall, Whitehouse, Woodburn, Canaan House, Woodville, Canaan Lodge, Millbank, Viewpark, and several others. Ecclesiastically the place is within the bounds of the presbytery of Edinburgh, and synod of Lothian and Tweeddale; patrons of the incumbency, the Congregation, Trustees, and Session. The church was erected in 1837, from a design by Mr. Henderson, and is a neat building beautifully situated, containing 634 sittings. Near it is a school, a commodious building erected in 1823, and attended by a large proportion of the children connected with the village. There are also within the limits of the district a place of worship for members of the Free Church; a private academy of considerable celebrity, carried on in the old castle of Merchiston; and an hospital established in 1802 for the reception of aged persons in decayed circumstances, in connexion with which is a charity school, resorted to by boys from all parts of the city.

MORTLACH, a parish, in the county of BANFF, 11 miles (N. E.) from Keith; containing, with the village of Dufftown, 2594 inhabitants, of whom 770 are in the village. This place, which is of remote antiquity, was originally the seat of a bishopric; and there is still extant a charter granted by Malcolm II. to the first bishop, in which it is called Morthelac, or Morthlac, a name supposed to be a corruption of the Gaelic *Morlay*, signifying "a great hollow", and minutely descriptive of the situation of its church. In 1010, Malcolm obtained here a signal victory over the Danes, by whom he had been defeated in the year preceding, and before whom he was now retreating, after having lost three of his principal nobles in the previous skirmish. Arrested in their retreat by the narrowness of a pass near the church, and which also retarded the pursuit of the enemy, the defeated army had time to rally and commence another conflict, in which Malcolm killed the general of the Danes with his own hand, and put his

army to the rout with great slaughter. From this circumstance some writers suppose the place to have derived the appellation of *Mortis-Lacus*, of which its present name may be only a modification. The PARISH is of irregular form, fifteen miles in its greatest length and nearly twelve at its greatest breadth. Mortlach is bounded on the north by the parishes of Boharm and Botriphnie, on the east by Glass, on the south by Cabraich and Inveraven, and on the west by Aberlour. It is nearly inclosed by hills, of which the highest are the Corhabbie and the Benrinnes, the latter having an elevation of 2561 feet above the level of the sea. The surface is intersected by the small rivers Fiddich and Dullen, the former of which rises in Glenfiddich, towards Strathdon, and the latter in Glenrinnes, on the confines of Glenlivet; and after uniting their streams about a mile below the church, they flow together into the Spey near the northern extremity of the parish, which extends to the river Doveron on the south.

The whole number of acres is 35,000. About 5000 acres are under tillage, and the remainder, with the exception of 600 acres of woodland, is pasture and waste, of which but a few acres seem capable of being brought into cultivation. The soil is in general a rich and deep loam, producing excellent crops; the system of agriculture is greatly improved, and much attention has recently been paid to the draining and reclamation of unprofitable land. Limestone of good quality is found in the parish, and slate is also quarried; granite is very general, but no quarries have hitherto been opened. In some parts are indications of alum and lead-ore, and the laminæ of some of the rocks resemble asbestos: antimony in small quantities is embedded in the limestone rocks; and in the grey slate, small garnets are frequently found, especially in that to the east of the river Fiddich. The plantations consist of ash, elm, oak, birch, plane, Scotch fir, and larch. Great attention is paid to the cattle, which are mostly a cross between the Highland and the Aberdeenshire; and numbers of sheep, chiefly of the black-faced breed, are fed. Grain is occasionally sold at the village of Dufftown, to persons resorting thither to purchase it; and cattle-markets are held five times in the year. The annual value of real property in the parish is £5197.

Ecclesiastically the parish is within the bounds of the presbytery of Strathbogie, synod of Moray. The patronage is vested in the Crown, and the stipend of the incumbent is £192. The manse, a very ancient building, was enlarged in 1807, and is now a comfortable residence; the glebe, which has been greatly diminished by the encroachment of the river Dullen at different times, comprises at present about five acres, valued at £8 per annum. Mortlach church, a venerable structure, was enlarged by Malcolm II. in fulfilment of his vow on the occasion of his victory over the Danes; and in the north wall are inserted three skulls of Danes slain in that battle, which are still in a state of entire preservation. It was again enlarged in 1824, and now affords accommodation to 886 persons. At Glenrinnes is a missionary church, built many years since at the expense of the heritors and inhabitants of the district; the minister has a stipend of £60 per annum, Royal Bounty, with a house and garden, and three acres of land, rent-free. Near the parish church is a Roman Catholic chapel, a neat building erected within the last few years.

The parochial school affords a good education to about ninety children; the master has a salary of £34, with a house and garden, and the fees on the average amount to £25. Dr. John Lorimer bequeathed £200 for the maintenance of a bursar in this school, and an additional sum of £200 for an exhibition to Marischal College, Aberdeen, for the further prosecution of his studies. There is also a school at Glenrinnes, under the General Assembly, attended by about fifty scholars on the average. A circulating library is supported, and there is a small library for the use of the Sunday school. The poor have, the interest of 1500 merks bequeathed by William Duff, Esq., who also gave 500 merks to the use of the schoolmaster; and the interest of £100 by Alexander Forbes, Esq., which he appropriated to the benefit only of four families.

On a commanding situation on the bank of the Fiddich, are the ruins of the ancient castle of Auchindown, the founder of which is unknown. It was till lately the property of the Gordon family, in whose possession it had been for more than three centuries. A massive ring of gold, consisting of three links, was found among the ruins within the last thirty or forty years, with an inscription which was legible when the links were placed in a particular position. Near the confluence of the rivers Fiddich and Dullen are the remains of the castle of Balvery, situated on the summit of a bold eminence; the entrance gateway is still entire, and above the lofty entrance is the motto of the Atholl family, "Furth Fortune and Fill the Fettris:" this castle is the property of the Earl of Fife. On the Conval hill, in the parish, are the remains of a Danish camp. A large stone, which is said to have been placed over the grave of the Danish general killed by Malcolm in the battle of Mortlach, now forms part of a fence; and in the parish is also an upright stone about seven feet in height, having on one side a cross and representation of two animals, and on the other a snake, rudely sculptured.

MORTON, a parish, in the county of DUMFRIES, 15 miles (N. W. by N.) from Dumfries; containing 2161 inhabitants. The name of Morton, which is Anglo-Saxon, signifies "the stronghold or dwelling on the moor"; and the parish appears to have been thus denominated from the old castle of Morton, a very strong place, the striking ruins of which are still to be seen upon an extensive moor at the bottom of a beautiful green hill. This castle is supposed to have been originally the possession of a Norman chief named de Moreville, whose family had settled in Scotland in the tenth century, obtained a large part of the estates in this neighbourhood, and risen to great power and eminence. He was appointed hereditary lord high constable of Scotland; and his grandson, Hugo de Moreville, in the year 1140 founded the monastery of Kilwinning, in Ayrshire, and in 1144 the abbey of Dryburgh, in Teviotdale. Hugo afterwards gave a portion of land called the Park to the abbey of Melrose; but this property, with the church of Morton, was eventually bestowed on the monks of Kelso. The possessions, at Hugo's death, came to his son, and subsequently to his grandson William de Moreville, who dying without issue, they all fell, by marriage with Emma, sister of William, to Roland, Lord of Galloway, who also obtained with the castle and the property the office of lord high constable. Allan, Roland's son, married Margaret, the eldest daughter of

David, Earl of Huntingdon, by whom he had three daughters, the eldest of whom was married to John Baliol, the father of John Baliol, King of Scotland. After Bruce ascended the throne, the lands of the Baliol family and their adherents were conferred as rewards of service on the friends of the new king, of whom Randolph, Bruce's nephew, obtained extensive grants of land in Annandale, as well as the castle of Morton, which he held when regent during the minority of David Bruce.

But the property here not long after passed into other hands; for Robert II. bestowed his daughter Egidia on William Douglas, natural son of Archibald Douglas, Lord of Galloway, to whom he gave as a dowry the castle of Morton and the district of Nithsdale. In 1390, Douglas set out for Prussia to the Holy war, and was killed at Dantzic, on the Vistula, by assassins hired by Clifford, an Englishman, formerly his rival, and still envious of his honour and promotion. Since the fourteenth century, the castle and lands of Morton have been in the possession of some branch of the family of Douglas. The parish has long given their title to the Douglasses, Earls of Morton, whose residence at one time is said to have been Morton Castle, and who were proprietors of the whole lands, with the exception of the Mains of Morton, lying north-west of the castle. The Mains belonged to the Douglasses, lairds of Morton, one of whom, Malcolm Douglas of Mains, was distinguished for his bravery in the border wars. The last of this family of Mains was Captain James Douglas, who died at Bratford, in the parish of Penpont, about the beginning of the last century. The earls eventually sold their property and interest here to Sir William Douglas Cashoggle, who built a house a little south of the village of Thornhill, called the Red House, where he sometimes resided; but William Douglas, first Earl of Queensberry, obtained from Cashoggle nearly all his lands, as well as the lands of Morton-Mains from the other family, and, being lord of the regality of Hawick, procured authority in 1610 to translate that regality to Thornhill, to which he gave the name of New Dalgarnoch. In 1810 the Scots, Dukes of Buccleuch, succeeded to this and other property of the Dukes of Queensberry.

The PARISH is six miles in length from north to south, and its mean breadth is about two miles; containing 7680 acres. It is bounded on the north and north-west by the parish of Crawford, in Lanarkshire; on the west by the parish of Durisdeer, from which it is separated by the Sheilhouse rivulet and the river Carron; on the south-west by the river Nith, with the exception of about 120 acres called Morton holm, lying on the south-west bank of that river; and on the south-east and east by the parish of Closeburn and Dalgarno, from which it is divided by the Cample. The surface throughout is diversified with hill and valley, except along the banks of the rivers, where it is flat. There are three considerable ridges north of the Nith, large tracts of which are uncultivated, and on the first of which the village of Thornhill is situated. The surface afterwards is gradually depressed until the declivity of the third ridge terminates in a valley; and then appear other hills and mountains, one of which rises 2500 feet above the level of the sea: there is generally, however, a considerable tract of rich arable and meadow land near the bases of the heights. In the parish are nu-

merous springs, rivulets, and burns; the rivers Carron and Cample run, as already stated, on its western and eastern boundaries, and the river Nith on the south-west.

The SOIL is rich and productive along the banks of the rivers, and on the first of the three ridges light and fertile, resting upon a gravelly bottom: on the two other ridges it is wet and heavy, and lies upon a clayey subsoil. About 2600 acres are under cultivation; 580 are occupied by wood, ninety of which consist chiefly of British oak about fifty years old; and 4500 acres are waste or natural pasture, 1200 of which are considered capable of profitable cultivation. The grain is chiefly oats and barley, and the green crops produced are also of good quality. In this parish the sheep usually reared are the black-faced, which, as being more hardy, are considered better suited than the Cheviots to the climate of the parish; the cattle are mostly Galloways, but the cows preferred for the dairy are of the Ayrshire breed. The stock of draught horses has within these few years been much improved. Husbandry is well understood, and great improvements have been made of late, and are still going on. The Duke of Buccleuch is sole proprietor, with the exception of the farm of Ridings: the annual value of real property in the parish is returned at £2817. The rocks which lie under the arable land consist chiefly of red sandstone; the hilly grounds rest on the primitive and whinstone formations. The Chamberlain's House, the property of his grace, is an elegant and commodious mansion. There are two villages, viz., Thornhill and Carronbridge, the former of which has received great attention from the proprietor, and exhibits many important improvements. It has excellent shops, two good inns, and a tannery employing about thirty hands; and is a clean, healthy, and populous village: the road from Dumfries to Sanquhar passes through it. There are fairs in the village in February, May, August, and November, on the second Tuesday in the month, O.S.; many persons meet at these fairs to hire servants, and there is a considerable traffic in coarse woollen and linen cloth, and in yarns made in the neighbourhood. Carronbridge is partly in the parish of Durisdeer, but chiefly in that of Morton.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Penpont and synod of Dumfries; patron, the Duke of Buccleuch. The stipend of the minister is £237; and there is a small but comfortable manse, with a glebe of about twenty acres, worth £25 a year. The church, an elegant edifice in the Saxon style, was built in 1840-1: it stands on an elevated spot near the village of Thornhill, chosen by the duke, by whom, it is understood, the plan of the building was designed; and from its picturesque appearance the church is a great ornament to the surrounding country. There is also a dissenting meeting-house, in connexion with the United Presbyterian Synod. A parochial school is maintained, the master of which has a salary of £34, about £30 fees, and a free house and garden, with upwards of two acres of land. Other schools are supported by fees, and some by fees and a small endowment. There is a flourishing subscription library in the village of Thornhill, instituted in 1814; besides three or four friendly societies in the parish. Among the antiquities is a Roman fort or castellum with intrenchments, called the Deer Camp; it is situated about two

miles north of Tibbers, the great Roman station in the parish of Penpont. The castle of Morton, however, is the most considerable relic of antiquity, though not above half of it now remains. It stands on the margin of a deep glen, and the ruin is about 100 feet in length, and nearly thirty in breadth. The wall of the south front, still entire, is about forty feet high, and has at each corner a round tower twelve feet in diameter: the foundation walls are generally eight, but in some places ten, feet thick. About the beginning of the last century a boat, formed of one solid piece of wood, and resembling an Indian canoe, was dug out of the bottom of a tract of moss not far from the castle; a circumstance which has led to the conclusion that the ground whereon it stands was formerly encircled by a loch. In the vicinity other relics have been discovered, indicating the occurrence of hostile engagements. There are several chalybeate springs in the parish; and near the castle, issuing from a peat-moss, is a spring impregnated with a small quantity of sulphuretted hydrogen, and the water of which has proved of singular advantage in cutaneous complaints.

MORVERN, a parish, in the district of MULL, county of ARGYLL, 18 miles (W. S. W.) from Strontian; containing 1774 inhabitants. This place, which anciently formed part of the territory of the celebrated Somerled, Thane of Argyll, takes its name from the Gaelic term *Mhor Earrain*, signifying "the great division, mainland, or continent". The parish is in the northern part of the county, and measures in extreme length from east to west twenty miles, and fifteen miles at its greatest breadth; comprising 85,369 acres, of which 4054 are arable, 78,246 pasture, and the remainder wood. It forms a peninsula, being bounded by water on all sides except along its eastern limit, which extends for twelve miles: its line of coast falls little short of 100 miles. On the north it is girt by Loch Sunart, on the west and south by the sound of Mull, and on the south-east by Linnhe loch. Towards the middle of the parish, Loch Aline runs into the land on the south from the sound of Mull, and Loch Teagus, in like manner, penetrates from Loch Sunart on the north; forming a kind of peninsula of the western division of the parish, but not so perfect a peninsula as the parish itself. The coast is marked by numerous creeks and bays, where vessels may find good anchorage and shelter; and there are several ferries for the convenience of local transit, affording great accommodation to the people. Oransay and Carna, two inhabited islands belonging to the parish, are situated in Loch Sunart. The former is barren and rocky, about two miles long, and indented in many places on each side with creeks and bays, which sometimes nearly meet each other; it is separated from the main land on the south by Druimbuy, a safe and commodious harbour, scarcely surpassed by any on the western coast, though but little frequented. Carna island, not far to the north-east of Oransay, lies near the entrance of Loch Teagus, and has in many parts a rugged and forbidding surface, but in its eastern portion is verdant, fertile, and pleasant. Loch Aline, on the south, has a convenient harbour; but some drawback to its extensive use is found in its narrow entrance, and the necessity of waiting, frequently, for a favourable wind and tide. The bay of Ardtornish, with north and west winds, also offers safe anchorage.

The surface in the INTERIOR is varied by several mountains; the highest being those of Ben-caddan, Ben-na-hua, and Si'ain-na-Rapaich, the first of which rises 2306 feet above the level of the sea, and has towards the summit a series of excavated steps called Fingal's Stairs. In general the scenery of the parish is not interesting; but some portions of it supply a very pleasing, and occasionally a splendid, contrast to the less inviting tracts. The more distant views, also, especially of the sable waters of the sound of Mull, and of the lofty mountain ranges in the Isle of Mull, are of considerable interest. Several of the scenes have been celebrated by the muse of Scott. Airi-Innis is the largest inland lake in the parish, measuring two miles in length and half a mile in breadth; besides which there are the lakes of Daoire-nam-Mart and Ternate. The principal river is that of Gear-Abhain, which, after being increased by numerous tributaries, and flowing through a pleasant valley till enlarged by a supply of water from Airi-Innis, falls into Loch Aline. Minor streams, and torrents and cascades, occur in every part of the locality: among the falls the most celebrated are those of Ardtornish, which overhang the bay of the same name, near the ruins of the ancient castle. Various kinds of fish are taken off the coast.

The SOIL is of moderate fertility, and the crops generally cultivated are oats, barley, and potatoes, with small quantities occasionally of sown grasses and turnips; but no more grain is raised than is necessary for home consumption. Husbandry has been considerably improved, chiefly by the subdivision of farms and the introduction of a better system of cropping; much inferior land has been improved, and several tracts of moss reclaimed. The small holders are usually tenants at will; where leases are granted, the period is nineteen years. The sheep are mostly the black-faced, frequently crossed with Cheviots, and the cattle are the Argyllshire or West Highland; large numbers of sheep are constantly grazed, and some hundreds of cows. In this parish the rocks are of two distinct species. From Ardtornish on the south the district stretching along the sound of Mull to the north-western boundary, in breadth about five miles, consists principally of lofty ranges of the trap formation; while in the interior and the upper part of the parish the substrata are chiefly gneiss and mica-slate. Freestone from the quarries of Loch Aline and Ardtornish has been used for many public works. Good lead-ore is found at Lurg, in Glen-Dubh; and at Ternate, on the property of Ardtornish, are indications of copper, a metal once wrought here. Morvern is said to have been formerly covered with wood, large quantities of which were consumed, while standing, in the disturbed times of 1745. The mosses abound in remains of forests. Immense trunks of oak-trees are to be seen on the sides of mountains, and there are large coppice woods in different places. Almost every description of timber has suffered from the axe since the extensive introduction of sheep-farming; but some very fine old trees are yet remaining, and the shores of Loch Sunart display heights thickly clothed with wood, especially with birch. The annual value of real property in the parish is £4752. There are three ferries on the sound of Mull, and two in Loch Sunart. The communication with distant places is carried on chiefly by the Tobermory steam-vessels, which call at Loch Aline: in the

winter months the steam communication is less frequent, sometimes it is entirely suspended; and consequently, during that period, a packet-boat plies between Loch Aline and Oban. The parish is almost entirely destitute of roads; and the communication of the post-office with that of Oban, which takes place three times a week, is therefore much impeded. A fair is held twice a year, on the days preceding the Mull summer and winter markets, for the sale of black-cattle, the hiring of servants, and general business. Coal is occasionally imported for fuel; but peat, procured at much trouble and expense, is in general use.

Ecclesiastically the parish is in the presbytery of Mull, synod of Argyll, and in the patronage of the Duke of Argyll: the minister's stipend is £155, with a manse, and a glebe of sixty acres, valued at £27. 10. per annum. Morvern is formed of the two ancient parishes of Kilcolumkill and Kilumtaith, united shortly after the Reformation. There are two churches, at which the incumbent officiates alternately: one of them was built in 1780, and the other in 1799; both are in good repair, and they afford sufficient accommodation. A portion of the parish, at the head of Loch Sunart, has been united quoad sacra to the parliamentary parish of Strontian, in the parish of Ardnamurchan; and a missionary preaches in this quarter every fortnight, supported by the Royal Bounty. There are also two catechists, maintained from the same fund. A Roman Catholic chapel has lately been erected. There are three parochial schools, where English and Gaelic are both taught, with the ordinary branches of education; and the higher studies may be followed, if required, at one of the schools: the maximum salary is divided among the masters, who have also about £8 each in fees. The ruins of a religious establishment founded by St. Columba are still visible. In the parish is also a vitrified fort, with several old castles, of which the most interesting is the ruin of Ardtornish. This castle was in ancient times a stronghold of the Lords of the Isles, and the place where a meeting was held between the commissioners of Edward IV. and those of John, of the Isles, on the 19th of October 1461, when the treaty was concluded in which the latter acknowledged himself a vassal of the crown of England, and engaged to assist Edward in reducing the Scots to his sway.

MOSSTODLACH, a village, in the parish of SPEY-MOUTH, county of ELGIN, $2\frac{1}{2}$ miles (S.) from Garmouth; containing 93 inhabitants. It is situated on the road from Fochabers to Elgin, at its junction with the road from Garmouth to Rothes. The river Spey flows at a short distance from it, on the east.

MOTHERWELL, a village, in the parish of DALZIEL, Middle ward of the county of LANARK, 2 miles (N. E. by E.) from Hamilton; containing 726 inhabitants. It lies on the eastern border of Hamilton parish, and on the east side of the river Clyde; and derives its name from an ancient well dedicated to "Our Lady". The inhabitants are chiefly weavers, dependent upon Glasgow for work. Great facilities of communication are afforded by the lines of the Caledonian railway company. The well partly supplies the village with water.

MOULIN, a parish, in the county of PERTH; containing, with the villages of Kinnaird and Pitlochry, and part of the former quoad sacra parish of Tenandry, 2017 inhabitants, of whom 172 are in the village of

Moulin, 13 miles (N. W. by N.) from Dunkeld. This place, the name of which is of doubtful etymology, is of considerable antiquity; and formed part of the possessions of David, eleventh Earl of Atholl, upon whom King Robert Bruce conferred the office of constable of Scotland. On David's revolting against his sovereign, his estates were forfeited; and the barony of Moulin was granted by the king to Sir Neill Campbell and his wife, sister to Bruce; whose son John was subsequently created Earl of Atholl by David II., but died without issue at the battle of Halidon-Hill, in 1333, when the title and estates again reverted to the crown. The pass of Killiecrankie, in this parish, is memorable for the battle which took place there in 1689, between the English army under General Mackay, and the Highland forces commanded by Graham of Claverhouse, Viscount Dundee, in support of the exiled James II. In this battle, which terminated in favour of the Highlanders, not less than 2000 of Mackay's forces were slain, and Dundee was so severely wounded that he died soon after, and was interred in the church of Blair-Atholl.

The PARISH is naturally divided into the nearly parallel districts of Atholl and Strathardle, separated from each other by a hill of inconsiderable height, about four miles in extent. Atholl is about seven miles in length, and from five to seven in breadth; the district of Strathardle is eight miles in length, and nearly seven in breadth. The surface is diversified with mountainous heights, of which the most conspicuous is Bein-Breacaidh, rising to an elevation of nearly 3000 feet above the level of the sea; and with numerous verdant hills of gentler aspect, which add much to the beauty of the scenery. The vale of Atholl is watered by the Tummel and the Garry rivers, which unite their streams within the limits of the parish; and Strathardle by the rivers Briarachan and Ardle, of which the former rises in the parish, and, uniting with the Arnat, forms the Ardle, whence the strath has its name. The Garry and the Tummel are both impetuous streams, and in their course make numerous cascades; the most striking is the fall on the Tummel, near its confluence with the Garry at Faskally. The Garry runs for nearly three miles through the wildly romantic pass of Killiecrankie, between precipitous masses of rugged rock, which overhang the stream and obstruct its current, at times concealing it from view by thick branches of trees that have taken root in the clefts of the rocks. Both these rivers abound with trout; and during the season, salmon and grilse are found in great plenty, and of excellent quality. The only lake is Loch Broom, which is also much frequented by anglers.

* Moulin is chiefly pastoral; about 3000 acres are arable, 2000 woodland and plantations, and the remainder mountain pasture and moorland. Along the banks of the rivers the soil is light and sandy, but in other parts a deep loam of great fertility; and for a considerable breadth around the village of Moulin is a tract of the richest land in the county, producing exuberant crops of grain of every kind. The system of husbandry is much improved, and regular rotations are observed according to the nature of the lands. On the hills is good pasturage for sheep, of which more than 13,000 are kept in the parish, chiefly of the black-faced breed, with a few of the Leicestershire; the cattle are of the Highland breed, with a few of the Angus and the Ayrshire.

The horses reared are generally a cross between the native Highland and the Clydesdale breeds. There are extensive remains of natural wood, consisting chiefly of oak and birch, of which latter numerous fine specimens are to be seen in the pass of Killiecrankie; the plantations, also very extensive, are of oak, ash, beech, birch, and larch, Scotch, and spruce firs, for all of which the soil appears to be well adapted. The substrata are mica-slate, of which the rocks are mainly composed, limestone, hornblende, and granular quartz; and large masses of marble of fine crystalline texture, and boulders of granite and quartz, are found in various places. In this parish the principal mansion-houses are, Faskally, Urrard, Balnakeilly, Baledmund, Kindrogan, Dirnanacn, and Edradour, most of which are elegant structures, beautifully situated in demesnes embellished with woods and plantations, and commanding finely-varied prospects. The annual value of real property in Moulin is £8117.

The village of Moulin stands in the southern portion of the parish, in the heart of a district abounding with picturesque scenery, and has a pleasingly-rural aspect; it consists of well-built cottages, and is inhabited chiefly by persons engaged in agricultural pursuits. Facility of communication is afforded by the great north road from Perth to Inverness, which passes through the parish. A fair is held at Moulin on the first Tuesday in March, for the sale of horses and the purchase of seed corn. There is a post-office in the village of Pitlochry. Ecclesiastically the parish is within the bounds of the presbytery of Dunkeld and synod of Perth and Stirling. The minister's stipend is £150, of which one-third is paid from the exchequer; with a manse, and a glebe valued at £26. 13. 4. per annum: patron, the Duke of Atholl. Moulin church, erected in 1831, is a neat substantial structure containing 650 sittings. There is a place of worship in connexion with the Free Church. The parochial school is well attended: the master has a salary of £34. 4. 4., with a house, £2 in lieu of garden, and school fees averaging about £10; to which may be added £7 allowed by the Commissioners of Bishops' Rents, for the gratuitous instruction of poor children. There are six Sunday schools; and a school for females is held at Pitlochry, the mistress of which receives £5 per annum from the Society for Propagating Christian Knowledge. In the parish are numerous upright stones, supposed to be Druidical remains. Near the village of Moulin are the ruins of an ancient castle, whose origin is unknown; it is a quadrilateral structure of stone, eighty feet long and seventy-six wide, and was formerly surrounded by a lake, which has been drained, and the ground covered with plantations. There are also vestiges of Picts' houses. Coins of Edward I. of England, and Alexander III. of Scotland, were discovered some years since on the farm of Stronchavie; and in the pass of Killiecrankie, broken swords and fragments of military weapons have at different periods been found, some of which are deposited in the mansion of Urrard.

MOUNT-PLEASANT, a suburb of the town of Newburgh, in the parish of **ABDIE**, district of **CUPAR**, county of **FIFE**; containing 524 inhabitants.—See **NEWBURGH**.

MOUSA, an island, in the former quoad sacra parish of **SANDWICK** and **CUNNINGSBURGH**, parish of **DUNROSSNESS**, county of **SHETLAND**; containing 12 inhabitants.

This island lies close to the east coast of the Mainland, and at the entrance of Aith's Voe; it is also called Queen's Isle, and is about a mile in length and three-quarters of a mile in breadth. The village of Cunningsburgh is distant from it, north-westward, about two miles. In this island is a most perfect specimen of an ancient Scandinavian fortress, or, as some call it, Pictish castle. It is nearly entire, and in shape resembles a dice-box: its height is about forty-two feet, and, over the walls, its diameter fifty feet; the walls are about ten feet in thickness, and hollow in the middle. The fort stands on the shore, and seems to have been a place of defence. Opposite to it are the ruins of another castle of the same description, round which are still visible the sites of a number of small houses.

MOUSWALD, a parish, in the county of **DUMFRIES**; containing, with the hamlets of Old Brocklehurst and Cleughbrae, 683 inhabitants, of whom 131 are in the village of Mouswald, 7 miles (E. S. E.) from Dumfries. The name was formerly spelt *Muswald* and *Mosswald*. Its termination is probably derived from the Saxon word *Walda*, or *Wealt*, signifying "the woody district", and which, with the prefix *moss*, or *mous*, may be interpreted "the forest near the moss". Some, however, give to the termination the sense of "a long range of high land". Few important events are recorded in connexion with the parish. At Mouswald Mains was the seat of Sir Simon Carruthers, laird of Mouswald, whose only daughter married into the Queensberry family, who thus came into the possession of the estate. The family of Grierson, of this parish, are descended from Gilbert, second son of Malcolm, laird of Mc Greggor, who died in 1374; his son obtained a charter of the lands and barony of Lag, in Nithsdale, and of Little Dalton, in Annandale, and his descendants have continued in this part of the country. Their present seat is Rockhall, in the parish of Mouswald. The last inhabitant of the castle of Lag, their former seat, which stands in the Glen of Lag, surrounded by lofty hills, in Dunscore parish, was Sir Robert Grierson, whose bailie, by virtue of Sir Robert's prerogative as baron of the regality, tried, condemned, and executed a sheep-stealer at Barnside Hill, about the end of the seventeenth century. This is said to have been the last instance in Nithsdale of a criminal suffering death by the sentence of a baron-bailie.

The **PARISH** is between four and five miles long and from two to three broad, and contains nearly 6000 acres. It is bounded on the north by Lochmaben, on the south by Ruthwell, on the east by Dalton, and on the west by Torthorwald. In general the surface is tolerably even; and what rising grounds there are, ascend so gently that they are cultivated to the very summit: the highest hill scarcely reaches 700 feet above the level of the sea. The only river is the Lochar, and this runs through the parish but for a few yards. Part of the extensive moss called Lochar Moss lies within the parish, and contiguous to it a considerable breadth of both the pasture and arable ground is wet and marshy. A large portion of the district near the farms immediately bordering on the moss is of a light and sandy soil, or thin earth resting upon gravel mixed with stones; and though carefully laid down with grass seeds, it runs into broom in two or three years. The land in the eastern part of the parish, however, which is higher, has a tolerably deep and rich soil, producing good crops. Upwards of 4000

acres are cultivated or occasionally in tillage; 1260 acres, including more than 1100 of moss, afford indifferent pasture; and 150 acres are in woods and plantations. All kinds of white and green crops are grown. The cattle are the Galloways, to the breed of which much attention is paid; some fine draught horses are reared, and large numbers of pigs, which latter are in general sent to London. Most of the modern improvements have been introduced; but the fences are still, to a great extent, in an unsatisfactory state: the farm-houses are generally of a superior description, most of them having been rebuilt or improved of late years. The chief rocks are greywacke and greywacke-slate, and in one place there is blue limestone. The great road from Carlisle to Dumfries and Portpatrick runs through the parish from south-east to north-west. There are also two excellent parish roads, besides others, facilitating the communication in every direction; and several convenient bridges. The parish is likewise intersected by the Glasgow, Dumfries, and Carlisle railway. The annual value of real property in Mouswald is £3997. Ecclesiastically the parish is within the limits of the presbytery of Lochmaben and synod of Dumfries; patron, the Marquess of Queensberry. The stipend averages £200; and there is a commodious manse, with a glebe of sixteen acres, valued at £20 per annum. The church is a handsome edifice, built a few years ago, and seats 386 persons. A place of worship has been erected in connexion with the Free Church. There is a parochial school, where the classics and the usual branches are taught; the master has a salary of £25. 13. 5., with the legal accommodations, and about £10 fees. The remains of several border forts are still to be seen, as also some ancient cairns.
